The United States Post Office Department is an agency that belongs to all the people of the United States—the most widespread and all-pervasive agency in the land—an agency seeking the speediest form of transportation. Under such conditions I believe it should allow many more of its owners an opportunity to use its speediest form of transportation by the adoption of a 3-cent postcard rate.

I feel that the post card is but another step in the direction of giving the public a lower air-mail rate of postage. And with business fighting the battle of reconversion, the post card will be used by many firms for daily quotations and short routine reports not of a confidential nature such as stock and grain and other quotations requiring speed for national distribution. Prior to the war it is my belief that regular air mail was used by some businesses for this purpose to a limited degree.

In addition, a 3-cent air-mail postal-card rate would open a new market for picture postal cards so favored by vacation travelers and we all know that the travel industry is going to be big business with a vengeance. Starting next June the travel interests of this country are pushing a "victory vacation year" and some authorities are estimating that the travel industry which was a $6,000,000,000 business before the war will be a $15,000,000,000 industry annually for the five following years. This would be a real aid in boosting the use of air-mail postal cards.

Both of the air-mail bills I have introduced would aid in increasing employment for they would aid in keeping air mail at somewhere near the tremendous volume which it attained during the war when everyone was writing to their sons and daughters and wives and husbands in the service and they were answering via air mail. The amazing growth in the volume of air mail is clearly shown by the fact that the air-mail pound-miles performed grew from 22,294,962,738 in 1941 to 85,802,866,010 in 1944 and during this period the payments to the air lines, made by the post office, dropped from 0.93 mill per pound-mile to 0.33 mill per pound-mile.

It is interesting to note that the percentage of total postal revenues credited to domestic air mail by the Post Office Department increased from 2.09 in 1938 to 7.02 in the fiscal year ending June 1944, a gain of 226 percent. In the same comparable period the percentage of total expenditures credited to the domestic air mail jumped from 2.81 to 4.41, an increase of 57 percent, thus reflecting a healthy balance in gains between expenditure and revenues—an indication that the drop of 1 cent in air-mail-letter rates would still leave a profit for air mail.

Looking at it another way, it has always been the policy of Congress since 1851 to recognize the post office as a vital important public service with the policy of "service first." There has been the feeling that the Post Office Department should not make huge sums from its services, although the profits from some forms of mail are used to subsidize others that are transported at a loss. However, it has not been the feeling that this should be carried too far. In the fiscal year ending June 1944, profit on domestic air mail after all costs had been charged against it was reported by the cost ascertainment service as $29,530,917. This was on a business that totaled $79,412,510.

With air-mail pound-miles showing an increase of more than 45 percent for the fiscal year ending June 1945 according to the Civil Aeronautics Board reports, there seems little doubt that a much greater profit will accrue to air mail when the final report appears for this fiscal year. If the 6-cent rate be left in effect, the profit from air mail will still show a substantial profit. So in theory we should increase the payments to the air carriers or reduce the rate to the people.

Of the two alternatives there does not seem to be any question as to which is advisable and the Honorable Postmaster General has pointed out that he believes that the rate of 5 cents within a short time would justify the cut.

I believe both of these bills deserve the support of every Congressman for they are but a continuation of the congressional policy of utilizing the fastest methods of moving mail for the benefit of all people in all walks of life. They would not only aid our vastly expanding air transport system, which is now growing at a tremendous rate, but they would certainly force the expansion of air mail and thus make for closer human and business relations and in turn for national welfare and unity.

An example of the support given the air-mail post-card and postal-card measure is a letter I received this morning from the National Council on Business Mail. The letter follows:

NATIONAL COUNCIL ON
BUSINESS MAIL, INC.,
*Chicago, Ill., December 11, 1945.*

Hon. HAROLD C. HAGEN,
*House of Representatives.*

DEAR CONGRESSMAN HAGEN: We were very much pleased to receive from our Washington representative a copy of your bill, H. R. 4735, providing for air-mail postal cards and private mailing cards, at the rate of 3 cents postage.

We believe this to be a definite step forward to a greater use of air-mail service, and that the air-mail card will prove to be a great convenience to the public, and prove also to be remunerative to the Department.

We are calling the proposed service to the attention of the members of our organization and feel certain that it will meet with their hearty approval.

Sincerely yours,

S. F. KIRBY.

## The Atomic Bomb and Its Implications

EXTENSION OF REMARKS
OF
### HON. E. C. GATHINGS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
*Thursday, December 13, 1945*

Mr. GATHINGS. Mr. Speaker, it was my distinct privilege to hear recently a most remarkable address delivered by Dr. Marshall Wingfield, pastor, First Congregational Church of Memphis, Tenn., on the subject of the atomic bomb and its implications. Dr. Wingfield delivered the speech before the Crittenden County Chapter, United Daughters of the Confederacy, at West Memphis, Ark., on December 3.

The speech reflects a most thorough knowledge of an intricate subject. It is truly a masterpiece.

Dr. Wingfield is a world-famed religious leader, scholar, historian, author, and lecturer. He has traveled extensively here and abroad.

Because of the far-reaching significance of this most learned address on a timely subject I include the full text:

Our Bible opens with the story of creation in which man came comparatively late. When man was created and placed in a garden which lay "eastward in Eden," he was told that he might eat of the tree of life, and all others except the tree of knowledge. The great scholars tell us that the high point of the story is the warning to man against eating of the tree of knowledge prematurely. Failure to heed this warning was the great transgression. It was here that our first parents fell, and here have fallen all their children. Through the ages man has always acquired knowledge before he has acquired the morality to restrain him in its use. Man learned the secrets of chemistry before he grew tall enough spiritually to refuse to use his chemistry to make poisonous gases to destroy his fellowman. Man invented a boat which would plow under the sea, long before he had a spirit great enough to restrain him from using the boat as a murderous weapon. The airplane was invented before man was ready to use it benevolently. All of these were forms of eating of the tree of knowledge before eating of the tree of life.

Man brought in his machine age before he brought in a moral age to manage his machines. He invented the radio which enabled him to say everything everywhere, and then had to admit the truth of G. K. Chesterton's jibe that it was a very remarkable thing that the most perfect means of communication should appear at a period in human history when man had so little to say.

Man made the world smaller before he learned how to live in a smaller world. He has learned how to produce goods in great abundance, but he has not had the willingness of heart to distribute his goods for the general welfare of his fellows. The result is the world has had want in the midst of plenty. It has not been very long since citrus-fruit growers were piling up their fruit and spraying it with kerosene to reduce the market's edible supply. Pigs and calves were destroyed by the thousands in carrying out this economy of scarcity. Every third row of cotton was plowed under while thousands were sewing patch upon patch to cover their nakedness.

If one wants a memorable picture of this crazy economy of destruction which was substituted for a decent economy of distribution,

let him read Carl Sandburg's poem about the wind-bitten vagabond who came to a crazy country where shoemakers were barefoot because they had made too many shoes, and carpenters were living outdoors because they had built too many houses, and farmers were in debt because they had grown too much food.

At every garden where man has paused on his long road, he has gone to the tree of knowledge before he has gone to the tree of life. And now man has plucked the knowledge of how to release the power of the atom. Compared with that knowledge, the invention of gunpowder, the harnessing of steam and electricity, and the invention of the gasoline engine, may come to seem like very small matters.

Harnessing the atom will enable physicists and engineers to enter vast new realms of power research and development. The scientists confidently tell us that this amazing discovery will make man independent of the sun for food production. Man will be enabled to live underground as healthily as above ground, and more comfortably. Any country, with any climate, at any time of the year, on a small indoor acreage can grow all it needs to feed, clothe, and provide shelter for its citizens. The citizens will need only to contribute services according to their talents—administrative, manipulative, or technical—and for only a small fraction of their time.

It is believed by scientists that the economy of uranium may soon displace the economy of coal. A pellet of this energy the size of a vitamin pill will run an automobile for a year. The same pellet will heat one's house in winter. Atomic power will provide artificial suns to drive away fog and melt the ice on city streets. It has even been claimed that this energy may be used to break up hurricanes and tornadoes. It will enable men to make iron, copper, tin, gold, and other metals from sea water and in unlimited quantity.

This atomic power can easily be managed, the scientists say. It can be turned on and off like an electric light. It can be used to incubate eggs or to give off a white-hot incandescence. It can be stored indefinitely without deterioration. It can be used so cheaply to drive vehicles that its energy can make transportation a public utility. According to scientists, there are many other ways in which the atomic energy can be used to bring in the age foretold by the poets and prophets.

But there is little cause for rejoicing in any of this information. And the reason why there is little room for rejoicing is simply this: Once more man's mentality has run too far ahead of his spirituality. Intellectually, he has jumped ahead into the twenty-first century suggested by the pictures of Buck Rogers and Flash Gordon. Spiritually, man is lagging back in the Stone Age.

The late Professor Soddy, of Oxford, used to say that "if it ever becomes possible to release the great store of energy in the atom, the first use that man will make of it will be to construct a bomb." And Professor Soddy has proved to be among the prophets.

The Archbishop of Canterbury recently said that with the nations in a war-weary mood and sobered by the discovery of the possibility of the suicide of the race, he has no doubt that man will control the atomic bomb against ill use for a long time to come. Against this word of the archbishop I set the word of the great military philosopher, Von Clausewitz: "War is an act of violence pushed to its utmost bounds. To introduce into a philosophy of war a principle of moderation would be an absurdity. Force unrestrained by any law save that of expediency is the true nature of war."

The archbishop is indeed an optimist. He would still be an optimist if he believed that man will be morally strong enough at the end of another century to be entrusted with this primal force. Wise men have been saying for a century that the universe is a vast tinderbox from which God hides the matches. Now man has found the matches and, after striking two of them, stands awed by the thought that he has found the stuff from which is wrought the wrath of God.

The energy of the atom can be exploded with a violence beyond anything known on earth. The British "grand slam," mentioned by President Truman, is an earth shaker so powerful that when one of them was dropped on a granite islet in the English Channel for experimental purposes the islet disappeared. The "vial of wrath" in each of the two atomic bombs dropped on Japan was no larger than an orange, but it was 20,000 times more powerful than the "grand slam" and contained a quarter of all the explosive power of all the bombs sent against England during the whole course of World War II. Dr. Leslie W. Bell, one of the scientists who helped invent it says, "An atomic bomb dropped in the ocean would create a tidal wave which would destroy the Nation's Capital. A bomb dropped a half mile from a warship would melt it."

We are being told that the unleashing of this basic power of the universe will end war. Nations will have to keep the peace now, or the whole race will perish. The same thing was said when gunpowder and dynamite were invented. But war continued in more terrible forms than before. Nobel, the inventor of high explosives, declared that he had ended war, but he lived long enough to bemoan his invention. The $9,000,000 fund which he set aside for peace and other prizes was a gesture of atonement.

Professional military men will remind us that each new weapon calls out a counter weapon, just as the bomber plane called out the fighter plane. That might have been true once, when man was dealing with derivatives, but it cannot hold true now, when man leaves derivatives behind and comes down to the original and primal force. When the final physical force has been employed, how can there be any other physical force to counteract it?

There is only one power in the universe which can counter the destructiveness of atomic power, and that is moral power, or spiritual power, or religious power, as you may choose to call it. And it is not likely that enough moral force will be called into play to safeguard this atomic force, the Archbishop of Canterbury to the contrary notwithstanding. The temptation for posterity will likely prove greater than its moral strength and the power will be unleashed for evil.

Leonardo da Vinci invented a submarine, but he destroyed his plans because he feared man would use his invention to bring about the utter destruction of civilization.

Havelock Ellis writes that he stood by Hiram S. Maxim one day as Maxim explained his new gun. After hearing him relate how many lives this gun could snuff out in a minute, Mr. Ellis said to Mr. Maxim, "That gun will make war very terrible." And the inventor replied: "No, Mr. Ellis, it will not make war terrible: It will make war impossible." Mr. Ellis wrote this reminiscence a few days after Maxim died, and added: "I suppose the man who first elongated the 2-inch knife-blade into the 3-foot sword blade thought he had made war impossible."

The discoverers of more effective killing instruments have not feared, as da Vinci did, to make their death-dealers available. They have thought, as Maxim did, that their inventions would end war. But in every instance the weapons which they thought would end war have been used to make wars more ghastly.

Under the pressure of passion and the urging of ambition, men have put into use the most efficient killing instruments at hand. There is no reason to believe that posterity will act differently when it comes to using atomic energy. This energy may not completely destroy the world, but one with imagination can easily see the remnant of humanity, deep in some cavern of the earth, pronouncing bitter curses on the scientists for unleashing the power which has wrecked the world. If you would see a preview of that picture look at the picture of the London woman whose three little children had been killed by German bombs, as she stands where her house had stood, and calls upon God to damn eternally the man who invented the airplane.

We are told that fear will restrain man in the use of this atomic power. But where in history has fear ever been a deterrent when hate had been whipped up to white heat? In the conquest of the atom at this particular stage in history, there is little ground for any sort of feeling save a feeling of deep anxiety. We have intelligence enough to know that we cannot confine the secret of the atom to America. What we know today, everybody will know tomorrow. What we have today, everybody will have tomorrow. If the atomic bomb can destroy Japan today, it can destroy America tomorrow. And the enemy will not have to cross the ocean to loose it against us; he can send his atomic bomb by a manless rocket which has been launched from the ocean's other side.

The danger of atomic war is too great and too threatening to permit neglect of any means to lessen or delay it. We must study and support all possible forms of social control, realizing, of course, that no social controls by themselves can save us. Nothing less than the inward controls of the spirit can save us now. The best that the outward social controls can do is to keep the threat of atomic war from overwhelming us.

In the hands of competing nations, atomic bombs would precipitate total war, because of the mutual fears of aggression which now spells annihilation. Unless a single world control of atomic power can be achieved while the United States alone has the secret, it is not likely that such control will ever be achieved. We should, therefore, urge our Government to state now its purpose to place the secret under a single world control, and to press for the perfection of such a control.

It should not be difficult to make a beginning in this direction since the General Assembly and the Security Council of the United Nations Organization both have authority to deal with threats to peace. Certainly the atomic bomb uncontrolled is the direst of all threats to peace. It would naturally seem that the United States Government should make the control of atomic energy, through the Assembly and Council of the United Nations Organization, its first order of business. It is not too much to say that the United States should determine now to establish world sovereignty over atomic power for the mutual protection of all. There are no political or technical obstacles which could overcome the effort.

The choice today is between world control and world catastrophe. America's choice in the matter will have a tremendous influence on other nations as they make their choices. In this, our day of visitation, America needs the help of God. Our knowledge of atomic power would not be dangerous if we knew God. Our pride and self-will are what make atomic energy dangerous. Only through repentance and inward renewal, can we overcome the peril we have created. We must practice the faith that men are brothers. We must live as children of God or we shall not live at all.

## We Will Have Plenty of Oil

EXTENSION OF REMARKS
OF
**HON. JAMES H. MORRISON**
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

*Thursday, December 13, 1945*

Mr. MORRISON. Mr. Speaker, under leave to extend my remarks, I wish to refer to an article which was yesterday placed in the CONGRESSIONAL RECORD written by the Secretary of the Interior, Hon. Harold L. Ickes, and which was published in the December issue of the American magazine. Mr. Speaker, it so happens that in the January issue of the same magazine, which is just out, there is an article prepared by Hon. Eugene Holman, president of the Standard Oil Co. of New Jersey, which takes decidedly an opposite view from that expressed by Secretary Ickes.

When Mr. Holman prepared his article he had no information that Mr. Ickes was writing on the same subject, and, I am told, as soon as the Ickes article appeared Mr. Holman wrote to Mr. Ickes explaining that.

Mr. Ickes predicted a potential shortage in the petroleum supply for this country, but Mr. Holman is very much more optimistic, as he indicates that the known resources in the United States now will take care of the demand for hundreds of years.

This article written by Mr. Holman clearly sets forth his views and is entitled "We Will Have Plenty of Oil."

WE WILL HAVE PLENTY OF OIL

(By Eugene Holman, president, Standard Oil Co. of New Jersey)

(A world-traveled geologist, Mr. Holman has visited every oil-producing region in the world except the Far East. As a young man he took part in the development of the great Texas, Louisiana, and Arkansas oil fields. For more than 23 years he has been associated with the producing activities of his company.)

Anybody who imagines that our oil supply will perish in the next decade, or even the next 100 decades, is all wrong. I can't blame them for their belief, because for several years or prophets of national impoverishment have been publishing and broadcasting the prediction that we shall have no more oil in 12 to 14 years. This is utter nonsense. People who make such statements simply do not know the facts.

Geologists, the scientists of the petroleum industry, generally agree that more than 150,000,000,000 barrels of oil will be found in the Western Hemisphere, enough to last us over 100 years at present rate of consumption. About 50,000,000,000 barrels of this they place in the United States alone. These are conservative figures.

But a 100-year potential is not enough. It is a shortage. If it represented our only hope, it would mean that our grandchildrens' airplanes might be grounded and their motorcars stalled for good—certainly that we should one day have to import all our oil from far abroad. But it is not the only gasoline potential. We have enough coal in this country to produce an additional 2,000 years of gasoline. Researchers now estimate that gasoline may, when the need arises, be produced from coal at a refinery cost of only 10 cents a gallon, not too much higher than the present cost of gasoline from petroleum—around 5 cents per gallon. If taxes on gas were reduced, the cost of gasoline from coal thus would not be prohibitive to mass consumption.

In addition to coal, we have trillions of cubic feet of natural gas, which can be converted into billions of barrels of gasoline. And we have not yet touched the vast quantities of gasoline-producing oil shale and tar shale with which our continent abounds.

But these ample reserve sources of liquid fuels probably will not be extensively tapped for a long time—as long as our general welfare can better be served by lower-cost natural petroleum available in ample supply.

And natural petroleum will continue to be available. Large favorable areas of our country remain to be explored for oil. Further, all the oil is not under dry land. Some of it, we have discovered, lies under lake and sea. Perhaps the largest potential source of supply is under the shore waters of the Gulf of Mexico, where already some successful drilling has been done. Also, as this article goes to press, drilling will have begun in a huge sandbar off Cape Hatteras, in the belief that oil may lie under the Atlantic coast. Underwater drilling is in its infancy—merely, of course, because it has not been necessary, since we are still not short of oil in spite of alarmists.

The largest and most significant underwater oil project, which presages what may come eventually on the Atlantic, Gulf, and California coasts, is at Lake Maracaibo, Venezuela. Here a 50-mile shore strip is one of the world's great sources of oil. An affiliate of our company drills there in an area extending 10 miles offshore and in water 100 feet deep.

To accomplish it, engineers had to invent every step of the way. Drill deck footings were established on giant concrete piles up to 150 feet in length. For greater lengths, hollow metal piles encased with concrete were used. When the time comes to drill in deep water off the coast of the United States, the industry will know how.

However, the life expectancy of our gasoline supply cannot be gaged alone by the volume of petroleum available in the next 100 years, nor even by petroleum substitutes. Other factors may stretch the gasoline supply over a far greater time than we can now calculate. For example, it is even possible to produce more than one barrel of gasoline from a barrel of petroleum by adding hydrogen to petroleum. This operation, using a process called hydrogenation, is not economically feasible or necessary at the present time, but it can be used to increase our supply of gasoline. Indeed, you can dig up asphalt from the street and convert it into gasoline by adding hydrogen.

The gasoline yield of petroleum, through improved cracking processes, is today about 40 percent. The remainder of the petroleum is used for numerous products, including fuel oil, solvents for paints and cleaner, butadiene for synthetic rubber, and so on. But we can increase the 40-percent yield to 80- or 100-percent yield if it is necessary to increase the gasoline supply. As the consumption of gasoline increases in the Nation—and we believe it will increase—we can easily step up the gasoline yield of petroleum from 40 percent to 50 percent or 60 percent, in this way cutting down the yield of fuel oil.

And we can continue to import fuel oil and heavier crude oil from nearby sources, such as Venezuela, not to compete with our domestic resources, but to supplement our own supply while maintaining a healthy and vigorous domestic industry. Our petroleum is light compared with much of Venezuela's. Heavy petroleum lends itself particularly well to the manufacture of fuel oil, whereas lighter crude, such as ours, is more adaptable to gasoline manufacture.

Still another factor which may stretch our gasoline supply is quality improvement, such as higher-octane gasoline. Ten years ago 100-octane gasoline cost $2 a gallon to produce. Now it can be available to the consumer at only a matter of cents more a gallon than regular gas. The important thing is that higher-octane can give the motorist 50 percent more power and 50 percent more mileage in a car designed to use it. The ordinary automobile engine of today will not use 100-octane gasoline efficiently, but engines designed for it are on the way.

The fear expressed by some people of an impending gasoline famine has been heightened by two factors: First, the shortage that developed at home during the war as a result of our having supplied our allies with 80 percent of their petroleum; and, second, the announcement of the oil industry that our present petroleum reserve amounts to about 20,000,000,000 barrels.

As for the first, obviously there is no shortage now, because motorists, since the removal of rationing, have all the gas they want at a refinery cost of about 6 cents a gallon, less than the cost of a gallon of distilled water. The balance that you pay at the filling station, on the average 15 or 16 cents, is made up of taxes and the cost of distribution.

The second catch lies in our announced reserve. If it represented all the oil available in the United States, there would, indeed, be cause for worry. It is on this figure, 20,000,000,000 barrels, that our alarmists have based their prediction that our gasoline motors will die of thirst in the next 14 years or so. They should have made their prediction at the beginning of the war. They would be on the spot today, because we started the war with a reserve of only 19,000,000,000 and, paradoxically, have ended it with 20,000,000,000. This increase was accomplished in spite of serious wartime shortages of manpower and tools.

Without pedantry it would be well to explain the meaning of this word "reserves." The announced reserve of the petroleum industry represents only a conservative estimate of the known quantity of oil in present oil fields. Each year there is prepared a new estimate, to include new discoveries, oil found by new drilling, and revised estimates of oil in previous discoveries. These revisions are important. When the great east Texas oil field was discovered 15 years ago its reserves were estimated in the millions. Today its reserves are in the billions of barrels, and it has become the largest producing oil field in the world.

The reason for such revisions is that the extent of an oil field cannot accurately be estimated from one drilling or a dozen. In the course of several years outpost wells are sunk for miles around the original find, and estimates of the reserve of the field are revised as the yield of the outposts indicate. While we started the war with a reserve of 19,000,000,000 barrels and ended it with 20,000,000,000, this increase did not represent just new discoveries. It represented the development and revised yield of the oil fields. New discoveries actually declined for the first few years of the war period, because we had neither the material nor the manpower for searching effectively.

And there is another heartening consideration when it comes to our reserve. The petroleum industry makes its estimates of our known oil supply on the basis of past methods of extracting the oil from the ground. This is the conservative thing to do. Only a few years ago we expected to get only 20 or 30 percent of the oil from the ground—that is, out of a known 100,000,000,000 barrels under our fields, we estimated we could get only 20,000,000,000 or 30,000,000,000 barrels.

Year by year our techniques have so improved that today experts generally agree that at least 50 percent of the oil can be recovered—about twice as much as we could formerly obtain. And this is still a conservative estimate. Actually, some modern, efficiently operated fields are yielding as much as 80 percent of their oil. In the oil business we must be conservative because, while we are estimating on sound engineering theory backed by experience, the thing we are estimating, like the neutrons in the atom bomb, cannot be seen.

In many oil fields in which recovery was low we can go back with new techniques for increasing the yield. We can get a "second crop." We can flush out remote "lost" deposits of oil sand by repressuring with gas or flooding with water.

We often make the mistake of thinking of oil fields in terms of square miles. Actually, we should think of them in cubic miles. This three-dimensional situation is due to the simple fact that different layers of oil often exist in one field, sometimes separated by many thousands of feet. And the presence of the deeper oil may not become known until many years after the shallower sand has been tapped. It is found by drilling deeper—vertical exploration.

Examples of this are legion, but a typical illustration is found in the field at Elk Basin, Wyo. This field was discovered some 30 years ago and wells were drilled 1,000 feet deep. The sand at this level produced for many years and the field neared exhaustion. Then, in 1942, a test well was drilled several thousand feet deeper and encountered a new oil pool, several times larger than the original one. Oil pools thus often lie one below another, like stories of a building. And we are far from having fully tested this vertical frontier, for the average depth of United States oil wells in recent years has been less than 5,000 feet, whereas we actually have found oil as deep as some 13,000 feet.

How do geologists presume to predict that there are at least 50,000,000,000 barrels of oil yet to be found in the United States? The answer is simple in principle, though, of course, complicated in detail. In the United States there is an area of approximately 2,500,000 square miles of sedimentary rock—the geological name for the kind of rock in which oil is found. Of this area, 1,500,000 square miles are favorable for the accumulation of petroleum, and scarcely half this territory has been thoroughly explored for oil. Studies of oil discoveries in the past show that, when thoroughly explored, from 1 to 3 percent of favorable territory produces oil.

Using only the lowest expectancy—1 percent—the geologists' calculations yield the 50,000,000,000-barrel figure. But there still is a chance—and a good one—that 3 percent or even more of some of the land will produce oil. In this case the potential of 50,000,000,000 may be increased.

Probably a good many readers live in States favorable for oil production, but not now producing. It may be that some of our future oil supply will come from their back yards or farms. These hopeful but nonproducing States are Arizona, Delaware, Georgia, Iowa, Maryland, Massachusetts, Minnesota, Missouri, New Jersey, Oregon, North Carolina, South Carolina, North Dakota, South Dakota, Utah, Virginia, and Washington. When the time comes that we need this oil, the petroleum industry will find it. There are hundreds of oil companies, large and small, that will be in on the search. Oil discovery and production today is engineered from top to bottom and every branch of science called upon, yet the smallest wildcatter has at his command the same geological techniques for discovery employed by the biggest companies.

But it must be remembered that while we are the largest oil-producing Nation of the world, we have only 15 percent of the world's favorable oil territory. We have produced already almost twice as much oil as the rest of the world combined, and we have gone more than twice as far, too, in progress.

Oil resources abroad are now very great—collectively, they far exceed our own. Can we expect a fair share if we need it to supplement our resources at home? The answer must be "yes." Our engineers, for the most part, discovered the world's oil. There is more vitality in the American petroleum industry than in any in the world. The average motorist probably does not realize that through our zeal to discover and negotiate, Americans today operate nearly one-half of the oil reserves of the world outside the United States. There is every reason to believe, in spite of some of our unfortunate experiences with expropriation in the past, that we shall continue to operate them. Trends toward peace and world amity are most impressive today; it is to be hoped that there will be a growing sense of security as time goes on.

Indeed, on purely business grounds the oil industry has less concern over the failure of the oil supply than of the development of atomic power. For if we ever do have the latter, we shall have it long before we "run out of oil." When we begin to run engines economically on atomic energy, oil will become a secondary, rather than a prime, source of power. By that time, however, it is likely that oil will have created a new industry for itself as a source of chemicals and special products; it will change its outlet, not lose it.

When you, as a motorcar buyer or driver, prick up a terrified ear to the prophets of oil-doom, remember that 63 years ago, 15 years after the completion of America's first oil well, the State geologist of Pennsylvania warned that oil wouldn't last long. Shortage predictions have come regularly since then. For example, some three decades ago the chief geologist of the United States Geological Survey issued this portentous warning: "Petroleum in the United States is a wasting asset. It is so far depleted as no longer to afford a secure foundation for the obligations based upon its continued adequacy."

Those were mighty words, but they weren't true. Oil continued to flow 30 years later in the period of its greatest trial—the recent war—despite such warnings. It licked the Nazis and the Japs. The industry fought to keep it flowing, even though costs rose in the face of fixed prices and its share of tools and men was not enough to maintain new discoveries. Yet we came out with greater reserves than we had to begin with. Now a new age of discovery begins. We can look to the future with confidence. There will be plenty of oil.

## Hands Across the Sea

EXTENSION OF REMARKS

OF

### HON. LEON H. GAVIN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

*Thursday, December 13, 1945*

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Bristol (Pa.) Courier of December 11, 1945:

HANDS ACROSS THE SEA

Is the British loan good or bad? Are its terms satisfactory? Does it finance socialism? Does the United States get a reasonable return for the large extension of credit involved?

A good many people will be asking themselves these questions during coming months—and perhaps years.

The answers are not easy. Very few persons will take the trouble to read through the long and extremely dry official statements. Those sufficiently interested will be largely partisan—they will be looking for evidence to back up a political point of view.

Scores of others will express vigorous opinions pro or con without knowing or caring what the exact facts are.

For those who are sincerely interested, there is one quite simple yardstick to measure comments and tell whether the author is dealing with truth or propaganda.

That yardstick is whatever statement may be made concerning the interest which the British Government is required to pay for the use of American credit.

Every New Deal propagandist is stating the interest to be 2 percent.

Unqualifiedly, that statement is false.

Whenever it is seen in print, or heard on the air, Americans ought to be on guard. Either the person who prepared the statement is too ignorant of his subject to make his opinions worth consideration or he is deliberately misrepresenting the facts.

The rate would be 2 percent if it were paid every year. But it is not going to be paid every year.

Deducting the years for which the plan specifically provides that no interest is to be paid, and figuring the interest on the same basis that interest is figured on long-term bonds sold at a premium or discount, the interest rate is 1.62 percent.

The distinction is very important. On current conditions, it costs the United States $1.92 a year to borrow every $100.

Loaning this borrowed money at $2 would give a profit of 8 cents on every $100 so loaned. Loaning it at a yearly rate of $1.62 means a clear loss every year of 30 cents to the United States Government.

But even the 1.62-percent rate is by no means guaranteed. Whenever the British Government decides to skip a year, it can do so with very little more formality than merely getting in touch with the President of the United States.

The terms of the clause providing for the waiver of interest are remarkable. They commit the United States in effect to waive the payment whenever the British insist.

"The Government of the United States," the document says, "will grant the waiver if the Government of the United Kingdom finds that a waiver is necessary," subject to reports and forecasts on internal economic conditions in the British Empire which would be impossible for the United States to either confirm or contradict.

But still more significant is the interest which the British labor government, now in process of nationalizing Great Britain, is asked to pay. This government will run for 5 years, unless sooner dissolved as a result of parliamentary revolt.

How much is the labor government promising to pay the American people for the use of $4,400,000,000 during those critical 5 years when dollar loans are so urgently needed to allow the buying up of underlying ownership of banks and industries to be nationalized?

Not one red cent.

The interest charges under the Truman plan are fixed to start December 31, 1951—after the end of the term to which the present labor government was elected.

This is a point which every American citizen ought to understand clearly.

The money concerned is his money. The brash New Deal remark that "they" had the money and it is on hand in the United States Treasury is the "bunk." Wherever it is, the

American people own it—not President Truman and his friends.

The proposed loan figures out to approximately $31.50 apiece for every man, woman, and child in America—$157.50 for every family of five.

That brings us to the $64 question: Do you, as an individual, want the Truman administration to hand over to the British labor government, which is openly antagonistic to the economic system under which you operate, $31.50 of your money to do as it pleases with for the next 5 years?

So far as the labor government is concerned, this would be a Christmas present. Future generations, and not those now in office in England, would have to worry about both repayment and interest.

"Hands across the sea" is a wonderful idea. So is the expression, "forgiving and forgetting."

But there is good reason to suspect that in the present case the American hands are for giving and the British hands extended only for getting.

## Administration of the Surplus Property Law

EXTENSION OF REMARKS
OF
### HON. ROGER C. SLAUGHTER
OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

*Thursday, December 13, 1945*

Mr. SLAUGHTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

OFFICE OF THE MAYOR,
*Kansas City, Mo., November 27, 1945.*
Hon. ROGER C. SLAUGHTER,
*House Office Building,*
*Washington, D. C.*

MY DEAR MR. SLAUGHTER: The record of the administration of the provisions of the surplus property law is a record of constant discrimination against local governmental agencies. The law contains specific provisions of priorities in the disposal of war surplus materials.

Last June, 8 months after the enactment of the law, the Surplus Property Board promulgated regulation No. 2. This regulation required the local governments to file a statement of needs, SPB 7, with the disposal agencies. These statements were filed with the regional office of the disposal agency but have been constantly ignored ever since.

Where disposal agencies sent out lists of available materials as required by SPB 2, the lists have consisted mostly of materials that were not desirable or were unusable by local governments. A minimum quantity of usable materials have appeared in these so-called notices of available property. In most cases it is impossible to identify and appraise the goods as crated.

On November 6, 1945, the War Surplus Board issued Administration Regulation No. 14, which provides an allowance to local governments of 40 percent discount off of original cost prices, which were highly inflated due to time-and-a-half and double time paid for labor costs. It also provides that Federal surplus is sold where is and as is. It further provides that the purchaser must assume all handling and transportation charges. When you consider that the 40-percent discount was based on highly inflated costs on merchandise of questionable condition such as is offered as Federal surplus, it could not be termed an advantageous offer except for the seller.

So far as local governments are concerned, surplus property disposal in this country simply does not exist today. The original regulation may have been a scrap of paper, as most of us believe, but at least it provided a method by which local governments were supposed to obtain surplus properties. It fixed responsibility for notification upon the disposal agencies in unmistakable terms.

I feel confident that the Members of Congress are eager to know what happened under the legislation which they adopted and will take immediate steps to have this law properly administered.

Respectfully yours,

JOHN B. GAGE, *Mayor.*

## Suggestions for a Larger National Guard

EXTENSION OF REMARKS
OF
### HON. THOMAS D'ALESANDRO, JR.
OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

*Thursday, December 13, 1945*

Mr. D'ALESANDRO. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I include the remarks of Gen. Milton A. Reckord, adjutant general of Maryland, printed in the Baltimore Sun of December 13, 1945, on military training:

GENERAL RECKORD REVEALS PLANS FOR NEW, LARGER NATIONAL GUARD

(By Howard M. Norton)

Plans for a National Guard three times larger than the prewar guard, with four times as many air units and heavy emphasis on mechanization, were revealed in detail for the first time yesterday by Maj. Gen. Milton A. Reckord, adjutant general of Maryland, who was chairman of the committee of fifteen generals which drafted the plans.

Maryland's famous Twenty-ninth Division will be reorganized as part of the new National Guard, General Reckord said.

The postwar guard will have a strength of 500,000 men, consisting of 24 divisions, he revealed.

TO HAVE 72 AIR UNITS

There are to be 72 air units—both transport and fighter—under the new plan, as compared with only 19 before the war.

Armored equipment and armored units will replace the old cavalry organizations; there will be no mounted or horse-drawn units in the National Guard of the future.

Motorized and self-propelled guns will replace the old horse-drawn artillery and the War Department pledges that the guard units will actually have this equipment, not mocked-up imitations.

AGE-IN-GRADE RULE

Younger and more efficient officers are to be secured, and the corps will be kept young and efficient by enforcement of a strict "age-in-grade" rule and extensive schooling.

The over-all aim, says General Reckord, is to have a well-rounded organization distributed over the country in such a way that the guard units in each industrial area will be constantly ready to defend their home areas.

The new plan, the general declares, assumes that there will be some sort of permanent conscription plan.

CONSCRIPTION ASSUMED

"If Congress fails to vote conscription, then it will have to make membership in the National Guard a lot more attractive in order to keep the new guard at full strength," he said.

The committee which drafted the plan for the postwar guard comprised five regular generals, five reserve generals, and five from the National Guard. Under General Reckord's leadership they approved the plan unanimously, and secured the unanimous approval of all sections of the War Department.

Here in the general's own words, is a digest of the officially approved plan:

"The strength of the National Guard of the future will be approximately 500,000 enlisted men together with the necessary officers, and will be the maximum within each State that can be recruited and maintained at a satisfactory standard.

NO HORSE-DRAWN UNITS

"The organizations and units allotted to the several States will be those which are required for the accomplishment of the mission of the National Guard and, when taken together with the units of the Regular Army and the Organized Reserve Corps, will insure an over-all balance force within the Army of the United States.

"Within the total allotment, organizations of the proper type will be allotted to each State and territory to enable it to accomplish the State mission.

"It will be interesting to note that there will be no mounted or horse-drawn units in the National Guard of the future. Armored equipment and armored units will replace old cavalry organizations; and motorized and self-propelled guns will replace the old horse-drawn artillery. Notwithstanding this fact, however, in the reorganization of the postwar National Guard the pride and traditions of old organizations will be utilized to the full."

FINE, BATTLE-SCARRED TWENTY-NINTH

"The 18 National Guard divisions which have performed in such a marvelous manner in north Africa, in Italy, in Europe, and in the Pacific will be reorganized and as far as practicable will be reallocated to the States from which they originally came.

"The old Twenty-ninth Division is 1 of the 18. The units of this organization entered Federal service on February 3, 1941, and the division is still in active service. It was one of the three divisions of the American Army which constituted the assault wave on the Normandy beaches on D-day. Men of Maryland, Virginia, the District of Columbia, and western Pennsylvania furnished the framework upon which this fine, battle-scarred organization was built.

"Air units of an appropriate type, antiaircraft artillery and signal aircraft warning units will have a high priority in the reorganization of the National Guard.

"Maryland will again be called upon to maintain a National Guard air unit as she has done since 1920. Air will form a very important part of the National Guard of the future."

THE BEST ARMY EQUIPMENT

"Prior to World War II the National Guard of the country supported only 19 air units, but in a postwar planning the National Guard will be called upon to support 72 air units. This will enable the larger States to maintain a number of units and, taken in connection with the antiaircraft, is designed to give to every industrial community throughout the Nation protection against enemy aircraft.

"All units of the National Guard are to be organized and equipped in a manner identical with that of similar Regular Army units. The National Guard of the future will not be asked to train with make-believe antiaircraft guns, with trucks representing tanks, with bags of flour representing grenades.

"The words, 'as far as practicable,' will have no place in the postwar National Guard. The equipment to be furnished them will be the best the Army has; it will be identical with that of the Regular Army.

QUALIFICATION REQUIREMENTS

"It is anticipated that the National Guard of the future will be tied in with universal military training and that the young men who completed basic military training will enlist in the National Guard in such numbers as to keep the guard at approximately war strength. Technically trained organizations in the guard will be allocated to those States having such qualified personnel available. This principle will be carefully followed in order that all organizations may maintain a high state of efficiency.

"Qualification requirements for officers in the future National Guard will be standardized in order that all officers grade for grade within all reserve components will be identical and the officers will be interchangeable.

"An 'age-in-grade' policy will guarantee that officers will not remain in grade too long. This principle will be so administered as to keep a continuous flow in motion, guaranteeing that each officer remain in a certain grade a definite period of years, after which he will be either promoted or step aside."

SECOND LIEUTENANTS

Waivers for physical defects will be on an identical basis with that provided for the Regular Army.

"In the initial reorganization appointments will be limited to those wartime officers who have clearly demonstrated their qualifications by actual performance in the grade or position contemplated, or who, through the satisfactory discharge of duties of corresponding and equal responsibility, have qualified for such appointments.

"Second lieutenants will be procured from among qualified enlisted men who satisfactorily complete courses at officer candidates school, or from among recent graduates of the Reserve Officers Training Corps.

"In order to maintain efficiency in all organizations, a mandatory age-in-grade provision will be adopted, and annual physical examinations will be given all officers. Examining boards will be composed of an equal number of Regular Army and National Guard officers."

EDUCATIONAL OPPORTUNITIES

"Officers of the National Guard will be afforded maximum opportunity for extending their professional education. This may be accomplished in several ways; by accepting temporary active duty with the Regular Army, by attendance at service schools and, for senior officers, attendance at Command and General Staff schools. Efficiency reports will be rendered on each officer.

"It is hoped that greater incentive than heretofore will be provided for men to enlist and serve in the National Guard. For those who have served 1 year in military training camp, a 2-year enlistment is provided—for all others, 3 years. The physical and educational standards for enlistment in the National Guard will be those prescribed for the Regular Army.

"Maintenance of efficiency and promotion among enlisted men will be afforded by attendance at service schools and detailed temporary duty with training forces. Selected enlisted men will be detailed to attend officer-candidate schools and, upon satisfactory completion of the prescribed course, will be appointed second lieutenants."

TRAINING SUPERVISION

"The training objective for the individual will be designed to develop and qualify personnel in all grades to perform all duties which reasonably may be assigned to them both in peace and for mobilization, and to maintain such standards of mental and physical fitness as are necessary for active field service. The unit training will insure that all units will be capable of immediate mobilization and field service.

"The training of the National Guard will be conducted by the officers of the Guard under the supervision of the commanding generals of the appropriate major forces.

"This is a definite change from the past procedure. Prior to World War II the Corps Area Commander was charged with the supervision of training, but in the future the Corps Area Command—now the Service Command—will be charged with supply; and the major forces—that is, Army Air, Army Ground, and Army Service Forces—will be charged with training. It is believed this change will guarantee much better supervision and will insure a better trained Guard."

SYSTEM OF ROTATION

"Regular Army instructors will be assigned to duty within the States in a manner similar to that which obtained in the past, but they will be responsible to the commanding general of the major force concerned rather than the Service Command.

"Normally, Regular Army officers assigned to duty as instructors will remain on duty for a period of 3 years and they will not be eligible for an extension of this period of duty. This will enable rotation and will guarantee that the National Guard will receive adequate and up-to-date instruction; and it will also benefit the officer who at the end of a 3-year tour will be required to serve with his own branch for a period of time before becoming eligible to again act as an instructor."

---

## Address of the Most Reverend Richard J. Cushing, Archbishop of Boston, at the Communion Breakfast of the St. Vincent De Paul Society

EXTENSION OF REMARKS

OF

### HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

*Thursday, December 13, 1945*

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include a splendid, powerful, and timely address made on Sunday, December 9, 1945, at the communion breakfast of the St. Vincent De Paul Society in Cathedral Hall, Boston, Mass., by the Most Reverend Richard J. Cushing, D. D., archbishop of Boston, on the importance of UNRRA in the saving of human beings who are suffering acute distress throughout the world, and the vital necessity of additional appropriations by the Congress before Christmas to assure the undisturbed continuance of UNRRA in its mission of human relief:

At the beginning of recorded history Cain killed his brother Abel. Almighty God asked him, "Where is thy brother?" Cain answered, "Am I my brother's keeper?" Centuries whirled away into space, and one day the Christ, the new Abel, came down to this earth because He was His brother's keeper. Ever since He is the ideal of Christian charity.

The scope of charity embraces everything we do for our fellow beings out of the love of God without any hope of material reward. The challenge to charity is thus a challenge of Christianity. If we love God, then love of neighbor is the necessary corollary of love of God. "A new commandment I give unto you, that you love one another as I have loved you."

In our day countless tongues from bombed homes, prison camps, and roofless sanctuaries are pleading, "Will you be my keeper, as Christ has been yours?" What will be our answer? Suppose that conditions in America and Europe were reversed. Suppose one section of the United States was as hungry as Greece; suppose husbands and fathers in another section were deported to a foreign land and all children exiled or left to starvation; suppose an enemy took the produce from our farms as they overran our country.

On the other hand, suppose that Europe was blessed with the same abundance with which we are blessed. In that case, would we not expect the people of Europe to assist us, and would we not consider them remiss in human kindness, if they refused to do so? Apply then, the Golden Rule of the Saviour: "All things whatsoever you would that men should do to you, do you also to them."

Now that for all practical purposes is the aim of what is known as the United Nations Relief and Rehabilitation Administration.

We agreed to contribute 1 percent of our national income for 1943 to that organization. Many other nations did the same. Everybody recognized that immediate relief for starving people in devasted countries was the first concern of a war-relief program. To the present time we of the United States have failed to make good our promise. Our Congress has been discussing the matter for months. In the meantime disease and death are rampant. "Am I my brother's keeper?"

We are told that a free press should be contingent upon the giving of relief to any country. All of us are in favor of opening the channels of news to every land, but Christian charity compels us to feed, clothe, and house the starving and the naked wherever they are. We attached no rider to our lend-lease shipments of war materials. Should we now attach one to charity? If we do, and if the UNRRA should fail for lack of funds, then the Good Samaritan has been waylaid.

The conditions in war-ridden lands beggar description. How can we comprehend the appalling situation in Poland, where 800,000 people are living in dugouts and holes in the ground, and where 10,000 die monthly from tuberculosis. "Am I my brother's keeper?"

How can we estimate the sufferings in Greece where the population must try to survive this winter on about one-third of the American consumption of food calories or in Yugoslavia where 75 percent of the adults, and 90 percent of the children, are barefooted; where 66,000 war casualties are limbless, and the year's crop will be half of the normal supply? "Am I my brother's keeper?"

How can we describe the plight of Austria when in Vienna alone, 5,000 people are dying each month from tuberculosis and all indications point to an increase during the coming months?

The desperate conditions and desperate need in the world today defy the comprehension of the secure, the well-fed, the warm and well-housed. It has been estimated that over 90,000,000 of our European allies, already weakened by semistarvation, will need shipments of 9,000,000 tons of food this winter if they are to be saved. The peoples of Greece, Yugoslavia, Czechoslovakia, Poland, Italy, China, and several other countries which have no credit resources will not eat without UNRRA.

Almost 25,000,000 people are milling back and forth in Europe—displaced, homeless, completely destitute. The destruction of housing facilities in Europe and China is tremendous, and the cruel expulsion of long-established populations of German origin from eastern Europe increases the horror of the world's uprooted, cruelly begun in the early days of the war. "Am I my brother's keeper?"

This litany of misery can be increased until it embraces every war-stricken land of Europe and elsewhere. In all human history there was never such sorrow, suffering, and starvation.

We may differ in great or small measure from these afflicted nations in matters pertaining to politics and human rights, but is it not a beautiful thing, despite our differences, to help our neighbor in his misery? And is it not a beautiful thing to contemplate many nations blessed with an abundance uniting, despite their own differences, in a work of brotherly love resulting from the pooling of resources to bring relief to the victims of heartless war?

The work of the United Nations Relief and Rehabilitation Administration must not fail. Thank God, Congress has taken the necessary first steps toward meeting our inescapable obligations. Friday morning the hearts and the consciences of all the American people must have been eased when they read in the newspapers that the House of Representatives had approved the appropriation needed in order to clear the good name of the United States, not so much in the eyes of our allies, as in the eyes of millions of people in Europe whose morale in resistance and in survival was kept alive by the promises we made to UNRRA. Last week there appeared to be a shocking danger that our Nation might default. Thursday's vote in the Congress indicates that it intends to abide by its promises.

However, there is still urgent need for alert, insistent, uncompromising public opinion on this matter. Every person who loves the fair name of the United States and who is anxious to alleviate the appalling situation of innocent millions all over the world will demand immediate further action in Congress so that before the end of this year food and other absolutely vital supplies can be bought and shipped to the destitute in liberated Europe. Last week's vote is in the right direction; but the problem is not solved. Delay can still mean death. The appropriation which the Congress has now agreed to provide should be passed by both Houses before they recess December 20. Otherwise the winter will be gone, and with it hundreds of thousands of lives, before funds are put to work in critically needed relief and in proving our national good faith.

We have a moral duty to make known our opinion on this matter and to watch very carefully the vote and the action in its regard of our elected representatives in Congress. This is not a political question and it should not be permitted to be turned into one. This is a question of keeping pledges we, as a people, made; it is a question of saving millions of lives; it is a question of averting conditions which might easily lead to another war; it is the age-old question: "Am I my brother's keeper?". Write immediately, my dear men, to your representatives in Congress to the effect that we are our brother's keeper regardless of his politics, his economics, his race, or his color. We have the great opportunity of laying the roadway of future peace on the rockbed of charity and justice, for the prospects of future peace depend in great measure on our ability to give renewed life and strength to the sick and dying people of the war-ridden nations. If we do not measure up to the task, the basis for an enduring peace will not be laid in this generation.

## American Watch Manufacturing Industry

EXTENSION OF REMARKS
OF
### HON. PEHR G. HOLMES
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
*Thursday, December 13, 1945*

Mr. HOLMES of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following memorandum of facts by the committee of the American Watch Manufacturing Industry regarding the American Watch Manufacturing Industry's position in connection with the State Department's representations to Switzerland concerning exports of watches to the United States:

1. The American watch-manufacturing industry, consisting of Bulova, Elgin, General Time Instruments, Hamilton, Ingraham, New Haven, U. S. Time (formerly Waterbury), and Waltham have been out of the civilian market since June of 1942, at which time their facilities were completely converted to the manufacture of war goods. Some interference with civilian watch manufacture occasioned by the early acceptance of war orders had already begun by 1941.

2. The war has demonstrated that the American watch manufacturing industry is absolutely essential to the defense of this Nation.

3. All during the war years Switzerland has had unrestricted access to the American market and no competition therein from any source whatsoever. For 10 years (1931–40) prior to the war, imports of Swiss watches into this country averaged less than 2,000,000 units annually, with no single year's importations exceeding 3,000,000 units until 1940. Beginning in 1941, as shown by the following table, importations of Swiss watches increased substantially:

| | *Number* | *Value* |
|---|---|---|
| 1941 | 4,300,513 | $13,778,248 |
| 1942 | 5,292,712 | 19,211,681 |
| 1943 | 7,996,589 | 34,984,113 |
| 1944 | 6,912,332 | 37,200,843 |
| 1945 (first 10 months) | 7,474,754 | ---------- |

These have been practically all jeweled watches. Note the disproportionate increase in value between the year 1942 and subsequent years. The demand for watches during the war years has been currently satisfied by these importations, leaving the American industry without a pent-up demand for its peacetime product; a situation which is unique, so far as we know, in the category of war-converted industries.

4. The American industry called this situation to the attention of the Committee for Reciprocity Information. Hearings have been held at which representatives of both the American industry and the importers have presented their views. Action was taken only after both sides had been heard.

5. No quota on watch imports has been imposed by the State Department. It merely has suggested to Switzerland that it, Switzerland, voluntarily limit its watch exports to this country from December 1, 1945, to December 31, 1946, in order to give the American industry a chance to reestablish itself in the American market. As we understand it, the limitation suggested is 3,000,000 units for this 13-month period.

6. This action by the State Department on behalf of an essential American industry has been seized upon by the importers to launch a smear campaign against the American watch-manufacturing industry, and in particular against Elgin, Hamilton, and Waltham, jeweled-watch manufacturers.

(a) A two-page telegram was dispatched by the Watch Assemblers Association on December 5 to jewelers and department stores all over the country, followed by a supplementary letter the next day, asking the recipients to wire their Congressmen, Senators, and the Secretary of State in protest. We also understand that two of the largest importers, namely, Gruen and Longines, have since sent out similar telegrams. Therefore, any protests which may be received will have been inspired by this action of the importers.

(b) The anticipated demand for watches has been exaggerated in an effort to frighten retailers into thinking that the State Department's suggestion, if agreed to by the Swiss, would result in a shortage of watches. No allowance is made for the fact that the American industry is returning to the manufacture of civilian watches.

(c) A congressional spokesman for the importers alleges that the Department of Justice has charged the Elgin, Hamilton, and Waltham Cos. with having "formed together in a conspiracy in restraint of interstate commerce." This is absolutely false, there being no case pending against these companies jointly. The fact is that before Pearl Harbor indictments were returned against these three companies individually (not jointly) dealing with their arrangements with wholesalers. At the request of the Army and Navy, in view of the importance of the production of these companies to the American war effort, these cases were deferred for the duration of the war. They are still pending and the companies are contesting the Government's charges. Nothing has been said about the multitudinous prosecutions which have been brought against the watch importers for violations of OPA price ceilings, actions which resulted from the profiteering efforts of these importers.

(d) This same congressional spokesman has alleged that the American companies seek to establish a monopoly. This is ridiculous; the American manufacturers have never supplied more than 50 percent of the American jeweled watch market under the most favorable tariff treatment, and under the reduced rates of the 1936 trade agreement with Switzerland had their share reduced to less than 40 percent. The Swiss on the other hand were enabled by the treaty to increase their share to over 60 percent prewar, and during the war, and as of today, have not only complete control of the American market, but the world market as well. The latter they have always completely dominated. The Swiss industry is, in fact, a government controlled and dominated trust. They fix prices, they control the exportation of machines used in watch making and, during the war and since, have refused to sell such machinery to watch manufacturers in this country. During the war they refused to permit sales of watches to American manufacturers who were desirous of keeping their trade names before the public while they were engaged in the fabrication of war goods, although the Swiss increased their sales and supplied new accounts in this country after such refusal.

(e) It is also claimed that the American industry would be allowed to reap a rich harvest by greatly increasing the price of their product. We observe that there still are price ceilings on watches and that the American industry has adhered to those ceilings. As a matter of fact the importers have been permitted by the OPA to increase their prices despite swollen profits not subject to renegotiation, whereas the American industry has not been permitted to increase theirs at all, not even an equivalent amount.

7. On the alleged factual side of the data that has been made public by the importers, there are certain misconceptions which should be clarified.

(a) It is said that the suggestion of the State Department is contrary to the administration's international trade policy. If that policy is to encourage the destruction of

American job-producing industry, the assertion is correct. However, every time the reciprocal-trade-agreements program has come before the Congress for approval, it has come with the assurance that the authority sought would not be used to injure, let alone destroy, American business. The last extension bill came with President Truman's expressed assurance to that effect. The State Department's mere suggestion that the Swiss voluntarily do some reciprocating certainly is, therefore, within the announced intentions, at least, of the administration.

(b) By failing to comment thereon, the implication is left that there is no limit to the duration of the recommended self-imposed restriction. The fact is, as we understand it, that the State Department has suggested only a 13-month period.

(c) It has also been said that proof was submitted to the Committee for Reciprocity Information "that there is a tremendous backlog of demand for watches and that this demand in 1946–47 will run up to about 10,000,000 watches." If by that statement is meant 10,000,000 over the 2 years, it is approximately correct, and the importers' fair share of a 5,000,000 annual market in each of the years 1946 and 1947 would, based on historical percentages, run not over the 3,000,000 units suggested by the State Department as a quota to be self-imposed on the Swiss during the 13 months beginning December 1, 1945. If 10,000,000 annually was intended, the figures have been grossly exaggerated, since we know of no surveys, including those made by the War Production Board, which mention watches among the immediate desires of the purchasing public. As a matter of fact, the War Production Board survey did not show any demand whatsoever for watches. It is only common sense to conclude that with imports during the war ranging three and four times their prewar average that the market has already been oversold. Obviously, the things which the consumer's dollar will be spent for are those things which have been off the market entirely during the war years. Watches are one of a very few commodities that could be had during the war, and, with other things not available, considerable anticipated buying occurred. It is significant the surveys mentioned are not identified. Another significant thing which has occurred recently is that the retail prices being advertised for certain types of watches are much lower than they used to be—a development inconsistent with the claim of shortage.

8. Much emphasis has been placed on the thousands of people employed in and as a result of the importing business. No figures are given. The American manufacturers employ, normally, approximately 20,000 workers in their movement-manufacturing operations alone. Furthermore, they support exactly the same types of related industries as do the importers, and others in addition thereto, because they require supplies of the materials which go into the movements and into the processes of manufacturing the movements; these the importers do not support, except in Switzerland.

9. The rather ludicrous assertion is made that we need this expanded import trade to keep our merchant marine busy. We had supposed it was common knowledge that one small cabin on almost any type of seagoing vessel would more than accommodate the 10,000,000 units over which so much concern has been expressed.

10. Even the old argument about smuggling has been resurrected from the moth balls. The Swiss have undertaken to control this, and it is assumed that, as a matter of good faith, they will continue to do so.

11. One thing has been carefully overlooked. Now that the war is over many uncontested markets closed to Switzerland during the war will be opening up again. This will be occurring while the American industry is getting back into production. Switzerland can now better afford to reduce her exports to America than after she has geared her production to holding more than her fair share here, plus the markets now reopening to her. It is now, also, that the American industry needs assistance to get back into the market after a long time out of it in the service of its country. Is it too much to expect some semblance of reciprocity from one of the nations saved by the participation of this country in the war, particularly when it is remembered that that same nation not only had an unrestricted wartime outlet for its civilian products here, but was also supplying war materials to an enemy of all mankind?

## Bonds for Loans to Britain and Other Nations Should Be Sold to Individual Americans, Not to Banks, for the Specific Purpose of Foreign Loans; Try It and See What Happens

EXTENSION OF REMARKS
OF
## HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Thursday, December 13, 1945*

Mr. REED of New York. Mr. Speaker, again I wish to call attention to a proposed gift—deceptively called a loan—of $3,750,000,000 to be made by the New Deal administration to Great Britain. The interest rate—another piece of hypocrisy—was set at 2 percent; but if and when the interest is ever paid, the effective rate will be about 1.63. It should be mentioned also that in granting the $3,750,000,000 checking account to Britain, the United States also writes off some $25,000,000,000 of lend-lease material used during the war.

Mr. Speaker, I trust that I shall not be called a carping critic for calling attention to this proposed gift of $3,750,000,000 to Britain. On yesterday, December 12, 1945, I pointed out that if the administration makes this stupendous gift to Great Britain, it will furnish a precedent for similar gifts to other nations. There are other persons alarmed at the consequences which will follow these hand-outs of billions to foreign nations. I quote verbatim excerpts from an article by Henry J. Taylor which appeared in the Washington Daily News, December 10, 1945:

OTHER NATIONS SEEK LOANS LIKE BRITAIN'S

(By Henry J. Taylor)

A loan to the British Government is only the first on our loan list. What we do about this we must be ready to do for many other nations.

France came in for a $550,000,000 loan last week. Russia, China, Italy, Belgium, Poland, and a dozen other nations also are waiting to see what rule book we write for the billions for Britain.

Each nation expects equal treatment. We are setting a foreign-loan pattern, many times larger than after the last war.

We expected to be repaid last time. But after every country, except Finland, defaulted (the countries borrowing now, including England, still are in default) the idea grew up that we should not have expected to be paid back in the first place.

Everyone knows that we cannot give away our money and our resources forever; there is a bottom to our barrel, and, in many ways, we are starting at the bottom now.

We shall have to be careful what we do. The money itself is important. We all pay it. The over-all sum for which loan applications probably will be made is estimated at $20,000,000,000.

Our duty is to lend aid, according to our ability.

Any gain our foreign friends might make now is temporary if it violates the American people's idea of sound judgment. Anything but a program for the most businesslike loans will hurt the world in the long run more than the loans will help today.

Unless our loan affairs are wisely handled the boomerang from the results could increase the already too good possibility that America will wash her hands of everything outside the 12-mile limit. In this way the cause for world collaboration would receive such a setback as to play directly into the hands of the isolationists. The issue is even more broad for the future than for the present.

The principles are the things to grasp now.

First, we should put a limit on our total postwar loans, both in time and in dollars.

It is the total which affects us more than the individual amount to any nation. Until this total is at least estimated, and formal congressional action taken to limit our aggregate loans, no intelligent action can be taken on Britain's request for $4,000,000,000.

Any individual loan must be made in proportion to the total sum.

Second, we should restrict our postwar loans to whatever nations took elementary steps in their own and our behalf before applying for any loan. Many of the most flagrant discriminations against America's interest, such as the black-out on information about Russia can be corrected by prospective borrowers before they negotiate at all.

Third, any nation should be required to utilize its own assets to whatever degree it can, for funds or as collateral, before we supply additional funds.

As a Senator, Mr. Truman wrote in a report to the Senate, November 5, 1943: "Before authorizing lend-lease the Congress expressly requested and received assurances that lend-lease assistance would be extended only where the recipient was fully utilizing all his own resources."

Yet Great Britain actually increased her assets here by $1,500,000,000 during the war and she has an estimated $3,600,000,000 in gold, cash, and securities here today.

Mr. Speaker, there is nothing more essential to the ultimate welfare of this country and to the world than to make the United States a solvent nation. The solvency of the United States is a condition precedent to the peace of the world and to our ability to be of service to suffering humanity.

Mr. Speaker, how solvent is the United States? I wish to invite attention of the membership to the financial status of the United States Government.

When the Members of the House shall have examined the debt to which the present generation and our posterity are committed, I offer a suggestion with reference to any gift or loan to a foreign nation. The suggestion is this: That the dollars for the British gift or loan of $3,750,000,000 and all other loans to foreign nations, if and when made, shall come only from funds raised by the sale

of long-term bonds to individual investors for the specific purpose of the foreign gift or loan.

Mr. Speaker, under leave to extend, I am inserting a summary of the financial status of the United States Government:

*Summary of financial status*

| | |
|---|---|
| Direct public debt (as of Dec. 31, 1944) | $230,630,233,709.36 |
| Contingent liabilities of the United States (as of Dec. 31, 1944) | 24,548,752,812.62 |
| Unliquidated obligations incurred against appropriations and contract authorizations | [1]67,057,064,000.00 |
| Total guaranteed loans | 6,545,526,493.00 |
| Insurance in force | 308,116,643,131.00 |
| Total gross debt and contingent liabilities | 636,898,220,145.98 |

[1] As of Nov. 30–Dec. 31, 1944, not available.

*Owing to the United States by foreign countries as of July 1, 1945*

| | |
|---|---|
| Principal amount | $11,435,365,215.21 |
| Interest postponed and payable under moratorium agreements | 184,696,634.30 |
| Interest accrued and unpaid under funding and moratorium agreements | 3,171,278,458.02 |
| Total principal and interest owing the United States | 14,791,340,307.53 |

*Proposed loan to Great Britain*

| | |
|---|---|
| Cash | $3,750,000,000.00 |
| Lend-lease materials and surplus property goods | 650,000,000.00 |
| Total | 4,400,000,000.00 |
| Great Britain presently owes us from previous war, World War I or subsequently but prior to World War II a principal amount of | $4,368,000,000.00 |
| paid interest | 2,047,664,782.58 |
| Total owing the United States from prior to World War II transactions | 6,415,664,782.58 |
| If present proposed loan and advances are made they will owe the United States | 10,815,000,000.00 |

Will we be called upon to loan them the money to pay back this debt to us? Or will it again be charged off to the poor business ability of Uncle Shylock?

*Financial picture of the United States at present*

| | |
|---|---|
| (1) Direct public debt (as of Dec. 31, 1944): | |
| Interest-bearing debt | $228,891,263,312.84 |
| Matured debt on which interest has ceased | 185,900,520.26 |
| Debt bearing no interest | 1,553,069,876.26 |
| Total gross debt | 230,630,233,709.36 |
| (2) Contingent liabilities of the United States (as of Dec. 31, 1944): | |
| Obligations guaranteed by the United States | $1,513,997,139.36 |
| Obligations issued on credit of United States: | |
| Tennessee Valley Authority bonds | 6,300,000.00 |
| Funds due depositors, Postal Savings system | 2,206,694,367.00 |
| Federal Reserve notes (face amount) | 20,821,761,306.26 |
| Total | 24,548,752,812.62 |
| (3) Unliquidated obligations incurred against appropriations and contract authorizations | [1]67,057,064,000.00 |
| (4) Data supplied later not available at time of above. | |
| Data furnished in Treasury letter of Mar. 23, 1945, and not included in independent offices hearings (p. 1298): | |
| Total guaranteed loans | 6,545,526,493.00 |
| Insurance in force | 308,116,643,131.00 |
| Total gross debt and contingent and other liabilities | 636,538,220,145.98 |

[1] As of Nov. 30, 1944, not available as of Dec. 31, 1944.

*Statement showing total indebtedness of foreign governments to the United States, July 1, 1945*

| Country | Total indebtedness | Principal unpaid [1] | Interest postponed and payable under moratorium agreements | Interest accrued and unpaid under funding and moratorium agreements |
|---|---|---|---|---|
| Funded debts: | | | | |
| Belgium | $503,579,077.60 | $400,680,000.00 | $3,750,000.00 | $99,149,077.60 |
| Czechoslovakia | 175,072,336.13 | 165,241,108.80 | | 9,831,227.33 |
| Estonia | 24,491,700.81 | 16,466,012.87 | 492,360.20 | 7,533,327.74 |
| Finland | 8,574,063.24 | 7,842,131.29 | [4]731,740.93 | 191.02 |
| France | 4,606,635,664.40 | 3,863,650,000.00 | 38,636,500.00 | 704,849,164.40 |
| Germany (Austria) | [2]26,024,539.59 | 25,980,480.66 | | 44,058.93 |
| Great Britain | 6,415,664,782.58 | 4,368,000,000.00 | 131,520,000.00 | 1,916,144,782.58 |
| Greece | 36,873,535.10 | 31,516,000.00 | 449,080.00 | 4,908,455.10 |
| Hungary | 2,740,938.07 | 1,908,560.00 | 57,072.75 | 775,305.32 |
| Italy | 2,052,213,409.34 | 2,004,900,000.00 | 2,506,125.00 | 44,807,284.34 |
| Latvia | 10,114,980.04 | 6,879,464.20 | 205,989.96 | 3,029,525.88 |
| Lithuania | 9,064,140.62 | 6,197,682.00 | 185,930.46 | 2,680,528.16 |
| Poland | 306,497,824.20 | 206,057,000.00 | 6,161,835.00 | 94,278,989.20 |
| Rumania | 74,926,279.75 | 63,860,560.43 | | 11,065,719.32 |
| Yugoslavia [3] | 63,396,718.78 | 61,625,000.00 | | 1,771,718.78 |
| Total | 14,315,869,990.25 | 11,230,804,000.35 | 184,696,634.30 | 2,900,369,355.60 |
| Unfunded debts: | | | | |
| Armenia | 27,391,079.23 | 11,959,917.49 | | 15,431,161.84 |
| Russia | 448,079,237.95 | 192,601,297.37 | | 255,477,940.58 |
| Total | 475,470,317.28 | 204,561,214.86 | | 270,909,102.42 |
| Grand total | 14,791,340,307.53 | 11,435,365,215.21 | 184,696,634.30 | 3,171,278,458.02 |

[1] Includes principal postponed under moratorium agreements and principal amounts not paid according to contract terms.
[2] The German Government has been notified that the Government of the United States will look to the German Government for the discharge of the indebtedness of the Government of Austria to the Government of the United States.
[3] This Government has not accepted the provisions of the moratorium.
[4] Also includes interest postponed and payable under agreements of May 1, 1941, and Oct. 14, 1943.

*Some of the British Government holdings in United States industry*

| | *Shares* |
|---|---|
| General Motors Corp | 434,000 |
| Radio Corp. of America | 177,000 |
| Amerada Petrol | 133,000 |
| Chrysler Corp | 36,000 |
| Standard Oil of New Jersey | 198,000 |
| Standard Oil of Indiana | 315,000 |
| Socony-Vacuum Oil Co | 130,000 |
| American Telephone & Telegraph Co | 70,000 |
| United States Steel (preferred) | 21,000 |

Would it not be good business to have the British Government liquidate these holdings into cash and use that in reducing their debt rather than to continue drawing earnings from that source while at the same time trying to negotiate further loans from the United States taxpayers?

Have we again reverted to the status of colonial days when we were crying "taxation without representation"?

Are the American taxpayers to uphold the British Empire forever?

Certainly good business sense demands that we draw a line somewhere. The ability of the American taxpayers is not without limits.

Present loans will beyond doubt be followed by others to other countries, and so on without end. Where is the money coming from?

## Shortage of Penicillin

EXTENSION OF REMARKS
OF
## HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
*Thursday, December 13, 1945*

Mr. FLOOD. Mr. Speaker, since my remarks of December 10 having to do with the temporary shortage of penicillin in my district, I have been in touch with Mr. Eugene J. Earley and Mr. Roy S. Koch of the Civilian Production Administration. These gentlemen have been most cooperative in presenting to me the facts surrounding the sarcity of penicillin, and have assured me to my satisfaction that the reasons for the shortage were uncontrollable. They have assured me, as well, that the situation in Wilkes-Barre had been corrected and that ample supplies will soon be available for my district and the Nation at large.

I am presenting, further, a letter on this subject received by me today from the Civilian Production Administration:

This will confirm our discussion yesterday with Mr. E. J. Earley regarding your statement on the shortage of penicillin which appeared in the CONGRESSIONAL RECORD of December 10, 1945.

Attached is a copy of direction 4 to CPA Order M-300, effective November 23, 1945. This order provides that 40 percent of the penicillin produced each month must be used to fill hospital orders since hospitals have the most urgent requirements for the drug. Considerable more penicillin is being made available for hospitals in December than in any previous month.

Allocation of penicillin was discontinued August 31, 1945, in accordance with WPB's policy of revoking controls when no longer necessary. Unfortunately production dropped approximately 10 percent in September, probably, because of the poor quality of corn-steep liquor available for use in the nutrient media for culturing penicillium notatum. At the same time, export licensing of penicillin was discontinued and the export demand increased for UNRRA, Latin America, European and other countries, except for the United Kingdom which is self-sufficient with regard to penicillin. In September, also, the Food and Drug Administration permitted the initial distribution of certified lots of penicillin tablets, ointments, and other dosage forms which are convenient for patient and physician alike. This increased the over-all demand for penicillin to such a point that Direction 4 to M-300 became necessary to protect hospital supplies.

In the last several weeks the quality of corn-steep liquor has improved and is result-

ing in increased production of penicillin in December. The export licensing of penicillin was reinstated December 1, 1945, by the Office of International Trade Operations of the Department of Commerce at the request of Civilian Production Administration. By agreement between CPA and OITO, an export quota of 170,000,000,000 units was established for December, or a reduction of 15 percent from the quota established for July and August, respectively.

Physicians and pharmacists may obtain their supplies of penicillin from the portion of production not reserved for hospitals. As production increases this month additional penicillin should be available to these distribution channels.

We have taken steps to insure that areas in short supply receive prompt shipment of penicillin. Should you have any further information regarding inability to obtain penicillin, we would be pleased to have you refer such cases to our attention. We assure you prompt steps will be taken to alleviate any hardship within the limits of available supply. The CPA is watching the penicillin situation carefully and will place penicillin under complete allocation, if necessary, in order to insure equitable distribution.

Your interest in penicillin distribution is appreciated and if we can be of any further service please do not hesitate to call upon us.

Very truly yours,

ROY S. KOCH,
*Civilian Producing Administration.*

## Palestine

EXTENSION OF REMARKS
OF
### HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
*Thursday, December 13, 1945*

Mr. FLOOD. Mr. Speaker, I am more than ever convinced that the time has arrived for immediate congressional action with reference to Palestine. The action of President Truman in naming representatives of the United States to the International Commission that is to inquire into conditions in Palestine has emphasized the need to us to affirmatively declare the urgency of restoring immigrating into that country and to establish it as a Jewish commonwealth. It is vitally necessary that the Commission and the nations of the world understand fully the position of the United States with regard to Zionist aims in Palestine. I am advised that the Senate will take action on an identical resolution to the one I am introducing in the House today, the Senate Foreign Relations Committee reporting out Senator WAGNER'S resolution favorably 17 to 1.

The facts with regard to the tragic conditions of the displaced Jews in Europe are established. To abandon the Jewish victims of Nazi crime would destroy the confidence of common people in the ability of Allied statesmen and the Members of this honorable body to honor their high professions.

Under all of the facts and all of the law, the law of God as well as of men, the rescue of these unfortunate people can brook no further delay. That is true as well to assure that Palestine, the historic motherland of the Jewish people, become, as soon as possible, a Jewish democratic state.

## The Moral of Pearl Harbor

EXTENSION OF REMARKS
OF
### HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
*Thursday, December 13, 1945*

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Times of December 12, 1945:

THE MORAL OF PEARL HARBOR

Testifying before the Congressional Pearl Harbor Committee yesterday, General Marshall said that President Roosevelt had personally ordered that all warnings of imminent war sent to field commanders in the Pacific should also include an instruction to them not to precipitate hostilities, but to wait for an overt act by the Japanese before hitting back. That our field commanders did so, at Pearl Harbor and in the Philippines, is evident from the result. If anything had still been needed to knock into a cocked hat the suggestion insinuated by some of the probers and voiced openly by their publicity claque that President Roosevelt "plotted" Pearl Harbor in order to drag the country into war, this statement of the American Chief of Staff at the time should complete the job.

But General Marshall's testimony likewise points another lesson which is of the utmost importance, not to the clarification of history, but to our future security. And that is the lesson of the vulnerability of the democracies. Because democracies do not go to war, and do not even prepare for war, until the overwhelming majority of the people is convinced of imminent peril by overt acts on the part of an aggressor, the aggressor will always have the advantage of them. That applies not only to the surprise attacks with which aggressors have learned to begin their wars, but to the whole preparation and planning of war, in which the initiative is a priceless advantage.

The Japanese had demonstrated the advantage of the sneak attack nearly 40 years before Pearl Harbor, when they crippled the Russian Fleet at Port Arthur, Hitler had improved on their technique, in both the military and diplomatic fields, a fact which enabled him to placate the democracies while he prepared for war, and then to attack them individually for the purpose of eliminating them one by one. The revelations at the Nuremberg trial and the admissions of the Japanese leaders themselves have demonstrated how both the Nazis and the Japanese plotted to wage war against the United States; how Goering called for planes able to bomb New York as early as 1938; how Hitler was preparing to seize islands in the Atlantic as stepping-stones to the Americas; how Hitler and Matsuoka, the Japanese foreign minister, concerted their plans early in 1941; how the Japanese war lords obtained an undated war declaration from their Emperor and prepared to put it into effect at a time strategically most convenient for them, which turned out to be December 8, 1941, their time. We did not know these details then, but only the politically blind could mistake the purposes which they had loudly proclaimed by their past actions. It is to the credit of President Roosevelt and his associates that they realized the danger and did what they could—through such measures as lend-lease—to prepare for it.

Despite this, Pearl Harbor happened. How far military negligence or misjudgment was responsible for it, or at least for the extent of the disaster, should be revealed when all the evidence is in. But it is already clear that there were two main factors in the situation. The first was the misjudgment of the spirit of this country, which tempted both Hitler and Japan to attack us in the confident expectation of victory. The second was the determination of the American Government, well known to our enemies, not to strike the first blow, which enabled them to plan at leisure and to strike at a time and place of their own choosing.

In short, we deliberately surrendered to our enemies the element of surprise, against which there can be no absolute protection, even in the midst of war. We did so because American public opinion would not permit the Government to take the initiative in the face of even known danger without so splitting the country as to impair its effectiveness for war. That is the price we pay for liberty and democracy. If the price was high in this war, it is bound to be much higher in any future war.

## Department of State Waits

REMARKS
OF
### HON. ALVIN F. WEICHEL
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
*Thursday, December 13, 1945*

Mr. WEICHEL. Mr. Speaker, the Department of State, speaking for the President, does not even give lip service to recalling 600 ships from foreigners to carry our boys home.

On November 20, 1945, I introduced H. R. 4760 to get back our 600 ships now used by foreigners.

The State Department wants to wait for information from the War Shipping Administration, even after the War Shipping Administration and the Maritime Commission have failed, neglected, and refused to tell about 7,500 Government-owned and chartered ships now under their control and operation.

Yet, the Department of State, the War Shipping Administration, and the Maritime Commission are under the absolute control of the President.

As to the recalling of the ships with foreigners, the State Department says:

DECEMBER 10, 1945.

The Honorable S. O. BLAND,
*Chairman, Committee on the Merchant Marine and Fisheries,*
*House of Representatives.*

MY DEAR MR. BLAND: By your letter of November 24, 1945, which I acknowledged on November 28, you requested a report for your committee on the bill (H. R. 4760) to provide for the securing of our ships from foreign nations and the return of the armed forces overseas, and for other purposes.

The bill proposes the immediate recall of merchant vessels owned by this Government and now operated by foreign countries, in order to expedite the return of our overseas forces. You are doubtless obtaining from the War Shipping Administration and other agencies responsible for the transport of our armed forces from overseas information as to whether the return of our overseas forces is in fact being delayed by insufficiency

of troop transport capacity and as to whether the ships referred to in the bill could be used as troop transports to expedite this movement.

Accordingly, I would prefer to reserve comment on the bill until the facts in this connection are reported.

The Department has been informed by the Bureau of the Budget that there is no objection to the submission of this letter.

Sincerely yours,

JAMES F. BYRNES.

Mr. Speaker, it is a pity that our overseas men must suffer such rot after waiting more than 6 months to be brought home.

## When Did War End?

REMARKS

OF

### HON. A. L. MILLER

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

*Thursday, December 13, 1945*

Mr. MILLER of Nebraska. Mr. Speaker, I have a resolution in the Judiciary Committee which has for its purpose the declaring of hostilities at an end as of September 2, 1945. This resolution had a short hearing, but to date has not been reported out of the committee. I realize that there are many acts and directives directly connected to the ending of hostilities. One of the most important is that of permitting men, who enlisted for the duration, an opportunity to have a discharge from the armed forces. This Congress should not by a legal trick continue this part of the wartime regimentation on the ground that neither the President nor the Congress has proclaimed the end of the war. The myth that there is still a war on should be exploded by prompt action of this Congress.

I include the following letter from a young man in the Navy who is now serving in Shanghai, China:

NOVEMBER 11, 1945.

Representative MILLER of Nebraska,
*House Office Building,*
*Washington, D. C*

DEAR SIR: I have read lately that you are one of those who are trying to get us released from the service, as we feel we should be. I want to thank you from the bottom of my heart for standing by us, and I certainly hope that you will be able to get some good results soon. I believe my own case is fairly typical of those you are trying to help.

While I was still 17 years old I voluntarily enlisted in the Navy with the understanding that I would be released within 6 months after the duration of war. At the time I enlisted, I was naturally interested in the contracts I signed and therefore had the entire matter explained to me by the recruiting officer in charge of my home office. We discussed the matter quite thoroughly and I was definitely led to believe that I would be required to service only for as long as the war lasted plus 6 months. That 6 months, I was told, was the maximum length of time I would have to service once the war ended.

As I now look back over 2 years to that time when I enlisted it all seems like a mockery and a farce. I feel that I have lived up to my part in the bargain and now I simply ask that my Government live up to its part.

Little did I think at the time I enlisted that the Nation for which I volunteered to fight would double-cross me, when the war ended, with some technicality. And a technicality it is, when we fail to recognize a cessation of hostilities now that the war has obviously ended and a formal peace signed by us in the presence of the world.

I and all the others who volunteered are naturally very resentful of the Government's actions, and we won't be quick to forget and forgive as people might think we will be. All we are asking for is a square deal which the United States should be willing to give to us after what we have given to it during these last few years.

By a square deal I mean for the war to be declared officially ended as of September 2, 1945, when the formal signing of the peace took place. That done, the Government should be conscientious in seeing to it that volunteers be released according to the contracts which they signed.

It is quite obvious that this square deal of which I speak is being fought and blocked by certain powerful forces which are high in our National Government. It is obvious that the Navy is reluctant to release its men any faster than they absolutely have to. The Navy point system is evidence of that. It was designed to free as few men as possible without arousing too much indignation. It was designed to keep the young, independent men in the service till the very last minute. The Navy's system of release, compared to the Army's, is ridiculous, and yet they are getting away with it without much trouble. Why can't the Navy be honest with its men and with the people of the United States by telling just exactly what it has in mind for its young men? The Army has at least told its men that if they have 2 years or more service they can plan on being released by March. Why can't the Navy do the same? I believe we both know the reasons, and they should be corrected at once.

No doubt, you have received a number of letters of this type, and I certainly hope that you will soon be successful in helping us fellows out who are stuck because we have no dependents and because our Government is reluctant to admit that the war has ended, regardless of the fact that it obviously has.

To me, dependents are not the only important obligations a man can have. Those of us who are still young have obligations to ourselves. We must be allowed to continue where we left off in school, for one thing. That alone is an important obligation both to ourselves and to society.

I am glad, as I said before, that you understand all these problems of ours and all your efforts are most gratefully received and deeply appreciated by those of us who have served.

Sincerely yours,

MEMBER, UNITED STATES NAVY NOW SERVING IN SHANGHAI.

## Lithuanian-American Congress

EXTENSION OF REMARKS

OF

### HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

*Thursday, December 13, 1945*

Mr. FLOOD. Mr. Speaker, in introducing a series of resolutions today I bring to the attention of Congress and the Nation and the world at large these expressions of free Americans concerning the fate of the beloved lands of their ancestors. These expressions amount to a declaration of policy with special reference to Lithuania and are on a par with like expressions of freedom-loving people down through the centuries. Seldom do the pages of the CONGRESSIONAL RECORD resound with words such as these sounding a clarion call to breathe life into the words of "the four freedoms" and declaring the right to life, liberty, and the pursuit of happiness as the inalienable rights of the oppressed people of Lithuania and the brave citizens of the little nations all the world-wide over. With a sublime faith in Almighty God and trust and confidence that justice will prevail, Mr. Speaker, I present to the Congress the following remarks and resolutions made at the American-Lithuanian Congress in Chicago:

ADDRESS OF ARCHBISHOP SAMUEL A. STRITCH OF CHICAGO

Mr. Chairman, the Congressman, reverend fathers, and my dear friends, I want to thank you for the good wishes you gave me today as I celebrate the ending of the twenty-fourth year of my consecration as bishop. In these good wishes I sense the spirit of this gathering and the fine things that brought you together.

If there was not something fine in you, if there was not in your a love most real and binding for freedom you would not be here.

All of us who have an interest in taking part in this session today place Lithuania as a symbol in this modern troubled world, the world of Christian civilization.

It took a great many centuries to build this civilization. And in it are a few ideas which are fundamental. First is that all men have a cast, a personality of their own, and certain innate rights. The second is that all men came together in the great family and brotherhood of men left by Him who died for us on the cross. We took these two concepts and built upon them. There have been mistakes made in the history of the west. Grave mistakes. But never before have we seen in history an attempt made to destroy the rights of man. There have been tyrants but they have kept up a respect of human nature and of its rights.

We Americans are troubled, for we see a renewal of struggles which have tortured Lithuania throughout its history.

Lithuania decided long centuries ago to become a part of the West and not a part of the East. And in its literature and in its art it is that of the West and not that of the East.

Just a few years ago, it seems, it had achieved the struggle it had been carrying on for centuries and had set itself up as a sovereign state. It was not big, as there were not a great many people. It was not a rich state. It was a state in which the Lithuanian people had a personality.

And they have developed that personality. Anyone familiar with their contributions to art and the things they have done for European and western history, has the knowledge that Lithuania has its own personality and the right for sovereignty and independence.

Our late President voiced this conviction when he planned the peace program. Clearly he said, "You have no right to destroy the personality of man and no right to destroy the personality of a people." We have seen time and time again in history that the work of tyrants might have succeeded but never succeeded in crushing the personality of a people.

The Lithuanian people have contributed to the variety of our culture.

When we look on what they have done in their own and other languages, we must admit that we would be poorer in our culture if there had not been this contribution of the Lithuanian people.

There are smaller countries than Lithuania. Who of us thinks of going down and destroying Puerto Rico?

Who thinks of robbing Cuba of its independence because it happens to be off our shores?

Lithuania took its place as a free state in a family of nations in the belief that all nations should live in unity. Its own political make-up was democracy. It wanted to respect the dignity of its citizens. It called upon its citizens to unite in the family of nations for its own common good and for the good of the world. It had reason in history to feel aggrieved. In its history there had been injustices done, but it had resolved to throw off all violence and to show that though their nation was small, the Lithuanians could do mighty things.

In 1920 Lithuania entered into a treaty with Russia, and Russia acknowledged Lithuania's independence. Again in 1926 it entered into a nonaggression pact with Russia wherein Russia assured the independence of Lithuania. When the Russians first came into Lithuania they voiced such assurances, but they enforced slavery on the people. When they came again, again they enforced their tyranny.

They did not keep the heritage of the Lithuanian people. They set up a puppet government and made that puppet voice Russian sympathies but not the sympathies of the Lithuanian people. And so we have before our eyes today a very queer situation.

Our country recognizes Lithuania. Lithuanian, Estonian, and Latvian representatives are still functioning. But, on the other hand, there has been an aggression made and, in fact, Lithuania is occupied by the Russians who are claiming it to be a part of their territory.

This claim is not based on any just right. There is no reason which can justify the deprivation of this country of its independence and its government.

We are here today to revive in our resolutions the hope that in some marvelous way the chain of enslavement will be broken and Lithuania will regain her full freedom. But if in chains she must endure hardships for a while, she will endure it with a heart that loves freedom, and she will never surrender her rights. And she will be glorious in her chains.

No; all of us have reached the same conclusion: we want Lithuania to be free and the Baltic states to be free. We have cast aside unworthy intentions which were manipulated by the Communist group in Lithuania.

These Lithuanian people are Christian Catholics and contributed much in sanctity to the church. In their days of trouble they showed that they never tried to sever religion from their culture and they are brothers of the human race as well as brothers in the house of the church.

My mind is troubled by the sufferings which have come to the Lithuanians. I know perhaps better than most about how many members of Lithuania were forced out into exile and how many found their way in the countries of Europe. They are in these countries today and there is a power proclaiming that they should return to their homes. For what? These refugees have a right to demand our protection, and should not be forced to return to suffering and danger and death. One of the instant things which demands the attention of the champions of democracy today is to declare a rightful haven for the homeless exiles in Europe and Asia who are being forced to return to their homes.

Fortunately at this time we bring relief to these depressed Lithuanians in Europe and in parts of Asia. We are allowed to protect many of them. We are allowed to do what we can for them and I want to assure you that the bishops' council and war relief of the National Catholic Council is doing its utmost to serve in every way these suffering people. Just recently they made a very generous grant.

It has watched this work. And while, of course, it realizes its own direct responsibility in doing what it can do, it rejoices that you are joining with them in trying to bring relief to those suffering whose hearts are crushed by the tribulations heaped upon them.

If we could only get a hand of relief into Lithuania. There is a black-out which obscures assistance. We cannot enter to relieve this suffering. So we are praying—praying not only that we may have funds, but that we can take care of those whom we are not permitted to take care of, and be permitted to enter and aid these suffering peoples of Europe.

Whatever be the political situations, the immediate thing to be done is to try to take care of the suffering and try to see if we can protect human rights of little children.

I am very glad that you gathered here in Chicago for this convention. These days will go down in the history of Chicago. You who love freedom came here to find a way to help Lithuania, and the Baltic states. And you came here with sympathy for Poland, for in both countries things have happened and are still happening. You have sympathy for all who are oppressed. You love this land under the Stars and Stripes because it stands for freedom and for the vow that no government may put it upon itself to infringe upon the freedom of another. Because it is a great democracy and democracy is Christian—you love this country. I pray that your resolves come true. May Lithuania be out of its difficulties and sufferings soon. Lithuania is true to its God, it has proved true to its ideas and believes in freedom. The great God in heaven will aid it.

---

ADDRESS OF HON. DWIGHT H. GREEN, GOVERNOR OF THE STATE OF ILLINOIS

I am indeed happy to be here tonight to welcome to Illinois the visiting delegates to the Lithuanian-American congress and to congratulate the Lithuanian-Americans of Chicago on their devotion to the land of their fathers and their definite contribution to the progress of our own city, State, and Nation.

It is fitting that this congress should be held in Chicago because for a generation Chicago has been the center of activity in America for the advancement of Lithuanian culture, Lithuanian freedom, and the welfare of our American citizens of Lithuanian origin. It is significant that the president of the Lithuanian American Council, Inc., under whose auspices this congress is held, Mr. Leonard Simutis, and its secretary, Dr. Paus Grigaitis, are Chicagoans. The fact that they are editors of competing newspapers, and that they represent different points of view, indicates the solidarity of your people in working for the common good, and demonstrates that you have truly caught the spirit of tolerance and cooperation which always has been the strength of our America.

I am familiar with the long and aggressive campaign which the Lithuanian-Americans of Chicago have waged to call the attention of all Americans to the struggle for liberty in their homeland.

I have no sympathy with the attitude of some Americans, who have enjoyed the blessings of our freedom so long that they have forgotten that the ancestors of all of us once were immigrants, who sometimes doubt if a man can be loyal both to the land of his birth or his fathers and to the country of his adoption. To me it is as simple as for a man to be loyal to his father and mother and still be a good husband and father at his own fireside.

Nor am I impressed by the statement we hear often these days that since the United States has proclaimed and enforced the Monroe Doctrine in this hemisphere for more than a century, we must permit the powerful neighbors of the Baltic States to control the destinies of these peoples. No man can read history, or even the current newspapers, without appreciating the difference between the protective interest we have taken in all the American Republics and the predatory interest of the European powers in Lithuania, Latvia, and Estonia. While we have guaranteed for our neighbors the opportunity for the full development of their free governments, their natural resources, and their culture, "protection" in Europe has meant the suppression of free institutions, of national cultures, customs, and languages, the exploitation and confiscation of economic resources, and wave after wave of invasions marked by murder, rape, and destruction.

Against that sort of protection the conscience of America always will protest. And America will be false to the ideals of liberty of the founders of this Nation, if we silently condone the crimes being perpetrated today against the peoples of the small nations of Europe and against the subject peoples of Asia.

America does not wish to dictate to the nations of the world. Certainly, we do not intend to use our tremendous military power to enforce any American meddling in the affairs of large or small nations. Yet the tremendous victory we have won in this war has placed us in a position of great influence throughout the world—an influence which we can and should use to advance justice and liberty everywhere. The American people expect the leaders of their Government and their diplomatic representatives to be guided by these high principles in their consideration of the forgiveness of lend-lease, the making of future loans, and in all our foreign relations.

From the record of events both before and since the end of hostilities, it is clear that we are not doing so. The fine words of the Atlantic Charter, of two Presidents and their Secretaries of State, are mocked by the meek subservience with which we have yielded to the imperial ambitions of our various allies.

This is particularly true in the case of Lithuania. The influence of American opinion was largely responsible for the world's recognition after the First World War of the independence of Lithuania which had been proclaimed on February 16, 1918, and which Lithuania had successfully defended on the field of battle. The American recognition of the Government established under that declaration in July 1922 has never been withdrawn. The sovereign rights of a free Lithuania were repeatedly recognized in solemn treaties executed by the Soviet Government.

The United States Government still recognizes the Lithuanian Minister to the United States. It has never approved the puppet government set up by force by the Soviet Union. Yet it has failed to make any effective protest against the crushing of liberty, the mass executions, the exiles to Siberia, the interference with Lithuanian churchmen, and the manifold indignities and sufferings inflicted upon the men and women of Lithuania. It is small wonder that a Senator from Indiana and a Congressman from Illinois each have introduced resolutions in Congress calling upon our State Department to force a consideration of the plight of Lithuania by the Council of Foreign Ministers in London. If the Congress truly represents the spirit and will of the American people, I am confident those resolutions will be speedily and overwhelmingly adopted.

Time does not permit me to review in detail the long struggle for freedom of the Lithuanian people. The spark of freedom kept alive through centuries of oppression will not be destroyed by the setbacks of these days. Their current tragedies have taught the peoples of all the Baltic states the necessity of composing their own differences and

cooperation for their common liberation. They have learned the lesson which Benjamin Franklin taught the people of the new American States when he told them in the Continental Congress, "We must hang together, or we shall be all hanged separately."

With such cooperation, both in their own lands and among their friends in America, and with truth and justice on your side, I am confident that Lithuania again will be free. In recent years it has been my privilege to proclaim the anniversary of the Lithuanian declaration of independence, February 16, as Lithuanian Independence Day. I trust that before the next observance of that occasion there will be new hope for the land that you love, new proof that the force of America is behind your prayers and your hopes.

Meanwhile all of us should be reminded from the fate of Lithuania and every other country where freedom has suffered in our day that we must vigorously defend our own country and its free institutions. We in America must be prepared to defend our liberties from attack from within or without our borders. We must maintain the military and naval supremacy, both in numbers and in our scientific weapons of modern warfare, which now renders us impregnable.

The godless philosophies which flourished on the continent of Europe and brought so much suffering to your kinsmen have spread through the world. In one form or another there are manifestations of them in our own United States. They will not flourish here if we are alert to the perils which they present to our freedom of religion, our system of individual opportunity, our sound American prosperity.

I know that the Lithuanian-Americans, with their deep devotion to their churches, their appreciation of their opportunity here by their own efforts to advance themselves and their children, their loyalty to their community and their country, will be a strong bulwark in the defense of our liberties. They will stand firm with all good Americans for the preservation of the American system under which they have prospered and under which they hope their sons, who have made such a glorious contribution to our country's victory, will achieve new progress and greater happiness. They will keep America tomorrow as it was yesterday and is today—the last great hope of freemen everywhere.

---

POLICY DECLARATIONS AND RESOLUTIONS

I. RECONSTITUTION OF LITHUANIA

*To Foreign Relations Committees of the United States Congress:*

The Lithuanian-American Congress, representing by duly elected delegates the preponderant majority of Americans of Lithuanian extraction or descent, jointly and severally, reiterates its membership's unequivocal belief in the inalienable rights of men and nations, in the principle of equality of men and races, in the right of peoples to pursue individual happiness and to develop their creative talents in freedom under a representative democratic form of government, for all nations capable of self-government, and in the war aims proclaimed by our country, based on the Wilsonian principle of national self-determination, the Rooseveltian Atlantic Charter and "four freedoms," and President Truman's "12 points."

Being particularly concerned with the destiny of Lithuania, the country of our ancestors, and realizing that the people of Lithuania desire nothing that is not rightfully theirs, this congress takes cognizance of—

(a) The ethnic, cultural, and linguistic individuality and the political traditions of the Lithuanian people.

(b) The ancient Lithuanian statehood dating back to the year 1200 A. D., its splendid historical record of tolerance; of individual, racial, linguistic, and cultural liberty; its progressive jurisprudence and ways of administration perpetuated in historical reminiscences of the liberal Lithuanian rule among the Latvian, White Ruthene, Ukrainian, Jewish, and Tatar nationalities.

(c) The most progressive and beneficial Lithuanian leadership in the educational and political reforms of the last quarter of the eighteenth century, just before the final partition of the Commonwealth of Poland and Lithuania in 1795.

(d) The long, unceasing, and determined struggle of the Lithuanian people against the foreign—Muscovite and German—domination and oppression; the heroic sacrifices of each succeeding generation of the Lithuanian people in the great mass insurrections of 1794–95, 1812, 1863–64, 1905, 1918–20, and the epic Lithuanian fight for basic human rights, for human dignity, for the freedom of the press and of the printed Lithuanian word during the 40-year suppression of all Lithuanian literary activities, 1864–1904.

(e) The proclamation of independence by the people of Lithuania on February 16, 1918; the unequal heroic struggle against several rapacious neighbors of Lithuania; the victory of the people in the general, direct, untrammeled elections by secret ballot in April 1920 to a constituent assembly based on proportionate representation; and the democratic constitution framed by the Lithuanian people's representatives for a progressive democratic nation of western Christian outlook and of liberal populist traditions in administration.

(f) The admirable progress in democratic self-government, economic and cultural advancement; the consistent adherence to the rule of reason, of justice, and of law in international relations; cooperation in the peace machinery devised by the League of Nations; and of the scrupulous performance of all international obligations by the Republic of Lithuanian in the years 1918–40.

(g) The imposition by the Soviet Union—by threat of superior force and in connivance with Nazi German war criminals now being tried by an international tribunal at Nuremberg—of a "mutual assistance pact" on October 10, 1939, whereby Lithuania granted and leased to the Soviet Union military bases in the strategic centers of Lithuania in exchange for a solemn Russian guaranty of the independence of Lithuanian and of Russian noninterference in the domestic, political, social, and economic order of the country.

(h) The subsequent violation by the Soviet Union of all treaties—the peace pact, the nonaggression pact, and the mutual assistance pact with a guaranty of the political independence and noninterference in domestic affairs—then and now in force between the Soviet Union and the sovereign Republic of Lithuania.

(i) The Soviet policy of lawlessness, terror, intimidation, economic impoverishment, nationalization, sovietization, oppression, persecution, mass arrests, mass executions, and mass deportations which caused, within 1 year of the Soviet occupation, immeasurable losses in manpower and of economic and cultural wealth in Lithuania.

(j) The condemnation by the Government of the United States in a statement by the Department of State on July 23, 1940, of the deliberate attempt by the Soviet Union to annihilate by devious processes and predatory activities the political independence and territorial integrity of the Republic of Lithuania and the northern Baltic States—Latvia and Estonia.

(k) The universal insurrection of the people of Lithuania against all foreign domination and enslavement in June 1941; the restitution of the political independence of Luthuania under a provisional coalition government, and its dissolution by Nazi Germany in August 1941.

(l) The Atlantic Charter declaration of August 1941 by the President of the United States and Prime Minister of Great Britain, holding out a promise of the restoration of sovereignty to the peoples forcibly deprived of same, and the subsequent embodiment of the Atlantic Charter as a part of the declaration by the United Nations, including the Soviet Union, on January 1, 1942.

(m) The effective Lithuanian underground liberation struggle during the 3 years of German occupation and continuing to this date, directed against Nazi and Soviet attempts to annihilate Lithuania as a sovereign nation and for a restoration of fundamental human rights and political independence, under a unified supreme Lithuanian committee of liberation which, since August 1941, proclaimed to the people that its fight for the Allied cause and the liberation of Lithuania and its good Baltic neighbors is being waged in full confidence in fulfillment of the Atlantic Charter.

(n) The present second occupation of Lithuania by the armed forces of the Soviet Union and the imposition of a puppet Soviet regime maintained solely and exclusively by the bayonets of the Red Army and NKVD troops; a continuing Soviet rapacity, imperialism, and refusal to honor its peace, nonaggression, and friendship pacts with Lithuania in spite of the solemn Russian underwriting of the Atlantic Charter, the Moscow Declaration, and the Yalta Declaration to liberated European peoples.

(o) The reiteration of the American policy of nonrecognition of the Soviet attempt to annihilate the independence of Lithuania, Latvia, and Estonia, voiced by the Department of State in March 1945.

(p) President Harry S. Truman's 12-point policy enunciated in his recent Navy Day speech.

(r) The equally excellent record in democratic self-government; cultural and economic advancement, scrupulous cooperation in the League of Nations peace machinery, the strict observance of all international treaty obligations, and the good neighborhood policies of the peoples of the Republics of Latvia and Estonia.

(s) The continuing guerilla fight and underground resistance of the peoples of Lithuania, Latvia, and Estonia striving for their liberation and for fulfillment of the many promises made in behalf of the United Nations and Big Three powers; and finally

(t) The unsurpassed American contribution to the victory over fascism, achieved at high cost in human lives and suffering, in great material destruction, and the decisive American lend-lease aid to the fighting United Nations.

Wherefore the Lithuanian American Congress pledges its full moral support to the people of Lithuania striving for a liberation from enslavement by any foreign power and for a restoration of the full political independence and democratic self-government of their country, in a free world promised by the Atlantic Charter and the United Nations Organization.

The Lithuanian-American Congress calls upon the Government of the United States to implement its wartime policy declarations by the active exercise of its good offices in initiating immediate measures to induce Russia to honor the Soviet Government's endorsement of the Atlantic Charter, the Moscow Declaration, and the Yalta Declaration to liberated European peoples, and to withdraw the Soviet armed forces, police, administrative, and Communist Party apparatus from the territories of Lithuania, Latvia, and Estonia.

The Lithuanian-American Congress calls upon the great powers that had subscribed the Yalta declaration to liberated European peoples to fulfill all of their jointly made promises to liberated European peoples, certainly including among them the peoples of Lithuania, Latvia, and Estonia; to create conditions enabling the formation of broadly representative interim governments of Lith-

uania, Latvia, and Estonia; to repatriate Baltic deportees from their Siberian and northern Russian exile, under the supervision of the United Nations Relief and Rehabilitation Administration; to provide for an orderly, noncompulsory repatriation of displaced Lithuanians, Latvians, and Estonians from western Europe, after the evacuation of the Russian troops, police, and Communist Party apparatus from the territories of the Republics of Lithuania, Latvia, and Estonia; thereafter to hold free and untrammeled general elections, under impartial United Nations supervision, with the effective full participation of the United States, and under conditions of complete uncensored freedom of the radio, press, campaigning, assembly, speech, and reporting, thus helping the sovereign peoples of Lithuania, Latvia, and Estonia to restore their democratic self-governments after the harrowing experiences of three successive hostile occupations.

The Lithuanian-American Congress also calls upon the Government of the United States to initiate the move for an immediate admission of Lithuania, Latvia, and Estonia, still full-fledged members of the League of Nations, into the United Nations Organization.

Finally, the Lithuanian-American Congress requests the Government to arrange immediately, prior to resumption of actual self-government, for admission, directly into the Baltic states, of the American press, the Red Cross, welfare organizations, and the American staff of UNRRA.

The membership of the organizations affiliated in the Lithuanian-American Congress will spare no effort until the above-stated objectives shall have been fulfilled, and the honor and spirit of the United Nations shall have been preserved by effecting the promises made to American men and women of the armed forces, to the American people, and the world at large.

II. TRIBUTE TO HUMANITARIANS

*To the Foreign Relations Committees of the United States Congress:*

The Lithuanian-American Congress was deeply moved by the wave of humanitarian response to the desperate call for help from 167 Lithuanian, Latvian, and Estonian internees, who, having been forcibly inducted in the German armed forces in violation of international law governing the conduct of a military occupant, used the first opportunity to flee to neutral Sweden to seek a haven from oppression and subjugation.

When it became known that the Swedish Government, inclined to treat these Baltic political refugees as ordinary interned prisoners of war of a belligerent country, accepted a Russian demand to surrender the Baltic citizens along with the German internees on conclusion of the hostilities of war—the Swedish people were the first to demand that the Baltic internees be treated as political refugees rather than face an almost certain death at the hands of the Soviet oppressors of the home countries of the internees. The spontaneous wave of sympathy for these victims of war and aggression spread throughout Sweden and thence to other democratic countries. In consequence of this great pressure of domestic and international public opinion, the Government of Sweden is reconsidering its former decision.

The Lithuanian-American Congress pays greatest respect and gratitude to His Holiness Pope Pius XII, His Majesty Gustav V King of Sweden, the Protestant bishops and delegates of the Evangelical Church of Sweden, Archbishop of Canterbury of England, the great liberty-loving Swedish masses and their free press for their humanitarian intervention.

Lithuanian-Americans are also grateful to the great American press agencies and newspapers, United States Senators and Representatives, and to the many churchmen, organizations, and individuals for their spontaneous response and action for the preservation of the right of asylum for political refugees.

Respect for the inalienable rights of man survives in the western democracies, as is shown by the humanitarian intervention in Sweden, the United States, England, Vatican City and Switzerland in this instance of saving the 167 human beings whose lives were jeopardized in consequence of Nazi lawlessness.

III. PRESERVATION OF AMERICAN DEMOCRACY

*To Committee on Un-American Activities:*

The Lithuanian-American Congress joins other patriotic Americans in a solemn warning against the systematic infiltration of subversive elements, under deceptive labels of promotion of pseudo "democratic" causes, into Government offices, in institutions of learning, in forums of discussion of domestic and international problems, in the motion-picture industry, and into labor organizations.

The insidious propaganda, actively sponsored and directed by an extensive network of disguised agents, is slowly making inroads into all phases of American political, social, economic, and cultural life. It is undermining the very foundations of the American way of life and is turning many individuals, otherwise fair minded, into blind tools of foreign propaganda, foreign imperialism, and un-Amercan ideas. This evil influence encroaches even upon our educational system, ostensibly under a disguise of "learning to know our friends"—who refuse and have no reciprocal opportunity to learn anything of our democratic ways of life.

The Lithuanian-American Congress calls on the fellow citizens of the great American democracy to be watchful and alert, to nip in the bud the vast plot of poisoning American public opinion, and to safeguard American standards of education and ways of life, particularly the freedom of the radio, press, school teaching, and motion pictures from a slanted and falsified communistic propaganda. Typical of such un-American activities was the recent example of a handful of Communist-minded individuals staging a convention of "democratic" Lithuanian-Americans in Pittsburgh and demanding an abandonment of the Chinese democracy to a foreign domination.

IV. UNITED NATIONS ORGANIZATION

*To Foreign Relations Committees of the United States Congress:*

The Lithuanian-American Congress welcomes American initiative in forming the United Nations Organization to safeguard world peace.

Nevertheless, it is our considered opinion that the Government of the United States, in cooperation with the Governments of Great Britain and British Dominions, should immediately initiate an amendment to the United Nations Organization Charter to abolish the veto power of any one of the great states and to return to the principle of sovereign equality of all nations, large and small, by applying the majority rule in the Assembly.

The veto power, particularly when reserved by an imperialistic state isolating itself from all outside intelligence and control, and building up a set of satellite states completely dominated by a single political party, controlled by such state, would only tend to promote lawlessness and aggression and to perpetuate the fruits of aggression by such state at the cost of subjugation of its weaker neighbors. The malignity of such veto power is particularly illustrated by the failure and refusal of the Soviet Union to conform to its many international commitments, to evacuate its armed forces from eastern European and Middle East countries, and to create conditions enabling free and unfettered elections there.

This congress is confident that the American people are prepared to modify the old concepts of sovereignty in order to preserve civilization in this age of atomic energy. For the sake of survival of our civilization, there should be no way open for sabotage of the United Nations Organization by any veto-minded power.

V. MILITARY PREPAREDNESS

*To Committee on Military Affairs:*

In the present stage of world affairs, the United States must retain its full armed might to carry out our country's commitments to liberated peoples and in behalf of the world order for which our sons had fought.

Firmly trusting the expert opinion of our military and naval leaders, the Lithuanian-American Congress urges the people's representatives in both Houses of Congress of the United States to enact legislation for military preparedness, in accordance with the program promulgated by Gen. Dwight D. Eisenhower and other experts entrusted with planning our country's defense programs.

VI. TRIBUTE TO AMERICAN PRESS

The Lithuanian-American Congress gratefully acknowledges the fairness of the preponderant majority of the American press in reporting world events, the plight and aspirations of the subjugated freemen of the world, the conduct of the various occupying forces, and the situation of displaced persons and political refugees in liberated western European and far-eastern countries.

The fair attitude of the American press and its foreign correspondents enabled the American people to form intelligent and unbiased opinions on world events and on the problems of peace settlement on the basis of the solemn wartime promises repeatedly made by our Government and by the United Nations—in a free world, under a rule of reason, of justice, and of law in international relations.

The freedom of the press and fairness in reporting salient news in an uncontrolled press are two basic promises fortunately blessing the American people in a half-free, half-slave world. The Lithuanian-American Congress voices its firm faith in the American free press and in the continuation of liberal press traditions that bring a ray of hope to subjugated peoples.

VII. DISPLACED PERSONS AND POLITICAL REFUGEES

*To Foreign Relations Committees of the United States Congress:*

The Lithuanian-American Congress heard with great sympathy and commiseration the reports on the present situation of displaced persons and political refugees in Europe. Several phases of their treatment were closely studied and a considerable improvement in the condition of the unrepatriable Baltic and other political refugees is noted with satisfaction.

This Congress voices its gratitude to Gen. Dwight D. Eisenhower and his staff at Frankfurt, to State and War Department officials promulgating the humane policies concerning the treatment of displaced Lithuanians, Latvians, Estonians, Jews, and other political refugees, and to the Honorable Herbert H. Lehman and his staff for their untiring efforts, in behalf of UNRRA, on the policy-making level and in many instances on the field operational level, to improve the hard lot of these victims of war, aggression and racial prejudice.

The Lithuanian-American Congress expresses its firm confidence that the Department of State, that Army authorities and the United Nations Relief and Rehabilitation

Administration will solve the pressing problems of refugee life and will improve postal and other communications facilities for the unrepatriable Baltic and other political refugees.

Liberation of their home countries, remains however, the paramount problem demanding United Nations Organization's action.

VIII. A TRIBUTE TO FRIENDS OF LITHUANIA

*To Foreign Relations Committees of the United States Congress:*

The Lithuanian-American Congress pays its tribute to the governments and peoples of the countries continuing to recognize the de jure independence of the sovereign Republic of Lithuania, to wit: The United States of America, the Vatican, the United Kingdom, Afghanistan, Argentina, Australia, Belgium, Bolivia; Brazil, Canada, Chile, China, Colombia, Costa Rica, Cuba, Denmark, the Dominican Republic, Ecuador, Egypt, Ethiopia, Greece, Guatemala, Haiti, Honduras, Iceland, Iran, Ireland, Lebanon, Luxembourg, Mexico, Netherlands, New Zealand, Nicaragua, Panama, Paraguay, Peru, Philippines, El Salvador, Spain, Syria, Turkey, the Union of South Africa, Uruguay, and Venezuela.

In full realization that all of the sovereign states of the free world, with the sole exception of the Union of Soviet Socialist Republics, are in fact friends of the Baltic States, the Lithuanian-American Congress pays its special tribute of appreciation to the Governments and peoples of the above-named countries for their active or moral support of the aspirations of the temporarily subjugated freemen of Lithuania.

The executive officers of the Lithuanian-American Congress are hereby delegated to transmit this resolution to the accredited representatives of the said countries at Washington, D. C.

IX. BALTIC ENTENTE

Recalling the long historical record of friendly coexistence, side by side, of the peoples of Lithuania, Latvia, and Estonia, and the common plight and aspirations of the three Baltic peoples, the Lithuanian-American Congress pledges its full moral support of the common struggle for freedom and independence of Lithuania, Latvia, and Estonia.

Lithuanian Americans are proud of the exemplary record of good neighborliness of the Baltic Entente interrupted so abruptly by World War II. Mutual ties of friendship have been strengthened in fact by the experience of foreign occupation common to all three good Baltic neighbors and by their underground fight for a common cause of freedom.

The Lithuanian-American Congress is confident that the United Nations Organization, under the moral leadership and initiative of the Anglo-American democracies, shall soon re-create conditions enabling the Baltic peoples to resume their places as sovereign democratic states in a world community of freemen.

X. GERMAN WAR CRIMINALS

*To Foreign Relations Committees and Judiciary Committees of the United States Congress:*

The Lithuanian-American Congress notes with satisfaction that some of the war criminals are brought to trial for their crimes.

Nevertheless, the Lithuanian-American Congress finds it necessary to call the Government's attention to the fact that the indictment against top Nazi criminals now being tried at Nuremberg omits the crimes committed by them against the independence, security, and territorial integrity of the Republic of Lithuania.

In 1935 the Government of Lithuania had prosecuted Dr. Neumann, Von Sass, and other Nazis of the Klaiped-Memel district for terroristic acts and plotting to separate the Klaipeda territory from Lithuania. The trial brought into the open the fact that these acts were directed from Berlin by Nazi Party officials and the German Government.

Furthermore, in March 1939 the German Government, acting through Joachim Ribbentrop, its Foreign Affairs Minister, forced the Government of Lithuania, by threats of use of superior forces amassed on the German-Lithuanian frontier, to cede the Klaipeda district to Germany. Simultaneously, Germany signed a guaranty of territorial security of Lithuania minus the forcibly seized district of Klaipeda.

Finally, in August and September 1939, Germany violated this guaranty by signing two pacts with the Government of the Soviet Union, whereby the Baltic states and Poland were divided into Russian and German spheres of influence, in effect attempting to annihilate the political independence of these countries.

Wherefore, the Lithuanian American Congress requests the Government of the United States to move that the indictment against Ribbentrop and other German war criminals be supplemented with three additional charges of acts of aggression, to wit:

1. Plotting against the orderly Government and territorial integrity of Lithuania in 1935;

2. Forcible seizure of the Klaipeda district from Lithuania in March 1939; and

3. Violation of the sovereignty of the Baltic states in August and September 1939 in a bilateral plot to annihilate the political independence of Lithuania and other Baltic states.

XI. INTERNATIONAL TRIAL OF NON-AXIS WAR CRIMINALS

*To Foreign Relations Committees of the United States Congress:*

The Lithuanian-American Congress expresses satisfaction that one set of war criminals of World War II is brought before the bar of international justice, wherein the representatives of the Russian people are sitting in judgment on German war criminals for the crimes committed against non-German countries and peoples, including the Russian people.

The charter of the International Military Tribunal at Nuremberg defines certain crimes: conspiracy and crimes against peace, war crimes, and crimes against humanity.

However, the Lithuanian-American Congress calls the attention of the American people to the fact that no provision has been made thus far to bring to justice non-Axis war criminals for their multitude of crimes committed against world peace and civilian populations of the occupied countries.

It is a generally known fact that the Government of the Union of Soviet Socialist Republics acting through Vyacheslav Molotov, Premier and Foreign Affairs Commissar, plotted with the German Government represented by Joachim Ribbentrop and other German officials to commit crimes against peace in violation of international treaties, agreements, or assurances in the development and course of the common plan or conspiracy against many eastern European countries including Lithuania, Latvia, and Estonia, in August and September 1939. Thereafter, in the course of the German-Russian conspiracy, the Government of the Soviet Union invaded by armed forces the territories of Poland and by threatening the use of Soviet armed might, forced the governments of Lithuania, Latvia, and Estonia to accept in October 1939 the so-called mutual assistance pacts investing Russian armed forces into the Baltic States, under a "solemn Russian guaranty" of respect for the sovereignty of those countries and their domestic, political, social, and economic systems. This step was thereafter followed by a war of aggression by the Soviet Union against Finland and installation of a puppet regime of Otto Kuusinen to replace the legitimate Government of Finland. These actions of the Soviet Government clearly fall within the definition of count 1, of the crimes against peace of the Nuermberg tribunal.

In June 1940, when the British evacuated Dunkerque and the Germans already had overrun the lowlands and France, the Government of the Soviet Union acting through Foreign Affairs Commissar Vyacheslav Molotov, served ultimata on the Governments of Lithuania, Latvia, and Estonia, and by investing the masses of Russian armies and naval forces, forcibly seized the Baltic States, destroyed the legitimate Governments of Lithuania, Latvia, and Estonia, and imposed puppet regimes not representative of the peoples concerned in violation of international treaties and the domestic laws of said countries.

Thereafter, in pursuing the policy of conspiracy against the political independence and territorial integrity, and in violation of the existing treaties, agreements and assurances, the Russian conspirators initiated and carried out farcical elections. The conspirators greatly enlarged existing Communist Party organizations, established a network of new state and party organizations and "coordinated" the state agencies with the result that the life of the Baltic peoples was dominated by Communist doctrine and practice, such as that the leadership of the Communist Party, as the sole bearer of the Soviet doctrines, was entitled to shape the structure, policies, and practices of the Baltic states and all related institutions, to direct and supervise the activities of all individuals within the state and to destroy all opponents. The conspirators established and extended a system of terror against opponents and supposed suspected opponents of the alien regime. They imprisoned such persons without judicial process and subjected them to persecution, degradation, despoilment, enslavement, torture, and murder. The conspirators destroyed the free trade unions by confiscating their funds and properties, persecuting their leaders, prohibiting their activities and supplanting them by an affiliated party organization. The conspirators promoted beliefs and practices incompatible with Christian teaching, sought to subvert the influence of the churches over the people, expelled the teaching of religion from all schools, and reshaped the educational system and particularly the education and training of Lithuanian, Latvian, and Estonian youths, on a progressively militarized footing and for the object of maintaining a dictatorship of one single Communist Party. They deprived labor and all populations of their rights of free industrial and political association.

Thereafter, the Russian conspirators reduced the diets of the Baltic States to bodies of their own nominees and curtailed the freedom of popular elections throughout the occupied territories of the Baltic States and Poland. The conspirators methodically and pursuant to plan endeavored to assimilate the occupied Baltic territories politically, culturally, socially, and economically into the Soviet Union and endeavored to obliterate the former national character of these territories. In pursuance of these plans and endeavors, the Russian conspirators forcibly deported inhabitants who were predominantly non-Russian and introduced thousands of Russian colonists. This plan included economic domination, physical conquest, installation of puppet governments, purported de jure annexation, and enforced conscription into the Soviet armed forces. In November 1940, the People's Commissariat for Internal Affairs of the Soviet Union issued, at Moscow, an executive order, No. 001223, directing the listing of all "anti-Soviet elements in Lithuania, Latvia, and Estonia." Thereafter, when the lists were compiled, one Serov, Deputy People's Commissar of Public Security (NKGB) of the U. S. S. R., issued detailed instructions regarding the manner of deportation of "the anti-Soviet elements from Lithuania, Latvia, and Estonia."

In consequence of these orders from Moscow, in execution of a common plan and conspiracy to commit crimes against humanity, hundreds of thousands of innocent people were detained, tortured, murdered, particularly in June 1941, or deported into the interior of the U. S. S. R. from Lithuania, Latvia, and Estonia. Masses of people were massacred, as in example at Proveniskis and Telsiai in Lithuania. Murders and ill treatment were carried out by divers means, including shooting, bayoneting, clubbing, hanging, starvation, gross overcrowding, systematic undernutrition, systematic imposition of labor tasks beyond the strength of those ordered to carry them out, inadequate provision of surgical and medical services, kickings, beatings, brutality, and torture of all kinds, systematic verbal abuse, denial of the right to correspond with relatives, and isolation from all contacts with families and relief organizations. In some cases, the victims were American citizens whose citizenship was arbitrarily denied by the Soviet authorities.

All these crimes are clearly within the definition of crimes against peace and humanity as defined by the charter of the International Military Tribunal for the trial and punishment of the major criminals of the European Axis countries.

The armed forces of the Soviet Union once more occupied the Baltic States in the summer and fall of 1944, and in the spring of 1945. Ignoring the obligations of the Atlantic Charter and declaration to liberated European peoples, subscribed to by the Government of the Soviet Union, the Soviet authorities again imposed a terroristic puppet regime maintained exclusively by the armed might of Russia. All freedoms, all basic human rights are once more suppressed. The policy of mass terror, mass executions, and mass deportations is once more instituted. Baltic men and women have been and continue to be forcibly drafted into the Red Army, Red Fleet, and labor battalions, and shipped outside of their home countries. Atrocities have been and are being committed by the Red Army and NKVD troops with exceptional brutality in disregard of all humane standards. Russification and communization of the Baltic countries is proceeding apace, including the bringing in of the masses of non-Baltic peoples from Russia, to settle in Lithuania, Latvia, and Estonia. Postal services, railroads, radio facilities, and all economic organizations are taken over and exploited by Russia and by Russian officials. No American reporters and no American or United Nations relief officials are admitted into the Baltic States. Baltic citizens forcibly inducted, in violation of international law, into the German armed forces, are being treated by the Russian authorities as traitors and peremptorily executed on their surrender. Eight months after the conclusion of hostilities in Europe the Soviet Government maintains a state of siege in Lithuania, Latvia, and Estonia. The countries are ruined economically in consequence of organized plundering of public and private property, expropriations, requisitions, and nationalization by Russian officials. These multiple crimes are being perpetrated by the occupational Russian regime in peace time.

Taking these generally known facts into consideration, the Lithuanian-American Congress petitions the people's representatives in both Houses of Congress of the United States to direct the executive branch of the Government to initiate the measures providing the machinery and uniform standards for trial of all international criminals, regardless of their nationality and regardless of the commission of such crimes in wartime or peacetime, in order to bring to justice Russian and other criminals guilty of crimes against peace, war crimes, and crimes against humanity, either by supplementing and extending the competence of the International Military Tribunal or by enlarging the scope of jurisdiction and venue of the International Court of Justice.

In particular, the Lithuanian-American Congress petitions for additional definition of international crimes by enacting the provisions embracing—

(a) Seizure, by force or by the threat of force, of a territory of another state; and

(b) Initiation and carrying out, under the conditions of a military occupation, of political elections for the purpose of effecting either the change of sovereignty for the benefit of the occupying power and/or imposing a party dictatorship subservient to such occupying power.

## Soil Conservation

REMARKS
OF
## HON. PAUL STEWART
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
*Thursday, December 13, 1945*

Mr. STEWART. Mr. Speaker, Oklahoma has taken the lead in forming a soil-conservation committee through our Governor by inviting all of the governors of the 48 States to participate in a move for larger representation groups of farmers and the governors to come to Washington on the 10th of January in an effort to convince Congress that the surplus machinery of the Army and the Navy should be turned over to the soil-conservation districts of the various States as a grant. I trust that each Member will give of his time and read the letter I received from Mr. Deering, editor of the Farmer Stockman, bearing on this subject, and a news item appearing in last Sunday's Daily Oklahoman, Farmers Plan Capital March January 10 To Demand Relief.

The farmers of the Nation cannot understand why foreign countries can acquire the much-needed machinery in soil conservation without consideration and the failure of Congress to favorably act upon the Poage bill which passed out of the Agricultural Committee several months ago—which is still before the Rules Committee.

This is not our first appearance or effort upon this subject and we favor before a recess for the holidays the Poage bill be reported out and brought to the floor for final passage.

The greatest investment this country can make, is saving what soil we have left.

The letter for Mr. Deering and the article in the Daily Oklahoman are as follows:

FARMERS COMING TO WASHINGTON

THE FARMER-STOCKMAN,
*Oklahoma City, Okla., December 10, 1945.*
Hon. PAUL STEWART,
*House Office Building,*
*Washington, D. C.*

DEAR MR. STEWART: No doubt you are familiar with the efforts now being made by the Oklahoma State Soil Conservation Board to organize and generate support for the transfer of surplus machinery and equipment to soil-conservation districts for soil-conservation work. I am informed that the Oklahoma congressional delegation has adopted unanimously a resolution supporting this type of legislation, and because of your previously expressed attitude, I am sure that you are willing to do all you can to further the cause of soil conservation.

At the meeting of the board here on last Saturday it was determined that on January 10 a committee headed by the governors of the various States will be asked to assemble in Washington to urge Congress to pass this legislation.

The Oklahoma State Soil Conservation Board, with the assistance of Gov. Robert S. Kerr, has undertaken the job of organizing and enlisting this support in all 48 States. They have had favorable replies from a dozen or so governors already, indicating their willingness to help.

I wonder if there is any possible way of speeding up the legislation on this matter so that it might not be necessary to make this proposed "march on Washington." I know that accommodations are difficult to find and I think no farmer would be disappointed to miss the trip, but farmers are determined to press every opportunity that may assist them in obtaining this machinery.

I would appreciate having suggestions you may have to make which will facilitate our efforts at this end of the road in support of this program.

Very truly yours,
FERDIE DEERING, *Editor.*

[From the Daily Oklahoman of December 9, 1945]

FARMERS PLAN CAPITAL MARCH JANUARY 10 TO DEMAND RELIEF

A farmers' march on Washington January 10 to demand grants of surplus Army and Navy equipment to the soil conservation districts was sought Saturday by the State soil conservation board.

Governor Kerr was asked to take the lead in enlisting governors of the 48 States to head delegations of farmers from their respective States in demanding that Congress make the equipment available for carrying out soil-conservation work, A. F. Houston, Grove, chairman of the board, said.

Houston said the board already has the support of the Governor in its plan for obtaining grants of the surplus equipment suitable for conservation work, and that preliminary letters sent out to States in the southern region have brought favorable replies from 20 States, including Tennessee, Florida, Georgia, Alabama, Mississippi, West Virginia, Virginia, Arkansas, Louisiana, and North Carolina.

The board will urge the other States to act promptly to prevent the surplus equipment from being disposed of through other channels, Houston said.

C. A. Ramming, executive secretary of the board, said letters supporting the plan to make suitable surplus equipment available to the soil conservation districts have been received from all members of the Oklahoma congressional delegation, and that the Oklahoma delegation met recently in Washington to adopt a resolution in support of the plan.

A committee composed of D. H. Brown, a member of the board; Ramming; Ferdie Deering, editor of the Farmer-Stockman; and

E. B. Smith, in charge of soil-conservation matters for the Oklahoma State Highway Commission, was named Saturday by Houston to organize the march.

The plan is to urge governors of the various States to head delegations of four or five farmers from their respective States with the entire group assembling in Washington to present the appeal for the equipment.

At least three bills making the surplus equipment available for soil-conservation work are now pending in Congress.

Ramming and T. C. Richardson, representing the Farmer-Stockman, attended a meeting of about 50 Texas farmers last week in Waco, Tex., with Congressman W. R. POAGE, of Texas, author of one of the bills, and Ramming said POAGE assured them he will support any of the measures so long as it makes the equipment available to the farmers.

Similar bills also have been introduced by Representative LYLE BOREN, Oklahoma, Democrat, and Senator MCKELLAR, Democrat, Tennessee.

Houston said that the preliminary letters were sent out to States in the southern region only, but he believed the response indicated that most of the States would be represented among the delegation going to Washington in January.

A large amount of surplus Army and Navy equipment suitable for soil-conservation work is now available, Houston said. It should be made directly available to the districts now prepared to make use of it, he asserted.

## Proposed Loan to Great Britain

REMARKS

OF

### HON. LEON H. GAVIN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

*Thursday, December 13, 1945*

Mr. GAVIN. Mr. Speaker, I listened with a great deal of interest to the debate yesterday on an appropriation of $75,000 for the Small Business Committee. And I cannot understand why we in the Congress quibble over an appropriation of $75,000 to help small business in America when shortly there will be brought before us a proposal to grant a loan to Britain of $4,400,000,000 to build up and maintain British industry and trade.

I understand from the press reports that the House of Commons opened debate yesterday to determine whether or not they will accept the $4,400,000,000, 50-year, 2-percent loan. Now isn't that something? We may have to send a couple of ambassadors or career men to the British Isles to persuade them to take this money on a long-term credit; but do not worry, they will take it.

Now, I cannot understand why they opened debate as to whether or not they will accept this money when this proposal has never been presented to the Congress to debate whether or not we approve giving this $4,400,000,000 under the terms suggested.

As far as I am concerned, I think that it would be better to take the $4,400,000,000 we are going to give Britain, and that is exactly what we are going to do, and the $6,000,000,000 talked of for Russia and set up the $10,000,000,000 to pay a bonus to the veterans of this war.

Certainly we who represent the American taxpayer are entitled to an opportunity to approve or disapprove of this loan to Britain before the House of Commons should determine whether or not they are going to accept it. I cannot understand why the duly elected representatives of the people are by-passed in the determination of matters of this nature.

We have a $300,000,000,000 debt and to saddle another four to ten billion dollars on the already overburdened backs of the American taxpayers is a matter that we should at least be given an opportunity to pass on. However, the economic and industrial supremacy and trade of the British Isles must be maintained, regardless of the hardships it works on the American people.

In view of the fact there seems to be a question as to whether or not Britain wants to accept this loan under the terms which have been suggested, why not call the whole thing off, and we will not have to get into any world-trade agreements or any other agreement that may eventually cause us trouble. It is about time we started to develop plans to reduce our $300,000,000,000 debt rather than increase it by many billions of dollars.

Everyone thinks Uncle Sam is a rich uncle, whose pockets are inexhaustible. Spend, spend, spend! But mind you, the day is not far distant when the American people will awaken to the complete realization that they will have to, by hard work, produce the money to pay the taxes to pay this bill, and let no one tell you otherwise.

If we keep on spending as we are now doing, ultimately we will go into bankruptcy.

## Facing Winter

EXTENSION OF REMARKS

OF

### HON. EMILY TAFT DOUGLAS

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

*Thursday, December 13, 1945*

Mrs. DOUGLAS of Illinois. Mr. Speaker, under permission granted me to extend my remarks, I include an article, Facing Winter, by Barnet Nover, which appeared in this morning's Washington Post:

FACING WINTER

(By Barnet Nover)

UNRRA AND THE FOUR HORSEMEN

There is a race going on between America's legislative machinery and the Four Horsemen of the Apocalypse; and the fate of millions of hungry, homeless, disease-menaced and despairing people in Europe and Asia depends on the outcome.

Congress has just appropriated the final $550,000,000 of this country's original $1,350,000,000 commitment to the United Nations Relief and Rehabilitation Administration. This action is to be commended, particularly since, in its final form, the appropriations bill had no injurious conditions tied to it.

We must recognize, however, that this money is being made available to UNRRA only in the very nick of time. Without these absolutely indispensable funds the machinery of UNRRA would have had to come to an almost complete standstill at a time when, with winter just around the corner, the demands on UNRRA are greater and more pressing than ever.

We must also recognize that the current appropriations while adequate for UNRRA's immediate needs provide no margin for that agency's future operations. In fact, by the end of December, every last dollar of the $550,000,000 just voted to UNRRA by Congress will have been committed.

For that reason it is not only essential that an additional sum of $1,350,000,000 be appropriated but that this appropriation be made available to UNRRA before Congress adjourns for its Christmas recess.

Postponement of such action until after the House and Senate reconvene in January will inevitably lead to a break in UNRRA's supply line. This could have extremely serious consequences for a great many suffering individuals in Europe and Asia.

The point is that between the time an order is placed by UNRRA and the time the supplies thus ordered are placed on board ship an average of 7 weeks elapses.

There is a further and inevitable delay between the loading of such ships and their arrival on the other side. And after those ships have docked at Marseilles or Piraeus or Stettin or Shanghai further time is bound to elapse before the supplies can reach the individuals to whom they may mean all the difference between starvation and at least a minimum of subsistence, between health and disease, between hope and despair, even between life and death.

During recent months UNRRA's shipments have steadily gone up.

In October of this year shipments totaled 520,000 tons. The total went up to 750,000 tons last month, may reach a million tons this month, and go well beyond that figure in January.

But by the middle of February the last of the supplies will be at dockside that are being ordered out of UNRRA's current funds. This means that if, by mid-February there is to be no break in the movement of essential supplies on UNRRA account, orders must be placed now. But UNRRA can place no orders unless and until it has the money to pay for them.

That is why it is so imperative for Congress to act on the second $1,350,000,000 UNRRA appropriation before it recesses. By mid-January or early February it will be too late to undo the damage that will be done by leaving UNRRA's treasury bare during the early weeks of winter.

Since it first began to operate a little more than a year ago the operations of UNRRA have steadily grown in scope as they have increased in efficiency.

UNRRA has more than its share of growing pains. With the military in control in many areas of Europe, UNRRA was forced to operate, at the outset, on a very limited scale.

Furthermore certain political difficulties and differences had to be overcome before UNRRA was invited in to take over the relief efforts needed in countries, such as Poland and Yugoslavia, where the needs were greatest. And to make matters worse, great difficulties stood in the way of UNRRA's recruitment of personnel at a time when so many of the people vest trained for the tasks UNRRA had to do were still in uniform.

Most of these difficulties have since been overcome. More and more of the relief job which the Allied armies themselves did at one time and still do in some areas have been turned over to UNRRA. The organization is now faced with the request that it take over in Austria and Italy.

But all this means that UNRRA's efforts cannot be subject to any interruption such

as would occur in the event of any postponement of the $1,350,000,000 appropriation bill now up before Congress. The House has passed the authorization. The Senate still has that job to do. And both Houses have as yet to act on the actual appropriation bill.

If we are not to be remiss in our obligations, this money must be made available, and promptly. Speed is of the essence.

---

## Henry Morgenthau, Jr.

EXTENSION OF REMARKS
OF
## HON. SOL BLOOM
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Thursday, December 13, 1945*

Mr. BLOOM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by the Honorable Henry Morgenthau, Jr., former Secretary of the Treasury, before the Hebrew Union College, Cincinnati, Ohio, December 8, 1945:

I am sure all of you must be as greatly disturbed as I have been by the fearsomely slow development of our national policy in dealing with Germany. Five months have passed since the Potsdam Declaration gave us the blueprint to be followed. The real, solid accomplishments in building from that blueprint have been pitifully small. In the most important fields, nothing has happened.

Yet, if we cannot carry out this relatively simple program, there is little chance that we can go on to build a permanent peace. Our course in Germany has been more thoroughly considered than some of the other problems of peace. We have agreement, signed and sealed, on all the vital aspects of the program except Germany's western border and the future of the Ruhr. On that basis, it only remains for the Allies to sit down and do business with each other. If the occupying authorities cannot agree, the foreign ministers should roll up their sleeves and grapple with any disputed point. If the foreign ministers fail to reach a prompt settlement, the heads of states must iron out the difficulty.

I myself have by no means given up hope that we will carry out the principles of Potsdam. But we must do more than put words on paper. Europe today faces the danger of chaos because for 4 months the Potsdam Declaration has remained little more than a blueprint. Hundreds of thousands of Europeans will die this winter unnecessarily because of our failure to act. The very existence of democratic governments on the Continent is threatened because we have not moved fast enough.

The administration has not been thinking hard enough, has not been working consistently on this job.

Four months is more than long enough, even in Washington, even in international dealings, to have moved forward. Since August 2, when the Potsdam agreement was signed, nothing has been done, so far as the public knows, to fix Germany's western boundaries. Why not? Since August 2 nothing has been done, so far as the public knows, to establish a permanent regime for the Ruhr industrial area, to break up the menacing German cartels, to settle just what industries Germany may keep, and, in our zone at least, to redistribute land so that Germans can grow their own food.

The whole framework of the peace is at stake. Failure to act is our greater danger at present. For with every delay, rumors, and suspicions multiply. We cannot turn our backs on the problem and hope that if we just forget about it, all will be well.

From the very beginning, our policy toward Germany has been the very foundation stone of peace. Success in Germany is the first essential step toward permanent world organization, toward lasting United Nations cooperation. The first test of postwar policy, the first test of the ability of free peoples to win the peace as they won the war, is our handling of the German situation.

Today Germany remains our problem. We have still to meet the test. We have still to take that first essential step toward real peace. Seven months after the final collapse of the Third Reich, the purpose and the manner of our occupation are still in the realm of debate.

Of course, no one should expect to have all the problems settled in 7 months. That is a little too brief a time to undo the damage of generations of German belligerence. I am not one of those who despair because the millenium does not come rushing upon the heels of Armageddon. At the same time, the unnecessary delays have brought us to the brink of a major crisis.

Let us review briefly what the 7 months of our control over Germany have accomplished or failed to accomplish. Our information on these vital points has not been altogether satisfactory. We have suffered from hold-overs of censorship and restrictions on the free flow of news. Surely there can be no valid reason why correspondents of all the United Nations should not have untrammeled access to all the zones of occupation, no matter which power happens to be exercising authority.

We know that the immediate disarming and substantial demobilization of the German armies have been achieved. Only a few remnants of the once mighty Wehrmacht remain in military formations.

The program of denazification and trial of war criminals has gained headway after a slow start. In finance and government service, the removal of Nazis has been fairly complete.

Unfortunately, the record in industrial life is not as good. This is a danger spot to be watched, and it may be hoped that the recent arrest of a group of German industrialists by the British foreshadows improvement. The great trial at Nuremberg has served the eminently useful purpose of reminding the world what we fought to destroy. As an example of mankind's new determination to hold its betrayers to strict accountability, the trial may have even more wholesome results.

When we come to industrial disarmament of the Reich, I, for one, am deeply concerned. Here is the key to our success in converting Germany to peace, and we are still only talking, still planning, at a time which cries for action. Even such actions as we do take are noisy but not vigorous. Only a very few factories have been selected as available for reparations. Yet official reports show that in spite of bomb damage, Germany's industrial capacity remains largely intact. The plants that have actually been destroyed typify the loud futility of the program to date. Ammunition and explosives factories have been blown up with a great deal of satisfactory noise. But these plants, by their very nature, are in small scattered buildings, easily replaced and unimportant in the general calculation of German industrial strength. Yet the heavy industry of any nation is the real measure of its military potential. With the advent of the atomic bomb, this becomes more important than ever before, if that is possible.

Linked closely to Germany's one-time dominance of European industry were the German business combines and cartels. So far our determination to abolish these cartels exists in word only. Deeds are lacking. Even the investigation of the cartel system is not being pressed strongly.

The program of reparations, also tied closely to the future of Germany's heavy industry, is in the hands of a committee. That committee has hardly advanced to the planning stage.

From such a long record of talk, it is pleasant to turn to a field in which we can discern some prompt and effective action. Europe's displaced persons—at least some 6,000,000 who have desired to return to their native lands—have been sent back in spite of difficult transport problems. The displaced persons who remain are those who will not or cannot go home. While these pitiful wanderers are suffering enough to keep any humane person awake nights, their more fortunate companions in misery have been saved by efforts that are worthy of all praise.

The long, slow task of creating an atmosphere in which the German people can reeducate themselves has been begun, and if the results so far are disappointing, that should be blamed mostly on the difficulty of uprooting the poisonous growth of centuries. German elementary schools and a few other institutions are open. The reorganization of local and provincial life to allow communities to take part in the handling of their own affairs is under way. Health and sanitation have been taken care of more efficiently than many observers had dared to hope.

The German people are eating. Food is being brought in for them, and I am glad that we are carrying out our responsibilities in this respect. True, millions of Germans are getting no more than 1,550 calories a day. But this is as much as some of our liberated allies can get, and if we give more to Germans it can only be by taking it away from Germany's victims.

Out of this summary of the situation, I think, one fact emerges clearly. The whole administration of Germany has been conducted on a hand-to-hand, largely uncoordinated basis. That means bad administration. Immediate problems have occupied the administrators and the policy makers to the exclusion of real objectives. Yet only when the real objectives are formulated can the immediate problems be solved.

Our paramount objective, in the long run our sole objective, is peace. Let us not lose sight of it.

My own program for using Germany as a stepping stone to peace has been set forth in my book, Germany Is Our Problem. The fact that more Germans may have to earn their livelihood in a smaller territory than I used as an illustration in my book does not affect the basic principle. But before it can be carried out, the Germans must be given a chart of their future. They must know that hope of aggression is dead. They must also know that hope of a decent peaceful life is before them.

The failure of the occupying powers to carry out the program envisaged in the Potsdam Agreement is our greatest blunder to date. It is a blunder for which I can find no real excuse. By putting that agreement into effect, we can give the German people a blueprint from which to build their country into a peaceful member of international society. But until we do that, we can do no more than act as guards. The elements of our policy are simple. They are:

First, the decision as to just what industries Germany may keep. There should be confined to consumer goods, to the so-called light industries which can never be a basis for modern war. These could then get into production as rapidly as physical circumstances permit. The Germans themselves could plan, knowing that 10,000,000 or 12,000,000 of them might eventually find jobs in these factories.

Second, the intensification of German agriculture on a family-farm basis should be

encouraged. This means breaking up the big landed estates. It means cutting down forests to build homes and then bringing the cleared land under the plow. It means helping Germany to establish rural financing akin to our own farm-security program. The new farmers must be helped with credit, seed, advice, essential tools. Only in that way can Germans be self-supporting without being also a menace to peace.

Now such a program needs the cooperative action of curselves and our allies. In this it resembles all the other problems of peace. All of them need cooperation. And that cooperation requires frequent discussions. For this reason I feel that President Truman will soon revise his estimate of the necessity for Big Three conferences—or anyway, Big Four conferences. I hope that Secretary Byrnes has correctly interpreted the real meaning of the President's statement on this point. There are some things that can only be done by the heads of States.

For instance, general agreement on German administrative problems has been impossible because the French have felt that certain other problems must be settled first. The cooperative way of getting things done internationally is to examine the case on its merits, not attempt to bludgeon the dissenting member of a group into acquiescence. Abolition of the rule of unanimity is no substitute for real accord. It is the accord that is important, not the rule. The situation is this:

At Potsdam, the Big Three laid the basis for a settlement of Germany's eastern border. That was essential to administration of occupied Germany. But nothing was said about the western border, or that equally important point, internationalization of the Ruhr. One must remember that the French, who have been overrun by the Germans three times in three generations, have every reason to feel insecure until these two vital questions have been settled. I feel certain that only a conference between the United States, Britain, France, and Russia to iron out this point can give us the basis for further collaboration in achieving our common ends in Germany. Furthermore, a prompt settlement here will help give stability to the French Government, and in turn to the whole fabric of Europe. It should also add wisdom and strength to the allied councils.

This is not a problem that can be fobbed off on the United Nation Organization. A world organization is not a peace conference. It cannot settle the problems arising from the war. UNO will have its hands full with the problems arising from the peace.

Joint action at a conference of the four major powers concerned will go a long way toward establishing the basis for our objective of peace. It will put the lid on the ambitions of Germans who still cherish a dream of a rearmed Reich. Their only hope is disagreement among the Allies.

The revival of German heavy industry as the first step toward that rearmament already has its advocates, although they do not put it quite that way. Some of them see Germany—as they saw Germany before the war—becoming a buffer against Russia. That curiously short-sighted view—to put it more kindly than it deserves—is highly pernicious. For its only possible result is antagonism and suspicion between Russia and curselves. Nothing could be more dangerous. The only hope of peace is in a solid understanding between the United States and Russia. The greatest menace to peace is the campaign to sow discord between us.

Here, too, Germany is our testing ground. Upon the actions now to be taken rest the stability of Europe, the success of the United Nations Organization, and the strengthening of our friendly relations with Russia.

## Tuskahoma World Capital

EXTENSION OF REMARKS
OF
## HON. PAUL STEWART
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES

*Thursday, December 13, 1945*

Mr. STEWART. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio broadcast by Ken Miller:

Four years ago tonight this Nation was shocked into the realization we were officially at war. Official proclamations had been made and the declarations of war resounded around the world.

The rude awakening and the first shock of Pearl Harbor day had not even worn off, but quickly a dazed nation was staggering to its knees after the first blow and attempting to gain its feet to strike back at the foul blow which had been struck.

The next three and a half years saw the fastest recovery a nation had ever made. Volunteers swarmed to the recruiting places. Draft machinery was beginning to turn over on greased wheels to fill the ranks of our Army. Factories turned on the night lights and extra crews were summoned back to the red glow of steel furnaces to put the plants into 24-hour production.

Homes saw loved ones go off to war and the remaining members took up their lunch pails and went to the factories. Even the children returned from their schoolrooms and canvassed the neighborhoods for scrap paper, rubber, iron, and steel—all to be molded into bombs, bullets, and guns to strike back at America's attackers.

And now the oppressors have been heartily spanked and the leaders are either dead, condemned, or awaiting their retribution. Heroes are returning to their homes, some battle-scarred and some maimed for life. Others are missing from their homes and will not return. Others are coming back to again take up their lives in peace.

All over the world the machinery of peace is being geared as world diplomats and leaders striving to set up the machinery which will forever outlaw war and oppression. Conferences are going far into the midnight hours as they strive to assure a weary and saddened world that never again will ambitious dictators attempt to further their realms of conquest—and to assure a world that never again will peace-loving citizens be dragged away from their homes, families broken up—just to reassert our rights to peaceful living and enterprise.

Today a new world of nations is in the making—a world dedicated to peace. World leaders even visualize the creation of a new world capital, which will be dedicated to the prevention of war and the maintenance of peaceful living among all nations of the world.

These world leaders are striving to locate a suitable place where a world capital may be built—a symbol of peaceful intentions, a place where the representatives of peaceful nations may meet, and a place where the machinery for maintaining this peace can be set up and kept in operation.

As a result, during recent weeks we have seen a half dozen ambitious groups come forward with the request that this proposed new world capital to be set up by the United Nations Organization be located in their respective areas. Philadelphia has officially made a bid for the new capital. Boston has submitted a proposal. San Francisco is requesting the capital be located there. Claremore, home of our own Will Rogers, has made its bid.

Some diplomats who are in close touch with the United Nations Organization say they believe the body will select a place in the United States which will be far from a metropolitan center—a huge expanse which is not littered with too modern structures and an area which can be built as a cosmopolitan center for the diplomats of the world.

Just a few days ago I was formally appointed to a state-wide commission in Oklahoma, to aid in the presenting of the suggestion that the town of Tuskahoma be selected as the world capital.

During my many years of residence in Oklahoma, I can safely say that there are few towns and cities in the State I have not visited at least once. There were few areas that I was not thoroughly familiar with. But Tuskahoma—where was Tuskahoma?

I found a map, and finally located the town, off the beaten trails, far down in the southeast corner of Oklahoma, and situated in the Kiamichi Mountains. I feel quite sure my consternation about Tuskahoma is shared by the majority of the citizens of Oklahoma, for it is a safe prediction that only a very slight percentage of the residents of this State have ever visited Tuskahoma.

This week I started out to find Tuskahoma—to visit the little-known town—to see personally the area which was being advocated as a location for the world capital. Quite frankly, I was a little skeptical when I started out, and even doubted the sincerity of those who were taking up this cause.

Last Monday morning I boarded the airplane of the Aerial Photo Service, and this company's genial manager, Delmer Curtis, was my pilot. Despite the bitter cold of that morning, he turned his plane in the direction of the Kiamichi Mountains in southeast Oklahoma.

Forty-seven minutes later we landed on the airport at McAlester, and there had a brief talk with Ben Choate, of Indianola, Okla., a member of the State legislature, who is the father of this move to locate the world capital at Tuskahoma. We heard Choate's story in brief, and he told us of certain areas in the vicinity of Tuskahoma which he especially wanted us to visit.

In the below-freezing weather, we again took off from the McAlester Airport and headed toward the hills which we could see in the distance.

Gradually we gained altitude until we finally were cruising at an altitude of more than 3,000 feet. Soon I saw the reason, for it was necessary to gain this altitude to clear the Kiamichi Mountains which were directly in our path. True, there are not mountains in Oklahoma equal to Mt. Everest or Pikes Peak, but what I saw certainly did equal the beauty of many sections of the Rockies. They were huge mountains in miniature. The Kiamichis were brown with the fall leaves of sleeping trees. A few still retained a bright red color as nature painted its colors on the Kiamichi canvas. And on top of the mountains we saw the bright green of the pine trees and the evergreens.

So engrossed were we in the beautiful scenery from the air, that we did not realize the mountains were gradually dropping away from us. Curtis suddenly nosed his plane downward, and the sight ahead of us was amazing. I had traveled by automobile on both sides of the Kiamichi Mountains, and had crossed them at several points, but here, directly in front of us, was a huge broad valley, almost as level as a floor.

Scattered above the valley were small farms, a few small farm houses, and cattle were grazing in the pastures. The beautiful Kiamichi River wound through the valley, the cold green water standing out in the scenery more vividly than the bright green of the evergreens and pines on the top of the mountains.

It was the first time I had ever realized that such a large valley, and such a beautiful expanse of land even existed over inside those rugged mountains.

My pilot, Curtis, nudged me and then waved his hand.

"There it is—this is the Tuskahoma Valley," he said.

I nodded, still much taken aback by the sudden realization that I had lived in Oklahoma these many years and had failed to see one of the most beautiful spots in the entire State.

We continued downward, until we were flying at an altitude of less than 500 feet. We passed over a farm house, and a farm wife was hanging clothes on a line. The clothes were hanging straight, not a sign of wind as the mountains on either side deflected the cold winds, furnishing an efficient windbreak for the entire valley.

We speeded over the land at 100 miles per hour, until directly in front of us was a small cluster of buildings. Small and a typical wayside town. There were no paved roads, and no railroads to this town.

Curtis informed me that this was Tuskahoma. We circled the town a couple of times, and several residents stood in the street and waved. It seems that my flying trip had been well publicized. I learned later in the day, and they were aware that a newsman was surveying their little town from the air that morning.

We headed north from the town, and only a mile away we saw a large red-brick building. Somewhat amazed at the sight of this building, I queried Curtis, who had flown over this area the day before, taking pictures of the entire valley, which the State commission is sending to the United Nations Organization in London.

This was the old capitol building of the Choctaw Nation. Only a few yards away was a small house, and Curtis informed me that this was the home of Chief W. A. Durant, principal chief of the Choctaw Tribe.

We flew from one end of the valley to the other, a distance of nearly 35 miles. And then we crossed it at several points, finding the valley 12 miles wide.

Here was a large valley, in which you could visualize the location for a large modern city of nations.

Here could be constructed a city, laid out by architects' plans, and world leaders' dreams—a city of beauty and a city of practicality.

Our plane turned homeward, and during the next hour I attempted to visualize this city of peace—the city of tomorrow. I knew well that mine was only a dream, and yet I realized too that Washington, D. C., was a city of planning. I realized that Geneva was virtually built from the ground up. Why not the new world capital?

Its location was ideal on the American Continent—the very center of the United States. The climate was temperate the year around.

Railroads were only a few miles away, and highways could easily be joined across the mountains to this haven of beauty. Wild deer and wild turkey roamed the hills nearby, and wildlife was abundant. Fish were abundant in the clear river which drained down from the little mountain streams forming rivulets over the mountains.

It was not difficult to envision a dream of fine broad highways being constructed by Oklahomans, highways made from gravel taken from the potato hills of the Kiamichis, and covered with asphalt refined in Oklahoma plants.

And then there were railways being constructed from their present locations across the mountains into this modern city of the twentieth century.

Huge planes were landing on a broad airport at one end of the valley, one bore the markings of a Russian airline to the United States. It taxied to the loading strip and stood beside a plane from Britain, and another air liner from China.

The diplomats, some in sport clothes, carrying guns and fishing rods, ready for a brief respite in the wildness of the Kiamichi Mountains, boarded taxis, and hastened to the nearby world capital.

Downtown all was a-glitter. Beautiful buildings, all constructed from granite—quarried from huge stocks of granite available in Oklahoma—rose from the valley floor. Atop each of the buildings were a few helicopters, parked by the diplomats, the envoys, and their aides. The windows glistened with shiny new glass, made in Oklahoma plants, and made from Oklahoma sand. The windows were held in place with lead trimmings taken from the lead mines of northeast Oklahoma. Building cornices sparkled under the sun, as the northeast Oklahoma zinc reflected the light.

It was a smokeless city, for all heating was done by natural gas taken from Oklahoma wells. The city was brilliant with light at night, produced from huge reservoirs and dams throughout Oklahoma. Cars hurried up and down the streets, carrying the world's great and near-great to conferences and places of entertainment. These cars were new models, powered by Oklahoma oil and Oklahoma gasoline.

The houses near the heart of the city were built of native lumber taken from the Kiamichi Mountains, and were painted with paints made from Oklahoma resources. Newsboys were on the streets calling the late headlines, and selling papers made from wood pulp taken from the nearby mountains.

And then—by that time we were back over the Tulsa municipal airport, and our dream was over.

Yes, I know, it may sound like a lot of nonsense, and a dream—but it still isn't beyond the realms of possibility. Such things have been done. Columbus had to dream. The builders of Washington had to dream. And look at the city they built. Look at Geneva today, the capital of the League of Nations.

Now, the dream of Tuskahoma may be a dream, but it isn't a dream to those people down in the valley. They are sincere, and they have convinced many prominent and influential citizens of the Southwest that this is not just a dream, but a distinct possibility. To get their viewpoint, may we suggest you listen to a special Main Street Speaks program from Tuskahoma at 11:30 tomorrow morning.

Ben Choate, a Choctaw Indian who had a vision of a beautiful city of tomorrow constructed in the valley of his birth, at the home of the world's only nation of people, the Choctaws, who are on record for having voted out their own national existence many years ago, to accept advancement, peace, and progress—the Government of the United States—is to be commended highly on his foresight. It may never become a reality—but more and more it is gaining in favor, until today Choate has received offers of assistance from scores of civic bodies throughout the Southwest. He has received praise from hundreds of individuals, and other scores of cities have pledged help in the plan to make a portion of Oklahoma the world capital of peace.

## A Secretary of Transportation

EXTENSION OF REMARKS

OF

### HON. SOL BLOOM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

*Thursday, December 13, 1945*

Mr. BLOOM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Enquirer of Monday, October 29, 1945, entitled "A Secretary of Transportation":

In view of the vital role taken by all forms of transportation in the life of the Nation, the suggestion by Basil Harris, president of the United States Lines, that a Cabinet post of Secretary of Transportation be created should receive warm support.

As Mr. Harris pointed out in his address at the dinner of the American Merchant Marine Conference the other night, we all are dependent on transportation. He said:

"The truck, the train, the plane, and the ship play such an important part in our daily life and are such an integral part of our economic structure as to merit primary attention by the Cabinet of the President. Every man, woman, and child in this great Nation—whether it be the food we eat, the places we go, or the work we do—is directly dependent on transportation in one form or another, and much of this transportation is competitive so regulation is essential.

"Therefore, we need a spokesman who can sit in the seats of the mighty and speak for all forms of transportation with the dignity and authority of a Cabinet minister. It is a self-evident fact and needs no defense."

In the postwar world when competition for international trade will be very keen it is obvious that quick, efficient transportation of goods and passengers may often be a determining factor in the placing of orders. And since, as Mr. Harris also said, 1 job in every 10 is dependent on export trade, the very prosperity of our country will necessitate the correlation of our transportation facilities and the development of proper public support. To this end the appointment of a Secretary of Transportation is an essential step that should be taken without delay.

And the President need look no further for a man who is so eminently qualified for this post as Basil Harris.

## Use Every Ship

EXTENSION OF REMARKS

OF

### HON. ALVIN F. WEICHEL

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

*Thursday, December 13, 1945*

Mr. WEICHEL. Mr. Speaker, under leave to extend my remarks in the RECORD, I want to say that according to a press release War Shipping Administrator Land says there are enough ships available for the return of overseas men, yet he has not come before the Merchant Marine Committee. More than 3 weeks ago I called for public hearings before the Committee on Merchant Marine covering the deplorable ship situation and failure to return our men because of lack of ships, and asked that public hearings and examination of the Maritime Commission and the War Shipping Administration be held.

Since the cessation of hostilities in Europe last spring every schoolboy has known of the cry that there are not sufficient ships to bring the boys home, and that the Army has told these overseas men that there are not sufficient ships. Every letter from these boys says they are being held because of no ships.

Pictures in the newspapers show large fleets of unused ships lying at anchor in various harbors throughout the world. One of the most recent was taken by the

Chicago Tribune showing 125 idle ships lying at anchor in one American harbor.

In addition, there has been the incident of 1,000 men being ordered to go into the hold of a smelly warship for transportation. They refused, some going a. w. o. l. The port health officer said that it was not a fit place to carry 1,000 men, that the space was not sufficient, and that the sanitary conditions were foul. Yet the love for home forced 500 to ride in this ship.

Further, the War Shipping Administration has over 425 ships with the British, more than 125 ships with the Russians, and even during the war and now, spent millions of dollars to make ships into crab canneries for the Russians.

On the recent three disabled troop ships in the South Atlantic with our returning troops, one is of Greek registry. Why are we hiring foreign ships if the War Shipping Administration has made our ships available. I introduced a resolution to recover back our 600 ships from foreigners for their use in returning our boys. But the Maritime Commission and the War Shipping Administration have not come forward for hearing and examination.

Since the cessation of hostilities in Europe the Maritime Commission, the War Shipping Administration and the Administrator have evaded and refused public hearings before the Committee on the Merchant Marine and Fisheries as to what has become of $22,000,000,000 spent by the Maritime Commission for ships, as to what has become of more than 5,000 American ships, as to why hundreds of American ships are in the hands of foreigners for their own private use, as to why these ships and the remaining 5,000 have not been immediately turned over for the return of our troops.

For nearly 6 months the public and parents of these boys have been refused public hearings on the use of more than 7,500 ships owned and chartered by our Government, as to why they have not been fully used to bring back our overseas men.

The President, through the Maritime Commission and War Shipping Administration, has absolute control of the use and operation of more than 7,500 Government owned and chartered ships, but has failed and neglected to order these ships to return our overseas men. I have introduced the following resolution that the President, the Maritime Commission, and the War Shipping Administration make available immediately these 7,500 ships for the exclusive return of our soldiers overseas:

A bill to provide for the immediate use of all ships owned and controlled by the Maritime Commission and War Shipping Administration to return our overseas men

Whereas the Maritime Commission and War Shipping Administration have expended more than $22,000,000,000 for the building and operation of ships; and

Whereas our soldiers in foreign countries are told that there are not enough ships to bring them home; and

Whereas there are millions of the armed forces overseas awaiting to be returned home; and

Whereas the Maritime Commission and the War Shipping Administration have nearly 7,500 ships under their control; and

Whereas the Martime Commission and War Shipping Administration have failed to use these 7,500 ships to return our soldiers from overseas: Therefore

*Be it enacted, etc.*, That the President of the United States, the Maritime Commission, and the War Shipping Administration immediately make available 7,500 ships for the exclusive return of our soldiers to the United States and that the members of the Maritime Commission, members of the War Shipping Administration, the Administrator of the Maritime Commission, and the Administrator of the War Shipping Administration, be forced to attend public hearings for examination as to their failure to make available and use these ships for the return of our soldiers overseas.

## Truman's Labor Proposals Similar to Minnesota Act

EXTENSION OF REMARKS
OF
### HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
*Thursday, December 13, 1945*

Mr. JUDD. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following editorial from the Minneapolis Star-Journal of Thursday, December 6 1945:

TRUMAN'S LABOR PROPOSALS SIMILAR TO MINNESOTA ACT

The procedure for settling labor disputes which President Truman asked Congress to enact differs only slightly from that provided in the Minnesota Labor Relations Act. Here are the main steps the President outlined in his message Monday:

"1. If collective bargaining and conciliation fail and a strike vitally affecting the national public interest is called or threatened, the Secretary of Labor would so certify to the President.

"2. The President then would appoint a fact-finding board. It would report its findings and recommendations within 20 days.

"3. From the time the dispute is certified until 5 days after the board reports, it would be unlawful to call a strike or lock-out or make changes in pay or working conditions except by agreement. The parties to the dispute would not be bound to accept recommendations of the fact-finding board."

The Minnesota act sets up the following procedure:

"1. A union or employer can file with the State conciliator a strike notice or request for assistance in settling a dispute.

"2. Ten days must elapse after receipt of strike notice before a walk-out follows. However, in disputes affecting a substantial number of people, and therefore the public interest, the conciliator so certifies to the Governor, and then an additional 30 days must elapse before a strike is legal.

"3. The Governor appoints a fact-finding commission, which must report within 25 days.

"4. The conciliator calls in both parties and tries to effect a settlement on the basis of the fact-finding report. If agreement is not reached, a strike becomes legal at the end of the 30-day waiting period."

No police powers are vested in the State conciliator. The most he may do is to deny benefits of the act to unions or employers who act contrary to the law. Such benefit for a union is chiefly that of certification as bargaining agent.

What the Minnesota act does—and what Truman proposes to do—is designate a cooling-off period and provide for gathering the facts on a dispute.

While it is true that principles rather than facts are the points at issue in much industrial strife, responsible people on both sides must be willing to face the facts squarely. Perhaps even more important than obtaining the facts for the parties to a dispute is obtaining them for the public. Public opinion can be the most powerful determinant in labor troubles.

Since January 1, 1945, the Minnesota conciliator's office has taken part, on request, in 427 disputes. Some of these were applications for certification of unions as bargaining agents, but in more than two-thirds of the cases strike notices were filed or the commissioner was asked to assist in settling disputes. During the war, strikes in the State averaged about 10 a year. There has been a slight increase in the rate since the war ended. That was to be expected. Hardly anyone would deny that industrial relations have been much better since passage of the law.

Labor does not lose the right to strike under either the Minnesota act or the Truman proposal. Compulsory arbitration is not provided.

It is difficult then to understand the reason for opposition of national labor leaders to the Truman plan. Perhaps they realize that sentiment against unions grew up in some quarters during the war. Perhaps they realize the General Motors strike put them in an unstable position and they fear reprisals. Perhaps they feel that once labor legislation comes to the floor of Congress, much more sweeping action may be taken than the President suggests.

There is the latter danger. A number of antilabor Congressmen would like the opportunity to hamstring unions. It is to be hoped that the majority of Congress will not accede to such demands. The interest of unions also is bound up at many points with the public interest.

But fact-finding and waiting periods have not operated to the detriment of organized labor in Minnesota. They should not impair the best interests of labor nationally, if voted by Congress.

## The Utility Industry's Record in Peace and in War

EXTENSION OF REMARKS
OF
### HON. EVERETT M. DIRKSEN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
*Thursday, December 13, 1945*

Mr. DIRKSEN. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include therein an address delivered by B. C. Forbes, president of the Investors Fairplay League, before the league's forum at the La Salle Hotel, in Chicago, on November 29, 1945:

Ironically, the most hounded industry in America, the arch target of governmental prosecution, invasion, usurpation, is the one which has achieved a perfect record throughout the war, never has been guilty of "too little nor too late," to quote Chairman J. A. Krug, of the War Production Board, never resorted to rationing, never bred black markets, actually lowered prices.

Ironically, also, the first concern in this industry to fall down on the war job was

the Government's prize project, TVA, which had to be bailed out by investor-owned companies.

When the supreme emergency overtook America, the colossal requirements for power to energize the Nation's war-producing facilities was furnished to the extent of more than four-fifths by privately owned and operated plants which governmental bodies have been so persistently attacking and dismembering, to the ruination of myriads of modest individuals and families who invested their savings in utility stock issues invariably approved by governmental regulatory bodies.

This fact should cause every American taxpayer to stop, look, and listen. The electric power and light industry pays taxes to the tune of $2,000,000 each and every day of the year. But each and every time a taxpaying utility is swallowed up by a Federal, State, county, or municipal body, the taxes formerly paid by the privately owned properties are laden upon the shoulders of other taxpayers.

Lincoln declared that no nation could exist half slave, half free. No industry can exist half governmental owned, half investor owned.

All indications, at least until recently, have been that Washington's dominating objective has been to obliterate the utility industry, owned by millions of small investors and to engulf the whole industry in state socialism.

Again ironically, the Federal instrument which is dismembering the Nation's foremost utility enterprises was established by Congress for the protection of consumers and investors.

The Securities and Exchange Commission was brought into being after millions of investors, and especially speculators, had their fingers badly burned in the financial catastrophe of 1929. Admittedly, during the 1920's utility leaders, in common with innumerable leaders in finance and industry, indulged in unconscionable promotions and exploitations. Congress, spurred by the very natural Nation-wide indignation against utility and other over-reaching Napoleons, passed the Public Utility Holding Company Act of 1935.

Chairman Joseph P. Kennedy, of the SEC, warned Congress that the Holding Company Act contained "no effective standard to guide the Commission in the momentous decisions it must make"; that it was "not a wise policy to vest in any one group of men the tremendous responsibility involved in this great power"; also that "I do not believe it is fair or practical to expect any five men to shoulder the responsibility of deciding which of these utility systems are to be reorganized and into what size or character the ultimate groupings should evolve."

What prophetic words. The SEC Commissioners have flopped and floundered. Instructed by Congress to draw up a plan to bring about the economic and geographic integration of the utility industry, the SEC has consistently side-stepped that—perhaps impossible—task.

Notwithstanding the immeasurable responsibilities devolved upon the SEC Commissioners—responsibilities calling for vast experience—the composition of the Commission has undergone kaleidoscopic changes. No fewer than 15 men have served as members of this 5-man Commission in 10 years. The shocking fact is that membership in this Commission has flagrantly been taken advantage of as a stepping stone to more remunerative public office.

Although few Federal legislative measures have cried louder for amendment, the law has not been amended since its inception a decade ago, although many less faulty and less vital measures have been improved during this period.

The utility industry deserves better treatment than it has received—than it is still receiving.

How has it met the crucial test of war? Consider these phenomenal tributes:

Secretary of War Robbert H. Patterson: "The Nation's electric light and power industry has never fallen down on its job. The Army rates its performance as that of 'a good soldier.'"

Vice Adm. Emory S. Land, Chairman, United States Maritime Commission: "We owe a debt of gratitude to the men and women of the electric power industry. They delivered the power we needed to build the ships. Our thanks for a job well done."

Lt. Gen. E. Reybold, Chief of Engineers, United States Army: "We, of the Army engineers, know of your work at first hand—know it and appreciate it. I am both privileged and honored to salute you."

Vice Adm. W. R. Monroe: "You delivered, each and every one of you, from executives in the front offices to the men who climbed the poles. When we asked for power we got power, and not—thank God—alibis!"

Under Secretary of the Navy Artemus L. Gates: "The wartime achievements of the electric industry well deserve the Nation's approval."

What of the industry's achievements before the war? In the 10 years preceding 1928 no fewer than 15,000,000 new customers were added—incidentally, largely due to the creation of holding companies, which made possible the raising of billions of capital to expand light and power facilities, often in rural areas, to take over and modernize and expand numerous small concerns.

In the half-dozen years ending in 1930 no fewer than 9,000,000 new customers were given the benefit of electric service.

Last year power output was double that of 1939, although generating capacity had been increased only 27 percent—a notable example of increasing efficiency.

Other and perhaps even more impressive instances of the industry's never-ceasing progressive achievements:

By January 1, 1945, war's needs had drawn from our farms more than 5,000,000 men and women, reducing our farm population to the lowest in 35 years. Yet farm production was increased 35 percent over a period of 5 years. This was made possible in no small degree by the increased use of electric power—for milking cows, pumping water, grinding feed, lifting loads, and, in all, for the performance of about 200 farm jobs.

Whereas nearly 3⅓ pounds of coal were required to produce a kilowatt-hour of electricity during the First World War, last year only 1⅓ pounds were consumed.

The average cost of electricity in homes has been more than cut in half since 1914. Even during the last 5 years, despite the very sharp rise in the cost of living, the average price per kilowatt-hour has been reduced—not increased—12 percent, to less than 3½ cents, a level never before reached.

A World's Fair exhibit illustrated these fantastic things 1-cent's worth of electricity would do: Wash 2 tubfuls of clothes; afford 6¾ hours of food protection; supply music for an entire evening; scramble eggs for 8 people; toast 30 slices of bread; make 7 cups of coffee.

Today electricity rivals the daily newspaper in being the cheapest thing, the greatest value for the money, any people, anywhere, ever enjoyed. As Peter O. Knight, Tampa utility executive, once observed to me: "The taxes on cigarettes alone amount to more per annum than the total cost of the domestic consumption of electrical energy in the United States."

Utility wage earners have always been among the best paid—even in depression times their average weekly pay exceeded that of 90 percent of the Nation's industries.

The world knows and acknowledges that American industry played a foremost, even miraculous part in winning the war, saving civilization. Its record, by and large, was phenomenal.

Somewhat less perfect, to say the least, has been the record of some of our multitudinous Washington authorities. Blunders galore have been perpetrated, particularly in the realm of bossing civilian activities. Bluntly, mismanagement has been flagrant. Interminable numbers of alphabetical agencies have been created, have overlapped, worked at cross purposes, been abolished, only to be supplanted by a new and equally ineffective brood.

A very prominent American, in 1930, publicly proclaimed:

"The doctrine of regulation and legislation by master minds in whose judgment and will all the people may gladly and quietly acquiesce has been too glaringly apparent at Washington during these last 10 years. Were it possible to find master minds so unselfish, so willing to decide unhesitatingly against their own personal interests or private prejudices, men almost Godlike in their ability to hold the scales of justice with an even hand, such a government might be to the interest of the country. But there are none such on our political horizon and we cannot expect a complete reversal of all the teachings of history."

That, gentlemen, was Candidate Franklin D. Roosevelt.

The philosophy, the truth, he then enunciated is as sound today as it was then.

Yet the trend ever since, under the New Deal, has been ceaselessly toward more and more governmental domination of our historic American economy, toward further and further encroachment upon investor-owned enterprise, toward multiplication of Federal regulators, toward the arrogating of still greater and greater overlordism by Washington.

This has been notoriously true in the field of power and light. It certainly was so during President Roosevelt's regime. And now President Truman plumps for multiplication of TVA's.

Has not the time come to call a halt?

The postwar responsibilities facing the electric power industry are, if that were possible, greater than it was confronted with during the war. A new era is dawning. A thousand-and-one new things to enrich life in America are promised. Almost without exception, every last one of them will call for the utilization of electric current.

Gigantic though the capital expenditures of the utility industry have been in the past—it is now a $13,000,000,000 industry—still vaster expenditures loom. The necessary capital will not be, cannot be, provided by the Nation's savers unless the Government's whole attitude toward the industry becomes less antagonistic, less hostile, less injurious.

Voters throughout the length and breadth of the land should voice their endorsement of the Boren bill for thoroughgoing investigation of the effect of the Public Utility Holding Company Act, with a view to enacting legislation designed to preserve our free enterprise system, to arrest the drift toward state socialism in the utility world, to prevent the further wiping out of innocent utility stockholders.

The constitutionality of the "death sentence" which, as administered by the SEC, has wrought so much havoc, is now before the United States Supreme Court. Profoundly it is to be hoped that the Court will take an enlightened, broad-minded, constructive view of this parlous situation, this menace.

Let me repeat, is it not ironic that the industry whose achievements have not been surpassed by any in this country or in any other country, is the one which for a decade has been subjected, and is still being subjected, to governmental blasting?

One of the very first recorded divine decrees was "Let there be light." American utility managements have fulfilled that decress infinitely more superbly than the men

of any other land on the face of the earth. They, and those who provided the wherewithal to accomplish this, richly deserve new, greater consideration.

## Northwest Development—An Opportunity for Returning Veterans

EXTENSION OF REMARKS
OF
### HON. COMPTON I. WHITE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES

*Friday, November 23, 1945*

Mr. WHITE. Mr. Speaker, there is submitted herewith for printing in the RECORD the resolutions adopted by the Inland Empire Waterways Association in the Northwest in favor of the comprehensive program for the development of arterial highways and river transportation in the three great Northwest States—Washington, Oregon, and Idaho.

We know that the eyes of this country are turned to the vast undeveloped resources of the Northwest and that the development of our water resources in the way of transportation, land reclamation, together with our highways, will open large areas and present exceptional opportunities for our returning veterans for the establishment of new homes and business opportunity.

The resolutions follow:

Resolution 1

Whereas this association was organized in February 1934 to prosecute a definite constructive river navigation development program, and

Whereas the McNary Dam and Snake River improvements as recommended in House Document No. 704 has now been authorized by Public Law No. 14, Seventy-ninth Congress, and

Whereas it is to the advantage of the overall comprehensive program to have all of the projects as recommended in House Document No. 704 authorized by the Congress at the earliest possible moment: Now, therefore, be it

*Resolved*, That the Inland Empire Waterways Association in regular meeting held in Lewiston, Idaho, this 20th day of November 1945, does hereby reaffirm a program embracing House Document No. 704 and urges the authorization of the remaining portion of the program as contained in that document, namely, The Dalles Dam, providing a navigable channel 300 feet wide with a depth of 10 feet between the eastern end of the pool caused by the construction of The Dallas Dam and the McNary Dam, the John Day Dam, and the Arlington Dam.

Resolution 3

*Be it resolved on this 20th day of November 1945, during the twelfth annual meeting of the Inland Empire Waterways Association*, That the officers of this association continue their efforts in support of the legislation now pending in Congress leading towards the acquisition of the Hood River and Cascade locks (Wauna Toll Bridge Co.) bridges by the Federal Government for toll-free operations and all structures of a like kind hereafter constructed shall be with the cooperation of the Federal Government and the highway departments of the States of Oregon, Washington, and Idaho, and all such structures shall be free bridges.

Resolution 5

Whereas this association has long been appreciative of the splendid public service rendered to this Nation by the Corps of Engineers, United States Army, in the promotion, prosecution, and development of our harbors and inland waterways, and

Whereas we feel that in the interest of economy, efficient and expeditious development of our inland waterways, the administration of this all-important natural resource should not be disturbed, and

Whereas millions of dollars of taxpayers' money have been expended and approximately 150 years of training and compilation of valuable statistical information by the Corps of Engineers is a matter of record: Now, therefore, be it

*Resolved*, That the Inland Empire Waterways Association in regular meeting held in Lewiston, Idaho, this 20th day of November 1945, does hereby reaffirm its position that the comprehensive development of the Columbia and Snake Rivers for navigation remain undisturbed in the department of the Corps of Engineers for Rivers and Harbors, United States Army.

Resolution 8

*Resolved*, That the completion of the Lewis-Clark Highway across the State of Idaho will extend the beneficial effect of the open-river development into western Montana and create and stimulate trade and commerce between that vast area and the head of the navigation at Lewiston, Idaho.

*Resolved*, That the completion of said highway project will be of major benefit to the agriculture, horticulture, and business interests of all the inhabitants of the territory tributary to the Snake, Clearwater, and Salmon Rivers, in the States of Oregon, Washington, Idaho, and Montana.

Resolution 10

Whereas the congressional delegation of Idaho, Oregon, and Washington have worked diligently and cooperatively with this association in the prosecution of its comprehensive program; and

Whereas we are cognizant and appreciative of the efforts of the congressional delegations of the Northwest States: Now, therefore, be it

*Resolved*, That the Inland Empire Waterways Association in regular meeting held in Lewiston, Idaho, this 20th day of November 1945, does hereby extend its most sincere and cordial appreciation to each and every Senator and Congressman from Oregon, Washington, and Idaho, individually and collectively for their hearty cooperation and active support in behalf of our program to date and urge their continued active, loyal support for the future.

Resolution 14

Whereas Senate bill No. 35, an act authorizing the preservation and repair of certain rivers and harbors; and

Whereas said act contained the authorization for the McNary Dam and the dams on the Snake River from its mouth to Lewiston, Idaho: Now, therefore, be it

*Resolved*, That the Inland Empire Waterways Association in regular meeting held in Lewiston, Idaho, this 20th day of November 1945, does hereby petition the congressional delegation from the States of Oregon, Washington, and Idaho to exercise all its powers and influence to secure early appropriations for these projects so as to insure early construction thereof.

Resolution 15

Whereas this association was organized in February 1934 to prosecute a definite, constructive river-development program; and

Whereas the executive committee recommends the adoption of a specific program as outlined in House Document No. 704, which is: Four locks and dams on the Columbia River from The Dalles to the mouth of the Snake River, 10 locks and dams and channel-improvement work from the mouth of the Snake River to Lewiston, Idaho, as recommended and approved by the Corps of Engineers for Rivers and Harbors as outlined in House Document No. 704;

*Provided, however*, That pending the authorization of the comprehensive program by Congress, the officers of this association and directors are instructed to vigorously and aggressively prosecute a program designed to provide navigation to Lewiston, Idaho, by open-channel improvements or such other methods as may be determined as practicable and feasible: Now, therefore, be it

*Resolved*, That the Inland Empire Waterways Association in regular meeting held in Lewiston, Idaho this 20th day of November 1945, does hereby reaffirm and accept as the program of this association the engineering plan approved and recommended by the Corps of Engineers as contained in House Document No. 704, with the added provision that we should seek extension of open-channel improvements pending the authorization and completion of the comprehensive plan.

## Proposed Loan to Great Britain

REMARKS
OF
### HON. ROBERT F. RICH
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

*Thursday, December 13, 1945*

Mr. RICH. Mr. Speaker, we will always have a U. S. A. if we do not give it away. I want to add my little word again about the great loan that is contemplated for Britain. As was said a few moments ago, Britain is very seriously considering whether she will accept the $4,400,000,000 our State Department offered her. In the first place, I do not know why the State Department offered her a loan on such terms. It is such terms and conditions as concluded by the State Department that would wreck this U. S. A.

Any loan that is not on a sound basis for our Government to make is not a good loan for the U. S. A. It it's a loan, I am afraid it's like the other loans to Great Britain, it will be a repudiated loan. Just bear this in mind, that they still owe us over $6,500,000,000 from the World War I.

I am willing to loan Great Britain money if we can find that money to loan. But I want to loan it to them on terms that constitute good sound business and on terms that will look after the American people's interests. Just remember that that comes to about $35 for every man, woman, and child in America. And if for any reason Great Britain does not pay it back, then the taxpayers of this country in future generations are going to have to pay it. So remember that the loan is a bad one.

The agreement forgives $35,000,000,000 of lend-lease; that is bad. It forgives interest payments for 5 years; that is bad. It forgives interest payments for any of the other years of the

50 of the time of the loan, providing Great Britain does not have a balanced budget; that may be many of the remaining years; that is bad. It may be used to purchase the coal mines of Great Britain; that is bad. It may be used to buy Great Britain's railroads; that's bad. It could be used to socialize Great Britain and I am opposed to that. I do not want to socialize any country, and especially this country. We will always have a free U. S. A. if we do not give it away.

## Tools Are the Fruit of Frugality

EXTENSION OF REMARKS
OF
### HON. EVERETT M. DIRKSEN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
*Thursday, December 13, 1945*

Mr. DIRKSEN. Mr. Speaker, under leave to extend my remarks which was granted on December 13, I am including an informal address which I made to the Chicago Forum of the Investors Fairplay League on November 29, 1945, as follows:

Mr. Forbes, fellow Americans, it is good to be here today. It is good to enjoy the fellowship of the forgotten man—the investor in America.

I could make you a great speech on power today. I am not going to do so. Some years ago I introduced a bill to consolidate all the power agencies in the Federal Government, including the loan functions of RFC, the regulatory functions of the FPC, and the SEC; the functions of Bonneville and the administrations of Fort Peck and Grand Coulee and TVA and all the rest in a single agency, that our lawmakers whose time is so scant may be able to see in better perspective where we are and whither we are going in this whole field of power. Those who are charged with the destiny of administration and who are the lords of our destiny in Washington have not seen fit to take that bill into their bosoms and to give it the right-of-way in the Congress. But I say to you advisedly (and I must be so careful as to what goes down on this record) that there is not a man in public life today who in my judgment has a complete concept and a perspective concept of this whole field of power.

So, Mr. Forbes, I could make you quite a speech on that subject today, but I am not going to do so. I want to talk a little about free enterprise—and we will forget about the title until, like in the proper sermon, we get to the last paragraph.

I wish it were possible to simplify some of the problems in America today that disturb people. There is so much ferment in the world, both on the international and on the domestic horizon, and I often wish that it were possible to somehow whittle it down into some kind of an individual cosmos where one could see and understand a great deal better. In proportion as you take this huge, complex, and bewildering economic structure, the working of our own country, and whittle it down to a few fundamentals that are somehow germane to your own life, you understand it so much better.

I think Lincoln was adept in that field. You remember when the negotiators of the Confederacy came to Washington for the purpose of negotiating a peace—even before it happened—he brought them into the White House, welcomed them with the utmost of grace, and finally said, "Now, gentlemen, I am only interested in two very simple propositions, so I will write them on paper, and you can write anything else you want and I will sign it." So he sent one of the lackeys to bring a huge piece of paper, and at the top Abraham Lincoln wrote: Number One: The Union must be preserved. Number Two: Slavery must be abolished." And then he handed this piece of paper to the negotiators and said, "Write anything you want by way of peace terms, and I won't even bother to read it. I will sign it."

What an amazing thing. But they were the fundamentals, simply delineated, as it were; and if we could do that today, how easy it would be to solve the bewildering problems with which we are confronted today.

Now, it is a tragedy that the investors have so little representation. You hear about every other group, but how little about the investors. I think the only time I came in contact with them was in 1934 when I served on a special committee of the House which was known as the Select Committee on Bondholders Protective Reorganization. It dealt with those people who, with the utmost of confidence and a certain degree of naïveté, took the fruit of their frugality and their thrift and dumped it into bonds and one thing and another and after the debacle were pretty well wiped out. We went into all sections of the country to hold hearings, and held many hearings in Chicago. Nothing distressed me quite so much as the thousands of people who gathered over here in the Federal Building, for there was something haggard and frantic and agonizing about them as they stood there waiting upon six or seven Members of the Congress to sort of probe and explore this whole matter in the hope that perhaps those values would come up and that these humble investors, the rank and file in the country who, through thrift over a long period of time, had made it possible for the country to go forward, might retrieve some of that investment that was lost.

But today we hear about everything else—we hear about wages, we hear about prices, we hear about every economic facet on the horizon of the country—but how little about investment. There is an OPA—the Office of Price Administration. There was a WLB—the War Labor Board. There is an NLRB—the National Labor Relations Board. There is a CCC—the Commodity Credit Corporation. Mention almost any activity in our economy today, and I will show you a Federal agency that devotes itself to that particular interest. And I have often thought, maybe there ought to be an OIA—the Office of Investigators Administration—to give the forgotten man a little place in the horizon.

Now that all is said and done, of course, the investor is, after all, the motive power of human progress. When I was a college student, I used to dip into things like Progress and Poverty, written by Henry George. You remember that. And I remember isolating that great truth, that cooperation is the law of human progress. But as a matter of fact, there has to be something with which to cooperate.

Now, you can get management and labor and everybody else together, but still, there must be an instrumentality for cooperation. And what is it? It is the very thing that accounts for the standard of living and for the progress that was made in America, and generically, you call it "tools." Land is a tool of production. Factory buildings are tools of production. Machinery of all kinds are tools of production. And they spell the difference between the civilization in this our blessed Republic and what you see elsewhere in the world.

For 90 days in the spring of this year I bounced around the world by the grace and generosity of the constituents of the Sixteenth Congressional District of Illinois. When I was candidate for national honors, they made up a fund, and I wouldn't spend it, so they made it available for a world trip.

What a fruitful thing it was, and what an immense adventure. But one of the things I saw as I got around was the difference between our own civilization and what you find in Egypt or India or Syria or Lebanon or Turkey; or France or Great Britain or Belgium or Germany; or any other place. The difference in their civilization and ours is essentially this. You can recite it in one word. It is the difference of tools.

You go into the bazaars of the Middle East or the Orient, and what do you see? Old people sledging on metal, whether they are coppersmiths or silversmiths. There you see the handweavers, there you see the handicraft guilds of 2,000 years ago. It is the difference between that and the assembly line and the machine technique of America that accounts for the difference in the standard of living.

Four hundred million people in India—a country that is two-thirds the size of our own country—and the wage there in many instances is 3, 4, 5 cents a day. They live on a handful of rice and a little piece of fish. But there you have a throw-back to an ancient age. Also you come back to the difference between our own country and their country. It is in this thing which is the motive power of progress. It is the instrumentality of production. It is tools.

There is that difference, and it has been that way in peace and in war. I think one of the most engaging experiences I had was to go through the V2 plant in Nordhausen, Germany. I spent some days up there, going to all the prison camps, and there was a prison camp located close to this series of underground passages, 30 miles long, where V2's were manufactured—these instrumentalities of death and destruction that would start from some loading platform on the Continent and travel 40, 50, 60 miles, and then find a target and wipe out life and eliminate buildings and construction, perhaps, in London or Southampton or elsewhere. But the thing that impressed me most was not the 30 miles of tunnels. The thing that impressed me most was the machinery that was there, the tools. That is the reason Hitler had perfected the Stuka and the tank. That is the reason he moved as fast and as far as he did. It was because of the tools that were available.

As I went along with a torch through those passageways, imagine, for instance, seeing machinery that was manufactured in Rockford, Ill., by Barber-Coleman Co., and machinery manufactured by the Cleveland Machine Tool, and Cincinnati Twist Drill, and the factories in Buffalo and Jersey City and Chicago. There they were. They had been gathered up from other countries over a long period of time. Here were 30 miles of machines, some of which had never been used, that were the real instrumentalities for the swift-moving events that took place way back in 1939 and almost cost the world a victory. Some of them were still in grease and had never been used. Here were milling machines and shapers; here were lathes and punchpresses and stamping machines—everything gathered from all over the world. And there you had the real motive power behind the force with which the Nazis struck, nearly 6 years ago.

What is true, of course, in war, is equally true in peace. You come back to this whole question of tools, and behind it is what? When all is said and done, what is it? What are all these machines and tools that are

scattered all over the United States that account for the high standard of living? They are the length and shadow of the frugality and the thrift of humble people everywhere who had been following an old adage that each generation must retool itself. That, gentlemen, is one of the most fundamental things with which we have got to contend today.

But now this grim and terrible war is over. It's been finished. I often think of it in terms of the sixth word of the Galilean as they hanged Him on the cross. At Eastertime every minister devotes himself to the last seven words of the Master. What did He say when He hung on the cross and they cast lots for His robe and they applied to His lips the sponge soaked with vinegar? When He was ready to give up the ghost, and the agony of the flesh has been expended, He said, "It is finished." And so this horrible and grim and brutal business is finished, and now we address ourselves to the question of postwar prosperity.

I am just like a shopper about it. I read the advertisements in the Saturday Evening Post, in Collier's, and Fortune, and there are glass houses and plastic gadgets and we are lifted way up into a kind of strange exultation as we think of life in terms of the postwar period. But no matter how far we move forward from where we are now and no matter how much life is enriched and ennobled, behind it must be the machines for this and the next generation, and behind the machine must be the thrift and the frugality and the savings of the average fellow who makes a great contribution to his own generation in the form of tools, which spell a finer and a larger and a more expanded life.

Must there be some incentive to save? Think of the ferment and the uncertainty in the United States today. Think of the unrest. Think of the people who are constantly writing their Members of Congress. I said a moment ago to Mr. Smith, there are congressional offices today that have as many as four and five thousand unanswered letters. Congressmen get quite beside themselves when they can't catch up with their mail. And what do those letters represent? They are a reflection, after all, of the uncertainty about the future. They are a reflection of the ferment that is in the hearts and the consciences of the people from one end of the country to the other—one of those tragic things.

So we say, all right, if the investors of this and succeeding generations are going to still devote themselves to frugality and thrift, that we, our generation, might retool ourselves and carry out a great social responsibility for better living in the country, and for this elusive thing that they call the abundant life, then there must be incentives—and what are they? Of course, there is the incentive of reduced taxation. But, folks, there is something infinitely more important than that. I sometimes wonder whether we went too far in this last transitional tax bill in Washington, because reduction in taxes is not going to mean too much until there is a corresponding reduction in expenditure. [Applause.] We see it exemplified this very afternoon. Do you know what would happen if I were in Washington on the floor of the House this afternoon? Since it is half past 2 now—that means half past 3 there—many Members have girded their loins for battle, and the battle, of course, will be to get a little more money out of the Treasury of the United States.

All day Monday, the Appropriations Committee of the House, of which I am a member, had the longest session it has had since I have been a member of that committee—and I have been there quite a long time. The real fight, of course, centered around the fact that they wanted additional money for all the congressional districts in the United States, for flood control and rivers and harbors. Here was money to be expended for the Veterans' Administration, for hospital additions and new hospitals. So all afternoon, in the full committee, the battle raged. The committee finally won. It held that deficiency bill down to a billion, one hundred million. It originally came to us from the President and the Budget Bureau with $576,000,000 more than the amendment suggested by the White House itself. So after long, arduous hearings lasting for weeks, we got it pared down; we took out five hundred and seventy-six million.

Now it goes to the floor. They called me from my office early this morning. I said, "What happened?" They said they have already written some amendments into the bill, and it looks as if they are going to write more amendments this afternoon.

An illustration: When General Bradley came to us for $158,000,000 dollars for new and additional hospitals for the Veterans' Administration, the thought occurred to me and to some other members of the committee that we have about 119 Army and Navy hospitals in the country. General Somerville came before us just a few weeks ago and said, "In December of 1945"—which is next month—"I am going to turn back 40 hospitals, and before June 30, 1946, I will probably turn back 40 or 50 more." Where are they? What kind of hospitals are they? Would they be useful for veterans' affairs and for those cases that must be rehabilitated over a long period of time? Wouldn't it be possible, therefore, to transfer some of these serviceable hospitals to the Veterans' Administration and save so many millions of dollars for the people of this country? But there are folks on the floor of Congress this very afternoon who have other ideas, and since General Bradley has asked for it, since the President has implemented that request, there is a move now to put back $158,000,000. Every citizen is more than anxious to make the very best provision for our veterans but tax reduction means nothing if you are going to continue to siphon money out of the Federal Treasury and add to the inflationary force that will blow the lid off even though Chester Bowles sits upon it. [Applause.] No one man, no ten men, no hundred men, no thousand men can cope with the inflationary force if the economic condition and the flow of money out of the Federal Treasury is such as to generate an irresistible force underneath. You can't get a weight strong enough or heavy enough to keep the lid on when that force gets to brewing.

So one of the real responsibilities before us is in this whole field of public expenditure. Those are some of the incentives, then, to disturb or to somehow dissipate the ferment, the uncertainty that is in the minds of people today who are clutching a few savings that they would like to put somewhere, to be invested in plants and machines and tools which becomes the motive power of human progress.

Oh, there are so many things that must be done: The revitalization, I think, of competition in the country; the setting out of some definite area for social-security benefit. All those things are necessary, and then there is one that we often forget—and what is it? Oddly enough, it is in the field of statistics. The other day, before I left Washington, we had the Under Secretary of Labor before us—and since that time he has resigned. He was a former Member of the House by the name of Carl Moran, of Maine—a courageous man and a very able man. While he was testifying, I was listening because they wanted a few hundred thousand dollars more for the Bureau of Labor Statistics. I said, in substance, "Mr. Secretary, what difference does it make whether we give you the money or not because the figures you finally contrive don't beget any confidence from anybody?" I said, "Management doesn't agree with your figures because, for instance, they say your cost-of-living index is too high. The CIO doesn't agree because they say repeatedly that the figures are too low. Why gather up so many facts and figures and embed them in tables and hurl them in great chunks at the country when nobody believes them?" So I thought one of the things that can be done to help bring about a sense of sanity and confidence in the country is, first, to develop some agency in Government that is nonpartisan, nonpolitical, unslanted in its viewpoint, that will take figures, good and bad, and say, "Here they are," and finally generate a measure of confidence on the part of investors, management, labor, and everybody else in this whole Republic, and then start setting up a foundation. It is just part and parcel of the whole field of incentives that are necessary if investment capital is to flow.

I can say, Mr. Forbes, with respect to SEC, that for years I have served on the subcommittee on independent offices appropriations and had opportunity to pass upon the budget requests of Mr. Ganson Purcell, the Chairman of SEC, and his staff, who come before us. We have had so many figures that I insisted he insert in the record from time to time, to show that the course that we are pursuing in this country is, as indicated by the amount of new capital as distinguished from refinancing over a decade of time—is the best indication I know of that funds have been tied up at the source; that there hasn't been that requisite confidence and requisite incentive for this motive power of human progress to articulate itself in the industrial field and carry it forward to something finer and nobler and better.

There are two things that I want to emphasize today—and then I will get around to the subject of the speech. [Laughter.] In addition to all these incentives, folks, it seems to me that one of the first jobs in America today, as we think in terms of this word that jumps from tongue to tongue, namely, "reconversion," is that there must be a kind of moral reconversion in America, and by "moral reconversion," I mean essentially the demobilization of defeatism. Oh, you know what a tragic thing it is today, after we have emerged from this conflict with our land intact, our cities intact, our buildings undestroyed, our people in good shape, wage rates reasonably high, with all the facilities intact that spell out a great and fine and promising prosperity, that you find people high in public life and elsewhere who go about with long, lugubrious faces, who think hopelessly about the future. You can hear speeches on the floor of the House and Senate any time in which they talk about the apple sellers.

You know, it reminds me of the fellow who went into a restaurant, got the napkin up around his neck, and when the waiter came, said, "What kind of soup have you?" The waiter said, "Oxtail." He said, "Why go back that far?" I often have wondered about that—to think that we dip back into the dim and dismal past when there are so many prospects before us, and all we need to do is to demobilize the defeatism in our own hearts and consciences and souls and then we shall resolutely move forward. That's a part of this whole incentive picture for the free and undiminished flow of capital to be translated in terms of machines and land and buildings, to send this country forward to something better.

We ought to be ashamed of ourselves for the attitude that we express when defeatism

is involved. I have seen a lot of soldiers. I have talked to GI's all over the world. I remember being at the airport at Calcutta early one morning, at 6 o'clock—way down in India. The planes were lined up and the boys were getting ready to fly over the "hump." As they were standing around there in the semidarkness I said, "Sergeant, what's your name?"

"My name is Joe Doak."

"Where are you from?"

"I'm from Chicago."

"Where are you going to go?"

"I'm going to fly over the 'hump'—and then the business."

You see, they were then on the threshold of this brutal business so recently come to an end. I said, "What do you think about it all?" Almost invariably the answer was something very expressive and definitive. "Well, we're going over and give them a shellacking and wind this business up in a hurry."

Never did you see any confession of defeatism, never any belief that victory was not in our grasp, never any faltering of courage. You know, every time you look at the pilot of a B-29 and you feel that old, sinking feeling about the future, just think that there is a boy who probably started out in one of those B-29's and took 1,800 miles of water with no landing place and dropped his destructive eggs and came back to base, and probably sat down to play a hand of gin rummy with his associates in the barracks. There's a lesson in encouragement and hope.

If we need anything more by way of a lesson, of course, we could get it out of the Chinese. I marvel at these Chinese folks. When the going got tough, you know they had to move all their tools (you see, that's their instrument for doing business) from everywhere in south China way back to Chungking. That was 1,500 miles. They moved 150,000 tons of machinery 1,500 miles. How? Like we do it, with tractors and heavy-duty trucks? No. They had no tractors, and they had no trucks. They took the machines apart; they loaded them on their bare backs, and Chinese coolies trudged over mountains and through valleys for 1,500 miles, to set that machinery down upon the terrain and quickly start manufacturing small-arms ammunition and other weapons, that the war might go on and that the "V" for victory might be written in the sky.

There is the answer to defeatism. But we have too many folks who sort of lock up hope before trouble even starts. You remember that story about Houdini. (Mr. Forbes, you ought to appreciate this, because it happened in Scotland.) Mr. Houdini was still an amateur in the legerdemain business when he went up to Scotland to give a demonstration, and the frugal, thrifty city fathers said, "We'll take your wager. We'll lock you in the jail and put you in a strait-jacket, and we'll bet you a hundred pounds you can't get out"—and that's really some wager for a Scotsman. He got out of the strait-jacket all right, and began to pick the lock on the jail door, and after an hour and a half he fell against the door, and it opened. They hadn't locked it. We are like that. Mentally we lock the door of hope and courage when actually it is not locked. I know of no better way to demobilize defeatism and get some sense of confidence into the country, as a great incentive for the free flow of investment capital, than to religiously devote ourselves to exterminating defeatism wherever we find it in the country.

No, folks, with all the incentives that you can recite—the revitalization of our whole competitive system, reducing taxes, reducing expenditures, better statistics, more stability, all that sort of thing that is so desirable and so necessary if we are going to put our country back on a foundation where it will really move forward as it did in days of old—there is still one thing lacking, and it is the indispensable ingredient. I don't care what you do in the field of incentives—it still has to be done in the right atmosphere. That's important. And the right atmosphere is the atmosphere of freedom. Free enterprise is just a facet in this whole structure of freedom—and you will never know how much it means until you see lack of freedom in other corners of the earth.

Last night I talked to six or seven hundred farmers at the Sherman Hotel. I said, "The first specific conclusion I want to give you from this trip that I took so recently is that communism is definitely on the march in every area of the world." I said, "Let's quit being sentimental about it. Let's quit being emotional. Let's quit thinking about a Cossack behind every gooseberry bush. Let's be objective and real and think of this as a form of government which will have a very definite effect upon the trade, the commerce, the business of our own country. Let's translate it in terms of its effect upon the daily human welfare for our own people, and then we shall readily understand what this menace is like if that virus gets too strong within our own country."

The trouble is we go off half-cocked and in such a cloud of nebulous emotionalism. The pay-off last night was when a man who is high in the councils of agriculture came to me and said, "Congressman, could you recommend to me a good book on communism?" I couldn't. I said, "Lee, I know of no book on the subject that you would want to read. They are all written by either a lot of long-haired professors or people with slanted inclinations and dispositions, and they give you one side and not the other."

So out of that thinking I think I got an idea. I thought last night before I went to bed that when I get back to Washington tomorrow I ought to drop a little bill into the hopper to set up a joint committee of 5 Senators and House Members who should be charged with the responsibility of picking a dozen or 15 or 20 people in the United States, of all shades of opinion, to prepare a short treatise on the economic aspects of communism, and then print it free of charge and scatter it by the millions through the country, and let our people really know what this business is all about.

If the free-enterprise system and freedom are going to be saved against the viruses that are moving through the world, folks, it can be done in one simple way. It is a question of getting the facts to the people—first isolating the facts and then disseminating them.

I often think of the chap they had on the witness stand who was called to testify about an auto accident. The attorney said, "Did you see the accident?" He said, "Yes."

"How far were you away when it happened?"

Without any hesitation, the witness said, "Twenty-two feet nine and one-half inches."

The attorney looked at that judge, then he looked at the jury, then at the witness, with some contempt. "Now," he said, "Mr. Smart Alec, how do you know it was 22 feet 9½ inches?"

He said, "You know, when this accident happened, I reached into my hip pocket and pulled out a tape measure and quickly measured from where I was to the point of impact of the collision, because I knew that some fool lawyer was going to ask me that question." [Laughter.]

Well, as a matter of fact, people are asking questions today, and in proportion as the answers are made simple and the facts are gotten to the people everywhere, so the problems that are before us are nearly half solved.

That gets around to the thing that I ought to say to you today. What price free enterprise? The answer is very simple: Enough people armed with the facts, who, through an organized and determined effort, will outmatch the efforts of those who would destroy the free-enterprise system.

Remember that great speech that Daniel Webster made on the Constitution. He said, "There are those who would uphold and those who would destroy." But the story in brief is simply this, that when you have enough people who are interested in preserving it to offset those who would destroy it, modify it, change it, and import some new ideology or some new system into the country, then we can feel reasonably sure that freedom and free enterprise will remain secure.

It's a case of facts. It's a case of information. But you have got to get it to the people. Take, for instance, the Library of Congress. It is probably one of the greatest repositories of the fruit of human thinking anywhere in the world. Last year I tried to get an additional hundred thousand dollars for the legislative research section over at the Library of Congress, simply to make it possible for Members of the House and the Senate to enjoy all this wisdom that is there, and to have it analyzed and presented in terms that will be helpful. If that Library were 10 times as large, it would be of limited value unless the information there is made available to meet current problems.

You may not know it—I still get letters from people who ask for free garden seed—and there has been no free garden seed in 24 years. Isn't it marvelous? I get letters from people who say, "We bet a hundred dollars that General So-and-so isn't entitled to wear five stars." All sorts of questions that indicate that somewhere along the line we have failed to get out information to the people.

It is not surprising, then, that Opinion Research only very recently came out with a story, after polling the people in all sections of the country, that 40 out of every 100 adult people in the United States do not know the names of the two United States Senators from their State.

What is the answer? What is the answer to this question of a free flow of investment representing the frugality of our people that provides the tools that enhances and expands and carries forward the standard of living in this country and preserves the free enterprise system? The price is simply an organized, implemented, determined effort on the part of people high and low, rich and poor, humble people everywhere, that that system shall not fail.

I heard a little incident the other day that I think is good for a conclusion—because when you talk about freedom and free enterprise, oddly enough, you must come up with this conclusion, that you do not get something for nothing, here or elsewhere, and if it is doled out freely on one side, somebody has got to pay somewhere in our social and economic structure. The whole thing, I suppose, can be summarized in a phrase that we can all understand—there is no such thing as a free lunch.

An ancient king summoned all his wise men and economists—they were 300 strong—and said, "Now, look! distress is on the land; there is grievous economic dislocation. I want you to come up with some kind of an answer."

They puzzled for a year, and they came up with 600 volumes filled with charts and graphs and explanatory data, and they said, "Here, O King, is the answer." He took one look at that solution, and he shot 150 of them and sent the other 150 back and said, "I will give you just a little while to come up with the answer." They came back with a hundred volumes, and he shot another half. Finally he got down to one man—just one old-time economist with a long beard—who stood in the presence of the king. The king said, "Have you got the answer?" He said, "Yes, O King." He said, "You know, your life depends upon the answer."

He said, "O King, I have got the answer, and it is in one phrase." He said, "King,

relief will be found if we simply carry out that old adage, 'There is no free lunch.'"

In proportion, folks, as we do that, and just think simply and get those simple facts to people everywhere in the United States of America, demobilize defeatism and then set up incentives for investment, which creates the tools of progress, then I have no doubt as to whether or not this blessed thing of free-enterprise system will prevail or not.

One other thing, and then I am through. In 1940 I sat with one of the state ministers down in Buenos Aires, in the Argentine. He said, "Congressman, you are not going anywhere in your country. If you get into a war with Hitler, you will never lick Hitler."

I said, "Is that so? You know, Your Excellency—have you ever been to the United States?"

He said, "No."

I said, "If you come as far as Washington, I will not only pay your expenses up to Detroit, but I will even go with you to show you what tools, labor, direction, and a free atmosphere can do in carrying forward the pursuits of peace, and also in developing the instrumentalities of victory." I said, "If you are going to build a B–29, you get a hundred thousand people out in a 640-acre field, and they will be carrying monkey wrenches and bolts and screws and pieces of aluminum, and you will labor a long time, and maybe you will fashion an airplane. Maybe it will fly, and maybe it won't. But if it does fly, you will call it a day, and you will have festal occasion that will last 6 weeks, and you will start in on B–29 No. 2.

"We don't do it that way in the United States," I said. "First management gives direction to fashioning the blueprints; the investors come forward with money for the tools; those tools are operated under skilled direction by the labor of the country; and then tanks and planes begin to drop off the line with all the facility of so much stick candy."

I said, "Your Excellency, that is the difference between the Argentine and the United States of America. There is cooperation through the use of tools—in what? In the thing that you lack here—the climate of freedom and free enterprise."

One must go into the corners of the earth to appreciate to the full the blessings of freedom. Its retention, its safeguarding, its perpetuity, lies in an organized effort to offset the efforts of those who would destroy. Simple? Also hard. For the answer lies within our own keeping.

It is good to fellowship with the forgotten folks in our country—the forgotten man—the investor.

Thanks so much. [Applause.]

## United Nations Organization Capital

REMARKS

OF

### HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 10, 1945*

Mrs. ROGERS of Massachusetts. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentlewoman from Massachusetts?

There was no objection.

Mrs. ROGERS of Massachusetts. Mr. Speaker, I would like to say to the gentleman from South Dakota that I hope when the House considers his concurrent resolution that it will also consider having the United Nations Capital in the Lexington-Concord area, in my district, in that historic community where the first blow for liberty was struck. Many other towns in my district are associated with that great fight for liberty. It is a very beautiful country, and I think the nations who have been fighting for freedom will appreciate very much having the capital in that locality. It is also an extremely healthful place. It is next door to one of the finest airports in the world. It is a part of metropolitan Boston, with its live port, its fine seaplane landing base, and its fine airport also. It has great railroad facilities; great colleges with magnificent libraries, the great Institute of Technology is in Boston with its availabillity for research. Boston is a great medical center. Fine churches are throughout the Commonwealth of Massachusetts and persons of every nationality live within its border. Fine newspapers and radio stations are numerous in the Commonwealth. In no other place can we find a better working of democracy with freedom of speech and action and religion than in other Commonwealths. The Concord-Lexington area is an ideal capital for the United Nations. I have received a cable from England that it is being considered.

## Un-American Elements Want To Abolish Committee on Un-American Activities

REMARKS

OF

### HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

*Thursday, December 13, 1945*

Mr. RANKIN. Mr. Speaker, on December 10, the gentleman from California [Mr. PATTERSON] inserted in the RECORD a petition asking for the abolition of the Committee on Un-American Activities. That petition was signed by a group of individuals, the leaders of whom would have signed a petition for the crucifixion of Jesus Christ.

To read that list reminds one of a petition coming from a bootleggers' convention asking for the abolition of the local grand jury. Some deluded individuals were evidently misled into signing that petition by the subversive leaders of this drive to get rid of the Committee on Un-American Activities that is trying to protect this country against their treasonable designs.

If they perpetrated such conduct in any other country in the world, the chances are they would be stood against a brick wall and shot.

Practically every Communist front organization, as well as every other subversive movement in America is represented in the list of names on that petition, as is shown by the records of the Dies committee, and also by the records of the FBI.

Of course, these un-American elements want to get rid of the Committee on Un-American Activities. They would like to get rid of the FBI also. Then they could practice their treasonable activities without fear of exposure.

But they know that as long as the FBI and the Committee on Un-American Activities are on their loathsome trails their alien noses are rubbing against the bars of the penitentiary, or facing that deportation they so richly deserve.

## Letter From a Soldier

EXTENSION OF REMARKS

OF

### HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Friday, December 14, 1945*

Mr. DOYLE. Mr. Speaker, I just received what appears to me is a very informative and important letter dated November 29 from a private in the ranks of our armed forces. I submit the letter to your attention from this GI friend of mine. I think his explanation is so clear that no word of mine can be added advantageously:

NEW YORK, N. Y., *November 29, 1945.*

Hon. CLYDE DOYLE:

Up until the time of my induction into the United States Army on July 29, 1945, I had handled all of the family's expenses and affairs, with my modest income. Since my induction my wife has had to undertake the task of trying to be a good mother to our two children, and at the same time assuming all of the responsibility of managing the house on considerably less money. This undue strain has shown its effects upon her as well as upon our children.

The fact that my wife has become very nervous and irritable has caused the children to become less respectful of her. Her discipline has had to, of course, become more severe, and the children have become less obedient.

A child needs the guidance of a sympathetic and patient mother and the discipline and guiding hand of an understanding father. To remove either parent from the home causes a very unbalanced condition within the home, which will later have its effects upon the children's lives. The results, of course, being a declination in school grades and later adolescent troubles and lastly, but far from being the least, it will eventually have a very marked effect on the children in later years as a citizen.

The prevailing circumstances at my home has caused the situation to get almost completely out of my wife's hands, and it is most certainly out of my hands as long as I remain in the Army.

My wife is in need of an operation, which we have sincerely tried to avoid for the past 2 years, through the use of medicines and drugs and intermittent doctoring. My wife has lost nearly 20 pounds since last August; she now weighs 93 pounds and the present strain and uncertainty of her future home life certainly does nothing toward improving her unhealthful condition. I certainly would not adhere to the operation she needs so badly, as long as she is alone and with no one to take full charge of the children.

I did not hesitate to take up arms against our enemies when my time to be called upon came. I do not intend to cast off those arms for my own personal gain or comfort, but rather for the health and safety and welfare of my family.

We have proven to be in a very healthful position here in the United States, where we can cut production, discharge servicemen, and at the same time have overpowered our enemies. Why then, cannot we very well afford to maintain our high standard of home life, rather than see it crushed by the absence and continued inductions of fathers, who are the sole supporters of families, such as myself.

Pray, our Nation has not bled itself of all of its younger generation, who are full of pep and vigor and anxiety for adventure and travel. Does the Congress of the United States want to see the high standards of home life in America and the morale of its people go back into the dark ages? Surely not, for we are a progressive and wonderful nation and we shall not see it recede into a state of chaos, but will diligently press its future progress, so that it will be second to none in its high standards of public morale and home life.

A married man usually is not efficient away from his family, especially since hostilities have ceased and he feels there is no longer any need for him anywhere but in his home. He is most assuredly not efficient in the Army. I can truthfully say as a married man of almost 11 years that my mind is constantly on the health and welfare of my family. With my wife's health failing and my children being forced to live under the present unpleasant conditions, I cannot, therefore, maintain the effective morale needed to become the good soldier I should be.

During the time when our Nation was waging a gallant war against our oppressors, I felt it within my heart, that it was my duty and obligation to my country and family to take my place in the armed forces to defend our precious democracy and to protect my Nation and home from threatened destruction. I truthfully felt proud that I was in such good mental and physical condition to do my small part of relieving some of our courageous men who had been away from home several years. However, since the cessation of hostilities and with many young unmarried men in uniform and out of uniform, just itching for travel and adventure who could be utilized to this extent, I therefore believe that every married man that has children should be sent back to their families, for sake of national health, safety, and preservation of the true high standard of America's once proud home life.

At the camp I just left a few days ago, there were at least a dozen young unmarried men between the ages of 18 and 21 who were nearly on the verge of tears, because they were not being shipped overseas, with our group, which incidentally numbers about 44 men, 95 percent of whom are married and have children.

Why is the War Department still sending married family men overseas and yet sending men who are single and between the ages of 18 and 25 to work in separation centers here in the States? I am speaking of the Finance Department of the Army only now, as this is the department to which I'm attached. Surely, Mr. DOYLE, there must be a definite reason, or is there?

You may think I'm being selfish, by the tone of this letter, but I most sincerely am not, and I can truthfully say this letter represents the sentiments of the thousands of fathers in our armed forces. If you think not, then you should personally interview some of them and get their opinions. I can truthfully say this letter represents all of the fathers assigned to my outfit.

We all feel that our first duty and obligation to our Nation has been fulfilled, with ending of the war and feel further that our second duty and obligation is calling us back to homes and families.

Then too, Mr. DOYLE, we have to consider the taxpayers' point of view, especially from the point of security. We know the national debt is so large now that it is almost beyond comprehension and that as a previous taxpayer and am hoping to be a future one, that if I should live to be 200 years of age, with no more wars, I would still be paying my share of expenses and costs of this war. My children and their children's children will be paying for this war as long as they live.

It costs the taxpayers of the United States approximately $150 per month to maintain a married man with two children in the armed forces. Of my outfit there are some 50 percent or more that come within this category. It costs the taxpayers of our Nation $50 per month to maintain a single man with no dependents in the armed forces. Therefore, would it not be more beneficial to the taxpayers in the United States, if all fathers were released from active duty, as the armed forces would then be able to maintain three single men for what it is costing to maintain a married man with two children? So out of 44 men, there are 22 of them married and having at least 2 children, the cost to the taxpayers is at the rate of $3,300 per month, whereas, 66 single men could be maintained for the same amount.

During the past month it has been my privilege to talk with at least 150 married men with at least 2 children. One hundred and fifty married men in this category costs the taxpayers at the rate of $22,500 per month. Four hundred and fifty single men with no dependents could be maintained for the same price. Of course, with many married fathers going overseas at this time, the cost is of course $10 extra per man, per month.

With the war over and our Nation looking ahead to a prosperous postwar era, I must truthfully say, we are not doing much to lessen the great burden that lies on the shoulders of our citizens.

Surely the Congressmen of our great Nation, who are supposed to be the greatest body of intellectual wizards in the world, can clearly see that if it costs as much to keep one married man in service now, with two children, as it does to keep three single men, that this great body of men would do something about it. The strength of our armed forces could be more than doubled and the burden on the taxpayers would not be any greater and at the same time our high standards of American home life would still remain secure.

Gen. Joseph T. McNarney stated in his first press conference since his appointment to the new post of successor to General Eisenhower, that United States military occupation of Germany would last for more than 10 years, and that he strongly favored the plan for the families of occupation troops to join them as soon as possible. As for myself and family, if I had liked Germany or any other foreign country so well as to have my family live there, I would have done so years ago. What is wrong with the good old United States of America as a place for a man to raise a family or don't the great leaders of our democracy wants its citizens to marry and raise families here any more? The United States was plenty good enough for our forefathers, and it is most certainly good enough for me, and by all that's sacred, I'll never take my family out of this Nation to reside. Even though I have never made as much money as some people, I at least have been happy and content living in the United States of America.

I sincerely think it is outrageous for any honest-thinking true American to even harbor such thoughts as asking United States citizens to take up residence in any foreign country against the citizen's will. What is our freedom and the pursuit of happiness coming to anyway?

At the present time we are undertaking the task of raising funds by means of a Victory Loan drive or bond sales drive. This drive will fall very, very short of its goal. It is supposed to be for the furtherment of rest homes, convalescent hospitals and rehabilitation resorts, etc., for our gallant men and women who were wounded, or had their health injured by being interned in prisoner-of-war camps. This assumption may, however, be true, but the average GI Joe, and I am one of them, that I have had the pleasure to talk with, knows very well it takes lots of money to maintain a large Army and Navy and they feel that as long as the taxpayers would be gullible enough to spend money buying Victory bonds, that many high-ranking military men, probably no longer needed, will continue to hold their high-paying jobs and that as long as there is being such a large waste of their money now, that it would only be throwing good money after bad.

I personally think as a citizen of the United States, that instead of our great diplomats trying to appease and be a good-time "Charley" to every nation in the world, they should take a peek at their own country and do a little appeasing here at home. Because, mark my words, that there is a day coming and it may not be too far away, when they may wish to God they had.

Mr. DOYLE, this lengthy letter may sound like an editorial of some kind, but truthfully, I'm writing you as an admirer, supporter, and as a free-speaking citizen and taxpayer.

You may not remember me and again you may. My name is * * *, address as of December 3, will be somewhere in the Brooklyn Army Base (P. O. E.). I am a former resident of Long Beach, Calif., Eighteenth Congressional District of California. I was formerly president of the Cabrillo Homes Resident Interproject Council and owner and general manager of the little newspaper of the west side of Long Beach, known as the West Side Monitor (formerly the Interproject News of Cabrillo Homes and Navy Housing).

I know, Mr. DOYLE, that the voters and taxpayers of the Eighteenth Congressional District have the utmost confidence in you as their Representative to the Congress of the United States, in that you will do everything in your power to lessen the burden of high taxation that now rests on their shoulders and the shoulders of every other tax-paying citizen of America, and that you will do your part by insisting that the unnecessary spending of money by all departments of the Government cease, and point out how the maintenance of a sufficiently large Army and Navy for the protection of our loved homeland and as a weapon for the insurance of future peace could be obtained at a much lesser cost than at the present. This would not jeopardize our famous way of good American home life and high standards of living in any way, else what is the use of an Army and Navy at all?

Mr. DOYLE, any consideration you may render to me in this matter shall be very dearly remembered and deeply appreciated by both myself and my family, as I am making application for my discharge from the Army of the United States on the grounds of dependency and hardship. It will also be an encouragement for GI's who are in the same category as myself. If anything were to happen to my wife or my children due to present conditions, I guess I wouldn't have much else to live for.

I am forwarding certain extracts from this letter to the Los Angeles Examiner and the Long Beach Independent as a means to show the people of the Eighteenth District that no matter where a citizen and taxpayer may be, he can always feel free to call upon his Congressman and tell him his troubles, and that he will be heard with open ears and bend every effort to assist him if at all humanly possible; and, by all means, that he has the taxpayers' interest purely at heart

and that it will remain uppermost in his mind and guide his every action and decision at all times.

Respectfully,

From your friend and supporter,

Pvt. ——— ———.

P. S.—Surely, Mr. DOYLE, the preservation of professional football is not as important to our Congressmen as is the preservation of the American home. I certainly hope not.

## The Full Employment Bill

EXTENSION OF REMARKS

OF

### HON. FRANK T. STARKEY

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

*Friday, December 14, 1945*

Mr. STARKEY. Mr. Speaker, in ancient times it was said that the mountain labored and brought forth a mouse, and many of us who doubted that such an event could occur have received a startling example recently how great labors could produce extremely small results.

Unquestionably the Committee on Expenditures in Executive Departments labored long and hard on H. R. 2202, the so-called full-employment bill. It held public hearings in September, throughout October, and for the first week in November. The testimony printed is voluminous and no more confusing or convincing than the ordinary committee testimony on controversial subjects.

But I have been under the impression that full employment was neither a controversial nor a partisan subject. The underlying ideal is so obviously in accordance with all American ambitions, aspirations, and hopes that it would seem that the only persons opposing full employment would be those who actually do not want to work and are so lazy that they do not want to see others working. Both political parties agreed to the full-employment principle in 1944. The Democratic Party platform practically begins with a statement on full employment, and Governor Dewey, in his acceptance speech, declared:

> We Republicans are agreed that full employment should be the first objective of the national policy.

Apparently the two parties then saw eye to eye on what everybody admits is to be the great postwar domestic problem—or is it barely possible that the Republicans were just making political speeches in 1944?

Others who testified for the original bill were not making political speeches. Bishop G. Bromley Oxnam, president of the Federal Council of Churches, was not making a political speech when he declared that this bill was of great interest to religious bodies, since it translated ethical and democratic ideals into concrete forms meaningful to the common man. Pointing out that a man who cannot get a job is not free, the bishop asserted that this bill "will take its place in history among the significant legislative acts of our time."

Certainly the Most Reverend Robert E. Lucy, S. T. D., archbishop of San Antonio, was not making a political speech when he testified:

> By the law of nature and of nature's God, man has a right to labor for himself or for another to the extent to which some income is necessary to support himself and his family in decent and frugal comfort and to save something for the uncertain future. * * * Under the full employment bill, Congress will know beforehand the probable number of unemployed in a given period. The representatives of the people must then decide whether to accord these laboring people the liberty of the sons of God to work and live or the liberty to starve. * * * It is imperative that the full employment bill be passed. It is equally imperative that it be not amended to death. Strangely enough, those who most heartily fear and hate socialism are the very ones who, by the injustices of their reactionary policies, drive the people to the desperation of an all-powerful state.

The members of the committee, it is true, took to heart at least one admonition of the good Catholic archbishop of Texas. They did not amend the bill to death. They killed it and produced in its stead an entirely new bill—the Employment Production Act of 1945.

Not even its most optimistic supporter expected the original bill to provide full employment for everybody everywhere at his or her particular trade or occupation. But we did feel that it was an important step in the right direction. It was first a declaration of policy—the statement of an ideal. And let me say that a declaration may be very important. If there had not been any Declaration of Independence, there would never have been any independence for the Colonies, and the United States of America might never have come into being.

And so we made the declaration in the original bill that "all Americans able to work and seeking work are entitled to an opportunity for useful remunerative, regular and full-time employment." To implement this declaration we set up a certain program designed to stimulate trade, to encourage private enterprise, to strengthen small business, to coordinate the activities of business and Government to the end that we would attempt to foresee and predict trends in employment, in the production and consumption of goods, in the volume of investment during a given year.

Now the idea of prediction is not especially new. Estimates of national income, of Government expenditures, of volume of business are made almost every day by somebody—Government bureaus, market analysts, newspaper financial editors, and every businessman must know his particular market. In many fields now there is substantial agreement on certain estimates, and in some fields the Government bureau estimates are so accurate as to be accepted by all in that field as the best possible estimates.

The last important phase of the original bill was that when the Government, in the person of the President of the United States according to procedures approved by Congress, estimated that there was to be a shortage of jobs, Congress was to be informed of it, and inferentially we were expected to do something about it—if necessary by approving additional public works.

In some fashion, which I am unable to comprehend, this last portion of the bill seems to have angered the opponents of full employment more than any other feature. Apparently, the fact that the Government of the United States might use its collective intelligence to forestall economic catastrophe, might attempt to cure a disease before it got complete hold of the body politic, maddened many persons. They felt that we should leave economic affairs strictly alone, in the hope that they would right themselves, although all the history of the past indicates they never have righted themselves. Under the original provision of the full employment bill, Congress was going to be warned of a thief before the horse was stolen; Congress was going to be warned of a flood before the fields were already inundated, and the opponents of the full employment bill did not feel that this was right. Apparently, they believed that we should wait until the lightning strikes before putting up any lightning rods, and wait until a fire starts before installing fire hydrants and fire engines.

The new Employment-Production Act of 1945 completely abandons the idea of full employment even as a national ideal. Its declared purpose is not to assure full employment but a continuing national policy to promote high levels of employment, production, and purchasing power in a free competitive economy. It will accomplish this purpose, evidently, by asking the President to submit an economic report to Congress within 60 days after the beginning of each session on current economic conditions and any suggestions for legislation required to remedy or improve them. To assist the President in the preparation of this report a council of economic advisers is created, and to assist the council in its advice to the President a joint committee of House and Senate members to be known as the joint committee on the economic report is created. The council of economic advisers to the President is to gather authoritative and timely information on economic trends, to analyze and interpret them for the President, to assist the President in the preparation of the annual report, and make interim reports on a quarterly basis. Whenever the council determines that widespread unemployment exists it is to report to the President the causes of such unemployment and it may recommend legislation to alleviate such unemployment.

I admit that this is a very small residue of what began as promising to be a great bill. We have in this new bill little more than the establishment of a national department or division of economics for the executive and legislative branches which will coordinate the effects of all the existing economic analyses of the various bureaus and departments, adding to them information from private sources and perhaps obtaining through original investigation some new additional information. But the mere fact that the Government takes cognizance of economic matters on the highest level, that it accepts as its duty the necessity of keeping the Members of Congress and the public informed, that it further accepts the duty of rec-

ommending legislation to alleviate unemployment when found all are steps in the right direction. The bill does not go far enough, but it does point the administration toward a coordinated program of economic investigation and upon this basis we may in the future expect progress.

Although I admit keen disappointment that the original bill was not recommended by the committee I intend to vote for this bill as the best available at the present time. I do not propose to stop working for the principles of full employment, but I feel that if we only get an official economic report once a year on conditions that will serve as the basis for legislation we will have got something worth while.

## The Price the Farmer Receives and the Consumer Pays

EXTENSION OF REMARKS
OF
## HON. VICTOR WICKERSHAM
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES

*Friday, December 14, 1945*

Mr. WICKERSHAM. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following address delivered by me before the New York State Fruit and Vegetable Shippers and Receivers Association, Schenectady, N. Y., December 12, 1945:

I am very pleased to have this opportunity to participate on the program of the New York State Fruit and Vegetable Shippers and Receivers Association, at Schenectady, N. Y., today, December 12. When your secretary invited me to address this meeting he very thoughtfully assigned me the subject, The Price the Farmer Receives and the Amount the Consumer Pays, or Price Spreads Between Producers and Consumers. He probably could not have selected a subject about which so much has been said in the last quarter century, but concerning which so little actually has been done, although, apparently, much effort and ability have been directed toward the problem.

I am grateful to my chairman, Hon. JOHN FLANNAGAN, Jr., for selecting me to make this talk after he received the invitation from your able secretary, Earle H. Bogardus. I am indebted to J. O. Parker, who is in charge of our marketing investigating committee, for his assistance in securing some of the facts used as a basis of my address.

I am neither a short-time crystal gazer nor a long-time prophet, so I shall merely attempt to review here today some of the work that has been done on this problem in the past and give you any personal observations I may have concerning it.

Perhaps for purposes of the record, we should all remember that the investigation presently being conducted by the Committee on Agriculture of the House of Representatives into the marketing of farm products makes the third time in approximately 25 years that the attention of Congress has been directed to this very important problem. Just after World War I, the Congress created what was known as the Joint Commission of Agricultural Inquiry, and one of its important duties was to investigate marketing. Again in 1935, the Congress, by joint resolution, directed the Federal Trade Commission to ascertain the proportion of the consumer's dollar going to farmers and distributors, respectively. During all the intervening years the Department of Agriculture through its various agencies has been gathering vast amounts of statistical information and publishing reports of its studies. All of these various investigations and studies have shown one thing very clearly: that is that the producers of farm food products receive a smaller share of the consumer's dollar than that received by the people who make their livelihood by distributing such products. Only twice since 1913 have producers on the average received as much as 50 percent of the consumer's dollar—that was in the year 1918 and the present war years. It may be that there is a proper and adequate explanation for that result, but in all the studies heretofore made, various criticisms have been leveled at the distributive processes and various recommendations made from time to time for their improvement. Whether the marketing margins are excessive, I am frank to admit that I do not know, but it behooves all of us to seek the answer to that problem and to explore the possibilities of improving the marketing system, for we all know that the hue and cry continues that distribution costs are too high and that the spread between the farm and the table is too great. It is better to inquire into such problems now while there is a fairly steady economic level rather than wait until a deflationary period comes and farm prices begin to fall. For then we are likely to be besieged to take action without knowing what, if anything, should be done.

How much does it cost to market fruits and vegetables? How does the Nation's bill for marketing fruits and vegetables compare with the amount received by the farmers who raise the commodities? According to information compiled by the Department of Agriculture, the total marketing charges for fruits and vegetables exceeded those of any other commodity group. In 1939, the last normal prewar year, the farmers' share of the retail cost of all fruits and vegetables, fresh and processed, was 31 percent. Producers received 35 percent of the consumers' dollar expended for fresh fruits and vegetables. In other words, it costs about twice as much to get fruits and vegetables from the farm to the consumer as the farmer is paid for growing them. The fruit and vegetable food bill of consumers in 1939 was about $2,800,000,000. Of this amount producers received about a billion dollars, and the difference of $1,800,000,000, or 65 percent, represents marketing margins.

Production and consumption of fruits and vegetables have increased considerably since 1920, and today approximately 20 percent of the average family food budget is spent for these products. The amount of the consumers' food dollar expended for fruits and vegetables ranks second only to meats. The value of these protective foods from a nutritive standpoint is becoming increasingly recognized. Every effort should, therefore, be made to assure that our system of marketing provides for the widest possible distribution of these products. We need only to look back to the thirties to see important failures in our distribution system, when vast amounts of fruits and vegetables were dumped and when producers were able to receive greater returns by marketing only a portion of their crops. Failures in distribution that we witnessed then must not be repeated.

If the producer of fresh fruits and vegetables received only 35 percent of the consumers' dollar in 1939, where did the other 65 percent go? Assemblers at shipping point accounted for about 6 percent, transportation about 19 percent, wholesaling and terminal brokers about 9 percent, and retailing about 31 percent. Merely to cite the marketing margins and the distribution of such margins among the various functions is not to say, however, that these margins per se are too high or that any of the functions are unnecessary. The figures which I have just recited merely show where the margins are and serve to enable us to see how the various functional groups fared in comparison with the farmers who produced the commodities.

I should like to give you some facts from the committee report in connection with the Pace bill, H. R. 754, for inclusion of farm wages in determining parity price of agricultural commodities:

"This bill, in identical language, was twice before reported unanimously by this committee and has been approved twice by the House of Representatives, once by unanimous vote of the Seventy-seventh Congress and again by voice vote during the Seventy-eighth Congress, at which time only one vote was heard against it. It was reported to the Senate by the Senate Committee on Agriculture and Forestry during the Seventy-eighth Congress. * * *

"Soon after his election in 1932 the late President Roosevelt called to a conference in Washington the outstanding farm leaders and agricultural experts of the Nation. At that time the farmers, those who provided the food and fiber to feed and clothe the people, were facing bankruptcy. Farm prices had gone down, down, down. * * * The President called on these leaders and experts to confer and submit recommendations for both quick relief and long-term remedies. * * *

"The period, 1909–14, was adopted as the base period. This was to be the base or standard by which future farm prices would be determined. If the cost of the farmers' necessities should go up, then these prices should rise proportionately in order to keep the two in balance—at parity.

"This conference of farm leaders and experts submitted their report. The President made his recommendations to the Congress, and on March 20, 1933, the House Committee on Agriculture reported a bill to the Congress (H. R. 3835) containing the following declaration of policy:

"'It is hereby declared to be the policy of Congress to establish and maintain such balance between the production and consumption of agricultural commodities, and such marketing conditions therefor, as will reestablish prices to farmers at a level that will give agricultural commodities a purchasing power with respect to articles that farmers buy, equivalent to the purchasing power of agricultural commodities in the base period. The base period in the case of all agricultural commodities except tobacco shall be the prewar period, August 1909–July 1914. In the case of tobacco the base period shall be the postwar period, August 1919–July 1929.'

"That bill, with that declaration of policy, became law on May 12, 1933 (Public Law 10, 73d Cong.).

"Then, in the Agricultural Adjustment Act of 1938 parity was defined, as follows:

"'Parity, as applied to prices for any agricultural commodity, shall be that price for the commodity which will give to the commodity a purchasing power with respect to articles that farmers buy equivalent to the purchasing power of such commodity in the base period.'

"PURPOSE OF THE BILL

"Probably one of the clearest and most understandable statements of the purpose of this bill is that of the late President Roosevelt, in his message to Congress on September 7, 1942, as follows:

"'Parity is a fair relationship between the prices of the things farmers sell and the things they buy. Calculations of parity must include all costs of production, including the cost of labor. As a result, parity prices may shift every time wage rates shift.'

"At the present time that 'fair relationship' does not exist. * * * And, certainly, if a farmer must now pay three or

four times as much for his labor as he paid during the base period, his crops cannot have that equivalent purchasing power unless this increase in labor cost is taken into account in determining parity prices.

* * * * *

"LABOR COST NOT INCLUDED

"But it will be observed that labor cost is not included in these parity calculations, although it is the biggest single item entering into the cost of producing a crop—32 percent, according to BAE.

"Then, if the parity principle is fair, and it is generally recognized as the fairest system that can be set up, it must be admitted that all the labor engaged in production should be included in the cost of production. That is all this bill seeks to do.

"Three things should be clearly understood and kept constantly in mind—

"1. This bill does not seek to add, and will not add, to parity prices the total amount paid to or allowed for those working on the farm. It merely adds, as a part of the cost of production, the difference or increase in the farm-wage rates since the base period (1909–14).

"2. That labor is the largest single item entering into production. It represents a greater percentage in producing some commodities than in others, of course, but the Bureau of Agricultural Economics reports that on the whole it represents 31.7 percent of the cost of production. Therefore, it can be easily understood what a rank injustice is being visited upon producers when the increase in labor cost is not included in the calculation of parity prices.

"3. That the passage of this bill, and the adjustment of the parity index and parity prices as provided by this bill, does not mean that the producers will necessarily receive the new parity prices for their commodities or that the consumers will be required to pay such a proportionate rise in the cost of such commodities. In the first place, parity prices are not actual prices paid to the producer; they are the prices the producer should receive in order for his commodities to have a "fair relationship" and an "equivalent purchasing power" with the things he must buy to live and make a crop, as promised by the Congress. In the second place, the trend of farm prices is now downward; already the prices of many commodities are below present parity prices and the producers have been assured protection or supports of only 90 percent of parity prices. The present parity prices, not including this increase in farm labor cost as provided in this bill, are only about 70 percent of true parity, and when producer prices are protected at only 90 percent of this, that is 90 percent of 70 percent, the producer realizes protection or support of only 63 percent of parity prices.

"The producers are entitled to receive parity prices for their commodities, 100 percent, and certainly while their prices are supported at only 90 percent of parity it should be 90 percent of the full and true parity authorized by this bill.

"PROVISIONS OF BILL

"This bill provides that, in addition to the present items considered in calculating parity, such prices shall also 'reflect the cost of all farm labor, including hired workers, farm operators, and members of the families of farm operators engaged in work on the farm, as contrasted with such costs of all farm labor during the base period.'

"The committee calls special attention to the fact that this bill includes only those workers who are actually engaged on the farm. There are three groups included.

"First, the hired worker. * * *

"Second, the operators.

"This term is intended to cover the small farm operator, the tenant and the share cropper; the men who actually live on the farm, manage the farm, work on the farm, and in most cases work in the fields, planting, plowing, cultivating, and harvesting the crops. Upon them rests the responsibility of producing the crops to feed the Nation, without regard to hours, weather, or seasons. * * *

"Third, the family worker. * * * There are now over 25,000,000 persons living on the 6,000,000 farms of the Nation. * * * Not included, the committee regrets to say, is the hardest worker of all, the farm wife. While she may not spend her time in the fields, she is the one who must be the first to get up in the morning and the last to retire at night. Breakfast must be prepared, the family cow must be milked, the house must be cleaned, the children must be prepared for school, the sick must be nursed, the sewing must be done, the old must be cared for, the vegetables must be gathered, the chickens must be fed, the washing must be done, the canning must be done, and on and on through the day. Finally evening comes, and after all have been put to bed and plans have been made for another dawn, a tired body lies down to rest. No; be it said to our shame, BAE doesn't include her among the farm workers and for the price of the crops grown on the farm no allowance can be included for her labor.

"BAE estimated that on January 1, 1945, the farm population was 25,190,000. It will thus be seen that if this bill had been in effect in 1944 it would have covered the wages, at the hired wage rate, of—

| | |
|---|---|
| "Hired workers | 1,880,000 |
| Farm operators | 5,140,000 |
| Family workers | 1,250,000 |
| Total | 8,270,000 |

* * * * *

"Yes, there are some—the committee can't believe there are many—who claim the right to buy their food at the same price they paid in 1909–14, although their own income in many cases has doubled and trebled since that time and notwithstanding the fact the farm wage-rate index is now 345 as compared with 100 in 1909–14. While they cheer other workers for asking a 30-percent increase in wages, they would deny the farmer the privilege of asking that the increase in farm-labor cost be included in figuring fair prices for his crops. While they approve others laying down their tools in support of their demands for 52 hours' pay for 40 hours of work, they expect the farmer to stay on the job, to work from daylight to dark, and to sell his crops at a price which reflects for him the same wage he received and paid over 30 years ago.

"No; the farmers don't strike, and they won't strike. * * *

"First, here is how the gross income is made up, as announced by BAE:

*"Cash farm income, value of products consumed on farms, and gross farm income, 1944*

| | |
|---|---|
| "Cash receipts from farm marketings | $19,790,000,000 |
| Government payments | 804,000,000 |
| Total cash income | 20,594,000,000 |
| Value of products retained for home consumption | 2,040,000,000 |
| Rental value of dwellings | 812,000,000 |
| Gross farm income | 23,446,000,000 |
| Adjustments for changes in inventory | −415,000,000 |
| Gross farm income, including adjustments for change in inventory | 23,031,000,000 |

"In the first place, it will be observed that the total cash receipts were only $20,594,000,000.

"Then, as the following analysis will show, after deducting the costs of production, after allowing a wage of $935 per year (the same average wage allowed for the hired workers) to the 5,140,000 full-time farm operators and the 1,250,000 family workers, and a return of only 3 percent on the value of unencumbered farm property, there is a net cash return of only $2,812,150,000. For the 25,190,000 people on the farms of the Nation this means only $111 per annum each. From this $2,812,150,000 some provision must be made for the farm wife, the hardest worker of all, for clothing for the children, schoolbooks, lights for the house, doctors, dentists, undertakers, etc. Here are the figures:

*"Amount of cash left in hands of the farmers*

| | |
|---|---|
| "Total cash receipts from marketings | $20,594,000,000 |
| Expenses of production: | |
| Feed purchased | 2,078,000,000 |
| Livestock purchased | 647,000,000 |
| Fertilizer and lime | 476,000,000 |
| Cost of operating motor vehicles | 831,000,000 |
| Miscellaneous operating expenses, including horses and mules, seed, insecticides, containers, electricity for production, twine, ginning, operating gas and steam engines, irrigation, grazing, insurance, dairy supplies, blacksmith and miscellaneous hardware supplies, miscellaneous greenhouse and nursery expenses, veterinary bills and medicine, sugar tolls, and total short-term interest | 1,218,000,000 |
| Total operating expenses | 5,250,000,000 |
| Buildings | 743,000,000 |
| Motor vehicles | 460,000,000 |
| Machinery and equipment | 421,000,000 |
| Hired labor (cash wages) | 1,760,000,000 |
| Taxes | 460,000,000 |
| Farm mortgage interest | 255,000,000 |
| Land rent | 1,100,000,000 |
| Total production expenses | 10,449,000,000 |
| Excess, receipts over production expenses | 10,145,000,000 |
| Government payments to nonfarmers; that is, owners not living on or operating farm | 89,000,000 |
| Balance | 10,056,000,000 |
| Allowance for 3 percent on $42,307,000,000 value of unencumbered farm property | 1,269,200,000 |
| Allowance to 5,140,000 full-time farm operators for work on the farm, care of stock, repairs of machinery, milking cows, planting, cultivating and harvesting crops, and general management of farm, at $935 per year, same rate as paid hired workers | 4,805,900,000 |

| | |
|---|---|
| Allowance to 1,250,000 family farm workers (only one-fourth person per farm) at $935 per year, same rate as paid hired workers | $1,168,750,000 |
| Total allowance | 7,243,850,000 |
| Net cash returns for all purposes for the 25,190,000 people on the farm, including something for the farm wife, hardest worker of all, and including clothing for children, schoolbooks, lights for the house, gas for the family car, paying the preacher, doctors, dentists, undertakers, etc., or the grand amount of $111 per year per person | 2,812,150,000 |

"(All figures for expense of production supplied by Bureau of Agricultural Economics.)

"This $2,812,150,000 is a long way from the published gross income figure of $23,446,000,000, which latter amount is what millions of people think is the farmers' pocket money.

"THE OTHER FELLOW

"In this connection it is interesting to note—

"1. The Department of Commerce has reported the total national income for 1944 at $160,700,000,000;

"2. The Department of Labor reports that there were 38,000,000 employees in nonagricultural establishments in January 1945, not including personnel of the armed forces, domestic servants, and self-employed persons;

"3. The Department of Commerce reports that, of the total national income, the sum of $111,000,000,000 was for wages and salaries, excluding farm wages.

"Does the farmer even start to begin to receive his fair portion of the national income? Figure it out yourself and draw your own conclusions. Such a situation hardly requires comment.

"UNENCUMBERED FARM PROPERTY

"The values of unencumbered farm property and farm indebtedness used in the foregoing analysis were supplied by BAE, as follows:

| | |
|---|---|
| "Value of farm property Jan. 1, 1945: | |
| Real estate | $45,592,000,000 |
| Other property | 15,367,000,000 |
| Total | 60,959,000,000 |
| Indebtedness against farm property: | |
| Real-estate mortgages | 5,635,000,000 |
| Average volume short-term credit | 2,089,000,000 |
| Total | 7,724,000,000 |
| Values of property free from debt | 53,235,000,000 |
| Adjusted to exclude owners not living on farms | 42,307,000,000 |

"DEMANDS OF LABOR

"Let it be said first that, insofar as this committee can interpret the attitude of the farmers of the Nation, they favor good wages, both for their own hired helpers and for all of those who work in the industrial plants, manufacturing establishments, mines, shops, stores, utilities, transportation systems, and other places. They recognize the need of such workers having strong purchasing power in order for them to buy all they need of the products of the farms. They want such workers to have, as they want for themselves, not only a living wage, but a wage sufficient to provide some of the comforts and pleasures of life and some protection against the uncertainties of the future and old age.

"But the farmers do ask equal treatment. They feel they have the right to insist—in fact, to demand—that (1) when industrial wages go up, and thereby result in an increase in the wages of the farm worker, that such increase in his labor cost should be promptly reflected in the price he receives for his commodities, and (2) that a similar increase in price should be allowed for his own work on the farm or in the dairy or elsewhere. The enactment of this bill is necessary to bring about such equal treatment.

"While the producers fully realize the benefits they derive from high consumer purchasing power for farm commodities, they are just as sure that a high purchasing power among the 25,000,000 people now living on farms can be of equal benefit to those who work in the industrial plants, manufacturing establishments, mines, etc.

"In fact, one of the greatest markets in the world today is the American farmer. They would like to enjoy modern improvements and modern conveniences just the same as those who live in urban communities. There are those who contend that national prosperity depends entirely upon high industrial wages and high purchasing power in the hands of industrial workers. On the contrary the economic history of this Nation demonstrates that the economic condition of the Nation as a whole follows the economic condition on the farms. Without exception, when the farmer is prosperous the Nation is prosperous. The farmers produce the raw commodities which industry and commerce must have for doing business and just as surely as industry must depend upon the farm for its raw commodities it must depend upon the farmer to bring about favorable economic conditions.

"The fear has been expressed by some that if this bill becomes a law it will justify demands by industrial workers for increase in their wage scale. The committee submits that this bill cannot justify any such demands.

"1. As shown above, the salaried workers are already receiving $111,000,000,000 of a total national income of $161,000,000,000. Surely they don't want it all.

"2. Since the base period (1909–14) the average hourly earnings of the factory worker have increased from the rate of 21 cents per hour paid during that period to the present rate of $1.02 per hour, an increase of nearly 400 percent. Here are the official figures from the Bureau of Labor Statistics of the Department of Labor:

| Year | Average hourly earnings, in cents | Index of hourly earnings of factory workers |
|---|---|---|
| 1909-14 | 21 | 100 |
| 1915 | 23 | 108 |
| 1916 | 26 | 123 |
| 1917 | 31 | 147 |
| 1918 | 41 | 193 |
| 1919 | 48 | 226 |
| 1920 | 58 | 273 |
| 1921 | 51 | 239 |
| 1922 | 46 | 219 |
| 1923 | 52 | 246 |
| 1924 | 55 | 258 |
| 1925 | 54 | 257 |
| 1926 | 55 | 259 |
| 1927 | 55 | 261 |
| 1928 | 56 | 265 |
| 1929 | 57 | 267 |
| 1930 | 55 | 261 |
| 1931 | 52 | 244 |
| 1932 | 46 | 216 |
| 1933 | 46 | 215 |
| 1934 | 54 | 255 |
| 1935 | 56 | 264 |
| 1936 | 56 | 266 |
| 1937 | 63 | 299 |
| 1938 | 64 | 302 |
| 1939 | 63 | 299 |
| 1940 | 66 | 312 |
| 1941 | 73 | 344 |
| 1942 | 85 | 403 |
| 1943 | 96 | 454 |
| 1944 | 102 | 481 |

NOTE.—Figures from Bureau of Labor Statistics of Department of Labor.

"3. The consumer is today buying his food for a less percentage of his income than at any time in the history of the Nation. During the 5-year period 1935–39 the consumer spent 23 cents of his or her dollar for food, while for the same kind and quantities of food today he or she is paying only 15 cents of the dollar. And, after taking into account the greatly increased quantity of food the consumer is buying today, he or she is still spending at this time only 20 cents of the dollar. Much more food bought and consumed in 1945 than during 1935–39, and yet the increased quantity is costing a less percent of the consumer's dollars, 20 percent as against 23 percent."

Time will not permit discussion and analysis today of all the various marketing functions, but I do want to touch momentarily upon the wholesaler function, since I assume that some of you are engaged in wholesaling. When I stated a moment ago that approximately 9 percent of the consumers' dollar went to wholesalers, the group that I was referring to includes terminal brokers, terminal auctions, wholesale receivers and jobbers, commission receivers, and chain-store warehouses. Although this group accounts for only approximately 9 percent of the consumers' dollar, it is a very important cog in the distribution machine, and apparently its importance has been recognized in view of the fact that in all the investigations heretofore made this group has received considerable attention.

The conclusion has been pretty generally reached that there are definite possibilities for not only reducing marketing costs but eliminating waste and reducing deterioration by the reorganization and improvement of many of the principal wholesale and jobbing markets. Many of the wholesalers themselves have recognized this but have admitted that they are powerless to bring about what they were ready to admit were needed improvements.

In many cities the wholesale markets for fruits and vegetables are very old. For example, the Faneuil Hall Market, of Boston, is about 200 years old, yet it is still the principal market in that city.

Many changes have taken place since most of the terminal markets have been constructed. Methods of transportation have changed. Produce from distant producing areas has become available. Consumption has increased. Yet with all these changes the markets themselves have undergone little change, with the result that many of these markets are inadequate.

Buildings are old, were not designed for handling fruits and vegetables, and are not suitable for the efficient handling of produce.

Most of these markets do not have proper facilities for handling motortruck receipts. Streets are too narrow for many of the larger over-the-road trucks to enter, and the produce must be reloaded on a smaller truck for a haul of a block or two to reach the market.

In some markets literally hours are required for a truck to get into the market and unload. When it finally gets through it usually cannot reach the particular wholesaler's store

and the produce must be unloaded and carried by porters to the wholesaler's store.

When members of our committee visited the West Washington Market, in New York, the truck congestion was so bad that it required more than 1 hour for a truck to turn from one street to another.

Another evil is that few cities have a common place to receive rail and truck shipments. Thus, there is much expense involved in moving commodities from the rail terminal to the truck market and in buyers having to go from one place to another to obtain their supplies.

I could go on and give additional examples, but it takes no expert to know that conditions like these mean time wasted, high operating costs, unnecessary handling, large losses from spoilage, and other cost-occasioning factors.

These conditions make real efficiency in marketing perishable products very difficult, if not almost impossible to attain.

Studies of the several principal markets have been made from time to time by the Department of Agriculture, and it has been estimated that savings of millions of dollars could be made through the improvement of the physical facilities for handling the commodities alone.

One might properly ask, if this is true, why have these improvements not been made? The answer is that some of them have. In other cities plans are now being made for bringing about certain improvements. In the main, the smaller markets and smaller cities can lead the way, since they are not confronted with all the obstacles that lie in the path of market improvement in large cities. Probably the greatest single obstacle to market improvement, especially in the larger cities, is the divergent interests within the marketing groups. Unless a very substantial portion of the wholesalers within a market are agreeable to the construction of new facilities, a different location, and so forth, little can be done by only a part of the market interests because of the costs and risks involved.

It has been proposed by various groups from time to time that Federal moneys should be made available through loans or grants, or both, for the construction of new market facilities in connection with public-works programs. In fact at the present time the Federal Works Agency is authorized to make loans to States, cities, and municipalities for the purpose of planning public improvements, and it is my understanding that some cities seeking to improve marketing facilities have obtained loans for such purposes. In that connection, I would like to make this observation—we should carefully consider establishing some method or means whereby the plans of such markets can be carefully examined and integrated into a unified national marketing system before making large sums of Federal moneys available for the erection of marketing facilities. Otherwise we might actually burden rather than improve the marketing system through the construction of improper facilities which would require the industry to meet high fixed costs.

At the outset I told you that I was neither a crystal gazer nor a long-term prophet, but I do want to make one phophecy. Whether we have improved marketing facilities at terminal markets and the savings which it is estimated would flow therefrom depends largely upon the willingness of those engaged in marketing to work and act together as a united group for the benefit of the industry as a whole. In my opinion, the failure of these marketing interests to take the action which is admittedly needed does not mean that improvements in the marketing processes will not be forthcoming. I do not want you to misconstrue that statement or infer it as a threat of legislation. For that is not the case. What I have in mind is simply this: we have seen the growth and establishment of two methods of marketing today which make little or no use of the so-called terminal markets. I refer to what is known as the chain-store-warehouse method and the service-wholesaler method. The former is the more familiar of the two and provides for the integration of the assembling, distribution, and retailing of fruits and vegetables, and whether we like chain stores or not, the inovations and improvements which they inaugurated are certain to continue. In this connection it should be observed that the Department of Agriculture estimated that for 1939 the average margin for retail fresh fruits and vegetables for chain stores was 25 percent as compared to 32.5 percent for the independents, and that the chain-store warehouses took a margin of 8 percent as compared to 12.5 percent for wholesale receivers and jobbers. Those figures are estimates and probably are subject to many adjustments. Nevertheless, it is the popular conception that the method employed by chain stores has brought about a reduction in marketing margins. The service-wholesaler method which is being utilized at certain points in the Midwest combines the receiver-wholesaler-jobber functions and uses chain-store-warehouse methods to receive, handle, and distribute from a single warehouse the supplies needed by retail outlets. In each instance the terminal market is almost completely circumvented. In other words, its the old story—if old ways of doing things are not improved, new methods will be found. Terminal markets, I believe, will be compelled to modernize or go into competitive oblivion.

I am convinced that any group can maintain its rightful position in the marketing system if it is continually trying to improve its services and does not rest upon its laurels. The fruit and vegetable industry is your industry, therefore, its problems are your problems. The decision as to whether there is anything to be gained by exploring the possibilities of improving the marketing system is yours as well as mine. The improvement of our system for distributing farm products is a matter which rises above local or selfish considerations or partisan politics. We must not confess our inability to grapple with this problem which in the evolution of time has come to challenge our genius.

## Citation To Accompany the Award of the Medal for Merit to Ralph K. Davies

EXTENSION OF REMARKS
OF
### HON. TOM CONNALLY
OF TEXAS
IN THE SENATE OF THE UNITED STATES

*Friday, December 14 (legislative day of Monday, October 29), 1945*

Mr. CONNALLY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the citation to accompany the award of the Medal for Merit to Ralph K. Davies.

There being no objection, the citation was ordered to be printed in the RECORD, as follows:

CITATION TO ACCOMPANY THE AWARD OF THE MEDAL FOR MERIT TO RALPH K. DAVIES

Ralph K. Davies, for exceptionally meritorious conduct in the performance of outstanding services to the United States. As Deputy Petroleum Administrator, Mr. Davies organized and directed the unique Government-industry combination that achieved one of the outstanding victories of the war—the assurance of petroleum for every military and essential civilian need of the United Nations. Under his guidance, this unprecedented partnership furnished the United Nations with their most vital and most used munition. As a member of the President's Committee on Oil, Mr. Davies played a leading part in formulating and negotiating an international oil agreement, executed by officials of the United States and Great Britain. To these high duties Mr. Davies brought profound oil knowledge, an incisive intellect, rare vision, the quiet power of a gifted organizer and executive, the courageous devotion of a man characterized by unflinching determination, and a deep sense of public service.

HARRY S. TRUMAN.

## Resignation of Gen. Patrick J. Hurley and the Sabotage of Our Foreign Policy in China

EXTENSION OF REMARKS
OF
### HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

*Friday, December 14, 1945*

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following report of the Committee on Foreign Affairs:

The Committee on Foreign Affairs, to whom was referred the resolution (H. Res. 443) requesting the Secretary of State to give information regarding the resignation of Gen. Patrick J. Hurley and the sabotage of our foreign policy in China, having considered the same, report adversely thereon without amendment and recommend that the resolution do not pass.

For the information of the House, there is included in this report the following communication from the Department of State:

DEPARTMENT OF STATE,
*Washington, December 8, 1945.*

The Honorable SOL BLOOM,
*House of Representatives.*

DEAR MR. BLOOM: I have received your letter of December 1 enclosing House Resolution 443, which has been introduced by Representative ROGERS of Massachusetts and referred to your committee.

I have no information relative to sabotage of our foreign policy in China. I enclose a copy of my statement made yesterday before the Senate Committee on Foreign Relations upon that subject. That statement also refers to the resignation of Gen. Patrick J. Hurley, as Ambassador to China, referred to in the resolution. I enclose also, as bearing upon that matter, a copy of the statement made by the Department at the time of his resignation, a copy of General Hurley's letter of resignation, and a copy of the President's reply thereto.

Sincerely yours,

JAMES F. BYRNES.

STATEMENT OF THE SECRETARY OF STATE BEFORE THE SENATE COMMITTEE ON FOREIGN RELATIONS, DECEMBER 7, 1945

During the war the immediate goal of the United States in China was to promote a military union of the several political factions in order to bring their combined power to bear upon our common enemy—Japan. Our longer-range goal, then as now, and a goal of at least equal importance, is the development of a strong, united, and democratic China.

To achieve this longer-range goal, it is essential that the Central Government of China, as well as the various dissident elements, approach the settlement of their differences with a genuine willingness to compromise. We believe, as we have long believed and consistently demonstrated, that the government of Generalissimo Chiang Kai-shek affords the most satisfactory base for a developing democracy. But we also believe that it must be broadened to include the representatives of those large and well-organized groups who are now without any voice in the government of China.

This problem is not an easy one. It requires tact and discretion, patience and restraint. It will not be solved by slogans. Its solution depends primarily upon the good will of the Chinese leaders themselves. To the extent that our influence is a factor, success will depend upon our capacity to exercise that influence in the light of shifting conditions in such a way as to encourage concessions by the Central Government, by the so-called Communists, and by the other factions.

If I understand correctly what Ambassador Hurley has stated to me, and subsequently to the press and to this committee, he entertains no disagreement with this conception of our policy. Moreover, he has indicated to me and to this committee that he has been unfailingly supported by two Presidents and three Secretaries of State in his efforts to execute this policy.

He does object, however, to what he asserts has been a failure or refusal to make this policy public.

I wish to make it clear now, because of its bearing upon this point and upon other matters which I shall come to in a moment, that I am not familiar with every speech and press release and letter of my immediate predecessors as Secretary of State, nor with every incident that has occurred in recent years among officers of the State Department in China or elsewhere. I have not had the opportunity to examine these records, nor am I likely to have it in the near future.

Nevertheless, I submit that the broad outlines of our policy in China have never been hidden or difficult to recognize. The phase of that policy upon which Ambassador Hurley has placed the greatest emphasis is our support of the National Government of Generalissimo Chiang Kai-shek.

Of all the phases of our policy in the Far East, this seems to have been the clearest and most obvious. We formally recognize only the National Government. Our Ambassador is an ambassador to the National Government. Our war supplies and financial assistance have been delivered only to the National Government. At the Cairo Conference it was Generalissimo Chiang Kai-shek who represented China. At San Francisco it was the Foreign Minister of the National Government who signed the Charter of the United Nations. It was the National Government which ratified the Charter. It is the Foreign Minister of the National Government who sits in the Council of Foreign Ministers.

In recent weeks, the necessary presence of our troops in China has been a source of understandable concern to the American people. As a result, the subject has been raised frequently at my meetings with the press. I have made it very clear that our troops are in China for the sole purpose of facilitating the surrender of large numbers of Japanese troops to the armies of the National Government in compliance with the order of the Supreme Allied Commander.

These are a few among many public evidences of our recognition of the government of Chiang Kai-shek as the legitimate Government of China. In the face of them, and in the light of the admittedly consistent support of this policy by Presidents Roosevelt and Truman and Secretaries Hull, Stettinius, and myself, it is difficult to understand Ambassador Hurley's intimation that his failure to achieve a satisfactory settlement of China's internal division resulted from the absence of a public expression of our policy.

General Hurley's statements before this committee require me to add a few words concerning what he has indicated to be a refusal by me and by the President to grant his request for such a public statement. The pressure of time has been so great that I am unable to make a categorical statement at the moment, but I can tell you that I have not been informed of any written document in the possession of the Department of State in which the Ambassador has made such a request.

I can state categorically that he has never made such a request in conversation with me. Moreover, I was present at one of the two conversations he has had with the President since his return in September. I did not hear him make such a request at that time. Since the Ambassador's testimony here, I have asked the President whether, in his recollection, Ambassador Hurley has ever requested him, orally or in writing, to issue a public statement of our policy in China. He does not recall such a request.

My recent letter to Representative ANDERSON of California, to which Ambassador Hurley has referred with approval, was in response to a letter of inquiry from the Congressman. When a Member of Congress requests an explanation of some aspect of our foreign policy, I take it as a matter, of course, that the request should be answered. But in the absence of such specific inquiries, I have thought it necessary to give public expression to our foreign policy only as occasion may demand.

As I have indicated, it is not my intention to attempt to interpret and explain every event of large or small importance in the administration of our foreign policy in China and other parts of the world in recent years.

I feel, however, that in fairness to the loyal, intelligent, and hard-working men of our foreign service, and in fairness to the employees of the Department of State, generally, I am compelled to discuss briefly certain charges which Ambassador Hurley has made.

The foreign-service officers are nonpolitical Government employees, selected through competitive examinations. They have long labored earnestly and with too little public recognition to uphold abroad our national interests. My own experience with them has given me a high regard for their ability, integrity, and loyalty.

I do not know George Atcheson or John Service. But because of the special criticism to which they have been subjected by the Ambassador, I have obtained and read Mr. Atcheson's telegram of February 28, 1945, and Mr. Service's memorandum of October 10, 1944. These are the documents upon which the Ambassador appears to rely most strongly for support of his charge that these two officers sought to prevent the accomplishment of the objectives of United States policy in China.

The propriety of Mr. Atcheson's telegram can be determined only against the background of the events in China which preceded it. Like Ambassador Gauss before him, Ambassador Hurley had been making strenuous efforts to achieve unity, not only between the Central Government and the so-called Communists, but between the Central Government and the other dissident elements in China as well. At the time Ambassador Hurley left Chungking for a visit to Washington on February 19, 1945, I am advised that the negotiations between the Central Government and the Communists appeared to have broken down.

When Ambassador Hurley departed from the Embassy at Chungking, Mr. Atcheson, as counselor, automatically assumed charge of the Embassy's affairs. On February 28, 9 days after the Ambassador's departure from Chungking and 3 days before his arrival in Washington, according to the records of the Department, Mr. Atcheson sent his telegram. It contained a broad and thoughtful analysis of the situation in China as it appeared to him in the light of the shifting circumstances of the moment. It concluded with the recommendation that these shifting circumstances required a readjustment of our immediate strategy.

In his telegram, Mr. Atcheson distinctly stated that "a favorable opportunity for discussion of this subject should be given by the presence of General Wedemeyer as well as General Hurley in Washington."

The officer in charge of an American mission in a foreign country bears the responsibility for full and accurate reporting of the factors and events which are necessary to the intelligent formulation and execution of United States foreign policy. He is further responsible for the submission from time to time of recommendations with respect to this policy. If his reports and recommendations are to be useful, it is clear that they must reflect his free and honest judgment.

In the case of an ambassador, these considerations have always been taken for granted. They have been taken equally for granted in the case of the officer who assumes charge during the absence of the Ambassador from the Embassy. Since September, for example, we have relied upon the reports of the ranking official of the Embassy in China.

It is difficult to understand how Mr. Atcheson failed in any way to observe the letter or the spirit of these rules and traditions. His telegram of February 28 was a full and free report of the current situation in China as he saw it. His recommendation was an honest effort to assist the Department of State in the formulation of its future policy in China. There is nothing to indicate that he sought to circumvent his superior in making this report and recommendation. On the contrary the telegram expressly suggested that this was a matter upon which the views of Ambassador Hurley should be sought by the Department in Washington.

The specific action of John Service to which Ambassador Hurley referred in his conversation with me was the preparation of a memorandum on October 10, 1944. I have also read this memorandum with care.

Before I turn to its contents, I wish to call attention to a few facts, as they have been presented to me. At the time this memorandum was prepared by Mr. Service, he was not attached to the Embassy at Chungking. Although he retained his status as a foreign-service officer, he was attached to the staff of General Stilwell, as a political observer in Yunan. He was at the time administratively responsible to General Stilwell and not to the Embassy.

Ambassador Hurley, as of that date, was in China as the personal representative of the President, with the rank of ambassador; but he was not the United States Ambassador to China. He was not in charge of the United States Embassy in Chungking.

Under these circumstances, it cannot be said that anything Mr. Service wrote constituted insubordination to Ambassador Hurley.

The memorandum itself embodied recommendations for a basic change in United States policy toward the Central Government of China. It was written in forceful language and the conclusions which it drew were rather drastic.

It was addressed to General Stilwell. It was also routed to the Embassy in Chungking. The Embassy forwarded it to the Department without endorsing its conclusions, but with a noncommittal covering memorandum indicating that it represented the views of a single political observer.

When the memorandum reached the Department of State it was sent to the Division of Chinese Affairs. Before it was circulated

further, the Division of Chinese Affairs attached another covering memorandum stating decisively that although its contents were informative, many of its conclusions, which were specifically enumerated, were regarded as incorrect.

It is not my purpose to dwell at greater length upon the two documents. In my opinion, based upon the information which has thus far been presented to me, there is nothing in them to support the charge that either Mr. Atcheson or Mr. Service was guilty of the slightest disloyalty to his superior officers.

What it amounts to is that within proper channels they expressed to those under whom they served certain views which differed to a greater or less degree from the policies of the Government as then defined. Of course, it is the duty of every officer of the United States to abide by and to administer the declared policy of his Government. But conditions change, and often change quickly in the affairs of governments. Whenever an official honestly believes that changed conditions require it, he should not hesitate to express his views to his superior officers.

The other complaint of Ambassador Hurley is that some official or employee did not merely express a different view to his superior officer but advised someone associated with the Communist forces that the Ambassador did not accurately represent United States policy. For such action there would be no excuse. I would be the first to condemn it and to dismiss the person guilty of it. But Ambassador Hurley has not furnished me, nor do I understand that he has furnished this committee, any specific evidence to prove that any employee was guilty of such conduct. Men who have rendered loyal service to the Government cannot be dismissed and their reputations ought not to be destroyed on the basis of suspicions entertained by any individual. I should be profoundly unhappy to learn that any officer of the Department of State, within or without the foreign service, might feel bound to refrain from submitting through proper channels an honest report or recommendation for fear of offending me or anyone else in the Department. If that day should arrive, I will have lost the very essence of the assistance and guidance I require for the successful discharge of the heavy responsibilities of my office.

HURLEY'S RESIGNATION

The Secretary was surprised at the news release by Ambassador Hurley that he had submitted a letter of resignation.

When the Ambassador returned from China he told the Secretary that because of his health he wished to resign, but later advised the President and the Secretary that he would return to China after taking a rest. That was on October 9.

Monday morning Ambassador Hurley called to see the Secretary and presented a letter of resignation, addressed to the President, setting forth the statements contained in the news release. The Secretary advised him of the serious situation existing in China and urged him, instead of resigning, to promptly return to China.

The Ambassador returned in the afternoon and, after again discussing the situation in China, agreed to return to his post. He said, however, that he had an engagement on Wednesday to make a speech before the National Press Club and would prefer not to leave before that time. The Secretary told the Ambassador that would be entirely satisfactory. The Secretary then advised the President that the Ambassador would promptly return to his post.

NOVEMBER 26, 1945.

The Honorable the PRESIDENT
OF THE UNITED STATES

(Through the Secretary of State).

MY DEAR MR. PRESIDENT: I hereby resign as Ambassador to China.

In tendering my resignation, I wish you to know that I am in agreement with the foreign policy outlined by you in your recent Navy Day address.

I am grateful to both you and the Secretary of State for the support you have given me, and for your kind offer in requesting me to return to China as Ambassador.

In one capacity or another I have been on the perimeter of America's influence since the beginning of the war. During the war I have served in Java, Australia, New Zealand, and generally in the southwest Pacific; in Egypt, Palestine, the Lebanon, Syria, Trans-Jordan, Iraq, Saudi Arabia, Iran, Russia, Afghanistan, India, Ceylon, Burma, and China. Of all of the assignments China was the most intricate and the most difficult. It is a source of gratification to me that in all my missions I had the support of President Roosevelt, Secretary Hull, Secretary Stettinius, yourself, Mr. President, and Secretary Byrnes.

In the higher echelon of our policy-making officials American objectives were nearly always clearly defined. The astonishing feature of our foreign policy is the wide discrepancy between our announced policies and our conduct of international relations. For instances, we began the war with the principles of the Atlantic Charter and democracy as our goal. Our associates in the war at that time gave eloquent lip service to the principles of democracy. We finished the war in the Far East furnishing lend-lease supplies and using all our reputation to undermine democracy and bolster imperialism and communism. Inasmuch as I am in agreement with you and the Secretary of State on our foreign policy I think I owe it to you as well as to the country to point out the reasons for the failure of the American foreign policy in reaching the objectives for which we said we were fighting the war. I will confine my remarks in this letter to Asia, although I wish to assure you that I will be at your service in discussing frankly other phases of our international relations.

I was assigned to China at a time when statesmen were openly predicting the collapse of the National Government of the Republic of China and the disintegration of the Chinese Army. I was directed by President Roosevelt to prevent the collapse of the Government and to keep the Chinese Army in the war. From both a strategical and diplomatic viewpoint the foregoing constituted our chief objective. The next in importance was the directive to harmonize the relations between the Chinese and American military establishments and between the American Embassy in Chungking and the Chinese Government. It will readily appear that the former objective could not be accomplished without the accomplishment of the secondary objective as a condition precedent. Both of these objectives were accomplished. While these objectives had the support of the President and the Secretary of State it is no secret that the American policy in China did not have the support of all the career men in the State Department. The professional foreign-service men sided with the Chinese Communist armed party and the imperialist bloc of nations whose policy it was to keep China divided against herself. Our professional diplomats continuously advised the Communists that my efforts in preventing the collapse of the National Government did not represent the policy of the United States. These same professionals openly advised the Communist armed party to decline unification of the Chinese Communist Army with the National Army unless the Chinese Communists were given control.

Despite these handicaps we did make progress toward unification of the armed forces of China. We did prevent civil war between the rival factions, at least until after I had left China. We did bring the leaders of the rival parties together for peaceful discussions. Throughout this period the chief opposition to the accomplishment of our mission came from the American career diplomats in the Embassy at Chungking and in the Chinese and Far Eastern Divisions of the State Department.

I requested the relief of the career men who were opposing the American policy in the Chinese theater of war. These professional diplomats were returned to Washington and placed in the Chinese and Far Eastern Divisions of the State Department as my supervisors. Some of these same career men whom I relieved have been assigned as advisers to the supreme commander in Asia. In such positions most of them have continued to side with the Communist armed party and at times with the imperialist bloc against American policy. This, Mr. President, is an outline of one of the reasons why American foreign policy announced by the highest authority is rendered ineffective by another section of diplomatic officials.

The weakness of American foreign policy has backed us into two World Wars. We had no part in shaping the conditions that brought about these two wars. There is a third world war in the making. In diplomacy today we are permitting ourselves to be sucked into a power bloc on the side of colonial imperialism against Communist imperialism. I am opposed to both. I still favor democracy and free enterprise.

Our announced policy in the First World War was to make the world safe for democracy. That slogan was elaborated for the Second World War by a definite statement of principles in the Atlantic Charter and the Iran Declaration. We won both wars, but in both instances we failed to establish the principles for which we alleged we were fighting. America's foreign-policy officials have always been divided against themselves. Consequently we have always been a prey to the nations that give lip service to our ideals and principles in order to obtain our material support. The war that is now in the making is not even intended to defend or establish democratic ideals. Instead of putting our weight behind the Charter of the United Nations we have been definitely supporting the imperialist bloc. At the same time a considerable section of our State Department is endeavoring to support communism generally as well as specifically in China.

The hydra-headed direction and confusion of our foreign policy in Washington during the late war is chargeable to the weakness of our foreign service. If our foreign service had been capable of understanding and sympathetic effectuation of our announced war aims, it would not have failed so completely to couple our logistical strength with our foreign policy to obtain commitments to the principles for which we claimed to be fighting from the nations to which we gave the strength of our productivity and manpower.

I am purposely omitting from this short paper a discussion of my negotiations with Britain and Russia for the recognition of the territorial integrity and independent sovereignty of China and the procurement from both of these nations of an agreement to support the aspirations of the Chinese people to establish for themselves a free, united, democratic government. These negotiations, as you know, were successful and, so far as Russia is concerned, was solemnized in a treaty and exchange of letters.

A democracy must live on its intelligence and its integrity and its courage. The people of a democracy should be given all the facts to enable them to form correct opinions. The discrepancy between American foreign policy as announced in the Atlantic Charter and the Iran Declaration and in your recent Navy Day address, and as carried into effect may be attributed in large measure to the secrecy which has shrouded the actions of the State Department. All too frequently information concerning the conduct of our foreign relations leaks out to the public in distorted, garbled, or partial form. The re-

sult is that the American people have too little basic information to judge the extent to which their State Department correctly interprets and administers the foreign policies of the Nation.

During the war we had to maintain secrecy to prevent giving aid to the enemy. I grant that sometimes during the war we had to be expedient. Now we should endeavor to be right. I raise this issue because I am firmly convinced that at this particular juncture in our history an informed public opinion would do much to give intelligent direction and implementation to our international objectives.

With special reference to China and the other nations where I have served in the last 4 years, the blessings of factual publicity would be manifold. Now that the war is over I am willing that all my reports be made public, together with the reports made by those officials in the foreign service who have differed with the promulgated American policy.

Our true position in China is misunderstood abroad because of this confusion of policy within our own Government. This situation suggests the need for a complete reorganization of our policy-making machinery, beginning at the lower official levels. No international policy can succeed without loyal and intelligent implementation. Because of the confusion in our own international policy, make no mistake, Mr. President, America has been excluded economically from every part of the world controlled by colonial imperialism and Communist imperialism. America's economic strength has been used all over the world to defeat American policies and interests. This is chargeable to a weak American foreign service.

I wish to absolve from this general indictment some of our career men. Some of them are very admirable and well-equipped public servants who have fought in the State Department and in other countries against overwhelming odds to advance American ideals and interests.

America's economic and diplomatic policies should be coordinated. America's strength should not be allied with any predatory ideology.

America should support the amendment or revision of the San Francisco United Nations Charter to make it democratic. Our strength should be used to uphold the decisions of the United Nations rather than to support conflicting ideologies or war-making power blocs.

Respectfully,

PATRICK J. HURLEY.

---

The Honorable PATRICK J. HURLEY,
*Washington, D. C.*

DEAR MR. AMBASSADOR: I have your letter of November 26, tendering your resignation as Ambassador to China, which you forwarded to me through the Secretary of State. I am grateful to you for the service which you have rendered in this important and difficult post.

I regret that you feel unable to continue, and, therefore, in accordance with your desires, accept your resignation.

Very sincerely yours,

HARRY S. TRUMAN.

## Forgotten Men?

EXTENSION OF REMARKS

OF

### HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

*Friday, December 14, 1945*

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Daily Evening Item of Lynn, Mass.:

FORGOTTEN MEN?

A few brief months ago, newspaper writers, commentators and public officials were proudly proclaiming that Okinawa would live in the grateful memory of the American people as long as this Republic endures.

Today, hundreds of cynical American troops who survived that bitter, historic campaign, including some of our own greater Lynn boys, are wondering if they and Okinawa already have been forgotten.

Some of the men now stationed on that bleak island have been in the service from 2 to 5 years. They have been told the war is over. They have read about hysterical rejoicing at home on VJ-day. They read of reconversion problems, of labor troubles—all the externals of a nation returned to peacetime living.

But to them, the end of the war has meant little. They and their comrades—the heroes of yesterday—are isolated on Okinawa and innumerable other islands dotting the lonely Pacific. The few men who have been shipped home came back away behind the schedule prepared under the War Department plan for rotation. When those remaining ask their officers about getting home, they are told: "Transportation isn't available." What happened to our thousands of Liberty ships? Our transports? Our endless supply ships? Our fleets of planes? Our great Navy?

Men with more than 80 points are still on Okinawa, although 60 points are supposed to be sufficient for discharge. More than 200 ships were lying at anchor off the island November 1. Living conditions, none too good before the typhoon, are intolerable now. Taxes, reconversion, voting, and readjustments all pale into nothingness when compared with these men's shining dream of return. The least a grateful Nation can do is to help them realize that dream.

---

## Not Unduly Exacting About Java

EXTENSION OF REMARKS

OF

### HON. CLARE BOOTHE LUCE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

*Friday, December 14, 1945*

Mrs. LUCE. Mr. Speaker, after his return from the London Conference Secretary of State Byrnes characterized American foreign policy, in the matter of Poland as being "not unduly exacting" toward Soviet Russia. The following article which appeared in the weekly news analysis, Human Events, shows that, in the matter of Java, we are being "not unduly exacting" of Great Britain. In our failure to be duly exacting toward Russia, in the matter of Poland, and toward Britain, in the matter of Java, we are betraying not only the Atlantic Charter, but we are failing to use the UNO for the high purposes of international peace and justice to which it was supposedly dedicated, and for which this Nation joined it. Yes; we are failing, before we have hardly begun, in our task of world cooperation for liberty, justice, and peace:

JAVA: A TEST OF THE CHARTER

(By Felix Morley)

It is reported from Batavia that the British intend to use a stronger hand to put down the independence movement in Java, and consequently will soon greatly reinforce their army of occupation in that Netherlands colony. Up to the present there has been no official expression of American opinion on this disagreeable subject. But, as former Governor Stassen has just pointed out, it is definitely our business.

The Charter of the United Nations has been binding on its signatories, including the United States, since conclusion of the ratification process on October 24. The wording of several articles of the Charter is difficult to reconcile with the policy of the British Socialist Government in Java. The wording of other articles strongly suggests that it is the duty of the United States to call attention to the subject. It would not be a promising inaugural for the United Nations Organization if Americans should close their eyes to what looks very much like clear-cut transgression of its principles by a prominent member.

Moreover, this is a matter in which all Americans as individuals have a responsibility to speak out. The Charter, signed by our representatives at San Francisco on June 26, ratified by the Senate on July 28, is unqualified on this point. It says that: "We the peoples of the United Nations [are] determined * * * to insure * * * that armed force shall not be used, save in the common interest."

There is no doubt that the British Government is using armed force, strongly and ruthlessly, against the Javanese, a people over whom Great Britain has no claim to sovereignty whatsoever. There is a great deal of doubt that this use of force can be called in the common interest of most of the members of the United Nations.

II

The Charter of the United Nations is a long and complicated constitution of international government. Some Americans may not as yet fully understand all the obligations involved in our membership. So it is not superfluous to quote applicable sections.

Under article 73 of the Charter—

"Members of the United Nations which have or assume responsibilities for the administration of territories whose peoples have not yet attained a full measure of self-government recognize the principle that the interests of the inhabitants of these territories are paramount, and accept as a sacred trust the obligation to promote to the utmost * * * the well-being of the inhabitants of these territories."

Great Britain is a member of the United Nations which has assumed administrative responsibilities in Java, whose native people under Netherlands rule "have not yet attained a full measure of self-government." It may be questioned whether the Netherlands, as a member of the United Nations, has fulfilled its "sacred trust" by inviting British troops to crush an independence movement with which the Dutch themselves are evidently unable to cope. Still more questionable is the British observance of "sacred trust" in accepting this assignment.

In the old days this example of imperialism would have been no concern of the American people. We might not have liked it, but under isolationist practice we would have had no legal obligation to intervene. Isolationism, however, is now discarded, and as a permanent member of the Security Council of the United Nations we have taken a solemn commitment to "determine the existence of any threat to the peace," in the words of article 39 of the Charter. The fighting in Java, now threatening to spread to Sumatra and other parts of Indonesia, is all too obviously a "threat to the peace."

Under other circumstances it might have been argued that American responsibility is lessened by article 2, paragraph 7, of the Charter, which says:

"Nothing contained in the present Charter shall authorize the United Nations to intervene in matters which are essentially within the domestic jurisdiction of any state."

That provision, however, is inapplicable to the case at issue. When the British started to repress the Javanese rebellion it was demonstrated that this matter is not essentially within the domestic jurisdiction of the Netherlands.

III

It should be emphasized that the major question involved is whether the Charter is to be treated as a scrap of paper, even before it is fully operative. That issue is fundamentally more disturbing than official acquiescence in the use of lend-lease tanks (with USA markings removed) to crush a native people for whose liberation those tanks were built.

Moreover, there is no issue, so far as our responsibility as a member of the United Nations is concerned, over current British policy in Siam. It is somewhat extraordinary—shocking is the word used editorially by the Washington Post—to witness the abasement of this once independent nation to colonial status. But Siam was undeniably an Axis ally during the war and, under article 107 of the Charter:

"Nothing in the present Charter shall invalidate or preclude action, in relation to any state which during the Second World War has been an enemy of any signatory to the present Charter, taken or authorized as a result of that war by the governments having responsibility for such action."

In the case of Indonesian territory, no such justification for British military occupation exists. The ostensible reason for the landing of an Anglo-Indian army was to disarm the Japanese forces left stranded in Java and adjacent islands when Tokyo surrendered. That argument can no longer be regarded as anything more than a pretext.

While the Javanese republican forces undoubtedly have obtained some Japanese arms there is no pretense that the independence movement has any more external incitement than was the case with the American colonials in 1776. Indeed, the British admit that they have been employing captured Japanese troops, as well as Indian mercenaries, against the natives.

IV

The part played by Japan was to provide the occasion, not the incitement or the backing, for the proclamation of independence made by Dr. Achmed Soekarno as soon as the Japanese lost control last August. Dr. Soekarno, after appealing to Russia to intervene, has now given way to the more conciliatory Premier Sutan Sjahrir of the unrecognized Indonesian Republic. His efforts to work out some satisfactory compromise with the Netherlands and British authorities have so far proved unavailing. After nearly 3 months of bloodshed the situation is still deteriorating.

In view of the pledges made at San Francisco, and duly ratified, this tragic situation cannot honorably be allowed indefinitely to impede the reestablishment of peace in the Far East. The first meeting of the United Nations Assembly is scheduled for January 8. It will be in order then for some national delegation to invoke that section of article 11 of the Charter which says:

"The General Assembly may call the attention of the Security Council to situations which are likely to endanger international peace and security."

It will be unfortunate if the Charter of the United Nations is first invoked to question the policies of a wartime ally. But the United Nations claims to be something much more than a self-protective alliance of the victorious powers. The very first article of its Charter sets forth, as a primary purpose of the Organization, "respect for the principle of equal rights and self-determination of peoples."

Americans cannot be utterly indifferent to the moving appeal of President Truman, on the day of the signing of the Charter:

"The world must now use it. If we fail to use it, we shall betray all those who have died in order that we might meet here in freedom and safety to create it. If we seek to use it selfishly—for the advantage of any one nation or any small group of nations—we shall be equally guilty of that betrayal."

## Will Russia Play Ball?

EXTENSION OF REMARKS
OF
### HON. CARL HINSHAW
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

*Friday, December 14, 1945*

Mr. HINSHAW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following significant editorial from American Aviation for December 1, 1945:

WILL RUSSIA PLAY BALL?

Berlin—bomb-wrecked Berlin is the most important aviation center in the world today. Montreal is not. Washington and London are not. But the fallen capital of Berlin very definitely is.

The future of the world depends upon the future of American and Russian relationships.

Aviation is one of the most, if not the most important, keys to American-Russian relationships.

Today Berlin is the laboratory, the testing machinery, the creative center, for working out future American-Russian relationships in civil aviation. History is being made here, history that directly affects every aircraft and accessory manufacturer, every air line, and every aviation development in the United States.

Before coming to Berlin, one hears just about everything conceivable about the Russian attitude toward civil aviation. In Vienna, Rome, Paris, Copenhagen, Stockholm, and points en route, one hears that the Russians are blocking every move the United States makes in civil aviation, that they confiscate our aircraft, that they are shooting at our transport planes in the Berlin area, that they push us around, that we never will obtain permission to fly into Russia, that we might as well start the war over again, and so on and so forth deep into the night at every gathering.

The average American is immature when it comes to international relationships. He is an amateur. He overlooks differences in languages, in concepts, customs, thinking, backgrounds, and history. He is impatient. He wants things to happen now. And he is guilty of a tremendous amount of loose talk, hasty conclusions, and petty quibbling when it comes to discussing our civil aviation problems with Russia.

Thus, it is that in this historical laboratory of Berlin, where patterns of far-reaching significance are possible of establishment, that the utmost care and the utmost thinking must be exercised. And it is a genuine pleasure to report that progress is being made.

The over-all United States military picture in Germany is a shameful mess. It is bumbling, complex to a fantastic extreme, unworkable, and a disgrace to the country which exerted such tremendous production and fighting effort to win the war.

But the United States can be grateful that the top aviation policy man is Maj. Gen. Robert W. Harper, Director of the Armed Forces Division (formerly the Air Division) of the Group Control Council. While irresponsible Americans in uniform spend time beefing (to use a mild expression) about the Russians, Bob Harper is using brains and tact in working out practical and important civil aviation relationships with the Russians and the French and the British.

It is easy to sit in Paris and cuss out the Russians for interning American aircraft forced down in Russian-controlled territory, or to raise Cain because the Russians shot up red flares at American aircraft a few miles off the Magdeburg-Berlin airway corridor, or to 'hangar-fly the Russians for requiring 2 weeks' advance clearance of transport planes flying to Budapest.

It isn't so easy, but it's a lot smarter, to try to understand the complex Russian methods of doing business and to reason out the many "whys" of what is going on in eastern Europe today. Confidence breeds confidence. The Russians are peculiar—to our way of thinking—but basically there is reason to be optimistic in reaching a sane, practical agreement on civil aviation problems.

This agreement will not be reached in PICAO in Montreal, but in the practical testing laboratory of Berlin. And as is appearing in Berlin today, our major problems may be more concerned with reaching agreements with the British than with the Russians.

The first successful test passed by the four-power Group Control Council is the establishment of an air-traffic control center for Greater Berlin, regulating the air traffic of Russian, American, British, and French aircraft. But one doesn't call it a traffic-control center, for the word "control" has a much more severe meaning in Russian than it does in the English language. When a traffic-control center was proposed, the Russians balked sharply. When the whole idea was finally explained in detail, that traffic regulation is necessary for safety, the Russians agreed to the entire principle. The name adopted is Aircraft Safety Center. As this is written technical committees of the four powers are at work drafting details of the new aircraft safety machinery and the Russians have asked that a teletype tie-in be made between the American Tempelhof Airport and the Russian Adlershof Airport for exchange of weather information.

Thus history is in the making. Aviation relationships begin with simple things. A jointly operated traffic center, a teletype link, exchange of weather information, the exchange of technical views—all this is basic groundwork toward a much greater understanding.

One handicap of the Russian aviation officials should sound familiar to our own military aviation, and it is important that this handicap be understood. Russian aviation has been under the stern wing of the Russian ground forces. And this, more than anything else, has accounted for the large number of "incidents" which arouse the ire of American airmen.

## Hollywood Victory Committee Did Wartime Job That Only Hollywood Knows How To Do

EXTENSION OF REMARKS
OF
### HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

*Friday, December 14, 1945*

Mr. McDONOUGH. Mr. Speaker, many a soldier had a chance to laugh or to dream a little or perhaps be lifted mentally out of the mud and muck of the Pacific islands or the homesickness of Europe, by the talents of the artists sent around the world by the Hollywood Vic-

tory Committee. Many of these boys were made happy and made to feel glad they were alive perhaps only a few hours before they had to fly into combat with the enemy or meet him in combat on land or at sea by these actors.

These real troupers, all headliners, who traveled to the four corners of the earth to bring them cheer and fun and keep up their morale and to let them know they were not forgotten wherever they were.

The Hollywood Victory Committee is concluding its work on December 31, 1945. Here is an account of what they have done in 4 years as reported by Variety:

FIFTY-FIVE THOUSAND SIX HUNDRED AND NINETEEN APPEARANCES ARRANGED BY H. V. C. IN FOUR YEARS

A total of 55,619 free patriotic appearances of entertainers has been arranged by the Hollywood Victory Committee, it was announced by Kenneth Thomson, as committee prepared to celebrate its fourth birthday today.

The H. V. C. was formed 3 days after the Pearl Harbor attack, with 22 organizations representing screen, stage, and radio talent guilds, production associations and film studios. Since that date the committee has assigned 4,11[illegible] performers to entertain the armed forces, sell war bonds, and aid Government and war relief agencies. Individuals have taken part in 7,634 events, including 122 overseas tours, 151 hospital tours, 254 camp tours, and 41 bond tours.

The committee will conclude its activities December 31, Thomas said, after setting up a method for continuing entertainment in military hospitals.

## Hon. Ralph K. Davies Awarded Medal for Merit

EXTENSION OF REMARKS
OF
### HON. CLARENCE F. LEA
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
*Friday, December 14, 1945*

Mr. LEA. Mr. Speaker, Hon. Ralph K Davies, as Deputy Petroleum Administrator during the war, performed a magnificent service for our country. He brought to that position experience, understanding, and executive ability of a rare quality. In the performance of his duties he exercised an impartiality and fairness that no one questions.

As chairman of the Petroleum Subcommittee of the Interstate and Foreign Commerce Committee of the House, I take particular pleasure in the high recognition accorded Mr. Davies by President Truman for his services as Deputy Petroleum Administrator for War.

"For special and meritorious conduct in the performance of outstanding services to the United States," the President on Wednesday, December 12, 1945, awarded to Mr. Davies the Medal for Merit.

The citation of Mr. Davies is as follows:

CITATION TO ACCOMPANY THE AWARD OF THE MEDAL FOR MERIT TO RALPH K. DAVIES

Ralph K. Davies, for exceptionally meritorious conduct in the performance of outstanding services to the United States. As Deputy Petroleum Administrator, Mr. Davies organized and directed the unique Government-industry combination that achieved one of the outstanding victories of the war, the assurance of petroleum for every military and essential civilian need of the United Nations. Under his guidance, this unprecedented partnership furnished the United Nations with their most vital and most used munition. As a member of the President's Committee on Oil, Mr. Davies played a leading part in formulating and negotiating an international oil agreement, executed by officials of the United States and Great Britain. To these high duties Mr. Davies brought profound oil knowledge, an incisive intellect, rare vision, the quiet power of a gifted organizer and executive, the courageous devotion of a man characterized by unflinching determination, and a deep sense of public service.

HARRY S. TRUMAN.

## Have You Read the Smyth Report on Atomic Energy? Better Get a Copy and Read It Before Voting on the May-Johnson Bill

EXTENSION OF REMARKS
OF
### HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
*Friday, December 14, 1945*

Mr. McDONOUGH. Mr. Speaker, the May-Johnson bill may be a reflection of the amazing story recently reported in the Washington Daily News which stated that most of the members of the Military Affairs Committee had not read the Smyth report on atomic energy which has been available at the Government Printing Office for several months. Reading the Smyth report should have been a "must" for each member of the committee before the May-Johnson bill was ever considered. When it became available, I obtained 150 copies of the report and sent them to various people so that they could become familiar with atomic energy. Every Member of Congress should obtain a copy and read it before the May-Johnson bill is reported to the House for debate.

A subject as technical and as vital to the people of the Nation as atomic energy should be thoroughly studied by all Members of the House before acting on the May-Johnson bill. I have read and re-read it, and made a study of it. Here is what the Chemical and Engineering News of the American Chemical Society says about the members of the Military Affairs Committee concerning the Smyth report:

ATOMIC IGNORANCE

Recently the Washington Daily News ran an interesting story giving the results of an informal survey on how many public officials in Washington have read the Smyth report on atomic energy.

This report is the most comprehensive official account of the development that has been published to date. It was amazing to find that some of the people on Capitol Hill who have given the most opinionated speeches and statements on what do do about the situation have not even read the report.

We can't help thinking that if a similar survey were made among other groups who are equally vocal we might find that the atomic sculptors on Capitol Hill are not the only ones who have neglected to get as complete an understanding of the subject as possible.

Better get a copy of the Smyth report right away and read it thoroughly.

## Veterans' Housing

EXTENSION OF REMARKS
OF
### HON. PHILIP A. TRAYNOR
OF DELAWARE
IN THE HOUSE OF REPRESENTATIVES
*Friday, December 14, 1945*

Mr. TRAYNOR. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from Wilmington Morning News, Wilmington, Del., Friday, December 14, 1945:

TRAYNOR DEMANDS HOUSING FOR VETS—HE INSISTS EASTLAKE SHOULD TAKE FORMER GI'S EVEN IF PAY IS MORE THAN $30

United States Representative, PHILIP A. TRAYNOR, yesterday demanded that recognition be given veterans seeking dwelling units at the Eastlake development of the Wilmington Housing Authority, where, he said, there are 14 vacancies, denied to veterans because they are making more than $30 a week.

In a letter to the Commissioner of the Federal Public Housing Authority in Washington, Dr. TRAYNOR stated that he had been advised by Arthur Scotten, executive director of the authority, that Eastlake, being a slum-clearance project, is not available to veterans making more than $30 a week.

"Yet, I am told by good authority that there are housed there, policemen and firemen of the city of Wilmington, who are making over $2,100 per year," he stated in his letter. "There are also migratory workers from all over the United States, all making on an average of $100 per week during the war, housed in this development, and I understand they are still there," Dr. TRAYNOR said.

"It seems to me that it would be a good policy to house 14 veterans rather than deny them the houses on a technical ruling. Thirty dollars per week in the city of Wilmington is a subnormal wage. Wilmington is one of the cities that prospered during the war and like Washington, D. C., the rents are high," he added in his letter.

Dr. TRAYNOR cited a case of one veteran, his wife, and three children living in 2 rooms because they cannot find adequate housing facilities. Declaring that a school boy makes $30 a week today, Dr. TRAYNOR demanded that the salary stipulation be waived in the cases of veterans seeking homes in Federal housing projects.

In his letter to Philip M. Klutznick, Commissioner of the Housing Authority in Washington, Dr. TRAYNOR said, "If you have no authority in the matter, kindly advise me who has. I desire prompt action."

The letter added: "* * * pertaining to the disposal of Federal Housing in Delaware, I beg to advise that I am mostly concerned in the disposition of 14 houses in the Eastlake project that are now vacant. I have been trying for 3 weeks now, since I spoke to you in the office of Congressman LANHAM, concerning housing of returning World War II veterans. I am not so much interested in the surplus property to be sold as I am in putting the properties there in proper livable condition to enable the veterans to have homes. As least they deserve this much consideration."

## May-Johnson Bill Should Be Defeated—200 Members of the National Academy of Sciences Oppose It

EXTENSION OF REMARKS
OF
### HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
*Friday, December 14, 1945*

Mr. McDONOUGH. Mr. Speaker, when more than 200 members of the National Academy of Sciences are opposed to the passage of the May-Johnson bill as written, there must be something wrong with it. The National Academy of Sciences is one of, if not the oldest and most respected scientific organizations in the United States. They are not politicians and their recommendations are not made for political purposes. They are sincerely interested in the development of atomic energy for the good of the Nation. Their recommendations should be taken seriously into consideration by all Members of the House.

Here is the resolution which has been adopted and signed by more than 200 members of the National Academy of Sciences:

RESOLUTION ON ATOMIC-ENERGY CONTROL

I

The Johnson-May bill for the regulation of atomic energy, now before Congress, does not protect the vital interests of the United States. This bill should be withdrawn.

Amendments have not corrected the essential defects of the bill. They retain the objectionable features of the original bill. The bill, if enacted, would:

1. Weaken the national defense.
2. Jeopardize the democratic institutions of the American people.
3. Frustrate fundamental research necessary to the maintenance of American leadership in the development of atomic energy.
4. Set up an authority within the United States responsible to no one—not even to the President or the Congress.
5. Take atomic energy away from the American people, where the President says it belongs, with the danger that it may become the exclusive property of the military.
6. Make it more difficult, perhaps impossible, to stop the present drift toward an atomic-armaments race.
7. Block the normal negotiation of international agreements in the field of atomic energy, and interfere with attempts to set up vitally necessary international controls.

The bill, as now amended, creates a commission with autonomous powers not only in the area of atomic military research, but in scientific, medical, and industrial fields. The new amendments do not require the Commission to license independent research or to make materials available to independent laboratories under proper safeguards. Nor are standards set up under the bill for atomic research privileges. The Commission would have power to grant exclusive rights in atomic energy development to certain private companies, or to withhold these rights from other companies at its own discretion.

II

In our judgment, any legislation in this field should, as a minimum, provide the following:

First. The Commission and its Administrator should be responsible to the President and to Congress. They should be removable by the President in the same manner as Cabinet officers.

Second. Any secrecy regulations should be applicable only to the disclosure of the design features and laboratory tests pertaining to the plant and to details of the atomic bomb itself; that is, only to such matters as are normally kept secret when the manufacture of munitions or weapons of war is involved. We note that the President of the United States has distinguished between the scientific knowledge and the design features, tests, plants, and details of the bomb itself. Other regulations should be limited to removing hazards to safety.

Third. Prior to promulgation all secrecy regulations should be reviewed by a special Cabinet committee to make sure that the public interest in full disclosure is protected whenever possible.

Fourth. To protect individual research, the Commission should be required to provide sufficient materials, under proper safeguards, to make independent research possible. It should be made perfectly clear that the Commission has no power to control research.

Fifth. The Commission should be required, after an appropriate interval, to recommend to the Congress a program setting forth the standards which should apply to the Government regulation of the industrial use of atomic energy. Until such a program has been recommended and enacted by the Congress, the Commission should not have any power to permit the use of atomic power for industrial purposes. Such a program should deal specifically with such problems as patents, exclusive rights, and those steps to be taken to encourage private enterprise to assist in this development. Research and experiments looking toward the industrial use of atomic power should be permitted prior to the submission of the industrial program.

Sixth. We believe that the free exchange of scientific information with the United Nations as proposed by the President is of the utmost importance, and is not entirely separate from the development of a domestic program. Atomic power has been made possible only by the work of scientists all over the world. Many of the most eminent of these scientists are not in the United States and are citizens of foreign countries. Legislation must be framed by the Congress so as to take advantage of such international agreements as may be achieved and to permit the free exchange of scientific information, not only within our own country, but with foreign scientists.

III

President Truman has said: "Never in history has society been confronted with a power so full of potential danger and at the same time so full of promise." Surely, any legislation on a subject so momentous deserves the gravest consideration by Congress. We welcome the creation of the spec' l committee of the United States Senate to deal exhaustively with these matters. Equal consideration must be given by the House of Representatives. To forestall the dangers and realize the promises of atomic energy, Congress owes the American people the best legislation which its combined wisdom can draft.

Respectfully submitted by members of the National Academy of Sciences.

## Westward Bound

EXTENSION OF REMARKS
OF
### HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
*Friday, December 14, 1945*

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from today's New York Times:

WESTWARD BOUND

After 26 hours of testimony and cross-examination, Gen. George C. Marshall was permitted yesterday by the congressional committee investigating Pearl Harbor to step down from the witness stand and prepare to embark on the important mission to China which the President has given him. It was perfectly proper that General Marshall should have been called to testify, and that he should have been questioned closely on the role he played in the preparations preceding Japan's attack at Pearl Harbor. His testimony was an essential part of the story. But it is no credit to the committee that for hours on end he was compelled to go over and over the same points in a tedious and often petty examination which at times resembled nothing so much as it did an effort by a smart lawyer in a police court to catch an unwary witness in an inconsistency.

The time to assess whatever responsibility General Marshall may have had, if any, for the failure of our armed forces to take more adequate protective measures at Pearl Harbor will come when all the evidence is in. Meanwhile, George Marshall will be westward bound over the course of the armies which went on from the catastrophe of Pearl Harbor to complete victory under the leadership of a Chief of Staff whose personal contribution to that result was nothing less than magnificent.

## Army Chaplain Calls Jews Worse Off Than Germans

EXTENSION OF REMARKS
OF
### HON. PHILIP A. TRAYNOR
OF DELAWARE
IN THE HOUSE OF REPRESENTATIVES
*Friday, December 14, 1945*

Mr. TRAYNOR. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following newspaper article by Virginia Reid:

ARMY CHAPLAIN CALLS JEWS WORSE OFF THAN GERMANS

(By Virginia Reid)

WASHINGTON, December 12.—"It is better to be a conquered German than a liberated Jew."

That statement was made today by a United States Army chaplain, Capt. Robert Marcus, at a press conference arranged by the World Jewish Congress.

Captain Marcus charged incompetent and disinterested military government officers are ignoring Gen. Dwight D. Eisenhower's order calling for improved conditions in European internment camps.

One military government man said frankly that "Hitler had something there" in his attempt to annihilate the Jews, Captain Marcus said.

NO HOUSES REQUISITIONED

Not one German house has been requisitioned to provide living space for Jews crowded into displaced persons' camps, he asserted, although Eisenhower specifically ordered dwellings taken over for that purpose.

He said that between 25,000 and 30,000 Jews have died in the camps from malnutrition or lack of clothing and shelter since their liberation.

Some inmates told him it was better under the SS, he reported.

Captain Marcus said 100 percent of the 100,000 Jews now in internment camps want

to go to Palestine. He accused the British of deliberately mistreating the Jews in their zone in order to force them back to Poland and stop their agitation to go to Palestine.

FLEE POGROMS IN POLAND

He said these homeless Jews refuse to go to Poland because five or six thousand of their fellows have come back to the camps to escape pogroms sweeping Poland.

Captain Marcus said Eisenhower is the most beloved man on the continent because he is sincerely interested in a complete denazification of Germany. Gen. Sir Bernard L. Montgomery, the British commander, is only interested in normalization of Germany, he charged, regardless of the consequences to displaced persons.

## America and the Philippines — After Their Political Separation They Will Have Military Relations and the American Flag Will Continue To Fly Over the Philippines

EXTENSION OF REMARKS
OF
### HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
*Friday, December 14, 1945*

Mr. McDONOUGH. Mr. Speaker, under unanimous consent, I insert in the RECORD a timely statement on the Philippines by a Filipino lawyer and economist in private life, Mr. Vicente Villamin, who lives in my district in Los Angeles, Calif.

The statement appeared in the Washington Diplomatic Letter of the Weekly Review of International Affairs.

By virtue of our geographical position, we of the Pacific coast are profoundly interested in the Philippines and other countries in the Orient. We want their good will and their trade. With the Philippines, a rich tropical country, I believe we can develop a mutually beneficial trade in the immediate future that is greater than in the past.

As Mr. Villamin states, after the Philippines become an independent nation on July 4, 1946, her relations with the United States will continue on the basis of their military relations. The Resident Commissioner from the Philippines [Mr. CARLOS P. ROMULO] has also stated that fact in commenting on an editorial in the Washington Post which was obviously inspired by an article by Mr. Villamin which appeared in that paper the day before the editorial was published.

The Congress will soon consider bills concerning the Philippines and it is, therefore, timely for Members to study the basic facts of the problems, and for that purpose the reading of Mr. Villamin's statement is strongly recommended.

The statement follows:

AMERICA AND THE PHILIPPINES

After 47 years the American flag will come down on July 4, 1946, in the government buildings in the Philippines, heralding the birth of a nation. But it will go up again at the naval and air bases as soon as they can be built in that country by the United States. That is the provision of Joint Resolution 93 of Congress, approved June 29, 1944.

With those bases on her territory, the Philippines will become an integral element in the American Pacific strategy, which seeks to locate its apex 5,000 miles beyond Pearl Harbor, thus pushing the future battlefields that much farther away from the United States.

To the Philippines the fundamental fact is that, by provision of an American law distinguished from a treaty, that country, regardless of its wishes in the matter, will become a part of the war in which the United States is a belligerent in roughly the same way that it got involved in the last war, because America was politically supreme and sovereign there.

The Filipinos are overwhelmingly for a continued association with America, and after receiving their international independence that association will be supported by their military relations.

The bill pending in Congress rearranging the economic relations between the two countries after Philippine independence utterly disregards their future military relations and their profcund political implications, for it seeks to dissolve their economic bonds ostensibly in 33 years, but actually in 2 to 5 years after the application of the progressive tariff duties. An American military establishment surrounded by an impoverished and disappointed people will hardly serve its purpose effectively.

The projected bases in the Philippines will cost around a billion dollars, which was the cost of the war to the United States for 3½ days. If their presence in that country deters, as it undoubtedly will, any potential enemy, the United States is supported by formidable reasons in strengthening, rather than weakening, the Philippines economically and otherwise.

It is, therefore, but logical to expect Congress, after resurveying the Philippine situation, to continue the free trade between the United States and the Philippines, its virtual protectorate, coterminously with the existence of the American military establishments on Philippine territory, for that free trade is enormously helpful to the Filipino people.

However, this time the Filipinos must not depend too much on too few industries and on markets overseas. They must build a new domestic economy that will create many small industries, businesses, trades, occupations, and services. And, too, they must blunt the competitive points that touch on American economy by retrenchment in certain industries, while they exert new efforts in the development of a long catalog of tropical staples which are needed but not grown in the United States.

With the vast amounts of money that the United States has left in the Philippines during the war and will pay for the war's devastations there, aggregating over $1,000,000,000, the coming Philippine nation has a golden opportunity to become a really strong and self-sustaining nation—the one bright spot in the Orient where the American flag flies alongside the Filipino flag.

## Whose Musicians?

EXTENSION OF REMARKS
OF
### HON. HAROLD D. COOLEY
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
*Friday, December 14, 1945*

Mr. COOLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following short editorial from the Lynchburg News of Lynchburg, Va.:

WHOSE MUSICIANS?

The Fredericksburg post of the American Legion, planning Armistice Day memorial services, desired an orchestra to play sacred music and made request for members of the Marine Band at Quantico. The request was denied by Local 123, American Federation of Musicians, Richmond.

Rocked back on their heels by this denial, and confident there was some misunderstanding, the sponsors called President Frank Cowardin of the union at Richmond. Graciously he consented to refer the request to his headquarters in New York. Again came denial, and the marine musicians didn't play.

Who has charge of United States Marine musicians at Quantico? Are they part of the Marines and so subject to orders, or are they under Local 123, American Federation of Musicians? Do they belong to Uncle Sam or to Caesar Petrillo? If to the latter, they are not marine musicians; if to the former, throw Petrillo out.

## Send Doctors Home

EXTENSION OF REMARKS
OF
### HON. WILLIAM A. ROWAN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
*Friday, December 14, 1945*

Mr. ROWAN. Mr. Speaker, under leave to extend my remarks, I include the following article from the Stars and Stripes, issue of November 28, 1945:

DOCS GOT THE MISERY

The waste of Army doctors has been freely discussed in the States in various articles appearing in the press. Senator REED has charged that the Army was holding 10,000 unneeded doctors and dentists in what he termed a "disgraceful situation." Apparently nothing is being done with regard to the hoarding of surplus doctors and dentists in the ETO.

Since VE-day, thousands of doctors have been idle in this theater. General hospitals with bed capacities up to 1,500 have been kept fully staffed, with a daily patient census of only 300. One general hospital now has 20 patients and still has not been authorized to close. Many doctors have been detailed to nonmedical duties.

An alarming situation faces those of us who seem to be stuck indefinitely in the ETO. The only vehicle, at present, for sending doctors home is on the basis of pre-Pearl Harbor service, 80 points, or being over 48 years of age.

We note War Department policy that medical officers in the States having 30 months' service will not be sent overseas. We find no provisions for those of us in the ETO with many more months of service, much of it overseas, to be returned to the States. Morale among doctors is very low, and this precludes the keeping of medical care on a high professional level.

We are told that there is a shortage of doctors and no relief is forthcoming until replacements are available. Doctors were trained at the Government's expense under ASTP. Now, we are told that they lack sufficient training to assume responsibility of overseas duty. And yet, most of the ETO patients have minor complaints and disorders not requiring the attention of highly trained specialists.

We request an immediate investigation into the problem of redeployment of medical officers in the ETO and a definite answer to the following questions:

How many doctors will be needed in Europe for the Army after January 1, 1946? Does the Army plan to use the same ratio of doctors to men in the service as was needed under actual combat conditions? How many patients are there in the ETO and what percentage of these require skilled specialists for their treatment? How many doctors and specialists are now in the ETO? Why are not replacements of low-point officers made available from the States on a just rotation basis immediately?

What is the status of the thousands of doctors educated at the Government's expense during the last 2 years? How many doctors have been sent home under the redeployment program during the last 60 days? How many will be sent home in the next 60 days? Why has not a definite policy been forthcoming with regard to medical officers?

(Signed by 165 medical officers from 23 medical units.—Editor.)

## Wants Republican Party To Go Republican—for a Change

EXTENSION OF REMARKS

OF

### HON. MAX SCHWABE

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

*Friday, December 14, 1945*

Mr. SCHWABE of Missouri. Mr. Speaker, as the New Deal takes America farther and farther into Hitler's national socialism—the latest steps being the demands for conscription and socialized medicine—simultaneously, cunning efforts continue to destroy the Republican Party.

With charming sharpness, the Omaha World-Herald on December 11 outlines this campaign to eliminate the Republican Party—and thus automatically bring about the despotism and tyranny of Germany and Russia.

The editorial follows:

A LOVELY CAMPAIGN

If the Republican Party is to go forward in vast confusion it won't be for lack of plenty—just oodles—of advice.

Interestingly enough, most of the advice comes from solicitous friends of today who, come election time, will fight tooth and nail to tear the party to shreds.

In Indiana a Congressman, himself a Republican, declares that to win, the Republican Party must be the radical party in America, and not the conservative.

And that proposed program meets with whoops of delight—from the radical camp and its editorial, commentator, and radio spokesmen.

The St. Louis Post-Dispatch (democratic, of course) summons the Republican rank and file to stage a real revolt for radicalism. Let them rally again, as they did when they nominated Willkie and made a liberal out of Dewey. Then, and then only, the two-party system may come into its own again.

The Post-Dispatch, naturally enough, disdains to comment on what happened to the Republican Party in its various attempts to equal, if not outdo, the New Deal. Why bring that up? Best forget it.

Nor does the Post-Dispatch attempt to furnish a blueprint for a two-party system in which both parties are radical and conservatism is left without representation, without leadership, no place to go but to the tall timber.

With both parties hell-bent for radicalism in a hurry and to the limit, with our politics all engine and no brakes what a merry race to Gehenna that would be.

Obviously the only contest would be as to which party could outdo and outdistance the other in carrying the New Deal forward to the goal of socialism—or something even more pronounced.

In Soviet Russia they are more straightforward. They call it one party only—none other permitted. What is proposed here, sleazily, is one party but sailing under two names. Let 'em fight! No matter which wins.

We like the candor of the Soviet bosses better.

The proposed campaign would be a curious one.

Did the "Democrats" spend much? We "Republicans" pledge we shall spend more! We "Republicans" will lend more! We will tax more heavily! We will increase the national debt more rapidly! We will more completely control prices and wages, regiment more thoroughly, build a larger and more powerful bureaucracy!

Come to us, all you citizens who are weary and heavily laden, and we promise to double your load!

A lovely campaign. A glittering prospect for our distracted Republic.

Maybe that program will appeal to the Republican Party. Maybe. If so, it will shortly be closing up its affairs, bankrupt in fact as well as in seeming. And all the rest of us can be preparing to close up, too. Except, of course, those who actually prefer the system Russia has adopted and that the rest of Europe is headed for.

For ourselves—a small voice in the wilderness—we would prefer to see the Republican Party go Republican—for a change.

If the Republican Party went Republican, could it win? No one knows. Perhaps we are already so far into the one-party system of Hitler's national socialism that we cannot regain our liberty.

But if the Republican Party would go Republican, the courageous people who believe in the American way of freedom could rally their forces and would deserve to win.

The Republican Party will not and does not deserve to win on a "me, too; but I can do it better" appeal. Those singing this tune, if they are sincere, should get out of the Republican Party and join the New Deal. Let them collaborate in reforming the New Deal from within its ranks, and not by posing as Republican Messiahs. In the case of the St. Louis Post-Dispatch, they supported Willkie for the Republican nomination and then supported Roosevelt for election.

## Meteorological Observation Stations in the Arctic Region

EXTENSION OF REMARKS

OF

### HON. MARGARET CHASE SMITH

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

*Friday, December 14, 1945*

Mrs. SMITH of Maine. Mr. Speaker, on November 7 I introduced a bill calling for the establishment of meteorological observation stations in the Arctic region of the Western Hemisphere for the purpose of improving the weather forecasting service within the United States and on the international air transport routes from the United States. This bill, H. R. 4611, is pending before the House Committee on Agriculture.

This proposal is identical to S. 765, introduced by Senator OWEN BREWSTER, of Maine, reported out of the Senate Commerce Committee and passed by the Senate October 29.

Arctic expeditions have been sponsored for over 300 years, largely for the purpose of new discoveries, but the importance of scientific research was not overlooked. Results have not been great in comparison to the efforts made because of hazards and expense of early Arctic exploration.

It has been found in recent years, as ably demonstrated by the Russians, that maintenance of stations in remote Arctic areas is neither unusually dangerous nor unreasonably expensive. We have benefited from that early effort in recent years, and learned at the same time how essential Arctic scientific research is to us.

We have heard more about meteorology during the recent war and find that with the progress of aviation the Arctic, a more isolated portion of the globe and a vital spot in the future, will be more easily penetrated.

Gen. Henry H. Arnold, the Commanding General, Army Air Forces, recently explained to the Press Club that the polar regions have been conquered by aviation, and cited distances, speeds, new weapons, and new planes to show that attacks will travel this course if there is another war.

## A Tribute to General Romulo

EXTENSION OF REMARKS

OF

### HON. GEORGE W. GILLIE

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

*Friday, December 14, 1945*

Mr. GILLIE. Mr. Speaker, under leave to extend my remarks in the RECORD, I am today inserting a resolution passed unanimously by the National Assembly of the Philippines, to which it is my pleasant duty to call the attention of my colleagues in this House. It is a resolution which pays tribute to the present Resident Commissioner of the Philippines to the United States, Brig. Gen. CARLOS P. ROMULO, and I feel that it should be known by all of us, because it is important that we have the assurance that he who speaks here for the Filipino people has the united support of that people.

I need not say here what we in this House think of General ROMULO. We have shown it by the standing ovations that we have repeatedly given him whenever he uses the privilege of the floor. We showed it when we unanimously passed the Filipino Naturalization bill

after his powerful speech advocating its passage. We showed it when we took him at his word and without discussion passed the bill releasing $71,000,000 to the Philippine Commonwealth. We showed it also when we passed the bill authorizing the Export and Import Bank to extend its operations to the Philippines at his behest. We showed it when we passed the amendment suggested by him to the recission bill allotting $200,000,000 to the Army of the Philippines. We are showing it to him now as we cooperate with him in his efforts to get Congressional action for Philippine rehabilitation.

It is but proper that General ROMULO should have our esteem and admiration. In his writings and utterances he has expressed such an unwavering faith in America that is inspiring and no American can be more loyal to the American flag than this Filipino who fought for us in Bataan, Corregidor, and Leyte, was wounded in action, and was several times decorated by General Wainwright and General MacArthur.

Because we know him and admire him in the United States for what he is I am happy to be able to inform this House of how highly he is also thought of in his native country by the legitimate representatives of his people by inserting today the following resolution passed by the loyal Philippine National Assembly at its last session:

[First Congress of the Philippines, second special session, House of Representatives]

House Concurrent Resolution 25

Concurrent resolution making of record the appreciation of the Congress of the Philippines for the invaluable services of Brig. Gen. CARLOS P. ROMULO to his country.

Whereas Brig. Gen. CARLOS P. ROMULO for more than 3 years worked indefatigably in the United States to tell the American people the great epic of Bataan and of the unswerving loyalty of the Filipino people to America and to the ideals of freedom and democracy;

Whereas by his writings and speeches, he has succeeded in presenting the Filipino people in a favorable light before the American Nation and has thereby brought about a closer understanding between the American and Filipino people; and

Whereas on the floor of the United States Congress, as Resident Commissioner of the Philippines, he has ably espoused the Filipino cause and has proven himself to be a worthy spokesman of the Filipino people: Now, therefore, be it

*Resolved by the House of Representatives (the Senate concurring)*, That they express, as they do hereby express, their appreciation for the invaluable services of Brig. Gen. CARLOS P. ROMULO to his country.

## Pattern of Surplus Sales

EXTENSION OF REMARKS

OF

### HON. ALVIN F. WEICHEL

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

*Friday, December 14, 1945*

Mr. WEICHEL. Mr. Speaker, under leave to extend my remarks, I am enclosing the original letter from the Howard Zink Corp., of Fremont, Ohio, and a copy of the letter from the Reconstruction Finance Corporation covering the sale of surplus duck material. I have had numerous complaints concerning the sale of surplus property and this shows the usual pattern after a person has actualy purchased the property. Weeks and months later he is advised that it has been sold to someone else. This is the method and it seems that there are always some specially preferred persons.

THE HOWARD ZINK CORP.,
*Fremont, Ohio, November 20, 1945.*

Hon. ALVIN F. WEICHEL,
*House of Representatives,*
*Washington, D. C.*

HONORABLE SIR: We would like to have you know of our experiences trying to buy some surplus property from the hereinafter named Department.

On or about September 23, we received a duck material list put out by the Office of Surplus Property, Department of Commerce, 704 Race Street, Cincinnati, Ohio, dated September 21, which reads as follows:

"Available millions of yards of surplus cotton duck."

Our purchasing agent called Mr. Cliff Hall, of the Treasury Department Office, Cincinnati, in regard to this list. He advised us that the lot of material we were interested in was open stock and no doubt the Government had a very large quantity of this particular lot. On October 2, we mailed our purchase order No. 0264 for 100,000 yards of the duck material, and enclosed with our purchase order a certified check for $27,000, made out to the Treasurer of the United States, Office of Surplus Property, Department of Commerce, Cincinnati, Ohio.

Our purchasing department called the Department of Commerce at Cincinnati at least twice each week since the order has been placed, trying to find out if and when the Government would ship the duck on our order. We were also interested in two or three hundred thousand yards more of the same lot, which we were willing to purchase and take into our Passaic, N. J., and Fremont, Ohio, plants. We were unable to get any information from the Cincinnati office as to when the 100,000 yards would be shipped. Our purchasing agent talked to the following persons at the Cincinnati office: Mr. Cliff Hall, J. F. Rule, and a Mr. McDaniels, sales manager, trying to find out if the Government was going to ship our order. The last time we talked to Mr. McDaniels over the phone was on November 14. At that time we were advised our order should be shipped from the Quartermaster Depot, Charlotte, N. C., within 5 days.

We received a letter dated November 15, signed by James F. Rule for Rowland D. Shell, Regional Director, Region 4, Consumer Goods Division, advising that our check in the amount of $27,000 would be returned to us because the duck had been sold out in small lots. The largest quantity going to any one buyer was 75,000 yards.

We really counted on getting not only the above lot of material, but an additional quantity to help us keep our help busy during the reconversion period, but it appears as if we were not given very much consideration.

We are enclosing a copy of the letter dated November 15 received from the Reconstruction Finance Corporation, Consumer Goods Division. We do not know if there is anything you can do about this, but we would like to know what we have to do in order to be able to buy any of the surplus goods offered by the Treasury Department. We will appreciate hearing from you at your convenience.

Respectfully yours,

THE HOWARD ZINK CORP.
H. E. ZINK, *President.*

RECONSTRUCTION FINANCE CORPORATION,
OFFICE OF SURPLUS PROPERTY,
CONSUMER GOODS DIVISION.
*Cincinnati, Ohio, November 15, 1945.*

The HOWARD ZINK CORP.,
*Fremont, Ohio*
(Attention Mr. C. L. Cole)

GENTLEMEN: With reference to your purchase order for 100,000 yards of duck, lot No. 218, located at Charlotte, N. C., same was presented to our Central Office in Washington, together with orders from this office and all other regions for allocation. We regret to advise, that due to such a number of requests for this item, you were not awarded any of this item.

The awards were made as authorized in the following quoted paragraphs in letter received from Mr. William C. Lehman, Assistant Director in Charge of Sales, Reconstruction Finance Corporation, Washington, D. C., and trust that this explanation is satisfactory.

"Therefore, in order to carry out the aim of the Surplus Property Act to secure wide distribution, the following methods were used:

On those items of less than 5,000 yards that had to be sold as one lot, where there was more than one bidder, the lots were drawn for the successful bidder.

Wherever the yardage ordered was many times the yardage available, awards were made in full to those ordering the minimum quantity of 2500 yards and if the balance of yardage available was sufficient, it was prorated to the balance of the offerings. Where the balance of yardage was not sufficient to make an award to all of the offers made, of a reasonable amount that a bidder would be interested in having, the yardage was then prorated to all bidders of 10,000 yards or less, (in one instance on one 20,000 and one 30,000 yard order, and in one instance on one 75,000 yards and lesser amounts, where the balance of the orders on larger amounts totaled 3,500,000 yards with 250,000 yards to allocate). All of the larger items offered on such lots received no award."

Very truly yours,

JAMES S. RULE,
(For) ROWLAND D. SCHELL,
*Regional Director, Region IV,*
*Consumer Goods Division.*

## Their Right To Howl

EXTENSION OF REMARKS

OF

### HON. GEORGE W. GILLIE

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

*Friday, December 14, 1945*

Mr. GILLIE. Mr. Speaker, the following editorial from the Fort Wayne (Ind.) Journal-Gazette should receive the attention of all Members of Congress. It seems that again a high Army officer is trying to prevent servicemen from writing to their Congressmen and to the newspapers by threatening them with disciplinary action. I believe this to be a dangerous, totalitarian, un-American attempt to take away constitutionally guaranteed rights and believe it should be thoroughly investigated by the Congress.

Members of Congress have received thousands of letters from men in service and their families, and, as the editorial points out, the chief complaint is the delay in getting home. If the Army wants to prevent servicemen from writing to their Congressmen, their best bet would

be to remove the main cause of their complaints and get them home. I do not believe that such communications violate in any way Army regulations drawn up to prevent men in the armed forces from interfering with military procedure or from seeking to "procure personal favor through legislation." For the most part the men who have served their country so well are asking no more than they deserve and have earned. They have won the war; they have served long and arduously; they have given up their families and loved ones; and now, very naturally and humanly, they want to come home. They want what the military authorities have promised them—to be brought home as speedily as possible. After the sacrifices they have made, they deserve that and more.

If disciplinary action should be the result of their writing to their Congressmen or to newspapers, it should be taken against the brass hats who try to gag them, not against the GI's who have fought a war to protect a right which is now threatened. We are not a totalitarian nation; our Government does not endure because we keep people gagged and afraid to speak out when they believe injustices are being committed. The people of this country—including the men in the armed forces—have long cherished "their right to howl" and it is one of our duties as Members of Congress to help them keep that right.

The American people have too much faith in their Army heads to believe the military needs to hide anything, and unless the military authorities do have something to hide, they have nothing to fear from the exercise of free speech now.

Members of Congress are just as patriotic as the brass hats. They have no desire to interfere with necessary military discipline. But they do have a desire and a right to secure equitable treatment for all people—including men in the Army.

THEIR RIGHT TO HOWL

Since the end of the war letters from disgruntled, impatient servicemen have been pouring in to newspapers and to Congressmen. From the men overseas the chief complaint, of course, is the delay in getting home. From men stationed in this country the big gripe is the apparent reluctance to give discharges to eligible servicemen.

This newspaper has not always agreed with the writers of these letters, but we never have doubted their right to write them. Not so, however, with Brigadier General Hornsby, of the Army Air Forces Technical Training Command, who last week caused to be published in the Lowry Field Rev-Meter a letter designed to end the GI pastime of writing letters to their Congressmen. General Hornsby cites two paragraphs of Army regulations on which he bases his order. The first order forbids any person in military service to "procure or oppose in any manner or influence legislation affecting the Army to procure personal favor through legislation." The other paragraph of the regulations cited warns that extreme care should be used by men in service in making "public pronouncements on political or diplomatic or on legislative or administrative measures and matters, the treatment of which tends to prejudice discipline, to involve superior officers in controversy, to interpret official publications, or define military procedure."

General Hornsby calls attention to one of his previous orders which said anyone with a complaint should communicate by direct correspondence to the air inspector of his command. He closes his communication with a warning that violators will be subject to disciplinary action.

It is apparent that the sections cited by the general were written by the War Department for the purpose of preventing string pulling—not to keep the lowly GI from writing a letter to his home-town newspaper editor or to his Congressman. Certainly a personal letter to a Congressman could not be construed as a public utterance. The letter a soldier writes his Congressman may hold forth on any subject from food, length of service, or the color of the top sergeant's eyeballs on Monday morning, but we believe the Constitution guarantees something like that. The letters may, as the general says, "place an undue burden" on the legislation, but it must be remembered that they asked for the job.

Many servicemen are doing little else than thinking of their personal problems these days. If they can let off some of their steam and spleen by writing letters, we believe they should be encouraged to do it. Certainly, they should not be intimidated by officers who place a too-broad construction upon certain regulations.

---

## Peacetime Conscription

EXTENSION OF REMARKS
OF
### HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
*Thursday, December 13, 1945*

Mr. PHILBIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following testimony by an outstanding businessman and publicist, J. Henry Scattergood, before the House Committee on Military Affairs on November 30, 1945, opposing the peacetime draft and calling for energetic moral and political leadership now on the part of the United States toward strengthening the United Nations and other agencies of peaceful international cooperation:

I am here to speak for the Friends' Committee on National Legislation, but I feel that I speak for great numbers of people of all faiths everywhere who still believe in the nonmilitary pattern of American life that has prevailed for 160 years of our history and who are opposed to peacetime conscription and a permanently enlarged military establishment for such reasons as these:

1. Because they want our country to have real security through the prevention of war, not the false security of an armament race headed straight for a third World War.

2. Because they are not convinced that from a military viewpoint conscription is a sound policy.

3. Because they feel that the enormous annual cost of a great permanent military establishment will threaten our whole American economic and financial system.

4. Because they do not want to have the military services become a predominant influence in our Government and political life.

5. Because they want our boys and young men trained to be upstanding citizens who think for themselves in terms of democracy, self-discipline, liberty, peace, and world brotherhood, not trained to be units in a military machine who think in terms of authoritarian discipline, war, fears, and distrust of other nations.

6. Because they believe real security can be attained by a positive, courageous policy of developing the United Nations Organization and world-wide reduction of national armaments by international agreement.

7. Because they believe that the way of cooperation and mutual service between nations will pay better dividends in security and welfare than great national competitive armaments and perpetuation of a system of power based on suspicion.

I need not review for this committee the well-known views of the Society of Friends—that war is utterly incompatible with the character and teachings of Christ. All Christians are against war; the Friends and other pacifist denominations have carried their opposition further. Their love of our country is as great, and their desire to serve is as strong, but it has taken the direction of relief of suffering caused by the war, health, and other civilian projects. Congress has recognied the law of conscience and generously provided ways of service other than in the armed forces.

While I represent the Friends committee, nevertheless, instead of stressing the Friends' view alone I would like to speak as a businessman and representative of typical citizens who are deeply interested in the trend of world events.

PREVENTION OF WAR IS MAIN ISSUE

We are not unmindful that General Marshall, General Eisenhower, Admiral King, and our other great military and naval leaders are vigorously urging conscription as necessary for our security, and we recognize that they are entitled to be heard with the greatest respect. They are doing their duty as men responsible for military policy, and they know much more about this than any of the rest of us. But that does not mean that their conclusions about conscription are necessarily right when all aspects of national interest and policy are taken into account. These gentlemen speak as military experts, but primarily as military experts. It is their duty to look forward to the possibility of war, and to tell you and all of us how to be prepared for war if war comes. It has become clear, however, that this is not the main issue—that if war comes there is not going to be any real security for anyone. The main issue is what President Truman and Prime Ministers Attlee and Mackenzie King recently said it was—the prevention of war. This is a problem beyond the field or our military leaders. This is a problem which you gentlemen of Congress have to deal with and solve—not as military experts, but as statesmen.

The atomic bomb has awakened us to an awareness of an unparalleled crisis in the world. There is a new kind of fear throughout the nations. The most awful war of history has just been fought and won; the aggressor nations of Germany and Japan have been laid low; and yet we are passing through a trough of cynicism and of doubt in human nature and human destiny, intensified by the unknown terrors of atomic energy. There seem to be many who think that the best the world can hope for is a precarious peace based on overwhelming force—lasting perhaps 15 or 20 years. What everybody wants, of course, is lasting security.

There are two alternative proposals to obtain this: (1) the old preparedness way; (2) the new world organization with its planned collective security. Both ways are in side-by-side existence today, and the policy must actually be settled as to which is to prevail. The United States is the strongest nation of all, and is in the responsible position of having to lead the world. It has the responsibility, too, of the knowledge of the bomb. The course our Nation follows is altogether likely to fix the future of mankind.

PEACETIME CONSCRIPTION WOULD STIMULATE ARMAMENT RACE

The old military preparedness way is based on the theory that each nation must be stronger than any other, either in its own

strength alone or with others to give it the advantage in the balance of power. We know by bitter experience of the two world wars that this theory has not worked. We know that through the centuries it has started more wars than it has stopped; we know that it leads again, as in the past, to a new armament race, and that it is based on a psychology of war, that instead of there being safety in this policy of military preparedness, there is almost certain danger of a third world war. Yet, here we are today, already proposing various steps again in the military race. As Senator FULBRIGHT said the other day, "We propose large armed forces by conscription; we demand exclusive bases in the Pacific, we insist upon our right to participate in the affairs of eastern Europe, and we keep the atomic bomb to ourselves under the guise of a self-appointed sacred trusteeship. At the same time we deplore militarism; we object to Russia's demand for bases in the Mediterranean and the Dardanelles, we refuse her request to participate on an equal basis in the affairs of Japan. We complain of her actions in the Balkans, and we would oppose any mention of the Panama Canal. This situation seems to point to a lack of guiding principles and convictions on the part of the United States." All these steps, both of ourselves and of Russia, however, are based on individual national preparedness.

UNITED NATIONS ORGANIZATION MUST BE MADE TO WORK

The second alternative to obtain security is the newly formed United Nations Organization. We can rejoice that all the great allies in the war joined in its formation and are members. In opening the San Francisco Conference President Truman said, "We stand in the midst of the vast ruins of the most terrible war in history. We must prevent—if human mind, heart, and hope can prevent it—the repetition of the disaster from which the entire world will suffer for years to come. But here and now, at San Francisco, the work must begin with the setting of the essential organization which is to keep the peace when it is won. Our sole task is to create the structure. We must provide the machinery which will make future peace not only possible but certain. We hold a powerful mandate from the people." This international organization—the UNO—must make effective a system of law and justice between nations. We must work toward the transfer of military power of individual nations to the international organization, so that the power may be used collectively in support of law and justice. Through it, also, must be developed economic policies for the well-being of all peoples. Standards and attitudes must be built up to form the foundation of an ordered and peaceful international community. This way is based on the psychology of peace.

These are long-range goals, but they give us our directions. The international organization set up at San Francisco is admittedly only a beginning. Improvements are already being suggested in England and in the United States as to limiting the veto power of the council nations. But imperfect as it is, the UNO offers the nations the possibility of developing it into an instrument of progress along these lines, if they have the will and the wisdom to do it. There is no other practical possibility in sight. So the choice lies between taking the San Francisco organization and gradually developing it into an instrument for law, justice, security, and economic well-being, or sinking back into the old struggle for national power, and its apparently inevitable consequence—war.

This making the UNO a success should be the preponderant purpose of humanity. If there ever was a "must," this is it. And all the more so now with the revelations of atomic energy.

I was at the recent meetings in Philadelphia of the American Philosophical Society, of which I am privileged to be a member. We were addressed by some of the scientists who had worked on the atomic bomb. They all said there is no defense except in strengthening the world organization for peace; that if the atomic bombs are used again in war, the soldier in the army will be safer than the wives and children in the city. They said that every sane person must be concerned with this fate; that we simply cannot afford to be without world government. One of them, in the realm of pure physics, likened the discovery of atomic physics already made to the discovery of America by Columbus, that a whole new continent of discoveries lies ahead leading in all probability to the solving of the universe and of creation itself.

Now what has all this to do with conscription? Just this: We are in an intervening period now. We are all sick and tired of war but fear leads the world to continue the old attempts at safety through old-fashioned military preparedness, while at the same time creating the new world organization. As I said before, both exist side by side, and all the great nations participate in both. But the world hopes for the UNO development from stage to stage. The first step will probably be supervision and regulation of the armaments retained. This received approval by Russia, France, and United States in the last disarmament conference. Perhaps later will come the pari passu reduction of individual nations' armaments and the transfer of parts to the UNO; then may follow the international law to hold liable the individual lawbreakers as criminals, like the criminal trials against the Nazi and Japanese leaders today; perhaps some day the world government can be attained, now so eloquently urged by Justice Roberts.

Now in this intervening period, while the UNO is being brought to more and more development, why introduce conscription in peacetime—new and un-American as it is—as an addition to our forces as they are? We have already a Navy as large as all the other navies in the world put together; we have the largest Army in peacetime we ever had. Why introduce conscription now? What's the hurry? We have no present threatening enemy; Germany and Japan are finished as aggressors; it is unthinkable that the United States and Great Britain will go to war against each other; General Eisenhower said the other day about Russia, that Russia wants peace with the United States more than anything else. And the United States certainly wants peace with Russia.

Other nations would interpret American adoption of peacetime conscription as proof that we don't trust them and that we expect another war; that we refuse to replace competing conscript armies by democratic world cooperation; that really we don't expect the UNO to be successful.

WE CAN'T MOVE IN TWO DIRECTIONS AT ONCE

If, on the other hand, we really do believe in the UNO and are sincere in our resolve to make it work, let us move in that direction, and not backward to the Old World futile policy of conscription, which we have never had in our history, and this just at the time when all efforts should be made in the other direction. If you want to go in one direction, you don't make a start in another, as this would be doing.

Furthermore, many people have come to believe that in an age of the atomic bomb military training would be obsolete and futile; that the training of a relatively few scientists would offer more real security today than the military training of a million boys a year.

ARGUMENT THAT CONSCRIPTION IS NEEDED TO SUPPORT THE UNITED NATIONS IS SPECIOUS

It is sometimes argued that conscription is needed because we are in the UNO and must support it by military force. A moment's thought makes it clear that under present circumstances the argument is wholly specious. Under existing conditions there is no expectation or possibility that the UNO will be used against any one of the Big Five. The veto provisions preclude that. Yet it is only for measures against one of these great powers that conscription could be needed.

Let us note in passing, that if millions of trained men should ever again count in the future, we should be fully cognizant of population trends. Astonishing information on birth rates, death rates, and careful calculations on manpower in future years were given by the experts in population studies of Princeton at a meeting of the American Philosophical Society in Philadelphia 18 months ago. These studies were based on the population, male and female, in 1940 and showed the trends of birth and death rates to the year 1970. These showed that Germany, France, England, and the United States would have fewer men of military age in 1970 than in 1940, so that they could not carry on a world war like the one just finished based on manpower. Spain, Italy, and the Balkans will have about the same numbers in 1970 as in 1940; but Russia will have 12,000,000 more men of military age than in 1940.

Let us also look further to the Far East. China has 400,000,000 population; India has 375,000,000. If these nations follow our Western examples in becoming military powers, what will happen? I remember 20 years ago hearing Dr. Henry Hodgkin, an English missionary to West China, say how short-sighted, to say the least, we Westerners have been in teaching the Chinese, that greatest naturally pacifist state, that the only way that they could gain a place in the sun would be to be able to fight for it. The Chinese didn't want to change—there the soldier occupied the lowest place in the social scale, but Dr. Hodgkin said the Chinese would learn the lesson if they found they had to, that they could pull triggers as well as a white man; that they could live on rice where our soldiers want beefsteak, that they are fatalists and death means little to them. Where in the long run will we Westerners come out if we head into a military clash with these eastern peoples? We already have had one lesson with one of them—the Japanese, who copied the worst part of our civilization. To prevent such a clash ever occurring with Russia or with these eastern peoples, it is only intelligent self-interest on our part to make a real working success of the world organization of nations while we have time. This will provide other means of solving world problems than by force, and will set up machinery for settling disputes by peaceful methods.

WHERE WILL THE MONEY COME FROM?

I have not mentioned costs of conscription. Congress knows only too well the pressure it is under to cut taxes and reduce Government expenditures. The cost of conscription is estimated at two and one-half to three billions annually. Secretary Patterson testified before this committee that the Army wants 500,000 men in peacetime, costing several billions; Admiral King wants a Navy of 500,000 and 58,000 officers; General Arnold wants 400,000 for the air. On top of these demands for almost a million and a half men with their huge peacetime costs, there will also be vast demands for veterans, social security, medical care, unemployment insurance, and all the civilian departments of the Government, as well as the huge debt service. The country will ask where is the money to come from for all these, and if conscription, which certainly is not needed now and which will cost three billions new expenditure, is added it would seem $20,000,000,000 to $25,000,000,000 will have to be raised. Businessmen can well ask what chance there will be for balancing the budget, for reduction of the largest debt ever incurred by an nation in

history. Many will even fear that the preservation of private initiative will be threatened. It will be altogether likely that the unsound practice of deficit financing will have to be continued and that some forms of repudiation will have to be adopted such as again lowering the value of our money standard. I well remember being in Berlin and paying a million marks for a newspaper. I am in a business with a subsidiary company in France, and we have seen the French franc go from 19.3 cents down to 2 cents. We need not in this country go all the way, but we will go part way down this route with sad results to us all, if we do not set our financial house in order.

LET AMERICA ADOPT A PROGRAM OF RELIEF AND GOOD WILL

Friends have been strong believers in the power of good will and good deeds in international affairs. The relief work done in many countries by the American Friends Service Committee bears testimony to this. It was my great privilege to have been the first Quaker emissary to France in 1916, and to have been on the first American Red Cross Commission to France. I was the first chief in France of this Quaker reconstruction and relief unit; also later I was a special Quaker Commissioner to the Ruhr at the time of the French occupation. I can bear personal testimony to the power of the child-feeding work in Germany. The Friends were the distributors in Germany of food for children from the Hoover relief organization. A million and a half children were fed daily in all German cities of 50,000 population and upward. The effect was unprecedented. The hardest-hearted German father was melted when his undernourished child came back from school one day and told him that America had brought the children food, which they themselves had no way of providing. "If thine enemy hunger, feed him." It works as nothing else works, if we only have the faith to try it.

Let America today go on with the great work of UNRRA, the Red Cross, the Quaker relief committees, and it will be much more efficacious toward our safety than the institution of conscription.

Conscription is not the American way to educate youth for democratic citizenship and world responsibility. Discipline is needed, but discipline in a democracy must rest fundamentally on self-discipline and not coercion. Training from childhood up in American ideals and privileges and duties is the only way to produce character and a sense of democratic responsibility. This is the task of the homes, schools, and churches, and cannot be done by the Army in 1 year with 18-year-old boys.

Furthermore, as we look at Germany, Japan, and other dictatorships that have used military conscription to indoctrinate their young men, we see what it has done to them. It has made them consider the state, not God, as supreme; it has taught them that the individual exists for the good of the state, not the state for the individual. We look today in the Axis countries for those who have stood out against this philosophy, and upon them we hope to rebuild democracy and freedon on the ruins of dictatorship. Why, then, should we think we can preserve our own democracy by indoctrinating our boys with the principles of dictatorship—for an army must always be a dictatorship?

We respectfully submit that the safety of our country lies not in any great military establishment such as peacetime military conscription would be. George Washington, in his Farewell Address, warned us not against a large standing Army as some would have us believe, but against "overgrown military establishments," which, to use his words, "under any form of government are inauspicious to liberty and which are to be regarded as particularly hostile to republican liberty."

SECURITY LIES IN MORE FREEDOM, NOT LESS

Rather does our security lie in more democracy, not less; in more freedom of speech; more freedom from want; more freedom from fear; more freedom of religion, which will make our essential Christianity the very life not only in our own country but throughout the world. To accomplish this requires self-discipline, not the discipline of the Army camp; the rekindling of individual conscience, not the submergence of it; complete loyalty to God, even above loyalty to the state. These virtues are not taught in Army camps.

We are convinced that only as our Nation turns from the treacherous path of military power and walks firmly in this path of freedom can we do our part to create in the world that mutual trust and confidence which are essential if the foundations of democracy are to be securely laid in other lands, and if the World Organization launched at San Francisco is to maintain peace. Our prayer is that you and all those in public office may seek and find wisdom from God, and, in the words of Lincoln, "that this Nation under God shall have a new birth of freedom, and that government of the people, by the people, and for the people shall not perish from the earth."

## Priorities for Veterans' Housing

EXTENSION OF REMARKS
OF
## HON. CLARE BOOTHE LUCE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
*Friday, December 14, 1945*

Mrs. LUCE. Mr. Speaker, on November 18 I introduced H. R. 4742, a bill to give war veterans priority in securing farms, homes, and building materials for those homes. Since that time the situation which faces our war veterans in trying to find homes for their families has become a great national scandal. The House and Senate are being flooded with bills to relieve the whole housing situation, and the administration has finally addressed itself to this national crisis. The following editorials are pertinent to the urgent need for rapid action in the housing situation which must be taken by both Congress and the administration:

[From the Bridgeport (Conn.) Post]

HOMES FOR EVERYBODY

The housing shortage is getting to be a sore point all over the Nation. It is especially resented because returning GI's coming back to the country they saved can't get a roof over their heads. They feel resentful about this and everyone else feels ashamed—or ought to.

But in a situation like this we have the usual cockeyed remedies proposed. The first impulse of all of our politicians is to rush into public housing. It isn't necessary, it isn't the solution, and most of the GI's don't want it. They want homes of their own.

It isn't a shortage of public housing which is bothering us but just a shortage of houses, or rather of homes. And the reason for the shortage is not hard to find. We haven't been building any homes to speak of for the duration of the war. Furthermore, building materials are still scarce and building labor is likewise scarce.

The solution to the problem is not to go into a lot of expensive public housing projects, or to treat veterans as wards of the city or the State or the Nation. The real remedy is to find out the bottlenecks in building materials and remedy these bottlenecks, just as we remedied the bottlenecks which were holding up the production of planes and artilleries and ships and so on. In every case this was successfully accomplished.

We might have all the houses the country could use if all the people who want to build houses at the present time had the ability to get the materials, the contractors, the labor to build them. Therefore the most that the Government can do to be permanently helpful in this case is to smash any bottlenecks that exist and give the go-ahead signal to private construction. Literally hundreds of thousands of homes are planned and hundreds of thousands of prospective home owners are eager to build, but they want to build with materials that are good, not shoddy or substitute; with labor that is competent, not green or unskilled, and at prices that are within reach of the average family. To solve this problem requires the same kind of business brains and executive leadership that solved the problem of airplane production, of artillery production, and of ship production in the war.

We do not need ill-advised, hastily constructed, unduly expensive public housing. We need a great number of new private homes.

As a practical aid to returning servicemen Congress should immediately pass the bill introduced by Representative CLARE LUCE, giving top priorities on building materials to servicemen. That would enable them to get the earliest start during the shortage of materials. As bottlenecks were broken and more materials became available, the civilian demand could be met.

[From the Washington Post of December 14, 1945]

WASHINGTON CALLING

(By Marquis Childs)

EFFECTS OF HOUSING SHORTAGE

When Members of Congress went home on holiday last summer, they heard a never-ending clamor from fathers and mothers about bringing the boys home. It was so insistent that some Congressmen sought refuge back in Washington or in remote vacation retreats.

This time when they go home for the brief Christmas recess, they will hear from the returned veterans themselves. The question of a place for fighting men and their families to live is the hottest issue in the country and it is still only in the warming-up stage.

It explains why the Truman administration has hastily back-tracked to apply controls on building materials again. These and other controls were taken off too heedlessly in response to pressure lobbies.

It explains the Senate's hasty action in voting $160,000,000 to be used to adapt emergency wartime housing for the veterans in cities and college towns. Made-over barracks will not be ideal by any means, but some such makeshift is necessary for the months ahead.

Reports reaching OPA show that in almost every city and town across the entire country the situation is the same. They show, too, that the talk of self-discipline put out by the building industry to justify removal of controls was largely nonsense.

A study of OPA reports make plain what a grim story it is. Thousands of families have been evicted. Hundreds of thousands are living in cellars and garages which are damp and insanitary.

The headlines from city to city are monotonously repetitious. They tell human-interest stories of veterans returned from 2, 3, and 4 years of service to find that they must live separately from their wives and children or doubled up with in-laws who are already crowded.

In each community they are casting about desperately for some expedient. At Great Lake ports they have sought lake steamers for use at dockside during the winter months.

Veterans seeking shelter for wives and children often grow desperate. One former officer in an Illinois city after 12 days of futile search, worked himself into a frenzy and began to smash the furniture in the local veterans' dvisory office. Yet, withal, they are remarkably patient.

The vacancy rate on rented dwellings, perhaps the best barometer of the housing shortage, has moved downward in most cities almost to zero. The contrast with 1940 when the crowding had just begun is striking.

In San Francisco the gross vacancy rate 5 years ago was nearly 7 percent. In May of this year it was 1 percent and it is probably less than that today. In Detroit it was 3.3 in 1940 and less than 1 percent in July of this year. The percentages for 1945 are deceptive in that the vacancies which do exist are largely substandard dwellings.

VJ-day released a small building boom. But it is not in houses or apartments. Lansing, Mich., for example, reported $1,000,000 of new construction and exactly three $6,000 houses going up. The construction was industrial and commercial. That is fairly typical of what is happening around the country.

One consequence is that the price of houses has been soaring. Confidential reports to OPA show that in many areas a speculative boom is in full swing. Modest dwellings that once sold for $4,500 are bringing up to $9,500.

In one community housing units built during the last war years for sale purposes were sold under order L-41, limiting the cost of new houses, at a fair price. They are now bringing half again as much in a speculative market.

Some veterans who can find the down payment are buying this inflated property. It is a measure of their desperation.

But the possibilities of loss and bitter disillusion are plentiful, especially when the veteran makes the discovery that loan privileges under the GI bill of rights are worthless in the face of such inflation. Multiplied many times over, this disillusion can have serious political consequences.

These grim facts of life are certain to intrude on the holiday cheer of many a Congressman. The idea of going back into a barrack again even though it has been reassembled into family type units will not appeal to GI Joe and if he can find somebody from Washington to tell his troubles to, he'll do it.

But he will take that barrack if it comes down to a choice of that or more separation from the family he returned to with the war's end.

## Forgotten Point Men in Okinawa

EXTENSION OF REMARKS
OF
### HON. WILLIAM A. ROWAN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
*Friday, December 14, 1945*

Mr. ROWAN. Mr. Speaker, under leave to extend my remarks, I include the following letter received from one of my constituents:

OKINAWA, *October 9, 1945.*

Hon. WILLIAM A. ROWAN,
*Congressional District Office,*
*Washington, D. C.*

DEAR CONGRESSMAN: I am writing this letter to you in hope that you will use your influence to help the men of the Thirty-fifth Station Hospital. We are being taken to Japan to serve as occupation troops with the Sixth Army after 32 months of continuous service overseas. During those long months there were no furloughs, no rotation, no, not even a decent break for those men whose loved ones at home fell sick and died. We were sent direct from the ETO to the Pacific when other units stationed near us, and who had less time overseas, were being sent to the United States.

At the present time we have 190 men eligible for discharge under the War Department's directive which states that men of 70 points and above will be released from their present assignments and will return to the United States.

Yesterday, the 8th of October, an order releasing 129 men with point scores of 80 and above, was read to us by our personnel officer. The men were told to pack and be ready to leave at 1300 hours for the POA center as their first step homeward. At 1300 hours the commanding officer of the unit rescinded the order—none of the men left. He, the commanding officer, admitted that it was up to him whether the men could leave or not. Sir, is that fair to American men who have given so much of their time toward winning the war?

We ask you to intercede for us; help us to return to our loved ones and don't let us become forgotten men.

Respectfully.

## A National Housing Policy: S. 1592

EXTENSION OF REMARKS
OF
### HON. CHARLES A. PLUMLEY
OF VERMONT
IN THE HOUSE OF REPRESENTATIVES
*Friday, December 14, 1945*

Mr. PLUMLEY. Mr. Speaker, it is quite probable that S. 1592, a bill to establish a national housing policy and to provide for its execution, may not be reported out of the Senate Committee on Banking and Currency, now holding hearings thereon, prior to recess or adjournment. However, Mr. Speaker, it is quite will understood that such a measure will eventually reach the House of Representatives in some form or other, in which event the membership will be well advised to read the statement made before the Senate committee by L. Douglas Meredith, vice president and chairman of the committee on finance of the National Life Insurance Co., of Montpelier, Vt., which statement under consent heretofore granted I am including, with my endorsement, as an extension of my remarks.

I think the sponsors of this measure were wise to recognize that their bill not only provides for the birth and administration but also for the execution of a national housing policy under Federal control, if you know what I mean.

If the Federal Government takes over all business to operate and to execute, there certainly will be effectuated an execution of free enterprise and individual initiative. There are already too many small business corpses hanging on the gallows due to Government interference to suit me or to ensure anything but the eventual socialization and federalization of the United States of America, always the land of the brave but day by day becoming less and less the home of the free!

Mr. Meredith's statement follows:

Gentlemen, my name is L. Douglas Meredith, and I appear before you at this time as a representative of the Chamber of Commerce of the United States of America, by virtue of membership on the Chamber's construction and civic development department committee. It also is my privilege to be affiliated with the National Life Insurance Co., Montpelier, Vt., as vice president, and chairman of the committee on finance. This company, incidentally, is a very active investor in home loans, and particularly Federal Housing Administration insured-mortgage loans, in which we have invested more than $210,000,000 since 1935.

The general views which I present here today are those of the Chamber, as reflected by a poll of all members on this and other vital subjects taken earlier this year.

We fully recognize the careful thought, diligent efforts, and the motives which have prompted the preparation and introduction of S. 1592. It is easy for us, too, to recognize that an acute housing shortage exists in the United States at the present time, that there always has been, and always will be, room for improvement in the housing facilities of our Nation, and that housing activities represent a very important factor in the economic structure of our country. At the same time, we are unable to agree with many of the principles and methods proposed by S. 1592 for remedying unsatisfactory housing conditions of the present, and for improving the housing standards of the Nation over the next generation.

PRESENT HOUSING STANDARDS ARE HIGH

Whenever a situation such as the current housing shortage develops, it becomes very easy for each of us to focus our attention upon acute current conditions, and to overlook or to minimize the fact that the American people enjoy the highest standard of living in the world. And housing is an important factor in that standard of living.

A recent survey of the United States Bureau of Census indicated that well over four-fifths of the occupied dwellings in the United States have ample room space as measured by the high standard of one person per room.

Well over four-fifths also have electricity or gas lighting.

Four-fifths of the urban dwellings have private bathtubs, or showers, for the exclusive use of their occupants, and 65 percent of all occupied dwellings have such facilities.

The four-fifths of the population who are well housed are the energetic, self-supporting families who have led the way in the past, and can be relied upon to improve the standards of the future.

This recent housing survey reveals there has been a decided improvement in housing for the country as a whole during the war years from 1940 to 1944. More dwellings are better equipped today than they were 5 years ago, despite wartime shortages. In addition, there has been a marked increase in home ownership during these years. In October 1944 there were 13,573,000 dwelling units occupied by owners, which represented an increase of 22 percent over April 1940.

It is significant, too, that not all of these housing accommodations are high-priced residences. More than half of the one and one-half million home owners purchasing single-family houses insured by FHA are now paying for them in installments of less than $40 a month. In 1941, the last normal building year, 40 out of 100 owners were paying for their homes and meeting all fixed charges with monthly payments of $30 to $40, while 28 out of every 100 were paying less than $30.

The American family's will to improve its housing standards and to own its own home is a demonstrated fact. So also is the ability

of the private home-building industry to meet these widespread and persistent demands for better housing.

WHAT IS THE HOUSING PROBLEM?

Review of the facts just stated properly leads us to consideration of the question: What is the American housing problem?

An acute housing shortage in practically every city in the country results from necessary restrictions on construction during the war period, from a rapid increase in marriages, and the fact that reconversion has not yet reached the stage at which houses can be produced in volume. Then there is, as always, the group of individuals with very low income whose housing conditions greatly could be improved. Yet it is difficult for many of us to see anything in the so-called housing problem which cannot be cared for by private enterprise and private production.

A widespread fallacy of much current thinking about housing arises from the mistaken conception that new accommodations must be provided for particular groups, such as low-income persons. New houses should be provided for all families who are willing and able to pay for them. When new housing is constructed, the occupants vacate less expensive quarters which in turn are available to another group, and thus the process of shifting occupancy extends throughout the income scale until only the poorest housing remains unoccupied. The quickest and most economical way to meet housing needs is to leave private enterprise free to build for the demand whenever it may appear.

The critical problem which faces the building industry now and will for some years to come is a problem of production and costs.

The problem cannot be solved by legislation directed primarily at affecting the supply of credit, as is contemplated by S. 1592. It can be solved only by industry and by community action designed to speed up the production of building materials and houses and to lower costs.

The home building industry is an outstanding example of small business in action. It is comprised of hundreds of thousands of contractors, builders, suppliers, professional firms and lending institutions. They have their roots deep in the community life of this country, and they have done a good job. For example, figures of the United States Bureau of Labor Statistics show that the average cost of one-family dwellings has declined almost steadily during the last 18 years, falling from $4,593 in 1925, to $4,228 in 1935, and to $2,876 in 1943.

The Federal Government can play its most-effective role by encouraging and clearing the way for this decentralized industry and community action.

GOVERNMENT ACTIVITY IN THE FIELD OF MORTGAGE CREDIT

Congress should be especially careful now not to undo, as a result of pressure of the readjustment period, what has been built up through the effective teamwork of the Federal Government and the private lending institutions.

The Federal Government, prior to the war, initiated several far-reaching activities of a permanent nature, the purpose of which was to improve the home-financing or mortgage-credit facilities of the country. These activities were undertaken primarily in the interest of those millions of private individuals who are home owners, or want to purchase a home, and those millions of private individuals who have placed their savings in lending institutions which in turn used them to help finance home ownership. Never in the history of this country has the credit supply for the purchase of homes been more ample or available on more favorable terms than today.

These activities of the Federal Government which have been highly successful may be described briefly as follows:

1. The Federal Home Loan Bank System consisting of 12 regional banks from which the members of this System—for the most part savings and loan associations, although other types of mortgage-lending institutions are eligible for membership and are members—may borrow on the security of eligible home mortgages, or of obligations issued or guaranteed by the Government. The System and the Corporation to date have been self-supporting.

2. The Federal Housing Administration which provides for the mutual insurance of private loans of high ratio up to 80 percent and in some cases to 90 percent of the value of the property. The insuring function of this Administration is available to, and used by, practically all types of mortgage lenders, and to date has been self-supporting.

3. The mortgage companies of the Reconstruction Finance Corporation which buy and sell mortgages on income properties, and also mortgages insured by the Federal Housing Administration.

In addition to these new agencies, established facilities in the field of mortgage finance have been enlarged and modernized, including the liberalization of previous restrictions in national banks.

Prior to the war, these three major innovations in the field of mortgage finance—the Federal Home Loan Bank System, the Federal Housing Administration, and the Federal mortgage companies were grouped together along with the RFC in the Federal Loan Administration.

This satisfactory arrangement was disrupted during the war through the setting up by Executive order of a temporary war agency, the National Housing Agency, which brought the Federal Home Loan Bank System and the Federal Housing Administration under its jurisdiction. The United States Housing Authority, now the FHA, also was placed under it.

BILL WOULD CONTINUE MODIFIED WARTIME CONTROLS

S. 1592 proposes to continue in a modified form the wartime supervision and direction of the activities of these agencies. Under the terms of title I of this bill, the wartime National Housing Agency becomes permanent. The National Housing Administration is made responsible for the general supervision and for the coordination of the functions, activities, and programs of the Federal Home Loan Bank Board, for the Federal Housing Administration, and for the Federal Public Housing Authority which succeeds to all the functions of the United States Housing Authority and all the wartime Federal public housing activities. The Administrator is directed by title X to estimate the housing needs of all communities throughout the country and of all rural areas, and to recommend to Congress such governmental action as he feels necessary to see to it that the needs which he estimates are taken care of. This in effect continues in peacetime the wartime control or so-called programing activities of the National Housing Agency.

The adverse effects upon the private home financing and building industries of using the wartime National Housing Agency as a model for the peacetime organization of the Federal Government's housing activities are patent.

During wartime all new residential building was channeled through the National Housing Agency due to the necessity for distributing building materials so as to meet emergency housing needs in specific numbers in certain areas at a given time. This was controlled by programing.

What harm did this programing do the private home-financing and home-building industries?

The answer is, no harm in wartime, any more than the War Production Board's regimentation of all industry harmed the manufacturers of the country. The injury many individuals suffered is more than compensated by the good which came from victory.

However, if programing in any form is to be continued after the war when materials and labor are in plentiful supply, it will mean increasing control from Washington of the real-estate and mortgage markets and of the home-building industry. This in turn will mean restraints on manufacturers of building materials and equipment and their dealers. Also, it would mean the determination of community-housing needs by a far-removed governmental bureau, rather than by the people of the community well acquainted with local requirements.

PREWAR COORDINATION OF CREDIT ACTIVITIES SHOULD BE RESTORED

It is highly important to the prompt recovery of home building that this wartime supervision and direction of the activities of these agencies of proven value should be terminated. There is no reason why this should not be done at once. The war work of the National Housing Agency is completed.

It also should be borne in mind that the basic functions of each of the agencies under the NHA are different. The Federal home-loan banks are banks for making advances to their members. The Federal Housing Administration is an agency which insures mortgage loans, while the Federal Public Housing Authority in the final analysis is a relief agency. It does not seem to us that governmental agencies with interests as varied as these are should be continued under one administrative head.

Congress should restore at once the Federal Housing Administration and the Federal Home Loan Bank Board to their previous positions of influence, leadership, and responsibility in the Federal Loan Agency. We know of no action which would be more encouraging at this time to the progressive forces in the home building and home-financing industry.

Proposals to improve the operations of the Federal Housing Administration and of the Federal Home Loan Bank Board should be considered by Congress on their merits. They should be considered entirely apart from the attempted objectives of S. 1592 to use both private and public lending agencies, and also Government subsidies for the purpose of providing new homes for families of all income groups.

OVER-ALL HOUSING POLICIES AND PROGRAM ARE IMPRACTICAL

The proponents of this bill are apparently of the opinion that the housing problem of the country is a total problem, that its solution calls for adoption of an over-all housing policy, to be carried out by a single Federal bureau.

But the plain fact is that Congress never has been able to adopt an over-all housing policy. It has been impractical to do so. A striking recent example is the failure to bring within the scope of this bill either the activities of the Veterans' Administration or the Public Roads Administration.

Yet in the next 10 years the home-loan provisions for veterans may directly affect up to one-half the entire housing market. Likewise, in connection with public roads, Congress has earmarked $125,000,000 to be spent annually for 3 years on a 50–50 matching basis to build modern thoroughfares within cities, and there is probably no single factor that is more influential upon urban housing than transportation.

Again, the bill divides responsibility for rural housing between the Department of Agriculture and the NHA.

The basic obstacle to an over-all treatment of housing is the decentralized character of the construction industry and the extremely variegated economic interests concerned with housing: construction, material supply, building labor, local government, finance, and property management, to name but a few. Congress would be well advised to deal with each of these constituent elements in-

dividually through such activities as housing research, labor relations, and mortgage insurance and discount as it is now doing, rather than to undertake a forced coordination of diverse and dissimilar organizations.

Two details involving application of the bill to FHA loans deserve special consideration.

Sections 309 (b) and 404 (c) of S. 1592 require that certain FHA loans shall include a proviso "for the extension of the period of amortization at any time the mortgagor, because of unemployment, economic conditions, or misfortune beyond his control, is unable to make a principal or interest payment due under or provided to be paid by the terms of the mortgage: * * *"

The intent of these provisions is commendable, but a stipulation so generally stated might well make FHA loans much less attractive to investors. The company with which I am affiliated includes in its uninsured loans a proviso which gives the borrower a deferment privilege under certain circumstances, but this privilege is expressed in language so specific that there can be little, if any, dispute as to what it means.

Section 312, of S. 1592, amends section 203 of the National Housing Act to provide in effect that upon new construction to be insured under this section by the FHA, the general contractor must give a warranty against structural defects and any failure to comply with the construction contract.

Builders in some cities now furnish such a guaranty, and no one doubts or questions its desirability. At the same time, in a market such as the present when there is an acute shortage of housing and when there is a plethora of funds available for purchases, it is my opinion that this provision would cause builders to shy away from FHA loans, and to encourage their borrowers to finance without them. I believe further that it would have very serious adverse consequences on the splendid work of the Federal Housing Administration.

PROVISION FOR RESEARCH

Congress should make suitable provision for existing Federal agencies, in cooperation with educational, research institutions and the construction industry, to correlate and to encourage research on construction materials and methods. This might be done by setting up a Committee on Construction Research which would be composed of men from Government agencies directly concerned with research in this field, and men from private life who have an outstanding reputation for their interest and achievements in the field of research as it relates to the construction industry. Such a committee should not carry on research activities, but should coordinate and encourage the research work which is presently being carried on by several Government agencies, by private business concerns, and by foundations and educational institutions.

It should be noted that the Department of Commerce through its Bureau of Standards and the Department of Agriculture through its Forest Products Laboratory are already deeply concerned with many phases of technical research in the building and construction field.

Action already has been taken by the Department of Commerce with the approval of Congress for setting up a Construction Division in its Bureau of Foreign and Domestic Commerce to assemble in one place and to make available to the construction industry all pertinent statistical and other data bearing on its operations.

I submit for your consideration that the building industry needs a Henry Ford in every city who will produce houses for a small family at $1,500, $1,800, or $2,000, but this will require extensive research as to materials and methods of production.

Herein rests the great undeveloped opportunity for cooperation by Government and private industry. Government should encourage research which will make lower cost houses possible. Industry certainly can provide them.

CLEARING THE WAY FOR URBAN DEVELOPMENT

Another fundamental objective which must be accomplished to bring about a permanent improvement of housing is to clear the way for a resumption of community initiative and responsibility for urban redevelopment.

This objective cannot be attained through action in Washington. It is the States and not the Federal Government which are in a position to give cities the necessary powers to plan for and to carry out the redevelopment necessary to make them attractive places in which to live and work.

Definite progress is being made along two lines. For the first time cities are working with the highway departments in their States in planning improvements in their major thoroughfare systems. Funds for carrying these plans into effect are available through the Federal-aid highway appropriations, as previously noted.

For the first time, also, cities are being given adequate power and funds to reclaim their rundown areas.

Urban redevelopment laws have been enacted by a number of States to provide a legal basis for assembly by condemnation of land within cities for redevelopment. Outstanding among these laws is the measure enacted this year by the Indiana Legislature which authorizes the establishment of a redevelopment commission in Indianapolis with power and funds to clear and replace slums and blighted areas, and then under proper safeguards to sell or lease them to private individuals for redevelopment. There is also encouragement in the appropriation made this year by the Illinois Legislature to assist municipalities in that State to finance urban redevelopment programs.

The States and cities are in better financial position than they have been in years to assume the costs of local improvements. They should be encouraged by Congress to take the initiative and to assume the costs of financing these new, important, but as yet untried and experimental programs for reclaiming slum and blighted areas. Congress should see to it that its fiscal policies are such as will not unduly hamper the ability of the State and local governments to carry out their responsibilities in this and in other fields which are properly in their jurisdiction, or to tempt them by Federal grants to evade such responsibilities.

BILL CONTEMPLATES LARGE EXPENDITURES

S. 1592 contemplates an expenditure by the Federal Government for housing and for urban redevelopment of several billion dollars over a period of years. These expenditures will be financed by issuing obligations, largely tax exempt, which will be repaid by what might be called a sinking-fund arrangement, which in the bill goes under the name of annual Federal contributions.

PROPOSED EXPENDITURES WOULD BE UNTIMELY AND INFLATIONARY

Much of this expenditure of Government funds would occur during the next 5 years, at a time when the private building industry will be straining every resource to take care of accumulated housing and other building requirements which can and will be financed by private funds. It would occur at a time when the States and cities are in a better financial position than they have been in years to assume the costs of programs for reclaiming slums and blighted areas. It would occur at a time when Congress itself faces the extraordinarily difficult fiscal problems created by a debt approaching $300,000,000,000. It would be an untimely and inflationary expenditure of Government funds.

Most of the Federal expenditures contemplated in S. 1592 are for public housing and related slum clearance with the objective of providing housing for low-income groups at prices they can afford to pay. This objective is accomplished not by the production of improved housing at lower cost, but by subsidies in the form of low interest costs, by long amortization periods, by contributions from a Government agency, and by local tax concessions. Thus housing becomes a social goal, regardless of the ability of a project to sustain itself economically, and the occupants become quasi-wards of Government. Builders, landlords, home owners, and investors naturally wonder whether housing has entered an era in which its otherwise bright future is to be obscured by the threat of Government competition and the threat of ultimate Government ownership and control of all housing.

SIGNIFICANCE OF INTEREST RATES

S. 1592 is conspicuous because of its stipulations throughout of very low interest rates and, therefore, no discussion of the bill would be complete without some comment on this subject. Earlier this year, able testimony was presented before the Taft subcommittee by Elbert S. Brigham, president of the National Life Insurance Co., and Paul Bestor, vice president of the Prudential Insurance Co. of America, who emphasized that any consideration of the future of housing and mortgage financing requires giving attention to interest rates and their relation to mortgage activity.

During recent years, money rates, including mortgage rates have been the lowest in history for reasons which are well known. From various quarters, the suggestion is advanced that rates should be still lower, and that the Federal Government should establish and maintain them at incredibly low levels by governmental action.

The intentions of these persons undoubtedly are of the best, but we should not overlook probable consequences of such rates or the rights of lenders who represent the savers of the country, as well as the rights of borrowers, and the fact that most savers are dependent upon the income from their savings to support them when incapacitated for work.

A substantial and satisfactory spread must exist at all times between the rate on mortgage loans and other investments or mortgages cease to be appealing investments. Let us take, for example, loans with a 4½-percent interest rate. Recently at the American Life convention annual meeting held in Chicago, consideration was given during a panel discussion to the net interest return on mortgage loans. Figures as to the interest rate and cost of administration were presented by representatives of four different companies. These figures were averaged and it was demonstrated that, assuming a 4½-percent interest rate on mortgage loans, the net return is 3.04 percent after deducting costs as follows:

| | |
|---|---|
| Service fee | 0.55 |
| Originating commissions | .43 |
| Principal losses | .15 |
| Home-office expenses | .33 |

Had the gross interest rate on these loans been 4 percent, and other costs the same, the return to the investor would have been 2.54 percent.

Instead of buying FHA loans or uninsured mortgage loans, an investor can purchase long-term Government bonds at 2½ percent with no risk of loss or corporate obligations. Bonds can be registered and the check for interest is mailed to the investor on each interest-payment date. With bonds, the lender encounters no difficulties in servicing loans, problems in personnel, foreclosure, liquidation of acquired real estate, or any other problems inherent in mortgage lending. It is imperative that the net return on mortgage loans must be attractive to investors

in order to induce them to make loans. Prospective mortgagers are in constant competition with other borrowers, including railroads, industrial organizations, and all other seekers of credit.

This subject of interest rate is part and parcel of the still larger problem of inflated construction costs and abnormal real-estate values. It is idle to devise more governmental machinery for housing, while ignoring the obvious fact that today costs and values are the great hurdle in the path of speedy correction of housing shortages. As a result of governmental deficit financing during the war and in prospect for some time to come, a huge money supply has been built up far in excess of any reasonable need of the economy. It operates as a continuing inflationary threat on all prices, real estate and other. In addition, it operates to increase the supply of investment funds and to force interest rates downward.

As previously pointed out, a certain spread is necessary between mortgage interest rates and the rates on Government and corporate bonds, which means that when Government bonds are available at 2½ percent, the mortgage rates cannot fall much, if any, below 4 percent without funds flowing into governments in preference to mortgages. However, if the supply of funds is large enough, it will force both rates lower while maintaining the differential, as is happening now in the markets for Treasury bonds and mortgages.

At the same time, the pressure of an unwieldy money supply is a potent factor in pushing prices upward. In real estate where control measures are extremely difficult to apply, it operates both directly in stimulating the bidding up process, and indirectly in facilitating financing.

If we are to control inflation, we must attack the root causes, among them an excessive and expanding supply of money. In my view this will involve, first, balancing the Federal Budget with restraint upon new spending and maintenance of high tax revenue, and second, reduction of the money supply.

The money supply is now largely in the form of bank deposits owned by the general public. It can be reduced by refunding the maturing bank-owned short-term securities into long-time holdings by the public. In other words, we should seek to induce the public to exchange their deposits for Government bonds.

I submit to you that the most effective way to accomplish this is to raise rather than lower the interest rate. If the Treasury were to offer a long-term bond at a rate somewhat higher than the prevailing rate, designed to take up the liquid savings of the public, both directly and through savings institutions, it would in my judgment have the following effects:

1. It would encourage saving rather than spending at a time when there is an excess of demand in the commodity and real estate markets. There is little reason to save when interest rates are extremely low and the currency is depreciating;

2. It would check the inflationary boom in real estate. Money which is now seeking investment in mortgages would be drawn toward Government bonds;

3. It would check the flow of equity capital into the stock market and the real estate market by serving notice on persons hedging against inflation that the Government's easy money policy was not perpetual.

It frequently is argued that low money rates are necessary in order to keep at a minimum the costs of carrying our huge Federal debt. And yet, if a policy of low interest rates produces higher prices, the real cost of carrying the Federal debt may be greatly increased and the burden may become extremely onerous to every citizen of our country. Higher prices resulting from Government fiscal policies are a vicious and hidden tax just as burdensome, and possibly more so than any direct tax.

In conclusion, it is our opinion that while S. 1592 contains numerous points of merit, the housing situation in America is not so grave that it calls for omnibus treatment with Government entering the housing field on a basis and to an extent it has never entered this field before.

## Cordell Hull Awarded Nobel Peace Prize in Oslo, Norway

EXTENSION OF REMARKS
OF
### HON. HAROLD C. HAGEN
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
*Friday, December 14, 1945*

Mr. HAGEN. Mr. Speaker, on Monday, December 10, the banquet hall of the Nobel Institute in Oslo, Norway, was the scene of festivities marking the formal presentation of the 1944–45 Nobel Peace Prize to former United States Secretary of State Cordell Hull. The presentation address was delivered by Gunnar Jahn, former Norwegian Minister of Finance and chairman of the Norwegian Storting's Nobel Committee. United States Ambassador Lithgow Osborne accepted the award on behalf of Mr. Hull whose ill health prevented him from personally accepting the plaudits of the Nobel Committee.

Mr. Jahn paid high tribute to the father of the good-neighbor policy with the following remarks:

Throughout a long life, Cordell Hull has labored to strengthen relations between the States. Best known to the public are his tireless efforts in the field of foreign trade policy, the goal of which was to break down the autocratic tendencies at home and abroad which to a great extent had characterized the nations' policies since the late 1920's. That is the background for his battle against isolationism at home, for his efforts to shape a peace bloc among the states of the American continents, and for his labors to organize the United Nations.

Several observations, which were a part of his first speech in Congress, shed a forecasting gleam to indicate his general course of action. He appears before us as the bearer of the best of liberalism's ideas; a man with a strong social consciousness. But at that time he had not yet given expression to his international point of view. That does not make its appearance until the time of the First World War. As early as 1917 he is setting forth his observations on an international agreement covering the weapons of trade policy. The task of easing trade restrictions was taken up by the League of Nations and with the great world conference held in Geneva in 1927 a foundation was laid for the work of the ensuing years. Final efforts to erect this structure found expression in the World Economic Conference in London in 1933. As we now know, the conference led to no results, but Hull did not give up. In 1934 he succeeded in pushing through a law which gave the President power to reduce tariff rates and to ease import restrictions for those nations which were willing to extend like concessions to the United States.

On the basis of this law he succeeded in concluding 14 different trade agreements in all. This marked a complete revision of the United States' foreign trade policy. It was partially in recognition of the United States position as a creditor nation that the reversal came about, but for Hull it was something more; it was his indefatigable belief that in this way one might smooth the way for a better understanding between nations and remove one of the causes of war. This is typical of him. When he does not accomplish his goal in the great onset, he turns to other paths. He bows before defeat, but never gives in. His belief in the cause is too firmly grounded for that. He is realistic enough to recognize that which is politically possible at a given moment, and to accept that rather than to wait for something which will possibly come eventually.

The reason I have dwelt so long on Hull's work in the field of trade policy is because it illustrates the trait which is characteristic of his labors. Not until Roosevelt's election in 1932, however, did Hull get an opportunity to give full expression to his ideas. It will not be possible in this survey to go into Hull's activities during the years from 1932 on. That would mean analyzing the foreign policy of the United States during those years. It may be said, however, that probably no foreign minister has ever had a more difficult period in which to serve. Year after year brings new incidents which could drive anyone to despair, and which gradually culminate in the Second World War. But Hull never gives up, despite opposition both from at home and abroad. When he fails to reach his objective via one approach, he attempts to push his ideas through to victory along another route.

Nothing better illustrates his procedure than his pan-American policy and his stand in regard to the neutrality law. Both the point of departure and the intent may be found in Roosevelt's description of the good-neighbor policy as a program which is aimed, first and last, at creating peace and good neighborliness on the American continents at a time when it is impossible to secure world-wide participation. It was also possible to bring about a convention where rules of guidance governing a state's rights and duties are set forth. The most vital decision is perhaps that which contends that no state has the right to intervene in any other state's internal or external affairs. This conference was followed by the Buenos Aires meeting in 1936 and by the Lima Conference in 1938. In Lima, Hull did not succeed in reaching the goal which he had set for himself. It nevertheless signifies a victory for the ideas of peace, even though it represents no extension of the achievements reached at the Montevideo and Buenos Aires Conferences. In Europe these pan-American departures have many times been regarded as a sort of expanded isolationism, but they must not be construed as such. They are large-scale attempts to realize the ideas of peace through international cooperation in those areas where it seems possible to succeed in forming, as Cordell Hull says, a pattern which could have an inspiring effect on the whole world.

The struggle over the neutrality laws and against isolationism concerns us so intimately that we remember it well. By and large, the original neutrality law can be said to serve the interests of peace. Neither can it be denied that the standpoint of isolationism is pacifistic. But the isolationists regard peace, first and last, as the United States peace, while Hull calls for a more elastic neutrality arrangement through which the United States can cooperate with other nations to maintain that peace; for, as Hull expresses it, the United States cannot unilaterally declare peace for itself alone. Peace, to him, means a peace between peoples. But he is realistic enough to see that it is something which must be fought for in order to be realized. As has already been mentioned, Hull turns to decisive language when he touches upon relations with the totalitarian states in Europe, and as the war draws nearer his speeches become sharper and more intense. All that is with-

in him, his sense of justice, his deep humanitarianism, rises against that which he sees of the encroachment and the violation of everything which represents the ideas of justice.

But with the coming of the war, his voice is overshadowed by that of Roosevelt himself who emerges more strongly than ever before as the leader of United States Foreign Policy.

It was necessary that this be the case, and it is not easy for one who has not had an opportunity to become personally acquainted with the circumstances, to show to what extent the happenings of these years are due to Cordell Hull. One can only draw conclusions according to the little which is known. He has done everything within his power to strengthen that which could beat back the aggressor powers, but he has also struggled intensively with the problems which were destined to appear with the coming of peace. This is already apparent in the draft of the six points which established the future policy of the four great powers at the Moscow Conference in 1943; and according to what we now know he has, during the last years of the war, labored tirelessly with the problems associated with the new United Nations Organization.

The principles of justice, which in the United States have possibly been to a greater extent than in any other land the possession of the individual man from his school days on, have been the guiding stars for his life and his work; where life and doctrine have been one. It is therefore a great pleasure for the Norwegian Storting's Nobel committee to be able to give the peace prize to this great American, in recognition of his long and tireless labor for understanding between nations.

## The Housing Problem

EXTENSION OF REMARKS
OF
### HON. HOMER A. RAMEY
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
*Friday, December 14, 1945*

Mr. RAMEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein an editorial from today's issue of the Toledo (Ohio) Times, penned by the distinguished journalist, Harold Hartley:

TRUMAN DIDN'T SOLVE THE HOUSING PROBLEM

President Truman's long-awaited building controls came yesterday. Three of his suggestions seem workable and should bring some improvement. One of them, however, is impractical and probably impossible.

First the President appointed an expediter for housing materials. Such a move has been suggested in this column several times. During the war, expediters were employed to keep war materials moving to the war plants. There is good reason to believe the same principle should work with housing materials. With this in mind, Mr. Truman appointed Wilson W. Wyatt, former Louisville mayor, as chief housing expediter. He should have an organization reaching every materials producer and contractor, and serving every community which has a housing problem.

Another proposal adopted was also a wartime practice. It called for the use of a priority system governing housing materials. The complaint today is that too many materials are going into commercial building, and too few into dwellings. The priority system would help to put the materials into the distressed field. The priority system works hand-in-hand with the expediters.

A third suggestion called for the release of surplus housing units and building materials of the Army and Navy for housing of veterans. Such a move should have been made long ago. Someone has been alseep at the switch.

The fourth and last suggestion sounded well, but until some reasonable way is found in which to work it out, it will remain purely in the suggestion stage. It called for the fixing of ceilings on old and new housing. Of the two classes, it would be much easier to find an appropriate ceiling on new housing because the prices of building materials can be regulated. But who knows how to fix ceilings on old houses?

Our greatest inflation has come in the sale of old dwellings and farm property. In housing it has been a case of an extremely high demand in the presence of an acute shortage. With no controls, it is easy to see where such a situation would lead. Housing prices have skyrocketed. The real answer is to build more houses, and until building materials begin to flow in the right direction, there is no sign of housing relief.

About the only way in which a ceiling can be put on old dwellings is to limit the profit in the sale of a house. But if this is done, what is there to prevent the limitation in the profit in the sale of an industrial security? Both represents capital gains, which are recognized by the Government, and, of course, covered by taxes.

Mr. Truman's housing control program cannot become 100 percent effective unless someone finds a method by which to control the ever-rising prices of old dwellings. When Mr. Truman, or his advisers, figure that out, they will have a pretty good program.

## China in Its Proper Perspective

EXTENSION OF REMARKS
OF
### HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
*Friday, December 14, 1945*

Mr. MILLER of California. Mr. Speaker, under the privilege granted me, I desire to call attention to an article which appeared in the Contra Costa County Labor Journal and 12 other labor papers throughout the States of California. Our action in China in intervening a civil war in that nation on the side of those who are oppressing the very democratic rights and reforms for which we struggled in our own Revolution so many years ago, are compared to those of the Hessians in our own early fight for freedom. I believe the article, demonstrating the clarity with which labor sees the present role into which we have been lead by Gen. Patrick J. Hurley in the Far East, is worth the attention of every Member of the House. It follows:

OUR HESSIAN STUNT IN FAR EAST, BUTTRESSING REACTION, LIKELY TO GENERATE MASS HATRED TOWARD UNITED STATES

(By Observer)

During the American Revolution against Britain in 1776 the British hired troops from Hesse-Cassel, Germany, to fight the troops of George Washington. They were hated and despised. When captured they were treated like dogs. For many years Hessian was a term applied to those who opposed liberty and self-government.

What may we expect the Asiatic peoples to think of hired Americans who fight the slave peoples of Asia who are fighting for freedom and who believe us when we announced our belief in and adherence to the Atlantic Charter?

Chiang Kai-shek's (Kuomintang) China is ruled by the war lords with their private armies, and money lenders who often extract 100 percent interest, the landlords who get from a half to three-quarters of the crop from their tenants. Two-thirds of the arable land is owned by 2 percent of the population and this concentration of land ownership is increasing rapidly. Nine-five percent of the people are illiterate, live in degrading poverty and die by the millions every year of starvation.

In the northern partisan areas (miscalled Communist), the leaders have not dispossessed the landowners, but they have compelled fair rentals, low interest rates, introduced a large measure of self-rule, and begun universal education. Their plan may be compared to the American Revolution in many ways. These are facts, and don't let anybody tell you otherwise. If the partisans maintain their present trend toward democracy they will win and China will become a great free country.

What, then, will these peoples struggling for freedom think of the United States? Will "American" then be a term of derision and hatred? What will all the billion slaves of Asia call us?

Regardless of what Hurley, Wedemeyer, or anybody else says, the United States military forces have been acting like Hessians in northeastern China. Whether directly or indirectly, they have been supporting the war-lord government of the Kuomintang in suppressing the revolutionists. The fight in China is an internal fight. As such, the outcome is just as important to the progress, freedom, and future development of China as the French Revolution was to France, the revolt against Britain was to the United States, the upsurge of Simon Bolivar was to the peoples of Latin America.

United States Army Air Forces and ships transported tens of thousands of Chinese Nationalist soldiers to areas claimed by the partisans as part of their domain, and these soldiers were American-trained and supplied with American weapons of combat. United States Marines guarded the ports for the Nationalists. United States Army liaison teams accompanied the Nationalists. The claim that our forces had to do all this to effect Japanese surrender in northern areas to Chinese is cover-up stuff. The fact remains that we have directly interfered in an internal situation on the side of reaction and forced sincere American lads to play a Hessian role that our patriotic history books taught them to hate.

## A Suggestion on the Housing Shortage

EXTENSION OF REMARKS
OF
### HON. JAMES I. DOLLIVER
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
*Friday, December 14, 1945*

Mr. DOLLIVER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Bee and Herald, of Jefferson, Iowa:

A SUGGESTION ON THE HOUSING SHORTAGE

Every community is facing a terrible housing shortage and, although many different plans are being attempted to solve it, nothing even approaching a solution has been found. Our guess is that we will be a long time muddling through unless it is attacked sensibly on the Federal level.

A local businessman this week came close to what might be the answer. He proposed

that nonessential building and remodeling be halted by law until the housing shortage is eliminated.

We wouldn't exactly go that far. We would propose, however, that building materials be put on a priority basis with top priority to the persons who are using them to create housing for additional family units.

As family income has risen in recent years there has been a lot of remodeling and nonessential repairing—the jobs which home owners have wanted to do for a long time but never before felt they could afford. In most cases there isn't anything about them that couldn't wait another year or two if thereby some family could be furnished with a decent place to live.

The housing shortage is not local and it's not State-wide. It is national. With strikes in the lumbering camps and factories producing building materials and with a dearth of carpenters, plumbers, electricians, etc., America faces an acute housing problem which is apt to be many years in solution. That is, unless it is immediately attacked on the Federal level.

## Poor Start for UNO

EXTENSION OF REMARKS
OF
### HON. ANGIER L. GOODWIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
*Friday, December 14, 1945*

Mr. GOODWIN. Mr. Speaker, under leave to extend my remarks, I include an editorial from yesterday's Boston Herald. The logic contained therein seems to me to be inescapable, and I believe it deserves to be read by everyone who wants to see UNO work. The editorial follows:

POOR START FOR UNO

The interest of Americans in world affairs has been of an off-again-on-again-gone-again character. A dramatic episode arouses them for a whole, but routine foreign affairs receive little attention. This lack of concern did little damage in the days when the United States was a nation unto itself and the two oceans seemed impregnable first lines of defense. Now that a plane can cross the Atlantic in 5 or 6 hours and rocket bombs a great deal faster, and a United Nations Organization has been charted, a continuance of the attitude would be harmful.

The UNO can succeed only if the people of the world are determined that it shall. The mood of Americans as a whole may make the difference between complete success and the sort of failure which dogged the old League of Nations. The Foreign Policy Association and similar groups have done a great deal to expand the horizon of Americans, but its programs have been of limited circulation. Millions still regard the UNO as something rather remote from them.

If the world capital is set up in the United States this lukewarmness will become a glowing thing. Reading daily detailed reports of activities there, the people will better understand what the UNO is, what it is trying to do, and how vitally its efficiency affects the welfare of the United States. Americans would become international minded, as most of the European peoples are now. The ordinary American citizen would ultimately understand world problems about as well as home issues. Congress and the President would feel the impact of a better-informed, continuous public opinion.

The old notion to which Governor Dewey referred scathingly in his campaign, the notion that this country has never won an international conference and that such gatherings should be regarded with misgivings or avoided, would quickly vanish. The result would be a far more active participation by the American people as well as the American Government in earnest discussions of global problems.

Located in Europe, as a minority of the members of the UNO now desire, the organization would seem less closely related to the United States. The trickle of news would not stimulate the thinking of Americans. They would still surmise that international cross-currents of politics were as influential as they used to be in Geneva. Ardor for the UNO would be less pronounced, and isolationism would probably be strengthened. An aroma of futility would cling to a European site, as the Russians, who will probably vote in favor of an American site, continue to argue. A large majority of Central and South Americans would be as deeply disappointed and resentful as citizens of the United States.

A new organization, carrying the hopes of humanity for an indefinite reign of peace, would be initiated under more auspicious omens if it began to function in a new environment and in a nation which has a more passionate longing than any other for a peaceful planet. In short, the UNO would be off to a limping start in Europe and to a flying one in the United States.

## Need for Veterans' Building at Boston, Mass.

EXTENSION OF REMARKS
OF
### HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
*Friday, December 14, 1945*

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein a letter I have received from Thomas Dorgan, clerk of the superior court, Boston, Mass., concerning the need for a veterans' building at Boston:

COMMONWEALTH OF MASSACHUSETTS,
SUPERIOR COURT,
CLERK'S OFFICE, SUFFOLK COUNTY,
*Boston, December 12, 1945.*

Hon. THOMAS J. LANE,
*House of Representatives,*
*Washington, D. C.*

DEAR CONGRESSMAN: Some time ago I wrote to you on the urgency of having erected in the city of Boston a centrally located administrative building to care for the needs of the returning veterans. The forecast made at that time in relation to the number of veterans who would be future applicants for compensation and other services is now found to be much too modest. The rapidly mounting number of veterans requiring assistance makes it imperative that the governmental agencies whose duty it is to serve them be assembled in one building which will be adequate and convenient.

Now that the Veterans' Administration is divided into 13 regional districts, one of which is Boston, why is it not constructive planning to erect in each of these regional districts a new Veterans' Administration building. The whole criticism through the years since World War I has been that there has never been proper space to intelligently transact the problems of the veterans. The Government has been penny-wise and pound-foolish in this particular matter and has spent hundreds of thousands of dollars for big rents instead of facing the realization that the work of the Veterans' Administration will be constantly increasing through the years and that a new building to house all the facilities under one roof in each of the regional districts would be of tremendous advantage in the efficient functioning of veterans' affairs.

With traditional generosity, the American people are sending, not millions—but billions—of American dollars to the people of Europe to help them rehabilitate themselves and, for good measure, are giving them a breathing space of 5 years on interest payments. If we can afford to do this, can we not take care of our veterans' interests adequately?

In Boston, the veterans' facilities are all over town: In the Federal Building, the Houghton & Dutton Building, at 17 Court Street, and in the hospital at the Dedham line of West Roxbury. This is still the situation after 2 years of constant friction and repeated promises to house all the facilities under one roof after 20,000 Massachusetts citizens had signed petitions to have a new Veterans' Administration building erected in Boston. These petitions, some months ago, were sent to Gen. Omar N. Bradley.

It is time for some intelligent action on this problem and I earnestly ask your support.

Sincerely yours,
THOMAS DORGAN,
*Clerk.*

## Consumer Credit Controls Should Be Modified

EXTENSION OF REMARKS
OF
### HON. HAROLD C. HAGEN
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
*Friday, December 14, 1945*

Mr. HAGEN. Mr. Speaker, President Truman has before him a request for immediate termination of Government controls on consumer credit. As Members of the House know, people of the country are denied the right to buy most consumers' durable goods except for cash or when they make large down payments and pay up the balance very quickly.

The request for termination of these curbs was made by the Retail Credit Institute of America following the annual meeting of the membership in New York City in November. The institute represents retail merchants in 44 States. It is a reputable and outstanding trade association, and its views on the complicated subject of credit are worthy of consideration. I wish to state publicly that I am 100 percent in accord with the institute's position, and I join with the merchants in requesting the President to take immediate steps to lift these credit controls.

As a wartime measure, the clamping down of these credit controls seemed necessary. No one can gainsay that argument. But to assert that they are a continuing necessity is sheer nonsense. In fact, there is no vital argument in support of the continuation of these controls and plenty of arguments against them. Let me expand on one argument

alone, an argument against these restrictions that struck me very forcibly. Am I, as an American citizen, protected by the Constitution and clothed with rights written into our laws and in our national traditions allowed, to make my private contracts on terms that suit me and my neighbor? That is the gist of the argument.

Clearly I have such a right. It is inherent in the concept of the word American. I can go to a merchant in my town and agree to pay him $1 down or $50 down on a $100 article. This is a matter for him and me to settle. The contract is between us and we, as Americans, can make our own terms. For the life of me I cannot see how such a contract is the concern of the Government. It is a legal contract between me and the merchant and freely entered into by both parties, and it is not the concern of the Federal Government. Mr. Speaker, such a contract does not constitute interstate commerce. How then can the Federal Government, in time of peace have any jurisdiction over it? Yet, there are those in Washington who believe such a contract should have the approval of the Government. Here again crops up that paternalistic attitude of Government, some of whose officials feel that they should dictate to me what is socially sound and morally good for me.

Some of the high-minded thinkers in Washington, the self-appointed guardians of the public morals, feel that these credit curbs should become permanent law. Obviously such a law would give them more authority, more jobs, and more opportunities to inject into our social structure more of their pet ideas on what is good for the workingman. I should like to call attention of the House to this danger. You will be hearing more about this subject when officials of the executive departments make their first new moves in this direction. For they will come to us. There is no other alternative for them.

Personal credit controls strike at the very root of rights guaranteed by the Constitution. If followed to its logical conclusion I see no reason why the Government at a later date cannot tell me what to say, what to write, and where to work. It is the dangerous implications in the continuance of these controls that disturbs me. It is the entering wedge for those who would destroy all rights of the individual and make him subservient to the state.

If, as I say, we were still waging war and needed controls the continuance of these restrictions would make some sense. No true American in time of war is opposed to a temporary suspension of some of his individual rights. But now that the war is over there is no possible justification for these restrictions.

On the contrary, these restrictions are holding up the reconversion program. What is the sense in manufacturing millions of articles if they cannot be sold? Articles are produced for sale and not for dusty shelves. If cash or heavy down payments are required it is a certainty that retailers' markets will be frozen. People simply do not have the necessary cash to make heavy purchases. President Truman himself admitted this in his October 30 speech when, speaking of the need for increased wages, he said:

If nothing is done to help the workers in this situation, millions of families will have to tighten their belts—and by several notches.

Returning veterans obviously do not have the cash with which to start life anew. Many of them are postponing marriage because of the absolute impossibility of attempting to rent and furnish a home. Many of them are disillusioned. They fought and bled for such American ideals as the right of private contract and now they find that right denied them. This is outrageous treatment for those who gave up everything for the defense of their country.

These credit restrictions—known as regulation W—are a breach of the American's rights, an insult to the returning veteran, an outrage on the American people, and one of the major hurdles blocking the reconversion program. President Truman can lift these restrictions by an Executive order. He does not have to seek the authority of Congress. The President should attempt to learn what the American people are thinking on this subject and not just take his advice from bureaucrats who wish to extend their authority.

In their petition for termination of these controls, the Retail Credit Institute of America lists 11 arguments. Each argument is a sound piece of irresistible logic and I do not know how they can be controverted. I do hope the Members of the House will find time to read these arguments, which are:

1. Will force millions of middle and lower income families to cash their Government bonds and savings, to enable them to buy the things they need, the very thing the Administration at Washington must at all cost prevent, to preserve proper balance in national finances, and to encourage the people to keep their savings, to do their purchasing out of current income without drawing upon what they have accumulated from labor in past years.

2. Will work great and needless hardship on millions of returning veterans and their families. These Americans lack adequate cash to re-equip their homes even on the simplest plan and to rehabilitate themselves for civilian life. They are entitled to reasonable and flexible credit and merchants are ready to offer it on the basis of their character and individual credit-worthiness.

3. Will prevent millions of displaced war workers from purchasing the products they need to equip themselves and their homes when reemployed by American business after migration to new environment.

4. Will deprive millions of people who have never enjoyed so-called wartime income of the opportunity to maintain a progressive standard of living. These millions include salaried employees, the so-called white collar workers, newspaper men and women, professional people, those employed in our hospitals, teachers, and many other groups upon whom regulation W has worked hardship throughout the war.

5. Will restrict the vast output of American factories dependent upon consumer credit for the effective distribution of the things they make. Regulation W will militate against the Nation's gigantic program to provide from fifty-five to sixty million jobs for our people. By its very restrictive nature it must reduce employment. It must result in fewer jobs for returning veterans and displaced workers, at a time when almost every economist, Government and private, insists that our prosperity depends on a 50-percent increase in the production and distribution of consumers' durable and semidurable goods. Regulation W is a direct obstacle in the path of the accomplishment of this objective.

6. Will give great economic advantage to those with considerable ready cash against the family with a small pay envelope.

7. Will destroy the democratic privilege of every American citizen to have equal access to available supplies of the Nation's products; will continue the undemocratic, antisocial and uneconomic wartime practice of rationing by the size of the pocketbook.

8. Will dampen the morale of the American worker; will divide our people into classes, those able to buy as they please and those artificially restricted from the markets, creating a situation contrary to every fundamental upon which modern marketing and mass production have been built up, dangerous to the continued growth of the American system of production and distribution that made possible America's gigantic war production.

9. Will monopolize consumer credit into the channels of big business and banking and destroy thousands of little merchants throughout the Nation, who, for a generation or generations, have served their customers' credit needs on a flexible, personal basis. The business survival of countless little stores has rested upon their individual credit and other service arrangements with customers. Until regulation W, their larger competitors have been unable to meet this credit service with equal satisfaction. The inflexible application of Federal regulation, its necessary disregard for local conditions of prosperity or difficulty, its prohibiting of the very essence of proper credit granting, consideration of the individual need and merit in each transaction, will make business success hazardous and proper service to consumers impossible.

10. Will deprive countless citizens of their sense of personal dignity by preventing their enjoyment and use of the credit standing of which their character and credit worthiness has made them entitled.

11. Will confer upon a Government agency power to determine upon what terms millions of people must make their contracts of purchase for intimate family needs—treated as masses, not individuals, whether in city or country, whatever their condition and need.

## The Most American Thing in Washington

EXTENSION OF REMARKS
OF
### HON. CHARLES H. ELSTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

*Friday, December 14, 1945*

Mr. ELSTON. Mr. Speaker, under leave to extend my remarks, I include an editorial which appeared in the Cincinnati Times-Star of Tuesday, December 11, 1945, entitled "The Most American Thing in Washington":

THE MOST AMERICAN THING IN WASHINGTON

A strange feature of public life in America during the past 7 or 8 years has been the persistent and venomous attempt to discredit Congress in the eyes of the American people.

Of course Congress has its weaknesses and its faults. Its great strength is that when all is said and done it is honestly and naturally representative of the people back home.

That is the reason why individuals and groups who are pushing pet schemes which

Americans back home do not want become exasperated so easily at Congressmen and Senators. They picture them as stupid, opinionated, venal. Thousands of newspaper and magazine articles and even a few books have been printed to show how contemptible Congress is.

Senator LA FOLLETTE has an interesting article in the December 3 issue of the Progressive. The Wisconsin Senator is chairman of the special congressional committee now preparing a program for the reorganization of Congress. LA FOLLETTE thinks that a number of improvements are in order. For one thing, in a period when the executive branch of the Government is in general overstaffed, Congress is still getting along with about the number of assistants it had decades ago. If the executive department has its own corps of experts to give it advice on public questions and if Congress is without such assistance, it is evident that Congress must rely more and more on the Executive. Obviously, that is not in line with the underlying American theory of a government of equal and coordinate powers.

"The executive branch of the Government," says LA FOLLETTE, "has expanded and reorganized several times to meet the new conditions. A bill which has passed the House is now pending in the Senate to grant the President sweeping powers for another reorganization of the executive branch of the Federal Government. The Congress has been struggling along, working harder than ever, with an organization and appropriations entirely inadequate to enable it to discharge its responsibilities in the complex economic environment of this age."

The La Follette article includes a comparison between Congress in our time and the first Congresses of the United States, by the very distinguished historian, Charles A. Beard. "As a more than casual student of the CONGRESSIONAL RECORD," says Beard, "I venture this opinion: It is possible to pick out of the RECORD for the past 10 years addresses (not orations) which, for breadth of knowledge, technical skill, analytical acumen, close reasoning, and dignified presentation, compare favorably with similar utterances, made in the preceding century by the so-called great orators.

"Considering the complexity of problems before Congress today, and taking account of the distractions which now beset Senators and Representatives, the quality of serious speeches in both Houses is amazingly high. There is, to be sure, more trash—bad poetry, demagogic claptrap, and clotted nonsense—in the RECORD of the past 10 years than there was in the annals of the Congress from 1789 to 1799. Yet after studying the operations of the first Congresses of the United States and the operations of the Seventy-sixth Congress, I am convinced that for disinterestedness, absence of corruption and concern with the public good, the present body is of higher order."

Of course, there are weaklings and men without ideals in the present Congress. There are men who cower before threats of reprisal at the polls. But it is surprising when you consider Congress as a whole how many men it includes who put patriotism above votes and who on matters of basic principle will not surrender under any political pressure whatsoever.

If you hear somebody engaging in one of these sweeping tirades against Congress, you are fairly safe in concluding that he is either a gullible follower of somebody else or that he deliberately places the interest of some foreign country or some minority group in this country above the interests of the American people. Congress is at heart American—which would excuse its faults even if they were very much weightier than they are.

## Use of Indian Troops in Indochina and Indonesia

EXTENSION OF REMARKS
OF
**HON. JAMES G. FULTON**
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
*Friday, December 14, 1945*

Mr. FULTON. Mr. Speaker, the eighth annual meeting of the India League of America was held at Steinway Hall, New York N. Y., on Wednesday, December 12, 1945, at 8:30 p. m.

Pearl S. Buck, Nobel prize winner and honorary president of the India League of America; Sirdar J. J. Singh, president of the India League; and Mr. Sidney Hertzberg, journalist and member of the executive committee of the India League, addressed the meeting. Richard J. Walsh, editor of Asia magazine and chairman of the India League executive committee, presided.

The following resolutions which were adopted at this meeting should be of great interest and encouragement to the freedom-loving citizens of the United States:

Resolution on the use of Indian troops in Indochina and Indonesia

*Resolved:*

(a) That this meeting expresses its deep resentment and disappointment that notwithstanding the repeated demands of all parties in India, the British Government still persists in the use of Indian troops in squelching the independence movements now blossoming in Indochina and Indonesia.

(b) That it is the firm opinion of this meeting that as stated in the India League of America's cable of October 22, 1945, to the British Prime Minister, Clement R. Attlee, it is indecent to use Indian troops to suppress the Nationalist movements in Indochina and Indonesia, when India herself is fighting for her independence.

(c) That it is the belief of this meeting that Indian troops are being used in this despicable effort to entrench and foster colonialism, to give India and Indians a bad name not only in the eyes of their fellow Asiatics, but among all the progressive and liberal peoples of the world.

(d) That this meeting lodges an emphatic protest with the British Prime Minister, and forceful requests that Indian troops be withdrawn immediately from all areas where they are being used to suppress and destroy independence movements.

Resolution on the freedom of India

*Resolved:*

(a) That though, upon the overwhelming defeat of the Conservative Party in the British elections and the coming into power of a labor government, high hopes were entertained that the labor government would take some bold and decisive action to hasten the independence of India, this meeting wishes to record, with great regrets, its utter disappointment in the labor government's attitude so far toward the freedom of India.

(b) That this meeting is of the opinion that though some useful purpose may be served by the proposed parliamentary delegation which is to visit India in the near future to meet the Indian political leaders and to learn their views at first hand, the time is past for such missions and deputation to accomplish anything worth while.

(c) That India is in no mood to tolerate further delaying tactics in granting her complete independence, on the repeated pretext of lack of unanimity among all Indian groups.

(d) That unless steps are taken to transfer all power to the chosen representatives of the people of India, as soon as the present elections are over, the people of India will lose their faith not only in the present British Government but also in the British Labor Party.

(e) That from all advices, private and otherwise, that have reached here, we are of the opinion that unless a constitution for a free India is framed soon after the elections, and complete independence is granted to India, there will be violence and chaos of the magnitude which will put in shade the first armed revolution of India of 1857.

(f) That we request the members of the labor party, both in the House of Parliament and outside, to bring their pressure upon their government to avoid such a catastrophe, which would be tragic both for India and for England. And help those Indians who believe in democratic evolution by making a political settlement, acceptable to the elected representatives of the people of India.

(g) That a free, democratic, united India will be a great bulwark against the expansion of any ideologies other than those that guarantee the freedom of man.

Resolution on Indonesia and Indochina

*Resolved:*

(a) That this meeting extends its deep sympathy to the people of Indochina and Indonesia in their heroic struggle against imperialist powers and fervently hopes that they will succeed in achieving their ultimate goal of complete independence.

(b) That we most strongly condemn the use of Japanese troops against the Indochinese and Indonesian nationalists and request the British, the French, and the Dutch Government to make a public declaration that henceforth no Japanese will be used in those areas either in defensive or offensive capacity.

(c) That in accordance with the provisions of the United Nations Charter which under the head of "Purposes and principles," article 1, clause 2, says:

"To develop friendly relations among nations based on respect for the principle of equal rights and self-determination of peoples, and to take other appropriate measures to strengthen universal peace."

And again under chapter XI under the heading of "Declaration regarding non-self-government territories," article 73, says:

"Members of the United Nations which have or assume responsibilities for the administration of territories whose peoples have not yet attained a full measure of self-government recognize the principle that the interest of the inhabitants of these territories are paramount, and accept as a sacred trust the obligation to promote to the utmost, within the system of international peace and security established by the present Charter, the well-being of the inhabitants of these territories, and, to this end:

"(a) To ensure, with due respect for the culture of the peoples concerned, their political, economic, social, and educational advancement, their just treatment, and their protection against abuses;

"(b) To develop self-government to take due account of the political aspirations of the peoples, and to assist them in the progressive development of their free political institutions, according to the particular circumstances of each territory and its peoples and their varying stages of advancement."

And to avoid further bloodshed, chaos, and loss of life of men, women, and children in Indochina and Indonesia, we hereby request the President of the United States to instruct the members of the United States delegation to the General Assembly of the United Nations Organization, which is sched-

uled to meet in January 1946 in London, to take the initiative in appointing an inquiry commission of the United Nations, to proceed to Indochina and Indonesia immediately, and to report its findings to the United Nations Organization at as early a date as possible.

(d) That we believe that the Nationalist leaders of Indochina and Indonesia, as publicly announced by them, will welcome an arbitration by the United Nations.

## Full Employment Bill

EXTENSION OF REMARKS
OF

### HON. WILLIAM A. ROWAN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

*Friday, December 14, 1945*

Mr. ROWAN. Mr. Speaker, pursuant to a number of requests, I am herewith presenting excerpts from a report on the full employment bill, made by the independent voters of Illinois, Inc.:

Prior to the field interviewing a complete block by block analysis of the entire district was made in order to pick a "sample" that would reflect in miniature the total characteristics of the district as to economic status, race, political leanings, occupations, etc.

All persons interviewed were asked the same series of 19 questions, designed to reveal not only the state of public information on the full employment proposals but also how, and to what extent, the citizenry of the district informs itself about what goes on in Congress.

A question: "Have you heard of any bill before Congress that will plan for enough jobs for everyone after the war?" brought replies as follows:

| | *Percent* |
|---|---|
| No; have not heard | 69 |
| Have heard, but have no idea what it is | 19 |
| Have heard, but have wrong idea what it is | 4 |
| Have heard, and have right idea | 8 |

Following this question, the essentials of the Murray full employment bill were set forth as follows, but without naming the bill:

"What would you think of a bill like this? First, the President would find out each year how many jobs there are going to be for the coming year. Then, if there were not enough jobs for every one, Congress would give financial help to private business so that it could provide more jobs. Then if there were still too few jobs, the Government would give contracts to private business to build public works to make up the balance of jobs needed."

Response to this proposal was:

| | *Percent* |
|---|---|
| For | 83 |
| Against | 12 |
| Doubtful | 5 |

The next question asked named the bill: "Have you heard of the Murray Full Employment bill?" The replies were:

| | *Percent* |
|---|---|
| Yes | 17 |
| No | 81 |
| Doubtful | 2 |

These contrasting replies indicate a large, but uninformed, majority generally favorable to the measure. This majority is larger in some groups than in others, but is found in all groups.

Thus, by types of employment, the percentages for the proposal are:

| | *Percent* |
|---|---|
| Business and professional | 74 |
| Other white collar | 84 |
| Shop and manual workers | 91 |

Persons with college education, and those with incomes of more than $100 per week, like the business and professional group, indicate relatively more skepticism than persons with less education and lower incomes.

By race and nationality, those for the proposal are:

| | *Percent* |
|---|---|
| Native-born white of native parents | 79 |
| Native-born of foreign parentage | 83 |
| Foreign-born white | 86 |
| Negroes | 94 |

In the Second Congressional District 22 percent of the population is Negro, as compared with 8 percent for all of Chicago. Half of the city's Negroes live in this district. The fact that they are for the full employment proposal so strongly makes the total percent for the proposal slightly higher than it would be if Negro population were substantially less.

The principal reason cited by those favoring the proposal is that it would provide jobs and so help avoid unemployment. Nine percent observed specifically that it would be better than direct or work relief. Following are some typical comments:

"It opens up opportunities. Places the responsibility on the Government, where it belongs. It is fair.

"It would create more buying power for everyone, which would create more business.

"Help private industry to keep going and give jobs to people without actually taking over private industry.

"A bill of this sort would enable many people to be employed who want to work.

"It would give people work. They would not be idle and could support themselves. It would do away with WPA.

"I think it is good. A man would rather work than be given something. We Negroes want a chance to work for what we get.

"Would not want my husband to sell apples when he gets out of the Army.

"Won't mind the taxes if it gives the jobs.

"It would give everybody a chance to work.

"Would help avoid a depression.

"A bill of this type would give work to everybody. As a matter of fact, the Government should do this."

The 12 percent who oppose the full-employment proposal, as presented in this survey, give three principal reasons: (1) Opposition to Government interference with, or subsidies to, business; (2) increased taxation; (3) the difficulties of making the plan work. Some of their comments are:

"Don't believe in subsidies for private business. Taxpayers pay for subsidies.

"It would involve a lot of red tape, I'm afraid. It's a beautiful thought, but I just don't think it would work out.

"There have been too many bureaucracies. The taxpayer has to pay the bill.

"Don't think Government belongs in business.

"Would be a pork barrel for private capital. Capital would take advantage by asking Government for money even if they didn't need it.

"Not a proper economic measure. Industry should stand on its own feet.

"No particular advantage. It would be paid for by taxation. A case of getting a check and handing part of it back to the Government."

One question was designed to find out whether the term "full employment" as defined by the proponents of the bill—jobs for all—is understood in that sense by the general public.

All respondents were asked, first, if they had heard the expression "full employment," and second to define it. Fifty-one percent of the definitions given by those who had not heard the expression are of the "jobs for all" type. Seventy percent of those persons who had heard the expression are "jobs for all" definitions. In both cases the remainder give a variety of answers other than jobs for all, such as steady work, work 8 hours a day, full-time work, etc.

(The number of definitions on which this analysis is based is 13 percent in excess of the number of respondents, since some give more than one definition.)

From this it appears that a spontaneous definition of the term "full employment" by those who hear it for the first time is significantly more vague and general than by those who have heard it before. Apparently, the term takes on more of a "jobs for all" meaning after it has been heard more than once. This may be in part due to current publicity which uses the term "full employment" in the "jobs for all" sense.

Eleven percent of the responses of those who had never heard the term give a spontaneous definition of full-time work for the respondent—the opposite of a part-time job. One woman, for example, says it means a "full-time job for my husband." Only 3 percent of the responses of those who had previously heard the term give it such a personal, rather than a public, meaning.

This analysis indicates that, whether or not "full employment" is as good a slogan as "jobs for all," the majority of persons tend to associate the two. Some 30 percent, however, need further clarification of the term "full employment."

If it had been possible to test the slogan "full employment" by an opinion poll before it came into general use, it is quite possible that something better might have been found. Perhaps it would have been simply "jobs for all." In Part V of this report is further comment on the importance of testing in advance the public reaction to proposed slogans.

PART II. JOB PROSPECTS

Citizens of the Second Congressional District, just before VJ-day, were definitely more hopeful about their individual prospects after VJ-day than about job conditions in general.

A pair of questions brought this fact out. Asked if they think job conditions will be the same, better, or worse after the victory over Japan, those interviewed replied:

| | *Percent* |
|---|---|
| Same | 13 |
| Better | 19 |
| Worse | 49 |
| Others (including combinations of above) | 19 |

But when the group sampled were asked about "job conditions for yourself and your family" their replies were:

| | *Percent* |
|---|---|
| Same | 54 |
| Better | 19 |
| Worse | 20 |
| Others | 7 |

This difference is explained by the response to the further question, "Why do you think that?" Sixty-four percent of the explanations for a same or better response said that the responden is in a job not dependent on war activities for its continuance, such as producing civilian goods, working in a hotel, civil service, or teaching. They feel safe despite the possibility of a downswing.

Those who expect general conditions to be the same or better base such expectations primarily on their estimate of the large civilian demand following reconversion. Some mention also foreign demand for American goods. Others indicate that they have confidence in a Government program to help stimulate activity.

Forty-nine percent of the responses which are pessimistic about general conditions following VJ-day cite as their reasons: Civilian demand will not balance cut-backs; reconverted industries will require fewer employees; returning servicemen will increase competition for jobs, etc. Nine percent of the pessimistic responses are based simply on

the idea that history will repeat itself—other wars have been followed by depressions—therefore this one will be.

In the racial grouping, the proportion of optimistic answers on the general job situation is highest among the foreign-born, 28 percent, and native-born of foreign parentage, 22 percent. The proportion of pessimistic replies to this question is highest among the native whites, 59 percent, and the Negroes, 57 percent. Respondents who are foreign-born and second generation yield a considerably lower proportion of pessimistic answers, 37 percent in both cases.

Young people gave pessimistic responses about general conditions more often than older persons—72 percent of the responses from young women of 21 to 29 years, and 61 percent of those of young men, had a gloomy outlook. It is interesting to note that the young women were more pessimistic than the young men.

The question was asked: "Do you think government, business, and labor should have an equal share in handling unemployment?" The phrasing of this question was deliberate, since a careful pretest in the field indicated it would get respondents to express themselves as to interrelationships between the three groups. Even small qualifications were probed in order to make sure respondents had a chance to show preference for any one of the three.

Results on this question were:

| | Percent |
|---|---|
| Yes | 59 |
| No | 27 |
| Undecided | 10 |
| Others | 4 |

Women supported this proposal in greater strength than men—65 percent of all the women as contrasted with 51 percent of all the men. However, women over 45 were in closer agreement with the men—56 percent—than the women under 45, of whom 69 percent were in favor. In both sex groups the youngest members—men and women 21–29—were slightly more in favor of cooperation on an equal basis.

The 27 percent who did not agree that Government, business, and labor should share the handling of unemployment on an equal basis had the following opinions:

| | Percent |
|---|---|
| Government should have greater share | 28 |
| Business should have greater share | 28 |
| Labor and management should work together with Government as referee | 13 |
| Labor should handle unemployment alone | 10 |
| Opposed to business, with no reference to the other two | 6 |
| Opposed to labor, with no reference to the other two | 4 |
| Other and "don't know" answers | 11 |

A break-down was not made to learn what percent of each of the above groups of responses also gave a "yes" to the digest of the full-employment bill. However, it would seem from a rough inspection of the above figures that it is likely that the bill has attracted to its support not only those who favor equal sharing of the responsibility but also some from the various groups favoring other alternatives.

In other words, no matter what preference the respondents have, either for cooperation on an equal basis or for a particular controlling group, the majority still is for the digest of the bill.

A further question asked: "If there are not enough jobs for everyone after the war, do you think anything can be done about it?" Replies are positive:

| | Percent |
|---|---|
| Yes | 83 |
| No | 8 |
| Doubtful | 9 |

Ask what can be done, 48 percent of the responses indicate some sort of a Government program to stimulate business, build public works, give direct relief or provide social security. Twenty-three percent recommend spreading work, or shortening hours. Nine percent suggest returning women from jobs to place in the home.

The fact that only 48 percent of the answers spontaneously named the Government as the controlling factor in a given program obviously does not mean that the balance are opposed to Government control, given the fact that the great majority support the full-employment proposal as given in this survey. We may assume that in the balance of the responses if the spontaneous suggestions were probed to find out what agency should be used to implement the program (e. g., spreading work or shortening hours), a considerable number would probably name the Government alone, or Government and business.

Break-down by income reveals only minor differences as to the percentages of answers which spontaneously mention some Government-controlled measure to relieve unemployment:

| | Percent |
|---|---|
| Up to $43 a week | 45 |
| $43 to $65 a week | 50 |
| $66 to $100 a week | 44 |
| Over $100 a week | 45 |

It is interesting to note that the lower and upper income groups show no difference at all in this respect.

Using the same break-down for the answers saying private industry can prevent or remedy unemployment, we find that in the three lower income groups only a negligible percentage of the answers are in this category, while 10 percent of the responses from the top income group are in that category.

Using the age-sex break-down on those answers which say the unemployment situation would be relieved if women left their jobs we find that none of the suggestions from the young men under 30 and only 4 percent of the responses from men over 30 are against women working. This is a contrast to the women's opinion on this subject, where we find the following percentages against women working:

| Age: | Percent |
|---|---|
| 21 to 29 | 12 |
| 30 to 44 | 16 |
| 45 and over | 9 |

The percent of all female responses on this point is 12 percent. When only the responses of nonworking housewives are considered the percentage is slightly higher: 16 percent.

For this particular break-down a further analysis was made as to how each age-sex group reporting this answer stands in regard to the full-employment proposal. It is found that only one person (a female 30–44) out of the whole group is against the proposal. While this question was not especially designed for this purpose, this analysis gives some weight to the assumption that while women generally resent other women as competition for their current or prospective breadwinners, they would be less opposed if there were greater job security generally. It is interesting that in the defining of full employment only one response specified that it meant jobs for everybody but married women.

PART III. POSTSCRIPT: RESEARCH IN PARTICIPATION

(By John H. Millar, director, Citizens Research Bureau)

The project reported here is a double-barreled research experiment: (1) In opinion polling; (2) in citizen participation.

Sixty citizen volunteers, under paid professional guidance, did most of the work. Thus, costs were less than would be the case if clerks, interviewers, and analysts were paid as well as supervisors. Quality of work done by these volunteers is high. Mrs. Ruth Shils, professional consultant on the project, was particularly impressed by how favorably the work of volunteers compares with that of paid workers on other opinion polls.

Deliberate effort was made to provide in the project a wide variety of jobs for the volunteers: Clerks, interviews, analysts, computers, etc. With a larger variety of tasks to be done, it becomes possible to involve a larger number of persons of various talents and interests.

Experimental work to improve effectiveness of volunteer political activity has particular interest to organizations such as Independent Voters of Illinois, principal backer of this project.

Political action organizations, such as IVI, stress doorbell ringing just before elections. But it is a long time between elections. It would strengthen such organizations and hold together their corps of workers if there were doorbell ringing between elections also. This project points to one way of accomplishing this.

Research in participation has wide significance. Improved methods are needed, and if developed will be used not only to increase citizen participation in government, but also in other fields: Worker participation in industry, parent participation in education, member participation in labor unions and cooperatives, citizen participation in all sorts of organized activity in a free society.

As this is written Independent Voters of Illinois is setting up a committee on research for further experimental activity of this double-barreled sort.

1. Opinion polling focused on single Congressmen and their districts will be extended, improved, and greatly speeded up. This means streamlining relationships between Congressmen and constituents. Congressman ROWAN, following private conversations with other Members of Congress, hopes that use of the method may extend to many other congressional districts.

2. Information secured through such polls will make more effective the educational activity of citizen organizations working on behalf of public issues. At the same time the accurate methods of statistical control that are used will improve the administrative effectiveness of the work.

The net result of this twofold experimental work might be described as applying management-engineering techniques to volunteer citizen action.

Methods that develop, however, will be different from the standard methods of business and industry. They will be more democratic, less authoritarian. The problems are different. Situations are different. The supervision of large numbers of part-time volunteers, who work for short periods only, is quite different from standard management of full-time paid workers.

Research in participation is research in democracy. That's what democracy is: Voluntary citizen participation in the Government.

## St. Louis Invites the United Nations

EXTENSION OF REMARKS

OF

### HON. CLARENCE CANNON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

*Friday, December 14, 1945*

Mr. CANNON of Missouri. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a résumé of the advantage of the Weldon Springs area, located at the crossroads of the Nation, and suggested by the city of St. Louis as the site of the permanent headquarters of the United Nations:

1. SECURITY

The property was originally purchased by the United States Government for reasons of security and protection from attack. It lies not far from the exact geographical center of the country. In this position it is almost at the center of the defense zones of the North American Continent, being protected by the coastal zones, the inner mountain zones, and the air zones of the central plains. While distance no longer affords complete protection, the central areas of the Middle West are among the few which sheer distance rendered invulnerable in the recent war. In this respect any location in this geographical region would afford greater security than one near either coast or border. The bastion of space—not to mention the armed defenses of the United States—still guarantees a large measure of immunity from attack to the central valley of the Mississippi.

2. CENTRAL LOCATION

"The site," said the report to the preparatory commission, "should offer easy accessibility from and to the world at large," and ready communication "with any area where immediate action might appear to be necessary." A glance at the map opposite indicates the totally central position of the Weldon Spring area. Plenipotentiaries from every nation in the world follow routes of travel that converge toward the center of the United States, and the commercial air lines have regular schedules east and west and north and south of this section of the country. St. Louis, the neighboring city, is "the most modern telegraph relay point in the world. Telegrams are relayed through it more swiftly than through any other large telegraph center." It is presumed that the headquarters of the United Nations will erect and control its own radio station, independent of commercial stations now operating, but, in an emergency, the services of local radio stations could be made available until the Assembly and the Councils have their own equipment set up.

3. ISOLATION

The recommendation of a site to the United Nations is both a privilege and a responsibility. The burden of responsibility will consist of turning aside any "local influences" that could be construed as affecting the impartiality of the Assembly's judgments. In this respect St. Louis has a marked advantage over most of the cities of the country. Though it is the largest city of Missouri, it is not the political capital. While its trade is active and flourishing, the routes of trade travel are not congregated in one direction as are those of the coastal cities. While it is the center of a Federal Reserve area and is itself an important banking city, few people could ever imagine that it might exercise a financial or commercial domination over the deliberations of the United Nations. St. Louis and the immediate surrounding districts of Missouri and Illinois have welcomed settlers from all over the world—from every nation in Europe and from many of the Asiatic peoples. Thoroughly American, it is, at the same time, a cosmopolitan city, having assimilated most of the world's racial and national strains. Alongside such a city the headquarters of the Assembly need fear no pressure except that of welcome.

4. PHYSICAL DETAILS

*Size*

The Weldon Spring property, entirely fenced and free of private holdings, comprises 27.7 square miles, nearly 18,000 acres, or slightly less than one-third the area of the city of St. Louis. Since none of the property of the international establishment will be occupied by industrial or manufacturing buildings, an area of the size mentioned will provide ample accommodations (residential, official, recreational, and storage) for a population of half a million people.

*Facilities*

Water: A complete, duplicate water system is already installed, with a daily capacity of 40,000,000 gallons of treated potable water. Such a supply is large enough to serve 200,000 people, and will provide, in addition, for complete air-conditioning in residential and assembly buildings.

Power: The area is supplied with electric power by the Union Electric Co. of Missouri from two high tension lines through two fan-cooled transformers of 10,000 to 13,000 kilovolt ampere capacity each. These lines and transformers are in place and available for immediate service. There are two steam power plants equipped with six boilers, each boiler with a capacity of 120,000 pounds of steam per hour at 325 pounds pressure per square inch. Each steam plant has installed and ready for use, power generating plants of 1,250 kilowatts. These extensive facilities are of substantial importance for lighting, heating, and for other steam purposes and are a permanent asset to the Weldon Spring site. With the water plant they cost the United States Government about $15,000,000. Their immediate availability can hasten the construction of the United Nations headquarters by many months.

Communications: St. Louis and its adjacent territory are served by the most modern telegraph system in the world. A further expansion of these unequaled facilities has been authorized—"beam transmission"—whereby as many as 1,080 messages can be sent simultaneously. The Weldon Spring area is directly connected to and served by these St. Louis facilities. A telephone cable forms direct connection with the Southwestern Bell Telephone headquarters at St. Louis. This Bell System is prepared and willing to supply any local and long-distance telephone facilities required by the United Nations Organization.

Transportation: Within the property are 104 miles of good motor roads and 22 miles of new standard-gage railroad track, the latter connecting with the main line of the Missouri-Kansas-Texas Railroad. The main line of the Wabash Railroad is in close proximity. United States Highway 61, the eastern boundary of the property, goes directly to St. Louis, which is less than 20 miles distant. This city is America's second largest rail center, and has 19 trunk-line railroads which control over half the country's rail mileage. The St. Louis Terminal Railroad Association is the largest system of unified freight and passenger terminals in the world. The world-famous Lambert-St. Louis Municipal Airport, its development based on first-hand study of the finest European airports, is 16 miles east. Five important air lines operate scheduled flights daily, and applications for extension of these services, both nationally and internationally, as well as for the entry of several new lines, are expected to have prompt and favorable decisions from the Civil Aeronautics Board. Space for the construction of a headquarters airport is available on the Weldon Spring site or in the immediate vicinity.

Buildings: Several industrial buildings and 30 modern residences, erected for the explosives plant and its staff, are available for use as temporary offices and homes of surveying and construction units. An abundance of building stone can be quarried right on the site. The United States Government opened and operated large quarries along the river front.

*Climate*

The climate of the St. Louis area is characterized by mild winters, with abundant sunshine and moderate snowfall. The summers are warm, and there are exceptionally long frost-free periods. Temperatures range from an average of 58.6° in winter to 77.1° in summer. St. Louis has a relatively low humidity, the average for mornings being 76 percent, for noons 56 percent, and for nights 62 percent. Precipitation averages 37 inches annually.

*Atmospheric conditions*

There is sunshine in St. Louis during 59 percent of the hours in which sunshine is possible, and on an average, 314 days of the year have some sunshine. More than a third of the days of the year are clear. Dense fog is normally recorded on only 10 days a year, so that it is rarely a hazard in aerial navigation.

## Opposed to Peacetime Military Conscription

EXTENSION OF REMARKS

OF

## HON. JAMES I. DOLLIVER

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

*Friday, December 14, 1945*

Mr. DOLLIVER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a letter opposing peacetime military conscription from Hon. Harry M. Reed, of Waterloo, Iowa, formerly United States district attorney for the northern district of Iowa and veteran of both World Wars. Mr. Reed is the father of a soldier son who gave his life in the advance of the United States Army across Europe.

The letter follows:

DEAR SIR: I notice that the Army is now promoting another campaign for the drafting of 18-year-olds. I also notice that the Army has eliminated most of the hokum of its earlier campaign and now states that the sole reason for the draft is protection. I also notice that its reenlistment program is resulting in many master sergeants reenlisting but few privates.

If the drafting of 18-year-olds is the best way or the only way that America can be protected, certainly, they must be drafted. I am wondering whether such a draft would do anything other than save the rank of some of the brass.

Everybody I have talked to who has been home on furlough has complained of the fact that he has had nothing to do in the Army. Every parent that I have talked to who has a boy in the Army has said that the boy has written home complaining of his utter boredom. I talked to a chap who was drafted about 4 months ago who was home on leave and who told me that neither he nor any of his group had done a lick of work since they completed basic training, except a little KP and to police up the premises.

Obviously, everybody who is now in the United States Army does not know everything that he should know about war. Where are the Army schools that they want to send the 18-year-olds to? Why shouldn't the boys who are now in service go to school now? The better prepared those boys are for an eventual war, the safer this country will be.

I suppose the answer to the question is that the Army has no schools that are in shape to take care of these boys.

Has anybody made a personal inspection of the situation? Taking the 18-year-old boys off the high-school steps is a very serious matter both to the boys and to their parents and to this country. It would certainly seem to me that two or three Senators or Congressmen with a little ambition and the welfare of their country at heart

could spend a week making an unadvertised trip around the camps where these boys are loafing. It would seem to me that they could very profitably do several things: (1) Find out what the Army is doing with the boys that it now has in this country. (2) Does the Army have any schools to send boys to, and, if so, do these schools compare favorably with our high schools and colleges? (3) What are the moral conditions around the camps, and have provisions been made in advance for adequate supervision of the 18-year-olds? (4) Are the men in the Army who are handling the 18-year-olds competent and fit to work with the boys? (5) Has the Army aroused to the fact that an 18-year-old boy just out of high school must and should be treated very differently than the same boy in time of war or than the average prewar soldier? (6) Does the Army seem to be making efficient use of its personnel, or is it merely killing time with them?

If on that trip a couple of competent schoolmen were taken, it would seem very helpful to me. As you well know, the Army plan is to assemble a large body of men and then start talking about what it will do with them. That makes for discontent and tends to teach the boys to be loafers.

Specifically, what does the Army expect to teach a boy other than basic training that he could not be better taught by professional instructors in the public schools and colleges?

Does the Army have a definite plan for the training of the boys that is now in operation and that will keep them busy in the same way that they are now kept busy in the public schools and colleges? It would seem to me that it should produce that plan and have a plan that would meet the approbation of men who are skilled in the handling of youngsters. In other words, I would not think the Army ought to be trusted with these boys until it had a camp that would meet the approbation of trained peacetime Y. M. C. A. men and that would have the approval of trained public-school men.

In time of war, there is nothing to do but give your boys to the Army and trust in the Lord. With no disrespect to the Army, we all know that it is operated on the "hurry and wait" plan, and that there have been tremendous numbers of boys who have sat around for indefinite periods. Boys always get in trouble when they sit around. To my way of thinking, there is now no excuse for such a system.

No sane man would send his boy to a college that was going to be organized after the boy got there and merely on the promise of the college president that he knew all about training boys. No sane man would send his boy to a college that was not interested in the moral phases of that boy's education. No one who was very bright would send his boy to a place where their conception of social relaxation was a "beer bust" nor where the faculty had had no training in the teaching of boys. If the Army now has an adequate program to keep a boy busy, it certainly has kept it top secret.

This letter is too long, but it seems to me that the time is past when one must take the Army on faith. I can see no reason for being awed by many stars. It would seem to me that the Army program should be subjected to the same detailed scrutiny that one would give to any other institution holding out as being competent to train boys.

Does the Army know yet what it wants to train them for, specifically? Does it know how many boys it wants as auto mechanics; how many boys it wants for radio; how many boys it wants to run a telephone exchange? Can it give a specific reason why it believes it can make a better engineer out of a boy than Ames?

In short, can the Army now prove that at the end of a year, an 18-year-old will be more skilled in a particular job if he is in the Army than if he attended a vocational training school?

I recognize that the Army says that it will teach discipline. In view of the conduct of a great many of the boys who have just been discharged, I gather that by the word discipline, the Army does not mean personal discipline. It seems to me that that has some importance in view of the fact that the 18-year-olds may some day be soldiers but certainly will be citizens.

As usual I apologize for the length of my outburst, and I am not trying to tell a United States Congress how to run its business. I just keep wondering, however, whether anybody has ever gone out and personally investigated the situation or whether you are all relying on the testimony of some general who has no personal knowledge either. You as an experienced cross-examiner ought to really have some fun deflating some of these chaps who testify from compiled records and not from knowledge.

Sincerely,

HARRY M. REED.

## Idaho Legion Joins Fight To Eliminate Pauper Oath for Veterans

EXTENSION OF REMARKS
OF
### HON. HENRY C. DWORSHAK
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
*Friday, December 14, 1945*

Mr. DWORSHAK. Mr. Speaker, under leave to extend my remarks, I include the following statement by Joseph Leib, service officer of Vincent B. Costello Post, No. 15, the American Legion:

IDAHO LEGION JOINS FIGHT TO ELIMINATE PAUPER OATH FOR VETERANS

(By Joseph Leib)

It is gratifying to learn that among the first veterans' group in the United States to join in the fight to eliminate the obnoxious and un-American pauper oath for veterans was the Department of Idaho of the American Legion.

Idaho was one of the States that submitted a resolution to the national convention of the American Legion recently held in Chicago, Ill., urging the discontinuance of the oath which appears on the Veterans' Hospitalization Form P-10. The bureaucratic procedure has been the subject of a great deal of criticism by Members of Congress and former servicemen.

To date there are six bills pending in the Congress, as follows:

H. R. 599, by Representative SPRINGER.
H. R. 1923, by Representative MORRISON.
H. R. 2413, by Representative WICKERSHAM.
H. R. 2587, by Representative MARTIN of Massachusetts.
H. R. 2717, by Representative SASSCER.
H. R. 3332, by Representative BARRY.

Here is a copy of the resolution adopted by the Department of Idaho:

"*Be it hereby firmly resolved by the Twenty-seventh Annual Convention of the American Legion, Department of Idaho,* That the portion of the Form P-10 (application for hospitalization or domiciliary care), which deals with the applicant's financial ability to defray costs of either transportation or treatment, be stricken out.

"Whereas the allowance or disallowance of a service-connected disability is not contingent upon the financial status of the claimant, this convention wishes to go on record as being of the opinion that such a statement is impertinent and is not necessary for such admittance: Therefore be it

"*Resolved,* That until such time as the form can be revised deleting this entire question, service officers and Veterans' Administration facility representatives be instructed to execute the form P-10 ignoring completely the pauper statement, which at the present time is required to be answered in the affirmative."

## Problems Before the Ways and Means Committee

EXTENSION OF REMARKS
OF
### HON. THOMAS A. JENKINS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
*Friday, December 14, 1945*

Mr. JENKINS. Mr. Speaker, under leave to extend my remarks, I am inserting in the RECORD a copy of a speech that I was supposed to deliver before the Ohio State Chamber of Commerce at Columbus, Ohio, today, December 14, 1945. When those sponsoring the Columbus meeting realized the importance of legislation that was being considered in the House today they graciously excused me.

In my somewhat extended service in this House I have never missed an important vote. I have missed a few unimportant votes. I felt that the votes today were important.

The remarks which I had intended to make at Columbus today would have been, in substance, as follows:

Mr. Chairman, members of the Ohio State Chamber of Commerce, and friends, I appreciate your invitation to meet with you. You have a right to feel proud of the fact that yours is the largest State chamber of commerce in the country.

I have had many pleasant relationships with the officials and members of your great organization. You are fortunate in having at the head of your organization Mr. A. Graves Williams, who has given you so much of his time and genius. Likewise you are to be congratulated on having such a capable and efficient executive force. These men have made a most favorable impression upon Congress and upon those with whom they have come in contact.

From my work as a Member of Congress, I have long since been convinced that the great industrial and business organizations and the labor organizations should equip themselves so that they might be able to bring their problems clearly and promptly to the attention of those in authority in the Government.

Our forefathers recognized this fact because the first amendment to the Constitution provides that Congress should have no right to pass any law that would abridge the right of the people to "petition the Government for a redress of grievance."

The first amendment to the Constitution is also the first section of the Bill of Rights about which we hear so much in these modern days. The Bill of Rights did not give the people the right of free speech nor the right of free press nor the right of petition. It simply preserved to the people the right which they already had and protected them in these rights by providing that Congress should pass no law infringing on these rights. There is no doubt that the freedom of speech and the freedom of the press and the right to petition are sometimes greatly abused. Pressure groups of various kinds are much more numerous and powerful in these days than they ever have been.

The activities of some of these groups are becoming increasingly pernicious and I predict that in the future some drastic action will have to be taken to restrain those who abuse these privileges. Liberty is sometimes lost by those who enjoy it.

The Members of Congress and all others in official capacity should not be so weak as to yield principle to expediency. Taken as a whole, fair play is still one of the greatest natural sentiments of a free people.

Whether these pressure groups be laborers, distributors, or farmers, they are more and more bound to be brought to the realization that the public has a tremendous interest in their activities. One of the greatest present needs in our country is some plan whereby the right of the public will be given proper consideration at all times.

I am expected to discuss some of the problems coming before the Ways and Means Committee. I shall do so and in doing so I shall discuss the Ways and Means Committee itself.

We are much inclined to look upon the Constitution as something sacred and hallowed, and we should. But the Constitution was drawn at a very critical time in the history of our country and by very practical men. In writing this great document, their first concern was for a national legislature that would at all times represent both the people and the States. Having created such a legislative body the framers of the Constitution proceeded immediately to prescribe and distribute the powers which they intended the new legislature to exercise. In this way they created our republican form of government.

In a republic the right of sovereignty—the right to rule, is vested forever in the people themselves who act through their chosen representatives. No king, no dictator has any right to govern superior to the right of the people's chosen representatives. In our Republic there are two outstanding principles which the people must hold to themselves as closely as possible if their republican form of government is to endure. One of these is the control over the purse strings. The other is the control over the power to declare war. One means financial security and the other means personal security.

The first section of the Constitution immediately following those sections which created and set up the legislative departments of the Government, reads as follows:

"SEC. 7. All bills for raising revenue shall originate in the House of Representatives; but the Senate may propose or concur with amendments as on other bills."

The action of the framers of the Constitution in making this section its first declaration of principle indicates that they felt that this section expressed a most important principle and that it would guarantee to the people the control of the purse strings.

The First Congress that met under the Constitution assembled on March 4, 1789. It was nearly a month before a quorum could be counted but on April 1 sufficient Members had arrived at the Capital in New York to transact business. It is significant that the very first piece of legislation considered was a bill to raise revenue by imposition of certain import duties. So important was the subject of revenue in the minds of the founders of the country that within 4 months from the day Congress first met, action was taken to implement section 7 of article 1 of the Constitution by the appointment, on July 24, 1789, of a committee in the House, known as the Committee on Ways and Means. It was the first legislative committee appointed in the House and it has continued to function from that day to this, zealously defending its constitutional prerogatives and resisting every attempted encroachment by the executive branch of the Government on its exclusive right to initiate revenue legislation.

This committee is unique in that it was the first congressional committee to be set up by Congress and was set up to exercise and fulfill a constitutional mandate.

Many of the great men of the Nation have achieved their distinction by reason of their work on this committee. Our own William McKinley was a member of this committee and for years was its chairman. While he achieved distinction as governor and as President, yet the real foundation of his distinction was his work as chairman of the Ways and Means Committee.

Until 1865 the Ways and Means Committee not only had the responsibility of raising revenue but it was also the Appropriations Committee of Congress. There are many who still believe that the levying of the revenue and the spending of the money should be controlled by the same committee. The principal reason for the division of the activities of this committee was that the work was too heavy for one committee. Accordingly there was created in 1865 the Committee on Appropriations in the House and a similar committee in the Senate. It is not likely that these two committees will again be merged. It is likely, however, that a closer relationship will be established and maintained between these two great committees so that Uncle Sam's left hand may always know what his right hand is doing.

While it is generally considered that from the importance of its functions and duties, the Ways and Means Committee is the most important committee of Congress, and while the actions of this committee are practically always approved by the House, yet there has been a tendency in these latter years by the Executive to usurp the powers of Congress over financial matters. Most of the money that the Government has been spending in the last few years was not money collected from the people through the regular channels of taxation. It is money borrowed from the people through the sale of bonds dated ahead to be paid by future generations.

Just a few days ago you noticed by the papers that two members of the President's Cabinet had taken upon themselves the responsibility of tentatively settling $35,000,000,000 of lease-lend obligations owing to the United States from Great Britain for less than $1,000,000,000 and at the same time they tentatively obligated our country to loan to Great Britain $4,400,000,000 which probably will never be repaid. Such an important transaction as this should not be even tentatively agreed upon by two men. Congress should have been consulted. Of course, the loan cannot be made without congressional approval, but these tentative agreements usually establish a moral obligation. From this it is easy to argue that a moral obligation must be carried out.

### FINANCIAL PROBLEMS

This brings us logically to a discussion of some of the financial problems that face our country and which must be directly or indirectly considered by the Ways and Means Committee in the near future. These problems divide themselves into two categories.

First. The problems of taxation and fiscal policy.

Second. The problems of social security.

The financial situation of the Government is now in worse shape than it has ever been. There seems to be absolutely no financial program. Soon after Mr. Morgenthau was inducted into office as Secretary of the Treasury, he made a statement before the Ways and Means Committee that the financial policy of the Nation was largely a day-to-day policy. Subsequent events have shown that he told the truth. We evidently are still on a day-to-day policy.

Assuming that our national debt is $266,000,000,000, it will stagger you to know that this means that the share of the city of Columbus in this colossal obligation is $655,000,000. The interest on this debt now is approximately $4,500,000,000 per year or nearly $1,000,000,000 more than all Federal expenditures in 1933. Nearly twice as much money was spent from January 1, 1941 to July 1, 1945, as was spent by the Government during all of the time from 1789 down to the first of January, 1941. The total expenditures of the Government from 1789 to January 1, 1941, was $173,000,000,000. The amount spent between January 1, 1941, and July 1, 1945, was $315,200,000,000.

### PROBLEMS OF TAXATION AND FISCAL POLICY

It is not an easy matter to be able to establish just what our fixed obligations are and consequently it is a difficult matter to estimate what our running expenses will be. With the executive department making moral commitments on every hand, which commitments sometimes run into millions; with the Government agencies, such as the Import-Export Bank and UNRRA operating with wide limitations which can involve billions; with RFC and the Commodity Credit Corporation and other domestic agencies operating almost as wild; and with the OPA still paying billions out in subsidies, nobody is able to say with any degree of accuracy what our national debt is at this time. I maintain that with our outstanding moral obligations and with our overlapping spending, our national debt at this time is well over $300,000,000,000.

Every year since 1930 our Government has been running a big deficit. The following list shows the amount of these terrific deficits:

| | |
|---|---|
| 1931 | $800,000,000 |
| 1932 | 2,900,000,000 |
| 1933 | 2,200,000,000 |
| 1934 | 3,300,000,000 |
| 1935 | 3,800,000,000 |
| 1936 | 5,000,000,000 |
| 1937 | 3,300,000,000 |
| 1938 | 1,500,000,000 |
| 1939 | 3,500,000,000 |
| 1940 | 3,600,000,000 |
| 1941 | 5,100,000,000 |
| 1942 | 19,600,000,000 |
| 1943 | 55,900,000,000 |
| 1944 | 49,600,000,000 |
| 1945 | 53,900,000,000 |

You will note that 12 out of the 15 years above referred to were peacetime years. In other words, we failed during all the 12 years of peace to pay the running expenses of our Government which averaged about $4,500,000,000 per year. We are, we hope, entering a long era of peace. How can we possibly pay our running expenses when the interest alone, on the debt we have incurred, will equal, if not exceed, the annual total running expenses in the years preceding the war?

Our necessary expenditures for the year ending June 30, 1946, may reasonably be expected to total $67,300,000,000. We will have spent by June 30, 1946, about $30,000,000,000 more than we collect from taxes and other income sources in that year.

Looking ahead to the fiscal year of 1947, which begins July 1, 1946, the best available estimates now place our receipts at approximately $26,000,000,000, our expenditures at something under $50,000,000,000, and our resulting deficit at about twenty to twenty-four billion, provided, of course, no drastic tax reductions occur, and, provided further, that general business conditions are good.

These constantly recurring deficits have resulted in a staggering debt—a debt of such proportions that it threatens our very security. Let me ask you in all seriousness, what do you think? Can we pay this debt, and if so, how would you suggest we pay it? Most of you, I am sure, have given serious thought to this problem and know that there are only about three ways in which we can meet this terrific obligation. One is by inflation. Another is by repudiation or cancellation, and one is by taxation.

If we attempt to settle our debt by inflation we run the risk of lighting the torch that has consumed many another nation.

We surely will not burn our country up in the scorching conflagration of inflation.

Obviously, we cannot repudiate the national debt or any part of it. We surely will not enter upon a program of repudiation. That would be so dishonest and so contrary to the very genius of our Republic that we must not even contemplate it. Repudiation would mean that this Government or any other government so conceived and so dedicated would perish from the earth.

Therefore, if this debt is to be paid, we must pay it by taxation. Can it be done? It must be done.

Ours is now the greatest nation in the world. No one challenges our position in this respect. We have won this position in the crucible of the most vicious war that ever scourged the earth. It has cost us so much in manpower that there is now an American cemetery in virtually every country of the world. It has blasted our home life to such an extent that I am sure our people everywhere feel like saying as they did after the Civil War:

"No more shall the war cry sever
Or the winding river be red."

Although we have won this great war and now are the recognized leading nation of the world, we cannot get away from that immutable rule of life—that with great opportunity comes great responsibility. Our nation must not go down. The indomitable courage and the great ability and capacity of our people will meet this test.

Again I say, will we solve our financial problems by taxation? We can do so if we can settle our own domestic troubles. We are like the man who had seven sons who were continually quarreling. After providing himself with seven sticks he called his sons around him and said, "Now, boys, you can see that I can break each of these seven sticks if I break them one at a time. If I bind them together I cannot break any of them."

When we combine all our energies and all our resources and pull together to meet this tremendous financial obligation, we can do so.

We cannot pay a debt except with something that is worth something. In other words, this debt represents wasted wealth. It must be paid by new wealth. All wealth comes from a combination of three sources—from nature, plus the acumen of the human mind, plus the dexterity of the human fingers.

In other words, nature is still rich and the American people must remember that no excellence is achieved without great labor. Work was the magic word in the magnificent development of our great Republic. When the American people get over fighting with each other and when they all go to work as they should and will do, I think we can again pay our way into financial liberty and freedom.

If we cannot do this and if we assume to pay our taxes by increased rates and by taking a greater percentage of the earnings and savings of our people, we cannot pay out. We must create more wealth to tax and not look for more taxes on the wealth we have.

We must again review the whole tax and revenue situation so as to encourage industrial expansion and encourage wide and steady employment. The fallacious doctrine of scarcity must give way to the doctrine of full and free production of all classes of commodities, for it is by production that wealth is created. A part of something is worth more than all of nothing.

Our tax structure is wholly unsuited to our prospective peacetime requirements. Aside from being geared to wartime economy, it has long been in need of a thoroughgoing overhauling, including a return to sound tax principles and especially to simplification of the law and its administration. It is notoriously lacking in these respects.

An ideal tax system demands that due consideration be given to ability to pay. It must be broad and general in its application. It should be reasonably stable, and yet sufficiently elastic to be adaptable to changing economic conditions. Furthermore, a sound tax system cannot be built around one source of revenue to the exclusion of all others, and it must finally satisfy the requirement of justice and administrative feasibility.

I shall review in a general way some of the important changes made in the present tax laws by the Revenue Act of 1945 which becomes effective on June 1, 1946.

*Individual income taxes*

1. The present surtax exemptions are made applicable to the normal tax, effective January 1, 1946, thus providing exemptions of $500 each for the taxpayer, his spouse, and each of his dependents for the normal tax as well as for the surtax.

2. The surtax rate is reduced 3 percentage points in each bracket, effective January 1, 1946.

3. The combined normal tax and surtax is further reduced by 5 percent of the tax, effective January 1, 1946. Thus the combined normal tax and surtax rates in effect have a starting rate of 19 percent and reach a top rate of 86.45 percent on incomes over $200,000. However, the present combined limit on normal tax and surtax of 90 percent of net income is reduced to 85.5 percent.

4 About 12,000,000 low-income taxpayers were taken from the tax rolls as a result of these changes.

*Partnerships*

The changes in individual income taxes also affect partnerships as well as individuals since the income of a partnership is taxable to the partners under the individual income tax.

*Application of individual income taxes to members of the armed forces*

1. All service pay received by enlisted personnel after December 31, 1940, and before the termination of the war is excluded from taxable income.

2. The time for paying taxes attributable to service pay of commissioned officers is extended and the tax is to be paid, without interest, in 12 quarterly installments over a 3-year period.

3. A similar extension of time for payment is provided for taxes attributable to preservice earned income for 1940 or 1941 if the tax became due after the taxpayer's entry into the service.

*Corporate taxes*

1. The excess-profits tax is repealed, effective January 1, 1946.

2. The 2-year carry-back of unused excess-profits credits is retained for 1946 in spite of the repeal of the excess-profits tax at the first of that year.

3. Corporate surtax rates are reduced to 38 percent from the present 40 percent for corporations with income over $50,000. For corporations with income under $50,000 the rates are reduced 4 percentage points on the first $25,000 of income and for income between $25,000 and $50,000 the effective rates are reduced from two to four percentage points. The new schedule of combined corporate normal and surtax rates provided in the Revenue Act of 1945 and as compared with the old law is as follows:

*Combined normal tax and surtax rate on income in bracket*

| Income: | *Revenue Act of 1945 (percent)* | *Old law (percent)* |
|---|---|---|
| Net over $5,000 | 21 | 25 |
| Over $5,000 but not over $20,000 | 23 | 27 |
| Over $20,000 but not over $25,000 | 25 | 29 |
| Over $25,000 but not over $50,000 | 53 | 53 |
| Tax rate on all incomes of corporations with income over $50,000 | 38 | 40 |

4. The capital-stock tax is repealed with respect to the capital-stock tax year ending June 30, 1946, and the declared-value excess-profits tax with respect to the related taxable year.

*Excise taxes*

1. The automobile-use tax is repealed, effective July 1, 1946.

2. With respect to the excise war tax rates imposed by the Revenue Act of 1943, no change is made in the existing law which provides that such rates will be reduced to the 1942 levels approximately 6 months after the termination of hostilities. However, when these excises are thus reduced, this bill provides that tax refunds to the extent of the tax-rate reductions are to be made on floor stocks of alcoholic beverages and electric-light bulbs.

*Employment taxes*

Employment taxes for the old-age and survivors' insurance program under this bill are frozen at the present rate of 1 percent on wages paid by employers and 1 percent on wages received by employees instead of being allowed to increase in 1946, as provided by present law, to rates of 2½ percent on each of these groups.

*Revenue effect of changes made by Revenue Act of 1945*

The reduction in tax liabilities arising from the tax bill as it finally passed the House has been estimated at $5,920,000,000 for 1946. Reductions in the individual income taxes are expected to account for $2,644,000,000 of this total, and reduction in corporate taxes to account for $3,136,000,000. The remaining $140,000,000 represents the estimated reduction resulting from the repeal of the automobile-use tax.

Taxes are an inevitable part of government. To reduce taxes, we must increase our wealth. We must widen the tax base and last, but not least, we must remember that thrift is yet a virtue. We must also remember that extravagant public spending does not reduce taxes.

PROBLEMS ARISING FROM ECONOMIC SOURCES, SUCH AS SOCIAL SECURITY

I think that the most comprehensive and far-reaching piece of domestic legislation ever passed by the Congress was the Social Security Act of 1935. As you know, that act dealt with many subjects, among them old-age pensions, blind pensions, old-age assistance, unemployment compensation, aid to dependent children, etc. You would wonder why legislation of that kind would come before the Ways and Means Committee. The reason is that each of these programs cost the Government a lot of money and it was necessary to include in the same legislation provisions for raising funds with which to carry on these additional activities. It is only natural that such a far-reaching new piece of legislation would in its operation develop some imperfections that would call for amendments and modifications. In 1939 it was amended in several respects, but it has had no general overhauling since that time. It is now again due for some necessary amendments. It is likely that when the subject is opened for these necessary amendments there will be a great number of other amendments of all kinds presented for consideration.

Those who think that the coverage should be widened so that many other people could be included have also been pressing their claims. Then there are those who think that the program should be widened so as to include universal hospitalization and universal medical care. Just what will happen in these respects, I do not know. In fact nobody knows. I think I can safely say, however, that the chances are that the Ways and Means Committee will some time between the 1st of January and the 1st of July give thorough consideration to amendments to the Social Security Act. Just what

will be considered and what will be adopted it would be idle for me to speculate further.

As you know, amendments to one title of the Social Security Act have been before Congress for consideration for some time. I refer to the amendments pertaining to unemployment compensation. The Senate, in this session of Congress, passed a bill providing for amendments to the unemployment compensation laws. The Ways and Means Committee of the House refused by a vote of 14 to 10 to recommend any changes in the present law. When the bill which the Senate passed came to the House for consideration, it was referred to the Ways and Means Committee, which committee proceeded to put it in cold storage where it still reposes. The President thereupon castigated the committee for its refusal to reconsider its action, but so far this committee has shown that it is still tough and still hard to scare.

The money spenders in Washington apparently appreciate the difficulty in getting the approval of the Ways and Means Committee for legislation calling for great expenditures. For that reason they have arranged to have the proposed national health program legislation referred to another congressional committee. This health program with its socialization of medicine, if adopted as it has been written, will cost the Government many billions. The authors and those supporting this legislation have craftily omitted any reference to taxes in the bill and in that way have succeeded in having the bill relieved from the ordeal of being considered through the Ways and Means Committee. Apparently, they expect to pass the bill authorizing these countless millions and then expect the Appropriations Committee to appropriate the money.

The bill makes no reference as to how the money is to be raised. All other legislative measures referring to social security have provided for the levying of a tax from which the expenses of such legislation would be made heretofore considered. All such measures have been referred to the Ways and Means Committee.

This effort to by-pass the Ways and Means Committee is proof of how free these spenders are with the people's money and how lightly they consider the national debt and the financial burdens they place on the people.

Returning, therefore, to my theme as to what the Ways and Means Committee will probably consider during the next session of Congress, no doubt it will take up the subject of taxation with the idea in mind of doing the best that can be done under these very stressful and discouraging circumstances. The revenue laws will be amended.

Second, it will give thorough consideration to social-security legislation. With what result I will make no prophecy.

Please remember that the country is in a critical financial condition. The duties and responsibilities of Congress are heavy. The average Congressman fully appreciates his obligation to faithfully advance the general welfare of the people.

## A Communication From a Marine

EXTENSION OF REMARKS

OF

### HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

*Friday, December 14, 1945*

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein a letter I received from a young marine that I have known a good many years, together with a newspaper clipping from the Stars and Stripes:

SIXTH BASE DEPOT GENERAL SUPPLY,
CARE FPO, SAN FRANCISCO, CALIF.,
*November 29, 1945.*

DEAR SIR: The enclosed article from the Stars and Stripes newspaper is further evidence of a poorly managed discharge system.

I also fought on Iwo Jima from D-day until the operation was completed. I am writing to you not in an attempt to have you intervene in securing my release from the Marine Corps. I do, however, insist that you make every effort to amend the discharge system. As a suggestion I propose a committee of the legislative body, who will have full control of the administration of a fair discharge system. The War Department would be answerable to this committee.

Any fair discharge system should secure the immediate release of men who have served at least 18 months overseas regardless of points. In all fairness, if a 38-pointer who fought on Iwo Jima was discharged, any man who has a minimum of 18 months overseas and fought in the campaign should be promptly released.

I strongly urge you to use these facts and direct it to any committee working on this discharge controversy.

Your prompt reply is requested.

Respectfully yours,

RAY F. BRIGHTMAN, Jr.

P. S.—The following men fought on Iwo Jima and now have 18 months overseas:

Charles J. Bowden (546687), Tewksbury, Mass.; Paul R. Bonar (853664), Fort Wayne, Ind.; Ray F. Brightman, Jr. (546623), Methuen, Mass.; Alfred C. Botel (553946), Amsterdam, N. Y.; Francis W. Brown (829414), Washington, D. C.; Adam Boruta (538994), New Bedford, Mass. (12 months); Virgil Bouknight (993524), Newberry, S. C. (12 months); George G. Greco (541044), Newark, N. J. (17 months); Oscar W. Bowers (993521), Prosperity, S. C. (13 months); Albert E. Burslem (925443), Paterson, N. J.; Leo F. Pion (976590), North Grafton, Mass.; John "S." Shrewsbury (963747), Nevada, Mo.; Floyd W. Bramlett (987170), Decatur, Ga. (12 months); Edward H. Bohemin (80223), Springfield, Mass. (12 months); Frank B. Lane (825744), Golden Pond, Ky. (17 months); Charles Kensil (966688), Philadelphia, Pa.; Charles W. Harmon (931384), Elgin, Ill.

The following-named men have 24 months overseas now and are ineligible for discharge:

Stephen Sandella (538968), Wakefield, Mass.; Donald G. Glaze (913779), El Campo, Tex.; W. J. Hopson (916326), Cadiz, Ky.; Keith C. Grant (523645), Topeka, Kans.; Thomas Alderman, Jr. (543670), Oak Hill, W. Va.; Leo J. Mausser (897261), Cleveland, Ohio; William R. Henson (875926), Santa Paula, Calif.; Edward F. Leitz (558305), Milwaukee, Wis.; Clarence Brock (873789), Farriston, Ky.; Ralph L. Arle (534306), Shreveport, La.; Clarence N. Corwin (548895), Los Angeles, Calif.; Al Cesione (855238), New Jersey.

[From the Stars and Stripes of November 28, 1945]

THE EASY WAY OUT

GREAT LAKES, ILL.—Pfc Jack MacNider, 18, son of Brig. Gen. Hanford MacNider, was discharged Tuesday from the Marine Corps, the Navy public relations office has revealed.

Young MacNider said he had a total of 38 points for his service in Iwo Jima and other Pacific battles. The Marine point requirement is 50, but MacNider said he received a special order discharge.

In Washington the Marine Corps said young MacNider was discharged at the request of General MacArthur.

A statement issued from the office of Marine Corps Commandant Gen. A. A. Vandegrift said:

"Pfc Jack MacNider, United States Marine Corps Reserve, was returned to the United States and discharged from the Marine Corps in accordance with a radio request of General MacArthur, supreme commander in the Far East."

General MacArthur relayed to Marine Corps headquarters the request that General MacNider's son be permitted to return home from Tokyo, but MacArthur has no knowledge of young MacNider's discharge, a headquarters spokesman said in Tokyo Wednesday.

The spokesman made public an exchange of radio messages involving Private First Class MacNider.

To General VANDERGRIFT:

"MacNider very anxious bring son, Pfc Jack MacNider, Fifth Marine Division, now on furlough, back with him to United States to continue his medical schooling. If you can authorize such procedure, be glad arrange air transportation for return with his father to United States where he will report any station you may designate."

The reply:

"Procedure outlined is authorized. Please direct Pfc Jack MacNider report marine barracks, Naval Training Center, Great Lakes, Ill. duty and grant him 30 days delay en route if he so desires."

The youth's father, former National Commander of the American Legion, commanded the One Hundred and Fifty-eighth Regimental Combat Team in the invasions of New Guinea and the Philippines.

General MacNider said in Mason City, Iowa, that Jack had enlisted on his seventeenth birthday and "I asked permission to bring him back (from Japan) with me so he might continue his pre-medic studies."

The general has two other sons who enlisted on their seventeenth birthdays and now are out of service—Tom, 19, was an Air Force cadet given an option to leave the service and did; Angus, 17, received a medical discharge from the Navy.

## There Always Will Be a U. S. A. If We Do Not Give It Away

EXTENSION OF REMARKS

OF

### HON. ROBERT F. RICH

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

*Friday, December 14, 1945*

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the Appendix of this day's RECORD on the subject There Always Will Be a U. S. A. If We Do Not Give It Away.

To the American people I am only trying to inform you of just what this administration is trying now to do with the balances of your resources, the resources that belong to the people of this country. Do you citizens know that we have a national debt of over $265,000,000,000, the largest in our history before this administration came into power, by about 1,000 percent or 10 times more than it was at the end of World War I.

A dreadful position to be in. Well, as bad as it is if we buckle our belts and go

to work we could in years and years take care of the debt and remain under our Constitution and still have our freedom and liberty. Providing, providing, providing we get a balanced budget and go to work, everybody go to work and get on to the job, that is vitally necessary. Now let us see what you are doing in Government as I see it, still spending more and more instead of less and less. Now you must be frugal and do those things that are necessary and leave undone a lot of crackpot schemes that do not have to be done at this time.

Many things can be put off till some future date, and thus not muddy the waters. Now suppose that someone owed you $50 on a promise to pay by a certain time. If he refused to pay the $50 when due would you loan him $50 additional? I believe not. If a party bought merchandise from you for $100 and refused to pay the bill would you sell him $50 more merchandise? I do not believe you would.

Now let us review our loans to Great Britain who the State Department wants us to loan $4,400,000,000 of your money that you will be held responsible for if they do not pay it. In the first place Great Britain owes us in principal and interest over $6,400,000,000 from the First World War. She owes us over $32,000,000,000 under the lend-lease agreement. The understanding is that in granting the loan of $4,400,000,000 of your money you are to cancel their obligation to you of $32,000,000,000 of lend-lease money. Is not that the most ridiculous thing that you have ever heard of? I have never heard anything so foolish, so unsensible, so ridiculous.

The recommendation for the loan is that it be made for 5 years without interest that alone is a gift to Great Britain of $500,000,000. Have you $500,000,000 to give away with a debt of $265,000,000,000? The loan also is at 2-percent interest, providing that Great Britain has a balanced budget, then she pays the interest. If she does not, she does not pay us interest. Whoever heard of such a poor deal for America as that? Why she may never pay any interest. In fact, she has not paid her debts to us, and I frankly must confess I do not think she will ever pay this loan if it is made. And it will not be made under the terms and conditions as is recommended by the State Department by my vote. I will not obligate all the people in my district for this additional debt without their consent. Our people in the Fifteenth District of Pennsylvania have enough debt, enough taxes to pay, and I shall not obligate them for any more debt in this manner without their consent. I am for America first, last, and all the time. We will always be a United States of America if we do not give it away. Let me ask you, What did Great Britain ever do for the United States of America? I ask you this in good faith. Name it. Tell me or write to me about it. I am not for giving them money to buy their railroads, their coal mines, or their public utilities as promised by the party in power. I will never socialize any country.

## Report on the Quebec Conference of United Nations Food and Agricultural Organization

---

EXTENSION OF REMARKS
OF

### HON. ARTHUR CAPPER

OF KANSAS

IN THE SENATE OF THE UNITED STATES

*Saturday, December 15 (legislative day of Monday, October 29), 1945*

Mr. CAPPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a report I have received from Clinton P. Anderson, Secretary of Agriculture, on the Quebec Conference of the United Nations Food and Agricultural Organization, held on October 16 to November 1, 1945. The purpose of this conference was to develop a program dedicated to the aims of more adequate food and clothing for all the people of the world and at better levels of living for the world's food and agriculture producers. I think this program is of great benefit to agriculture.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

DEPARTMENT OF AGRICULTURE,
*Washington, November 26, 1945.*

Hon. ARTHUR CAPPER,
*Senate Office Building,*
*Washington, D. C.*

DEAR SENATOR: In accordance with your request of November 3, I am enclosing a report on the Quebec Conference of the United Nations Food and Agriculture Organization.

With kindest regards, I am

Sincerely yours,

CLINTON P. ANDERSON,
*Secretary.*

---

THE FAO CONFERENCE AT QUEBEC

The first session of the Conference of the Food and Agriculture Organization of the United Nations was held in Quebec City, Canada, from October 16 to November 1, 1945. The purpose of the Conference was to create, organize, and give general direction to the first year's program of FAO, a body dedicated to the aims of more adequate food and clothing for all the people of the world and of better levels of living for the world's food and agricultural producers—that is, the farmers, forest workers, and fishermen.

The Conference accomplished its purposes in a manner highly satisfactory to the delegation of the United States.

As President Truman pointed out in his message to the Conference, the one vital interest of this country was to get FAO off to a good start. "The task of repairing the ravages of war and building for a saner future," the President said in part, "are tremendous. Each day it becomes clearer that in many ways we must work harder to win the peace than we did to win the war. But we know that the peace can be won. One of the major victories can be won at Quebec.

"The United States is eager and proud to take its full part in your efforts. The success of this all-important first step in the life of the food and agriculture organization is the primary aim of my country's delegation. Its members come to this Conference prepared to work together with the delegations of other nations for the good of all, and to bear their full share of the responsibility for a successful outcome."

I am glad to report that the President's hopes were realized at Quebec. Members of the United States delegation did take a leading part in the work of the Conference. They worked in close accord with the representatives of other countries, and found an equally sincere desire on their part for understanding and cooperation.

As a result of the Quebec Conference, the Food and Agriculture Organization of the United Nations now is a going concern—the first of the permanent international bodies to grow out of the wartime cooperation of the United Nations. It has a truly great director general—Sir John Boyd Orr of Scotland. It has a strong and well-balanced Executive Committee, a workable constitution, and a forward-looking but practical budget of early projects.

Before any more detailed report on how the Conference went about its work and what it accomplished, a brief review of the nature and idea of the FAO may be helpful.

For all practical purposes the Food and Agriculture Organization is an outgrowth of the United Nations Conference on Food and Agriculture held at Hot Springs, Va., May 18 to June 3, 1943; although for years previous to that, world interest in the problems of food and agriculture had been growing.

The Hot Springs Conference was convened by the United States Government upon the initiative of President Roosevelt. In a letter to members of that Conference, President Roosevelt said in part:

"This is the first United Nations Conference. Together, we are fighting a common enemy. Together, also, we are working to build a world in which men shall be free to live out their lives in peace, prosperity, and security. * * *

"We know that in the world for which we are fighting and working, the 'four freedoms' must be won for all men. We know, too, that each freedom is dependent upon the others; that freedom from fear, for example, cannot be secured without freedom from want. If we are to succeed, each nation individually, and all nations collectively, must undertake these responsibilities: They must take all necessary steps to develop world food production so that it will be adequate to meet the essential nutritional needs of the world population. And they must see to it that no hindrances, whether of international trade, of transportation or of internal distribution, be allowed to prevent any nation or group of citizens within a nation from obtaining food necessary for health. Society must meet in full its obligation to make available to all its members at least the minimum adequate nutrition. The problems with which this Conference will concern itself are the most fundamental of all human problems—for without food and clothing life itself is impossible."

Forty-four countries, either members of the United Nations or associated with them, attended the Hot Springs Conference. They were: The Governments of Australia, Belgium, Bolivia, Brazil, Canada, Chile, China, Columbia, Costa Rica, Cuba, Czechoslovakia, Dominican Republic, Ecuador, Egypt, El Salvador, Ethiopia; the French representatives; the Governments of Great Britain, Greece, Guatemala, Haiti, Honduras, Iceland, India, Iran, Iraq, Liberia, Luxemburg, Mexico, Netherlands, New Zealand, Nicaragua, Norway, Panama, Paraguay, Peru, Philippine Commonwealth, Poland, Union of South Africa, Union of Soviet Socialist Republics, United States of America, Uruguay, Venezuela, and Yugoslavia.

In addition, Henrik de Kauffmann, the Danish Minister at Washington, attended the sessions in a personal capacity in response to an invitation from the United States Government.

As a result of the discussions at Hot Springs, members to the Conference reached a clear agreement on such basic points as these:

The world has never had enough to eat. At least two-thirds of its people are ill-nourished; many face periodic starvation; and this in spite of the fact that two-thirds of the world's people are farmers.

The modern science of nutrition proves beyond doubt that if all people could get enough of the right kinds of foods, the average level of health and well-being could be raised much higher than it is now.

The modern science of production shows how to produce enough of the right kinds of foods. To do it, farmers everywhere must have the opportunity to use modern production methods.

But production alone is not enough. Foods must be so distributed that the levels of consumption of those who do not have enough are progressively raised.

This implies an expanding world economy, in which each nation will play its own part, but all will act together. Only by acting together can nations, in the close-knit modern world, achieve peace, prosperity, and rising standards of living.

The Conference recommended establishment of the United Nations Interim Commission on Food and Agriculture and specified that the field should be construed broadly enough to include forestry and fisheries. The Interim Commission was directed to make plans for a permanent organization. L. B. Pearson, of Canada, was elected chairman. The United States member of the Interim Commission was Paul Appleby, Assistant Director of the Budget. About a year later he was succeeded as United States member by H. R. Tolley, Chief of the Bureau of Agricultural Economics.

The Commission worked hard and carefully at two major tasks—preparation of a constitution for the permanent Food and Agriculture Organization, and a series of technical reports which would serve as a starting point for the work of the first FAO Conference.

The first draft of the constitution was completed by January 1944 and sent to the several governments for comment and suggestions. The final draft was ready for submission by July 1944. Within the next year more than 20 nations (the number required to bring FAO into existence) had formally or informally indicated their acceptance of the constitution. The acceptance of the United States took the form of a resolution approved by both the House and Senate.

In the meantime, the Interim Commission had been making studies and recommendations as to the structure and functions of the new organization and had published the reports of technical committees on nutrition and food management, agriculture, forestry, fisheries, and statistics.

The call for the Quebec Conference was issued August 14, 1945—the day of Japan's capitulation. All of the nations represented at Hot Springs were invited, as was Denmark, which had had personal rather than official representation at the earlier meeting. A few other countries were invited to send observers. Under the constitution only the 45 Hot Springs participants were eligible to be charter members of FAO.

As a result of the work of the Interim Commission, much spadework already had been done before the Quebec Conference opened. Through the reports of the technical committes and through other studies, the work of committees at Quebec was largely a matter of selecting, amending, and approving.

The fact that the proposed constitution had received prior approval from most of the participating governments still further narrowed the field in which the first FAO conference worked; that is, there already was agreement as to the Organization's chief aims and general method. The aims are set forth in the preamble to the constitution:

"The nations accepting this constitution, being determined to promote the common welfare by furthering separate and collective action on their part for the purposes of raising levels of nutrition and standards of living of the peoples under their respective jurisdictions, securing improvements in the efficiency of the production of all food and agricultural products, bettering the condition of rural populations, and thus contributing toward an expanding world economy, hereby establish the Food and Agriculture Organization of the United Nations."

The general nature of FAO's functions were outlined in article I of the constitution as follows:

"1. The Organization shall collect, analyze, interpret, and disseminate information relating to nutrition, food, and agriculture.

"2. The Organization shall promote and, where appropriate, shall recommend national and international action with respect to (a) scientific, technological, social, and economic research relating to nutrition, food, and agriculture; (b) the improvement of education and administration relating to nutrition, food, and agriculture, and the spread of public knowledge of nutritional and agricultural science and practice; (c) the conservation of natural resources and the adoption of improved methods of agricultural production; (d) the improvement of the processing, marketing, and distribution of food and agricultural products; (e) the adoption of policies for the provision of adequate agricultural credit, national and international; (f) the adoption of international policies with respect to agricultural commodity arrangements.

"3. It shall also be the function of the Organization (a) to furnish such technical assistance as governments may request; (b) to organize, in cooperation with the governments concerned, such missions as may be needed to assist them to fulfill the obligations arising from their acceptance of the recommendations of the United Nations Conference on Food and Agriculture; and (c) generally to take all necessary and appropriate action to implement the purposes of the Organization as set forth in the preamble."

Thus the chief tasks of the Quebec Conference were those of formally creating FAO, of perfecting and approving the interim commission's suggestions as to organization and programs, and of choosing a director general and an executive committee.

The Conference opened at 4 p. m. October 16 at the Chateau Frontenac, where all of the plenary and committee sessions were held and where most of the delegates stayed. The United States delegation had arrived the preceding afternoon. Make-up of the delegation, as announced October 3 by President Truman, was:

United States member: Hon. Clinton P. Anderson, Secretary of Agriculture.

Deputy United States member: Hon. William L. Clayton, Assistant Secretary of State.

Alternate United States member: Howard R. Tolley, United States representative on the United Nations Interim Commission on Food and Agriculture.

Congressional advisers: Hon. ELMER THOMAS, United States Senate, chairman, Committee on Agriculture and Forestry; Hon. RAYMOND E. WILLIS, United States Senate, member, Committee on Agriculture and Forestry; Hon. JOHN W. FLANNAGAN, Jr., United State House of Representatives, chairman, Committee on Agriculture; Hon. CLIFFORD R. HOPE, United States House of Representatives, member, Committee on Agriculture.

Advisers: Andrew W. Anderson, Fish and Wildlife Service, Department of the Interior; Paul Appleby, Assistant Director, Bureau of the Budget; H. G. Bennett, president, Oklahoma Agricultural and Mechanical College, Hugh Bennett, Soil Conservation Service, Department of Agriculture; Homer L. Brinkley, president, National Council of Farmer Cooperatives; R. E. Buchanan, Director, Agricultural Experiment Station, Ames, Iowa; Edward G. Cale, Acting Associate Chief, Commodities Division, Department of State; P. V. Cardon, Agricultural Research Administration, Department of Agriculture; A. L. Deering, dean, College of Agriculture, University of Maine; Mordecai Ezekiel, Bureau of Agricultural Economics, Department of Agriculture; Albert S. Goss, Master, the National Grange; Henry S. Graves, college of forestry, Yale University; L. Wendell Hayes, Divisional Assistant, Division of International Organization Affairs, Department of State; Edward I. Kotok, Forest Service, Department of Agriculture; Edward A. O'Neal, president, American Farm Bureau Federation; Thomas Parran, Surgeon General, United States Public Health Service; James G. Patton, president, National Farmers Union; Hazel K. Stiebeling, Bureau of Human Nutrition and Home Economics, Department of Agriculture; Leroy D. Stinebower, Deputy Director, Office of International Trade Policy, Department of State; Anna Lord Strauss, president, National League of Women Voters; Clifford C. Taylor, agricultural attaché, American Embassy, Ottawa, Canada; Lyle F. Watts, Forest Service, Department of Agriculture; L. A. Wheeler, Office of Foreign Agricultural Relations, Department of Agriculture; M. L. Wilson, Extension Service, Department of Agriculture.

Press relations officer: Henry Jarrett, Bureau of Agricultural Economics, Department of Agriculture.

Secretaries of delegation: James G. Maddox, Bureau of Agricultural Economics, Department of Agriculture; Clarke L. Willard, Assistant Chief, Division of International Conferences, Department of State.

Other official duties prevented Assistant Secretary Clayton and Mr. Appleby from attending. Two additional advisers, however, joined the delegation during the conference. They were Harry Carlson, assistant to the Secretary of Commerce, and Samuel Jackson, former United States Senator.

The Food and Agriculture Organization officially came into existence the first afternoon of the Conference when representatives of 30 nations, including the United States, signed the constitution. By the end of the conference 42 nations had become members. The following member nations were represented at Quebec:

Australia, Belgium, Brazil, Canada, China, Colombia, Cuba, Czechoslovakia, Denmark, Dominican Republic, Egypt, France, Greece, Guatemala, Haiti, Honduras, Iceland, India, Iraq, Liberia, Luxemburg, Mexico, Netherlands, New Zealand, Nicaragua, Norway, Panama, Peru, Philippine Commonwealth, Poland, Union of South Africa, United Kingdom, United States of America, Venezuela, Yugoslavia, Syria, and Lebanon. The two list-named countries had started out as observers at the Conference and subsequently had applied for membership and had been admitted unanimously.

Five other member nations—Bolivia, Chile, Ecuador, Paraguay, and Uruguay—were not represented at the conference.

Accredited observers were present from the Union of Socialist Soviet Republics, the Eyelo-Russian and Ukranian Socialist Soviet Republics, and Argentina.

The U. S. S. R., which had been represented at Hot Springs and on the interim commission, sent a good-sized and able delegation of two dozen or so to Quebec and participated actively in the work of the plenary session and the commitees. Announcement that the U. S. S. R. was not ready to accept

full FAO membership at the present time occasioned general regret. L. B. Pearson, conference chairman, made the following statement in reporting the Russian decision to the Conference:

"This morning I had a conversation with the head of the Soviet delegation. He assured me that his Government has the same objectives and sets for itself the same tasks as FAO, that it endorses the idea of international cooperation for the improvement of agricultural production and the bettering of the food situation of the United Nations.

"The Government of the U. S. S. R. feels, however, that the organizational forms of FAO still require study. It has also become necessary for the Soviet Union to consult those of its republics which are large producers of agricultural products and agricultural raw materials.

"For these reasons the U. S. S. R. is abstaining from becoming a member of FAO at this time, and its representatives will continue to attend the first session of FAO only as observers.

"I know that I am speaking for every member of the Conference when I say that it is our earnest hope that the Government of the U. S. S. R. will soon be able to accept the constitution of FAO, which is the first of the specialized Organizations to be set up by the United Nations. The U. S. S. R., as an indispensable member of the United Nations and as one of the nations which has already ratified the UNO Charter, will be greatly interested and concerned in the work of FAO. We hope, therefore, that it will not be long before it expresses that interest by accepting all the rights and obligations of full membership of our Organization."

In the field of organization, the Conference set FAO on its feet as a functioning international body. Much of this work naturally took the form of detailed arrangements and procedures too numerous to be included in this report. The complete details can be found in the report of Commission B of the Conference.

A few points are worth special mention. The permanent headquarters of FAO is to be the same place as that ultimately selected as the seat of the United Nations Organization. This decision was reached on the understanding that the seat of the UNO will also be that of its Social and Economic Council. The temporary seat of FAO is to be Washington.

The question of permanent regional offices was reserved for action by next year's FAO Conference on recommendation of the director general and executive committee. The committee and the director general have the authority, however, to establish provisional regional offices in the meantime.

Provision was made for the closest possible working relations between FAO and other United Nations organizations, especially those that along with FAO will be associated with the Social Economic Council. To avoid duplication and confusion, it was recommended that the affairs of the International Institute of Agriculture and the Comite International du Bois be wound up, and their functions and equipment taken over FAO. To accomplish this in an orderly and legal manner, the member countries of FAO who also are members of the other two organizations (in each case they constitute a decided majority) were requested to take steps looking to prompt liquidation of IIA and CIB.

As for finances, the total budget for the first fiscal year which will run for 8½ months, until June 30, 1946, was set at $2,500,000, and the budget for the next fiscal year—the full 12-month period starting July 1, 1946—was set at $5,000,000. The United States share for the first fiscal year is $625,000, and for the second, $1,250,000. It is provided that no country's contribution can exceed 25 percent of the total budget. Because of unusual conditions in many member countries that were ravaged by war, no attempt has as yet been made to work out any permanent methods for establishing the contributions of member nations. The apportionment for the second fiscal year represents some modifications in the form used for the first year, but it was recognized that conditions will have to be more settled before a formula taking into consideration such factors as population, national wealth, and national income can be devised.

The staff of FAO is to be appointed by the director general and, in keeping with the constitution, selection and compensation are to be made without regard to race, nationality, creed, or sex. Appointment of deputy directors general, of which there are to be no more than three, will be subject to confirmation by the Executive Committee.

Actual selection of a director general and the Executive Committee constituted the second major phase of the organizational work done as Quebec. Sir John Boyd Orr, who had come to the conference as an adviser to the United Kingdom member, was unanimously chosen director general for a term expiring December 31, 1947. The salary for the position was set at $18,000 a year plus a $10,000 representation allowance.

It is almost needless to mention Sir John's world-wide reputation as a nutritionist and agricultural scientist. His attainments as a farmer and as an administrator of a research organization are perhaps not so widely known. He was born in 1880 in Ayreshire, Scotland, and holds Glasgow University degrees in the arts, sciences, and in medicine. He founded the Rowett Institute for Research in animal nutrition at Aberdeen, Scotland, and has been its director until his election to Parliament this year as representative of the Scottish universities. In addition to being interested in the operation by the institute of the 1,000-acre farm, Sir John owns and operates a large general farm in Scotland.

In his acceptance speech Sir John said, in part:

"I think most of you will agree that we are now passing through the greatest crisis in the history of our civilization. That crisis has been brought about by the advance of science. In the last 40 years science has advanced more than it did in the previous 2,000 years. Physical science has let loose tremendous new forces into the world. Those forces cannot be bottled up; they must either be harnessed to serve the ends of mankind, or they will break loose in a riot of destruction.

"How those forces are used will affect all nations equally. The world is now so small that any war will be a world war; any prosperity must be a world prosperity. Governments realize this, and they are, therefore, attempting to set up world organizations which will enable those powers of science to be applied on a world scale. It is very fitting that FAO should be the first of these organizations. It deals with the primary products of land and sea; it deals with food—the primary necessity of life.

"Let me say a word about what FAO must accomplish. Each nation has accepted the responsibility, which indeed must be the responsibility of any government, to provide, as far as possible, food and a health standard for all the peoples it governs. But something new has arisen. All the governments have agreed to cooperate in a great world food scheme, which will bring freedom from want of food to all men, irrespective of race or color.

"I ask you for a moment to consider what the great results will be. In the first place, disease and misery and premature death, which afflict the majority of the people of this planet, will, to a large extent, be replaced by health, by happiness, and by life.

"But other results will follow. If the nations of the world are going to get together to feed the people of the world, they must increase the production of the most important foods. In many cases that production must be more than doubled. This will bring prosperity to agriculture. There should be no slump in agriculture after this war, such as after the last war, and prosperity in agriculture must overflow into other businesses and into world trade.

"But we do these things not because they will bring prosperity but because they are right. We have now reached the stage, I hope, when we realize that if we put first things first, and do the things which we know to be right, a great many social, economic, and political difficulties will disappear. * * *

"I hope that upon their return to their own countries, all delegates will report to their governments that this Organization has been launched in a spirit of great good will, and that it has been set on its course to make its great contribution to the promotion of human welfare and to the unity of the nations of the world. I also hope that all delegates will inspire their governments with the enthusiasm which has been generated at this Conference, so that all the nations will put their resources of men and materials at the service of this great Organization, which will have the great honor of laying the first stone in the foundation of that great new world which modern science has made possible."

The executive committee, which is to exercise the power of full conference in the periods between the annual meetings of that body, consists of 15 members chosen by the conference for their personal qualifications rather than as formal representatives of their governments. Eventually, each committee member will be chosen for a 3-year term. It is also provided that one-third of the membership shall be chosen each year. Therefore, it was necessary that one-third of the first group of committeemen chosen should serve for 1 year, one-third for 2 years, and one-third for 3 years. When the 15 nominations to the executive committee had been approved unanimously by the conference, the length of term for each was decided by lot. Executive committee members, with their terms of service, are: Sir Girja Bajpai (India), 2; Edouard Baker (Haiti), 1; G. S. H. Barton (Canada), 1; Newton Castro Belleza (Brazil), 3; R. R. Enfield (United Kingdom), 1; E. J. Fawcett (New Zealand), 1; Anders Fjelstad (Norway), 2; Alfonso Gonsales Gallardo (Mexico), 1; Darwish Haidari (Iraq), 2; Andre Mayer (France), 2; Stanislaw Mikolajczyk (Poland), 2; Howard R. Tolley (United States); 3; P. W. Tsou (China), 3; P. R. Viljoen (Union of South Africa), 3; and Arthur Wauters (Belgium), 3.

Subsequently, the committee elected Andre Mayer as its chairman and H. R. Tolley as vice chairman.

Establishment of general policy with particular emphasis on recommendations for the first year was the third major function of the Quebec Conference. Six committees were established to submit reports to the Conference in their respective fields. There were committees on nutrition and food management, agriculture, forestry and forest products, fisheries, marketing, and statistics. Several of these committees were subdivided into panels designed to give detailed study to certain phases of the broader committee subject.

Full reports of the six committees are grouped together in the report of Commission A of the FAO Conference.

Although the United States had a deep interest in the work of all six of the committees, its interest in marketing was perhaps the keenest and most immediate.

"Marketing," the introduction to the report of that committee states, "is the crux of the whole food and agriculture problem. It would be useless to increase the output of food, it would be equally futile to set up optimum standards of nutrition, unless means could be found to move the food from the producer to the consumer at a price which represents a fair remuneration to the producer and is within the consumer's ability to pay. Similar considerations apply to other agricultural products and to fish and forest products.

"It should be the responsibility of the Food and Agriculture Organization to collect all relevant facts regarding both the supply and demand situation. The collection of the facts alone will not be sufficient The Food and Agriculture Organization must advise the governments which comprise it, and the other international bodies whose activities effect supply and demand, as to the action which should be taken to maintain and increase consumption."

The marketing committee, in addition to recommending that FAO promptly make world-wide studies of the needs and marketing possibilities for food and agricultural products, and to stressing the need for interchange of information on marketing and transportation techniques, brought out strongly that FAO should make specific and detailed recommendations to member nations, to any international trade organization which may be formed, and to any special groups formulating or administering international commodity agreements.

The recommendations on programs and policy, all of which were adopted unanimously by the conference, make it clear that although FAO will not be an action agency in the sense of buying or selling products or of laying down any binding rules, the member nations of FAO are determined that it shall be an active agency, not content merely to gather and publish information.

Two paragraphs from the report of Commission A reflect the spirit and character of the six committee reports adopted by the conference. "What stands out most from all these six reports? It is this. The peoples straightway, if they so wish, can take a great step forward along the road towards freedom from want. They need not wait for research, important though it be that scientists continue to make discoveries which augment man's control over his environment. They need not wait for surveys, though investigators must continue to study human needs and lay bare the earth's resources. They need only to act on what is known, for every country, no matter how advanced, can achieve substantial immediate improvements in production, nutrition, and rural welfare by the more energetic application of existing knowledge.

"To move forward rapidly, however, governments must work together. Although each has important programs of a domestic character there are other problems they cannot resolve by acting independently of one another as interwar experience has shown. Many countries need outside help in improving farm practices; others need to cooperate together in expanding and ordering their foreign markets. The list of FAO work projects in this report measures the extent of the peoples' interdependence."

Like other large-scale international gatherings of its general type, the conference found it necessary to divide and subdivide into commissions, committees, and panels. All final decisions were made in plenary session at which each member nation had one voting representative. Each member nation also had a representative on the two commissions—commission A on policy and program and commission B on organization and administration. Senator ELMER THOMAS was the United States member of commission A and Representative CLIFFORD HOPE the United States member of commission B.

The participating nations were represented by their leading men in the field. Besides the United States Secretary of Agriculture, Stanislaw Mikolajczyk, Poland's Deputy Prime Minister and Minister of Agriculture, was present, together with M. C. Tanguy-Prigent of France, S. L. Mansholt of the Netherlands, J. G. Gardiner of Canada, all ministers of agriculture in their respective countries. P. J. Noel Baker, Minister of State in the British cabinet, was among the many other top-rank officials present.

Advisers and associates on the delegations of the various countries included dozens of the world's leading economists and scientists in the fields of food and agriculture, although a few countries sent one-man delegations. Several, like the United States, sent groups numbering two or three dozen. Altogether, not counting clerical and administrative staff members, the national delegations at Quebec totaled about 250 persons. In addition, there was a large and able secretariat whose membership was drawn from many of the participating nations, including a number of physical and social scientists from the United States.

It is impossible to comment even briefly on the way the conference was conducted, without mentioning the outstanding work of L. B. Pearson, Canadian Ambassador to the United States, who was first temporary and then permanent chairman of the conference. No small part of the success of the conference was due to the chairman's tact, vision, energy, and good nature.

The delegation from the United States was a well-balanced and effective working group. I should like to make special mention of the great contribution made by the four Congressional advisers—Senators THOMAS and WILLIS, and Representatives FLANNAGAN and HOPE. Their work in the commission and committee sessions was as valuable as their counsel in the daily meetings of the United States delegation. A list of the committee assignments of members of the United States delegation follows:

COMMISSION A. POLICY AND PROGRAM

I. Nutrition and food management: Dr. Thomas Parran, Dr. Hazel K. Stiebeling, Miss Anna Lord Strauss, Dr. M. L. Wilson.

II. Agriculture: Mr. P. V. Cardon, the Honorable Elmer Thomas, the Honorable Clifford R. Hope, Dr. H. G. Bennett, Dr. Hugh H. Bennett, Dr. A. L. Deering, Dr. Mordecai Ezekiel, Mr. Albert S. Goss, Mr. Edward A. O'Neal, Mr. James G. Patton.

III. Forestry and forest products: Mr. Lyle F. Watts, the Honorable Raymond E. Willis, Mr. Edward I. Kotok.

IV. Fisheries: Mr. Andrew W. Anderson, Mr. Edward G. Cale.

V. Marketing: Mr. L. A. Wheeler; the Honorable John W. Flannagan, Jr.; Mr. Homer L. Brinkley; Mr. Harry Carlson; Mr. Leroy D. Stinebower.

VI. Statistics: Dr. R. E. Buchanan, Mr. L. Wendell Hayes, Mr. Clifford C. Taylor.

COMMISSION B. ORGANIZATION AND ADMINISTRATION

I. Rules and procedure: Mr. L. Wendell Hayes, the Honorable Elmer Thomas, Miss Anna Lord Strauss, Mr. L. A. Wheeler.

II. Finance: Mr. Edward G. Cale; the Honorable John W. Flannagan, Jr.; Mr. Leroy D. Stinebower.

III. Administrative arrangements: Miss Anna Lord Strauss the Honorable Raymond E. Willis, Mr. L. Wendell Hayes.

IV. Constitutional and diplomatic questions: Mr. Leroy D. Stinebower, the Honorable Clifford R. Hope, Mr. Albert S. Goss, Miss Anna Lord Strauss.

Dean Graves was chairman of the conference committee on forestry and forest products and Mr. Cardon was vice chairman of the committee on agriculture.

After approving the committee reports of the two commissions, the conference closed. The general feeling at the end was one of optimism. The conference had accomplished all its three objectives. It had created FAO. It had organized it and picked an outstanding director general and an able executive committee. It had charted a course for the first year. Beyond that no one yet can do more than hazard a guess.

From the standpoint of the United States, FAO holds great promise, especially in the field of marketing. Naturally, we also can learn much from other nations about the science of nutrition and agricultural production. We have even more to learn about fisheries and forestry. But, all things considered, we probably will give more than we receive in the exchange of technical information. Our great problem is to find markets for all we can produce efficiently, and that applies to industry as well as agriculture. The FAO, through efforts to improve distribution and to increase productivity and raise living levels all over the world and to generally contribute to an expanding economy, can help supply the outlets we must have if we are to enjoy continued prosperity based on full production; also, FAO is of great importance to the United States as the first of the United Nations organizations designed to establish prosperity and maintain world peace. As Sir John Orr said, "FAO is the world's answer to the atomic bomb. If the nations cannot agree on food, they can agree on nothing."

At Quebec, FAO got off to a good start. Where it will go from there depends on how much sincerity and effort member nations put into it and how well they work together. As the richest and most powerful member nation, much of the answer is up to us.

## Problems of Lumber Dealers

EXTENSION OF REMARKS

OF

## HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

*Saturday, December 15 (legislative day of Monday, October 29), 1945*

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement filed by Mr. Edwin W. Elmer, executive secretary, Independent Retail Lumber Dealers' Association for North Dakota, South Dakota, Minnesota, and two other of the adjoining States, which he made before the Senate Small Business Committee on December 12, 1942.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

The Independent Retail Lumber Dealers Association, with offices in the Baker Building, Minneapolis, Minn., represents some 500 independent retail lumber dealers in the States of Minnesota, Iowa, Wisconsin, North Dakota, and South Dakota. To our knowledge, our organization is the only one in the

country representing exclusively the interests of the small or independent lumber retailer. Other lumber associations have combined memberships of independent and line yard or chain lumberyards. The reason that membership in our group is confined to small dealers is that frequent conflict of interests develop between the independent and large chain-yard groups. One such conflict of interests is present in the current lumber-distribution problem.

It is estimated that there are from 25,000 to 30,000 retail lumberyards in the United States. The majority of these yards are independently owned and operated.

The problem that today confronts our small lumber dealers in the Northwest is equally as serious for the many thousands of independent lumbermen throughout our Nation.

To fully understand and fairly consider this distribution problem some background information will be necessary.

Some lumber is produced in nearly every State in the Union. In the construction of a home, for instance, the lumber used often comes from widely separated areas. There may be fir from the west coast and hardwood from the South. No one mill, regardless of size, can supply everything the buyer requires. Very few concerns, except those with extensive operations in widely separated timber areas, have found it profitable to maintain a salaried sales organization of sufficient size to merchandise their product direct to the retailer. As a consequence, aproximately two-thirds of our prewar lumber production was sold through lumber wholesalers. These wholesalers, with years of experience in the distribution of lumber produced, perform a genuine service to manufacturers and retailers alike. They supply the retailer with valuable market information, advice on industry problems, extension of credit, and act as referees in occasional misunderstandings and complaints that develop in any business. The properly financed wholesaler eliminates the credit risk for the manufacturer. Further, he makes it possible for the manufacturer to take only that portion of large requirements that the latter can properly and profitably handle.

The functions of the commission lumber merchant are in many ways similar to that of the lumber wholesaler.

Thus, to a great exteht, the independent retail lumber dealer has been dependent upon the lumber wholesaler and commissionman for his source of supply. When the lumber dealer is in need, for instance, of a car of west-coast fir, he contacts his wholesaler, giving him the specifications for the material, which might be used in the construction of a home, store building, creamery, food-processing plant, or some other building in his community. The wholesaler fills this order, if he can, calling upon the various mills that he represents.

When the Office of Price Administration established mill ceiling prices, they announced that the customary commission allowed wholesalers and commissionmen, had been computed and was included therein. During the war, when our armed forces needed and took lumber to the near exclusion of all civilian uses, wholesalers, for the most part, did a fine job aiding where they could, and accepted with a minimum of complaint, the direct sale by the mill to the Government as the most satisfactory method of meeting our wartime requirements.

Government buying of lumber has now almost ceased. With the ending of hostilities, we find a tremendous pent-up demand for lumber for civilian use. There are several classifications of buyers, all striving to buy present lumber stocks and contract for future lumber production for their particular clients. Included among such buyers are those representing large chain lumberyards, large wholesale distribution yards and large industrial users. These buyers are compensated on a salary-and-expense-account basis. Equally desirous of placing lumber orders are the lumber wholesalers and commissionmen.

All during the war, most of our Government's lumber requirements were purchased direct from the mills at full ceiling prices. Because of customary Government payment practices, not even the usual 2-percent cash discount was taken. When civilian buyers replaced Government buyers, most of the mills continued to ask and have received full ceiling prices.

In fairness to the mills, it must be stated that since price controls went into effect, production costs have increased substantially. We doubt if any of the mills could continue to pay wholesale commissions, and stay in business, on today's production costs, if they wanted to.

Inasmuch as wholesalers today cannot place business at less than full ceiling prices, and inasmuch as they are prohibited from adding any "mark-up" or buying charge under all present OPA price regulations covering lumber, except Revised MPR 19, covering southern pine, these buyers are effectively eliminated from the field.

Under present OPA price regulations, the small lumber retailer cannot compensate his wholesaler for locating and buying lumber for him, even though his large competitor is permitted to absorb limitless expense for this same buying service through his employee buyer. Further, OPA refuses to permit two or more small dealers to share the expense of a joint buyer.

It is true that OPA does not prohibit the small dealer from likewise hiring individual buyers in the many markets from which his lumber comes. Neither does OPA prohibit the small dealer from traveling the length and breadth of the land, trying to serve as his own buyer. Many factors make it impossible and impractical for him to do this, however. A few would include (1) his inability to leave his business for long periods of time; (2) the staggering expense of such buying practices; and (3) lack of contacts among the many mills.

The only other alternative is to use black-market tactics. It is a sorry state of affairs when legitimate businessmen are driven into illegal practices in order to stay in business. This is true even though the regulations to be violated appear to be unconstitutional, arbitrary, and discriminatory.

We do know that the major portion of lumber production available for civilian use since Government buying has ceased has been taken by the three large groups of buyers enumerated above, and further, that they have contracted for considerable of the mills future production. Unless immediate relief in buying is granted the smaller lumber retailers, they will be unable to place orders for their spring lumber requirements. There is no logical reason to believe that such dealers could expect to place orders for any appreciable amount of suitable yard stock for several years to come, even with peak production, under present buying inequities.

The majority of the 25,000 to 30,000 retail lumberyards in the country, the more than 1,000 wholesale lumber concerns, and the hundreds of commission lumber merchants are a formidable segment of our Nation's industry to needlessly force out of business. Once again, the poor, long-suffering general public will reap the fruits of maldistribution. There are many sections of our United States that have very few chain lumberyards or wholesale distribution yards. In many States there are few if any of such lumberyards. In those States the consumer is dependent upon his independent or small lumberyard for his lumber requirements.

President Truman has recently stated that priorities would be issued, if necessary, to assure the flow of building materials into small homes. Our continued attempts during the past 2 months to budge OPA on this very serious distribution problem would make us very wary of placing further Government controls in that or any other Government agency. If some of the controls and unreasonable provisions of regulations now in effect were amended or corrected, as the need arose, it would be a far more effective solution and a real boon to reconversion.

The lumber and building industry itself is capable of meeting its full reconversion responsibilities if only given a fair chance to do so.

During the past several months the Independent Retail Lumber Dealers Association has repeated often, in letter, bulletin, and news articles, that our paramount problem is to secure our just share of present mill stocks, and future mill production. The plan we suggest is simple, and will be effective. It can be accomplished by OPA almost overnight. All that need be done is to extend the "mark-up" provisions of Rev. MPR 19, covering southern pine, to all species of lumber. Our small retail yards could then secure their lumber requirements through their wholesalers, as usual. This amendment to present lumber regulations would insure the flow of material into the average independent retail lumberyard. It would mean less material for the large wholesale distribution yards and industrial users, and more for home construction.

There are other minor, but nevertheless important factors which need correction in the retail lumber industry. OPA again holds the power for correction of these. They include:

1. The $5 per thousand handling plus 10 percent mark-up given large wholesale distribution yards. The retail dealer must absorb this, in addition to his expense of hauling the material, over regular mill ceiling prices, with no chance to pass on to the consumer any portion thereof.

2. Excessive prices paid for remanufactured lumber. This has resulted mainly because mills' ceiling prices have been too low on desirable yard stock items.

3. Absorption of unreasonable freight costs on green lumber.

The field secretary of our association, Mr. Deward G. Schultz, recently returned from a 3-week inspection trip of the western lumber-producing areas. His report of December 3, 1945, reads as follows:

"Since November 10 I have personally conducted an investigation of conditions in western lumber-producing areas, and have found that with the elimination of WPB controls and OPA's refusal to recognize and protect the position of the wholesaler and commissionman, prospects for securing a fair share of the Nation's lumber production have become extremely critical for the small buyer. Yes; even more serious than we had thought."

Since November 10 I have had the opportunity to personally analyze conditions at the scene of operation, remaining in each production area long enough to contact the leading mills, western wholesalers, and prominent observers. These conclusions result from general discussions and studies of accurate report sheets on mill production costs.

Much depends on the Nation's future lumber production. One thing seems certain. Lumber and other west coast building materials will not be available in quantities sufficient to supply huge pent-up consumer demands for several years to come. I am irked by propaganda coming from prominent sources within the lumber industry which attempts to convey the impression that "there will be plenty of lumber for everybody shortly after the first of the year." I didn't run across anyone on the west coast engaged in such wishful thinking. Retail dealers who permit the application of such soothing salve and contemplate an easy road to lumber procurement will find themselves without lumber stocks in 1946. Large buyers on the coast today are fully aware of the circumstances. They are representatives of

large industrial users, catalog houses, wholesale distribution yards, and chain lumberyard systems. Reports to their associates show much concern about securing a minimum of 1946 requirements. Just why a large retail lumber association, supposedly representing the best interests of small dealers, apparently fosters a program of false, misleading propaganda, is beyond my understanding. Unless wholesalers, commission men, and independents are willing to take matters into their own hands the larger buyers truly will hog it all if they can.

At this writing it would seem that the strike situation, indeed unfortunate at this particular time, is improved and that some of the many mills idle for more than 2 months, will soon be in operation. A considerable number in the Inland Empire are now so disorganized, their programs having been so disrupted that they cannot produce until spring. The strikes for some came at a time in which preparations for winter logging should have been made. Seasons of the year have no respect for strikes. Some CIO mills were not down on strike. They continued to operate with the understanding that wage adjustments were to be retroactive to November 1. The question yet unsolved is "Who will pay the increase of 12½ or 15 cents per hour?" A satisfactory settlement with labor unions doesn't mean that production will promptly go forward in the Inland Empire, or elsewhere for that matter. Accurate reports on production costs on the basis of 12½ cents per hour wage increase, retroactive to November 1, show that mills are "running in the red" now that they are producing yard stock. If OPA doesn't act quickly (and they have shown that they can in the case of southern pine) many of the mills will be forced to shut down. This is what they intend to do. Under present price ceilings most Inland Empire mills will be idle before or at least by January 1. This is not a pleasant picture. It appears that the mill cost of lumber will have to experience an average raise of approximately $5 per thousand to sustain and increase production.

It is said on the coast that Mr. Peter A. Stone (Lumber Branch, OPA) expects mills to operate for 6 months and then prove to him that they have lost money. Do your own thinking. The war is over, and now it is not a matter of saving lives. It is claimed by some of the mills that only about 5 years of good production remain in the Inland Empire. Mr. Stone will find the going plenty tough. Producers in the area can hardly be blamed for holding out for a reasonable return as their natural resources become depleted.

The situation is similar in Douglas fir, although in the past the "fancy paragraphs" which even most of the producers themselves do not understand have made it possible for them to operate at a profit. However, they, too, are feeling the squeeze now, since they no longer sell a major portion of their production to the Government at mill ceiling prices, with the benefit of "fancy paragraphs." Ceiling prices on some yard items must be raised to secure production. The industry as a whole wants to get back to the shipping of dry stock, but their present ceiling prices do not appear adequate to cover drying and additional handling costs. This again calls for action by Mr. Stone.

At best very little dry lumber will be shipped in 1946 and 1947. Demands are great and the lumber is still in the tree. By midsummer of 1946 retailers in the Northwest area will receive some dry stock, but there will not be enough dry stock (kiln dried) to anywhere near meet requirements.

Redwood inventories on the west coast are depleted, but are gradually being built up. Much of the lumber from the redwood tree must be air dried for 6 or 8 months before it can be kiln dried. Very little redwood siding and finish will be available for distribution in the Northwest prior to June 1946.

It has not been the purpose of this report to be at all pessimistic. These are facts and there is no reason for anyone to be misled. The independent retail lumber dealer is in a precarious position. He can help himself considerably if he will cooperate with his wholesaler or commissionman to the extent that in this emergency he demand from OPA the right to compensate him for his buying service. Mill representatives are frank to state that everything being equal, they would much rather do business through old, reliable, trusted channels. It is imperative for the survival of small lumber dealers that the "mark-up" provisions of the southern pine regulation be extended to all species of lumber immediately.

Yours very truly,

INDEPENDENT RETAIL LUMBER DEALERS' ASSOCIATION,
By EDWIN W. ELMER,
*Executive Secretary.*

## Conditions in Lumber-Manufacturing Industry

EXTENSION OF REMARKS
OF
## HON. WILLIAM LANGER
OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

*Saturday, December 15 (legislative day of Monday, October 29), 1945*

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the RECORD a letter sent to Mr. Chester W. Bowles, Administrator of OPA, by the Retail Lumber Dealers' Association. The letter is dated October 22, 1945, and signed by Deward G. Schultz, acting executive secretary of the Independent Retail Lumber Dealers' Association.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

INDEPENDENT RETAIL LUMBER DEALERS' ASSOCIATION,
*Minneapolis, Minn., October 22, 1945.*

Mr. CHESTER BOWLES,
*Administrator, Office of Price Administration, Washington, D. C.*

DEAR MR. BOWLES: Changing conditions in the lumber manufacturing industry on the west coast, from one where Government agencies requisitioned most of the mills' output to one where lumber in large quantities will be available for civilian consumption, has posed a problem of tremendous import to independent retail lumber dealers of the United States. This results from the failure of OPA to amend existing maximum price regulations as dictated by present conditions.

A position equally as serious has arisen and confronts the lumber wholesalers and commission merchants.

Congress fully recognized the importance of maintaining established methods of distribution, and clearly stated its intent in this respect in the Emergency Price Control Act, in the following language: "The powers granted in this section shall not be used or made to operate to compel changes in the business practices, cost practices or methods, or means or aids to distribution, established in any industry." The section in question covered prices, rents, and market and renting practices.

OPA announced at the time regulations establishing mill ceiling prices went into effect, that the customary commission due wholesalers and commission merchants had been included in the mill prices. However a mandatory discount provision was refused by that agency. Retail lumber dealers and wholesalers and commissionmen alike complained very little and accepted their position gracefully, as long as the lumber which was sold by the mills direct to Government agencies was considered essential to the war effort. Businessmen in both the retail and wholesale fields simply tightened their belts and awaited the reconversion period which is now here.

What do the independent retail lumber dealers and the lumber wholesalers and commission merchants find, now that reconversion is here? The mills, which have been selling direct during all of the war period, and which have, except in rare cases, retained the discount computed and included in mill ceiling prices for wholesalers and commission men have shown that they intend to continue selling for the full ceiling prices during the postwar period. They can easily do this, as buyers for large chain lumberyards and wholesale distribution yards will take their entire output on this basis for some time to come.

The independent or single-yard operator could not possibly afford to hire a buyer to purchase stocks for him, in the many markets from which he must obtain his varied stocks. His volume in each market could not possibly justify such an overhead. This is a function which has always been handled by his lumber wholesaler or commission man.

Early in 1945 there were 537 lumberyards in the State of Minnesota classified as small or independent retail yards, and who depended upon the wholesaler or commission man as a source of supply of his lumber requirements. There were 392 line or chain lumberyards at this time, who would be represented by buyers on the coast and in the several lumber markets.

Unless OPA acts immediately to amend the present northern softwoods, western softwoods, and hardwood maximum price regulations the independent retail lumber dealers, wholesalers, and commission men will have to make a choice. They can obey and submit to these OPA regulations, which are arbitrary, discriminatory, and indefensible, and be driven out of business. They can stand up for their constitutional rights and save their businesses by following a procedure which OPA has sanctioned in MPR 19, covering southern pine lumber.

There are from 30,000 to 40,000 retail lumberyards in the United States which would be affected in the above manner, and hundreds of wholesalers and commission men. They have played a vital role in the lumber industry during its entire history.

The amazing thing about OPA's failure to act in this matter, and their apparent disregard of the fact that these thousands of lumber retailers, wholesalers and commission men will be driven out of business is that this reticence does not have the slightest pretext of being of any benefit to the public in general, and has no bearing whatsoever on the price that the general public pays for their lumber. It would seem that OPA, by their refusal to grant relief, has determined to deliberately drive independent retail lumber dealers, wholesalers and commission men out of business.

OPA's failure to act in this matter will further seriously impair the rights of farmers, businessmen, and home owners in many communities where there are no chain lumberyards to get lumber for needed repairs, improvements, additions and new construction. Our citizens living in such communities will be unfairly and unjustly discriminated against. If the independent retail lumberman cannot get lumber, neither can the people in the area that he serves, in many cases.

Independent retail lumber dealers, wholesalers and commission men will not be driven out of business. They will fight for their

constitutional rights. They will not be deprived of their property without due process of law. They will not desert the customers and trade who have come to depend upon them, at a time when they are vitally needed. The retail lumber dealers will pay commissions to the wholesalers and commission men for buying lumber for them, and will absorb such commissions out of their own margin of profit. It should be carefully noted that the retail lumber dealer will not pass this cost on to the public, but will absorb the increased cost himself.

There can be nothing illegal or wrong with such a course of procedure, because OPA has sanctioned this procedure in its own MPR 19, covering southern pine lumber. Why OPA consistently denies similar rights to the industry dealing in other species of lumber is difficult to comprehend.

The thousands of persons whose businesses, incomes, and livelihoods are at stake believe that under conditions as they now exist OPA's MPR 94, covering western pine and associated species of lumber, as well as the regulations covering northern softwoods, in their present form, are unconstitutional and invalid, on the following grounds:

1. It violates the fifth amendment to the Constitution because it deprives independent retail lumber dealers, wholesalers, and commission merchants of their property without due process of law.

(a) The effect of the regulations in their present form is to drive these groups out of business, to deprive them of their income and profits, and to drastically reduce the value of their capital investments, and all without any practical or reasonable means of hearing or appeal.

2. The regulations in question are discriminatory.

(a) The MPR 19, covering southern pine lumber, grants to the segment of the lumber industry dealing in this species the very benefits that OPA is denying businessmen dealing in northern softwoods, western pine, and associated species of lumber.

(b) The latter OPA regulations create a monopoly for the large chain or line lumberyards and wholesale distribution yards in that they bottle up a major portion of the production of the lumber mills. The small retail lumberyards are effectively prevented from securing appreciable amounts of lumber.

3. These maximum price regulations of OPA are arbitrary.

(a) Although OPA has been fully informed of the hardships and inequities resulting from the northern softwood, western pine and associated species of lumber regulations in their present form, and the imperative need for immediate relief, as well as the incongruity of the southern pine regulation and those covering northern softwood, western pine and associated species, they have consistently refused to make any effort to remedy the situation.

It would also appear that OPA maximum price regulations covering northern softwoods, western pine and associated species are invalid under conditions as they have now developed, as contrary to the following provisions of the Emergency Price Control Act itself:

"The powers granted in this section shall not be used or made to operate to compel changes in the business practices, cost practices or methods, or means or aids to distribution, established in any industry, or changes in established rental practices, except where such action is affirmatively found by the Administrator to be necessary to prevent circumvention or evasion of any regulation, order, price schedule, or requirement under this act." (U. S. C. A. title 50, Appendix, art. 902, par. (n).)

The northern softwoods, western pine and associated species, Maximum Price Regulations of OPA in their present form are compelling not only changes, but radical departures in the "means of distribution established in the industry." The present effect of these regulations is to completely remove independent retail lumber dealers, lumber wholesalers and commission merchants from the lumber industry. There can be no claim that such action is necessary to prevent evasion or circumvention of the act.

In the case of *Philadelphia Coke Co.* v. *Bowles* (1943) (139 Fed. 2d, 349), the Court, speaking of business practices, stated:

"The purpose of inserting in this section the provision that powers granted should not be used or made to operate to compel changes in business practices, etc., was to make sure that the Administrator would not go beyond his price regulating function and engage in an effort to reform business practices which were not directly related to prices."

It is no argument for OPA to say that payment of commissions to wholesalers and commissionmen by retail lumber dealers itself compels changes in the business practices established in the lumber industry. First, the industry is still subject to wartime restrictions; these conditions have resulted in many regulations which have not worked out in practice in the manner contemplated in theory. The war emergency gave birth to OPA and is the only excuse for its present existence. If conditions were back to normal OPA would have been liquidated, and there would not now be the need for the circuitous method that the affected groups must employ to seek relief from an untenable position. In fact, the present problem would not be with us. The present predicament of the affected groups is due entirely to wartime conditions and their immediate aftermath. OPA has a solemn and continuing duty to keep abreast of the times, and to act to prohibit the use of their regulations as vehicles of monopoly and discrimination.

Neither can OPA's failure to act expeditiously in this emergency be excused by blaming the laws of supply and demand. We reiterate that OPA's continued existence is proof that conditions are not yet normal. An Administrator's philosophy that all problems will eventually run their course and iron themselves out in time is no solace to businessmen who are being driven out of business in the meantime. The relief for the independent retail lumber dealers, wholesalers, and commissionmen must be immediate.

We trust that immediate consideration of this matter and prompt remedial action will be forthcoming.

Yours very truly,

INDEPENDENT RETAIL LUMBER DEALERS' ASSOCIATION,
By DEWARD G. SCHULTZ,
*Acting Executive Secretary.*

---

## Feeding Our Allies

EXTENSION OF REMARKS
OF
## HON. J. WILLIAM FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES

*Saturday, December 15 (legislative day of Monday, October 29), 1945*

**Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the RECORD an article entitled "Feeding Our Allies" published in the Washington Post of December 15, 1945.**

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FEEDING OUR ALLIES

A COMMUNICATION

"Join the Allies and starve! Join the Axis and be fed by the Yanks!" Posters emblazoned with this slogan should have been plastered all over China, France, Norway, and the Netherlands, because it is the truth. The United States statement on German policy, released by Secretary Byrnes yesterday, indicates clearly that these countries would be far better off this coming year if they had fought against us rather than with us.

The United States Government is going to guarantee at least 1,550 calories per day for the normal German consumer. How easy would be the minds of the French and Dutch and Belgians if they could get such generous largesse, and could spend their pitifully small stock of United States dollars to purchase the industrial materials they sorely need.

Mr. Byrnes says, "In terms of world supply and of food shipments from the United States, liberated areas must enjoy a higher priority than Germany throughout this first postwar winter." Doesn't Mr. Byrnes consider China a liberated area? Because if he does, and if we should enable China and the other liberated areas to raise their consumption to 1,550 calories a day, there would not only be no food for the Germans but the generous diet of the United States would be considerably reduced.

The State Department policy has been variously elaborated in terms such as these: "The liberated areas will get the foods to satisfy their needs, and then whatever foods are left over will go to Germany—in other words, the Germans will get only the surpluses over and above the liberated areas' needs."

Officials familiar with the total food situation have repeatedly pointed out that there are no such surpluses, if the word "needs" is taken to mean human needs to prevent starvation. If any reasonable calorie figure is used as a criterion of human needs, there just isn't enough food in the world to satisfy the needs of all the liberated allies; every attempt we could possibly make, even continuing tight food rationing, would serve merely to alleviate somewhat a tremendous problem of limited supply versus human need.

The joker is found in Mr. Byrnes' definition of "need." According to the formula under which United States allocations of food are made, no food is provided for any claimant unless that claimant guarantees his claim with cash on the line, and our food prices are high. Regardless of true human needs, the "needs," which Mr. Byrnes has stated have first priority before the Army feeds the Germans, will be much smaller quantities, resulting from a painful calculation by the claimant government as to the amount of their very limited United States dollars which they can afford to spend on food.

But the United States Army is claimant for Germany; the 1,550 calories per German will become a firm requirement, with financial backing, submitted by the Army. And the food will be allocated to them. Mr. Byrnes' pious expression that the liberated areas would enjoy a higher priority than the Germans is just a plain untruth—the Germans stand a much better chance of eating this winter than the peoples the Axis has oppressed for the past several years.

President Roosevelt committed the country to fighting the war most efficiently regardless of the limitations of the dollar sign—the country reluctantly accepted his judgment in the matter, without being completely convinced. Do we not need someone now with

the courage to commit this country of ours to the battle against hunger and poverty with the same wisdom, that the peoples of the earth who fought side by side with us should be permitted to eat at least as much as our erstwhile enemies, regardless of the limitations of their state of finances?

More and more during the coming year the little people of the world will have occasion to mourn again the passing of Franklin D. Roosevelt—apparently the only force that could make this selfish little Nation of ours see beyond the end of its balance sheets.

CHARLES MILLER.

WASHINGTON, *December 12.*

## The Cause of India

EXTENSION OF REMARKS
OF
**HON. WILLIAM LANGER**
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES

*Saturday, December 15 (legislative day of Monday, October 29), 1945*

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the RECORD an article which appeared in the Washington Evening Star in the form of an advertisement, signed by the National Committee for India's Freedom.

There being no objection, the advertisement was ordered to be printed in the RECORD, as follows:

MR. ATTLEE, WHAT ABOUT THE WORLD OF TODAY?

AN OPEN LETTER TO THE BRITISH PRIME MINISTER

To the Right Honorable CLEMENT R. ATTLEE.

SIR: I gather you are here in Washington, among other things, to help build the world of tomorrow. All power to you in this laudable and lofty undertaking.

I desire, however, on behalf of the National Committee for India's Freedom, which represents the vast majority of Indian nationals resident in this country, to submit a few observations for your consideration, which pertain to the world of today, in which your Government is deeply implicated.

When the British Labor Party, of which you are the head, came to power in a decisive and sweeping victory, there was widespread hope that the more flagrant abuses and venalities of British imperialism would, at any rate, be mitigated, and a departure made from the traditional toryism of your predecessor in office, Mr. Churchill, and his kind. This expectation was all the more natural since, for a generation, your party had made ardent protestations of liberal internationalism, and now you had secured undisputed parliamentary power to carry your professions and principles into practice.

On examining the record of the Labor government since it came to power, we find that, whatever you and your colleagues may have done, or attempted, on the home front, there is not a ray of light to illumine the dark and dismal domain of British imperialism and colonialism.

There is no evidence today of any heart-searching on the part of the British Government, of which you are the head—no chastening of the spirit, no sign of moral regeneration, not even an honest and intelligent reorientation to the changed aspects of the world. You and your colleagues appear to be impervious alike to the hopes and the sufferings of a broken world.

What other conclusion is to be drawn from the operations of British policy in Asia today? What Churchill did in Greece you are doing on a more outrageous scale in Indonesia and elsewhere. And as representing Indian sentiment, we have a stake in these British imperial activities. Both Churchill and you have used Indian soldiers, respectively, to crush Greek and Indonesian and Indo-Chinese patriots. Why? We suggest that if this sort of dirty work must be done it should be undertaken by your own soldiery and not by Indians. You cannot be unaware of the fact that there is a vast and deep revulsion in Indian against this sordid and cynical policy of the British Imperial Government.

Indian volunteers enlisted to fight against the Axis, and in behalf of what they were told was to be a war of human liberation. They are now being employed, under virtual military coercion, to act as mercenaries, and to destroy their Indonesian and other kinsmen who seek independence, and to whom they are bound by innumerable ties of history, culture, and sentiment. Being a slave himself, the Indian must needs labor to enslave others! And you are a party to that degradation.

And why has the world been confronted with this ghastly spectacle? Mr. Churchill, very understandably, did not want to liquidate the British Empire. You appear to be bent upon a more ambitious project: To resuscitate and reestablish the moribund empires of France and Holland in Asia—as satellites in the British solar system! And this is sought to be done, primarily, with American equipment and Indian manpower.

Since you are in Washington and have just proclaimed your concern for a foreign policy that should be "conceived in the interest of all the people of the world," may I recall to you certain words of a great American that appears to be pertinent; Abraham Lincoln said:

"If any nation robs another nation of its freedom, it does not deserve freedom for itself, and under a just God will not long retain it."

Lincoln's words proved to be a prophecy, and not merely a warning, in the case both of France and Holland. Britain herself, at Dunkerque, had a close shave with destiny.

By the grace of God, and help of the United States, you have all been rescued—and given a new lease of national life and freedom. Yet, you and the French and Dutch imperialists, with unregenerate souls, are apparently trying to revive again in Asia the suicidal old business of imperial enslavement and colonial exploitation.

India is the pivot and exhibit A of world imperialism. So long as India is not free, the world will not be free. It is presumably in order to bolster your own empire, and the imperial system in general, that your government is so frantically trying to put back their respective colonies into the palsied hands of the French and the Dutch.

I suggest that you cannot reverse the processes of history. There will be no peace in Asia—and in the world—so long as such policies are pursued.

You have just affirmed as "the supreme need of today * * * the lifting of the bonds of fear from the human spirit, and the setting free of the human spirit." How can you reconcile your own diagnosis with the policies of your Government? Your exalted concept of the freedom of the human spirit with the blood and terror let loose by your agents and hirelings on hapless men, women and children who, after generations of bondage, want nothing more than their own long-usurped birthright of freedom?

Furthermore, is the system of British rule in India conducive to "the lifting of the bonds of fear from the human spirit?" Many of your party leaders, and experts, well know the facts. (I would refer you in particular to Sir Stafford Cripps, and to Francis Williams, the author of that excellent and completely honest book Democracy's Battle, who, I understand, is here with you in Washington as your press secretary.)

You, too, should have some cognizance of the inner realities of the Indian situation since, as I recall, you went out to India as a member of the Simon Commission. What your precise part, if any, was in the compilation of the commission's report, I do not know. I can only hope you were not one of its architects. For that pretentious structure perished from the weight of its bogus fame and real futility.

However, having gone out to India in such a responsible capacity, you must have seen and heard enough to discover this central truth: From the days of the mutiny until today, India has been ruled by fear—a disarmed and devitalized population at the mercy of organized militarism. Should this cycle of Indo-British relations not now be ended—the cycle whose reciprocal segments are force and fear?

There has been no appreciable advance upon the policy or the tactics of the previous British Governments which you succeeded. We are being treated in India to the same eternal procrastination, the same moth-eaten alibis, the same demands for an impossible national unity which exists nowhere on this earth, the same playing up of minorities and secretarians to defeat the demand and goal of constitutional freedom for the nation as a whole.

You and your Government have it in your power to redeem the honor of England's name in Asia, and to help forward the cause of human freedom by breaking the fetters of 400,000,000 of the people of India. Only freedom can dissolve the bonds of fear anywhere.

I trust you may be yet enabled to live up to your professions and aspirations.

I remain, sir,

Faithfully yours,

SYUD HOSSAIN,
*Chairman, National Committee for India's Freedom.*

## The Need for Health Insurance

EXTENSION OF REMARKS
OF
**HON. ROBERT F. WAGNER**
OF NEW YORK
IN THE SENATE OF THE UNITED STATES

*Saturday, December 15 (legislative day of Monday, October 29), 1945*

Mr. WAGNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a brief, informative statement on the need for health insurance.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

THE NEED FOR HEALTH INSURANCE

HOW HEALTHY ARE WE?

Because the United States is the richest of the nations and is known throughout the world for its natural advantages and its progress in education, sanitary controls, and scientific achievement, it is often declared that Americans, as a people, stand first in health. Statistics do not bear out this claim. Despite past progress in preventing sickness and prolonging life, the United States has not yet achieved for all its people—and in particular for those in the working ages—the level of security of life which has been attained in some other nations with much smaller economic resources.

In the years before the war, 7 countries had lower infant mortality rates than the United States. From 7 to 11 countries—the number differing for various age groups—had lower death rates among children and adolescents, and 20 or more countries had lower rates among persons aged 35–64. Death rates among white persons in the United States are typically lower than those of the Negro population; yet even if the international comparison is restricted to the white population, our death rate is by no means the lowest. In the expectation of life for white boys at birth, the United States ranked fifth among the prewar nations; for white men at age 20, it ranked ninth; at age 40, twelfth; and at age 60, thirteenth.

Selective Service reveals the serious health situation in this country. Of the first 3,000,000 men examined for Selective Service (average age 26), one-half were rejected because of physical or mental defects. Notwithstanding the lowered standards of physical and mental requirements and the fact that a certain number of men with a serious disease or handicap are inducted into the armed forces and given needed rehabilitation, the rejection rates still approximate 40 percent. At the end of 1944 we had 4,500,000 IV-F's. To this number must be added 1,000,000 men initially inducted and later discharged because of unfitness for military service.

Testifying before the Senate Subcommittee on Wartime Health and Education, Col. Leonard G. Rowntree, medical director of the Selective Service System, said that Selective Service physical examiners had expected to find "a rough, virile, manhood." They had been disappointed. Colonel Rowntree called the situation "appalling," and said, "We can no longer regard ourselves as a sturdy, healthy Nation; the country is ailing."

THE DAILY TOLL

On an average day 1 person in 20 is unable to carry on his normal routine because of illness or disability. Studies of the Social Security Board based on the national health survey (1936) and other data indicate that on an average day at least 7,000,000 people are disabled. This is the number of persons who, because of illness, accidents, or defects, are unable, temporarily or permanently, to go to work, to attend school, or to follow other normal pursuits. About one-half of these 7,000,000 persons are incapacitated by disabilities of less than 6 months' duration; about one-half of longer duration. These figures do not include the thousands of persons who go to work or school or continue their usual activities in spite of permanent physical defects or chronic illness.

COULD MEDICAL CARE CUT DOWN ILLNESS AND PREVENT DEFECTS

The national health survey found that nearly 18 persons in every 100 suffer from chronic disease, lameness or other crippling defect, or serious impairment of sight or hearing. Many of these chronic conditions could have been prevented by medical attention at the first sign of illness or injury.

The illness and injury, unfortunately, even when discovered early, frequently continues uncorrected. This is borne out by a study of physical rejectees in Hagerstown, Md., made by the United States Public Health Service. The Public Health Service compared Army health records and school health records made 15 years back when the boys were in elementary school. Comparison brought out the realization that 15 years ago physicians could have predicted which boys might fail to pass Army examinations—15 years ago they had defects in vision and teeth but little was done to correct them—15 years ago physicians could have predicted from their growth and posture, their general state of nutrition, which of these boys were likely to grow up into physically handicapped adults. "It is particularly disturbing," the Public Health report says, "to find that, in spite of knowing • • • which children in a community would grow up into physically handicapped adulthood, the health professions, the lay professions, and especially society as a whole, has to date apparently failed to take full advantage of the knowledge."

WHY DON'T AMERICANS GET ENOUGH MEDICAL CARE?

One reason is that social progress has not kept pace with medical progress; the benefits of medical progress have not become available to all the people. There are many regions in our country today where the chance of survival is no greater than it was 60 years ago. There are places—and this is especially true of our rural area, where average income is low—where people are almost without access to modern facilities to prevent and cure sickness. The selective-service examinations sharply brought out the medical deficiencies in our rural areas. Whereas among a large group of 18- and 19-year-old registrants about 25 percent were rejected on physical or mental grounds, among boys classified as farmers the rate of rejection was 40 percent.

The United States as a whole has in peacetime nearly enough doctors. In January, 1940, there were about 141,000 active physicians or about 1 physician to 935 people. But this country-wide ratio conceals the fact that physicians are concentrated in wealthy areas. There is wide variation from region to region, from State to State, and among counties within States. The following table shows some of the State-to-State variations.

| | |
|---|---|
| New York State | 1 to 597 |
| Massachusetts | 1 to 696 |
| California | 1 to 747 |
| Illinois | 1 to 789 |
| South Carolina | 1 to 1,565 |
| South Dakota | 1 to 1,657 |
| Alabama | 1 to 1,684 |
| Mississippi | 1 to 1,784 |

Furthermore, medical facilities are concentrated in the large cities and some medical services scarcely exist outside them. Physicians, too, are concentrated there. In large cities the national ratio was probably about 1 general practitioner for 750 to 800 people. In rural, low-income and sparsely populated areas, only 1 general practitioner might be available to serve 2,000, 3,000, or an even larger number of people. These rural physicians are often elderly, and as they die, younger physicians are not coming in to take their places. The result is that the situation in regard to doctors in rural areas is becoming progressively worse. There are throughout the country dozens of counties without a single doctor in them. Maldistribution of specialists and dentists is much greater. Maldistribution of other health personnel parallels the picture indicated for physicians.

Another reason Americans don't get adequate medical and hospital care is that large numbers of people cannot pay for them. "Most of the remediable defects found in the draftee," says Dr. Hugh Cabot, a leading Boston physician, "spring from inability to pay the bills which are often beyond the peoples' means." Many people who are within reach of facilities today cannot take advantage of them because they cannot surmount the barrier of costs that stands between them and the doctor, the laboratory, or the hospital. Thus a considerable part of the capacity of hospitals and the time of skilled practitioners goes unused in ordinary years, though in the same places there are sick people badly in need of services. Reluctant to undertake financial burdens, many hesitate to consult a doctor and find out in the early stages of a disease, when it may be checked or cured, what is wrong with them. Today, except for accidents, the leading causes of death are the slowly crippling diseases of middle and old age—diseases of the heart and arteries, cancer, and other chronic ailments. To prevent and curb such diseases takes skilled individual medical care—and skilled individual medical care over a period of years is beyond the purchasing power of millions.

Studies of the medical services received by Americans as compared with those needed by Americans indicate great insufficiencies. According to the final report of the Committee on the Costs of Medical Care, the services received among low-income groups constitute one-third or less of requirements. The well-to-do receive three times as much medical attention as those with lowest incomes. Moreover, because of the higher cost of specialist services and laboratory services, the medical care received by the low-income groups is likely to be more limited than that received by groups with higher incomes.

With regard to hospital services, statistics show that families with high or very low incomes receive almost twice as much care as families with moderate incomes. Some very low-income families obtain free hospitalization. High-income families can pay for needed care. Most self-supporting families are in between and are unable to purchase all the care they need.

SICKNESS AND POVERTY

No one has yet proved whether sickness causes poverty or poverty sickness. But it is a fact that they go together; sickness comes oftener and lasts longer in the homes of the poor than of the well-to-do. The National Health Survey found that persons in families on relief had nearly three times as much disabling illness lasting 7 days or more as those in families with incomes of three thousand to five thousand a year. Low-income groups have twice as much sickness as high-income groups, and the impact of the costs of medical and hospital care on low-income groups is very heavy. More than one-fifth of our urban families of low incomes spend for medical and related costs more than $100 every year, and many have sickness bills of one-fourth, and even one-half, of their entire family income.

MORTALITY RATES AND POVERTY

All mortality studies indicate markedly higher infant mortality, mortality from tuberculosis, and from most other causes among the low-income groups in comparison with those with higher incomes. In recent years we have greatly improved our ability to save lives, but this improvement is spotty, and rates are still high in some States, in some areas within States, and among Negroes and other characteristically low-income groups. The death rates reported for low-income areas and low-income groups are often as high as those which prevailed in the country as a whole a generation or two ago.

INFANT MORTALITY RATES SPOTTY

How much chance infants have to survive depends on where they were born. The infant mortality rate for the United States as a whole in 1942 was 40 deaths per 1,000 live births. In 3 States with the best record the rate was 30 or less per 1,000. But in the State with the best record, a baby's chance to survive the first year of life was nearly 3 times as good as it was in the State where the infant mortality rate was highest. As with general mortality, infant mortality is high in low-income areas.

THE COSTS OF MEDICAL AND HOSPITAL CARE ARE UNEVEN AND UNPREDICTABLE

On the average, American families spend about 4 or 5 percent of family income for medical care. Averages, however, conceal wide differences in the expenditures of individual families. Some spend little or nothing in a year if they escape serious illness or can postpone preventive medical or dental services. Other families pile up bills which represent more than they could hope to save in many years. Only about one family in five uses hospital service in the course of a year, but this one-fifth spends more than half of all the money spent for medical and hospital services. The annual medical ex-

penses of families with hospital care average more than $300, while medical bills of other families with medical care average about $70 a year. Hospitalized illness is a large and unpredictable drain on family resources. Nor are medical costs in general predictable: no family can tell in advance what medical expenses will be necessary in the coming weeks or months. Medical and hospital costs cannot be budgeted on an individual basis like rent, or food, or clothing because, unlike these other necessities of life, medical needs are uncertain, unpredictable, and uncontrollable.

## The Wool Problem

EXTENSION OF REMARKS
OF

### HON. ABE MURDOCK

OF UTAH

IN THE SENATE OF THE UNITED STATES

*Saturday, December 15 (legislative day of Monday, October 29), 1945*

Mr. MURDOCK. Mr. President, the special Senate committee created for the purpose of studying and investigating the wool industry in this country has recently held and concluded extensive hearings on this very important subject. The hearings were well attended by sheep men from all sections of the country, fabricators, processors, brokers, public officials, and educators. The hearings were presided over by the senior Senator from Wyoming [Mr. O'MAHONEY], who has rendered invaluable service to this great industry for many years.

Recently a publication concerning the hearings was issued by Merrill Lynch, Pierce, Fenner & Beane. I ask unanimous consent that the publication be printed in the Appendix of the RECORD.

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

OUR PRESSING PROBLEM IN WOOL AND PROPOSALS TOWARD A SOLUTION

Under the able chairmanship of Senator O'MAHONEY, a special Senate committee has been holding hearings, from November 19 to 27, in search of a constructive wool policy.

The problem has been defined as follows:

1. Stocks overhanging the market:

(a) CCC inventory of domestic wool 421,000,000 pounds as of October 27; estimated at 525,000,000 pounds by end of year.

(b) British stock pile in United States 286,000,000 pounds foreign wool.

(c) World stocks of foreign wool exceeding 4,000,000,000 pounds.

2. Domestic wool prices above world prices:

(a) The CCC buying program, while protecting the producer during the war, has resulted in the accumulation of a stock at such prices as to cost the taxpayer a currently estimated loss of approximately $65,000,000.

(b) The selling price, as decided upon previously, has been some 20 percent above foreign duty-paid prices and, after the November 27 price reduction of 15 to 16 cents per clean pound, is still estimated at 5 to 7 cents above foreign duty-paid prices.

Result is that, apart from Government contracts specifying domestic wool, the latter can be used only to supplement shortages of particular grades of foreign wools, instead of the normal vice versa.

(c) Despite the wartime rise in foreign growers' costs, even so high a tariff as 34 cents per clean pound is claimed to be insufficient to keep the domestic grower in business.

3. British wool control: British Empire producing countries have formed a joint control with Great Britain for the purpose of liquidating their surpluses. Since this liquidation is estimated to require perhaps 13 years, the strain on market absorption will be severe and extended. Machinery in other consuming countries will take years to rebuild, thus the United States market will be sought intensely. Meanwhile the wool tariff and high labor costs make wool-textile exports difficult or impossible.

4. Other considerations:

(a) The interruption of shipping lanes during this war has revealed the domestic wool growing industry to be a strategic necessity.

(b) A parity price to the grower is considered inadequate inasmuch as the base period (1910–14) was a period of low wool prices.

(c) Wool is a world commodity, with worldwide consumption and relatively few large producers. Among the latter is a large degree of State control, principally as a direct consequence of the war.

(d) Wool growing is incapable of appreciable cost reduction by mechanization, and reduction in labor costs, estimated to have risen 100 percent since 1940, is not in sight.

(e) The fear of repercussion on the manufacturing trade, already worried about the adequacy of current tariff protection, of any change in the raw material price structure.

5. Decline in numbers of breeding sheep in United States, approximately 25 percent since 1942. As a result of rising production costs and fear of surpluses, liquidation has been in progress, and domestic wool growing is admitted to be a sick industry.

REMEDIES SUGGESTED AT THE HEARINGS

1. Upward revision of the tariff looked upon in many quarters as the simplest solution.

Obstacles are:

(a) Opposition by the State Department as contrary to basic policy.

(b) Would enlarge the umbrella for synthetic competition, and tend to reduce consumption.

(c) Objected to by subsidy advocates as an unnecessary additional burden on the consumer-taxpayer.

2. Producer subsidy advocated by the State Department as being least objectionable; opposed by the Department of Agriculture as being against its general policy. Producers only lukewarm—consider stopgap only; feel more comfortable with a satisfactory price in the market place, however induced.

3. Import quotas favored by many growers and some manufacturers; opposed by the State Department. Logic behind them is that no more wool should be available than domestic production plus necessary supplementary imports for adequate consumption. Proponents suggest imposition either on estimated total needs, or on a per capita consumption standard, similar to the sugar plan (see Fortune article, condensed in November Reader's Digest, Why You Can't Have Enough Sugar, for sugar plan defects); some suggest quotas be based on the degree to which living standards are raised in the exporting country.

Objections:

(a) Difficulty of equitable administration among both United States importers and exporting countries.

(b) Quantities and types required may change from year to year.

(c) Manufacturers' necessary freedom of selection of foreign wools would be reduced.

(d) Licensing of importers and an import quota plan for textiles would be necessary.

(e) Restricted imports mean higher consumer costs.

4. Hill plan:

This advocates purchase by the Government of all wools, both domestic and foreign, and its sale at a price which would be an average between the controlled prices of the two.

Variants include a floor price on domestic wool, Government control on purchase of foreign wools, or free purchase of foreign, with supported prices for domestic wool.

Objections to the basic plan are:

(a) Inimical to the system of free enterprise.

(b) Insufficiently flexible. Government buying methods cannot equal those of the trade in efficiency of making complicated selections of foreign wool. Government selling methods, as instanced by CCC with domestic wool, considered too slow and cumbersome compared with either British disposal methods or those of the trade. Unwanted types might accumulate.

(c) Assuming wool imports subject to quota, some of the quota difficulties abovementioned arise.

5. National Wool Marketing Corp. plan:

CCC buying program to be continued during the readjustment period, or as long as the joint Empire control is in process of its surplus liquidation.

Domestic wool prices would be maintained at present ceiling levels, or cost plus reasonable profit.

Each year's clip would be sold through trade channels at prices competitive with British control prices, CCC losses to be reimbursed from wool import duties.

Advantages:

(a) Assuming no wool tariff change, readjustment of textile duties might be unnecessary.

(b) CCC dependence on congressional appropriations reduced or eliminated.

(c) Consumers would have the benefit of world prices plus tariff, estimated to be about twice the cost of the reconversion differential. Latter would not be pyramided in manufacturing and retailing processes.

Objections:

(a) The reconversion differential payment contained within the buying price is a disguised subsidy, though perhaps no more so than a tariff.

(b) Present ceiling levels claimed by growers to be inadequate. Cost plus reasonable profit difficult to determine, and might establish undesirable precedent to other groups.

COMMENT

The fifth plan appears to contain the elements of the most practical approach to the purely domestic problem, provided the eventual objective is a level of domestic prices competitive with c. i. f. world prices, plus a tariff no higher than present rates. An adequate readjustment period, and adequate guaranteed prices in such period, seem essential, but with the inauguration thereafter of a gradual reduction of domestic buying prices upon periodic reexamination. The long-term policy should be clearly announced so that the readjustment period shall be fully used, in efforts toward production cost reduction from a wartime level. Specific and immediate measures are suggested as follows:

(A) Domestic field:

1. The establishment of a minimum domestic production total, adequate for national security under immediately foreseeable conditions.

2. The establishment of a buying price for a fixed reconversion period, sufficient to maintain profitably such production, but not—as in the case of cotton—to increase it.

3. Thereafter reconsideration of the domestic production goal, and the establishment of a buying price at the beginning of each season, set in accordance with the then existing and prospective conditions, but with the basic objective clearly in view. The consequences of such a program, i. e., surpluses in Government hands, lead to the question as to whether they are not part of a world surplus problem, only possible of permanent solution through international agreement. While the British joint control, controlling 70 percent of production in the main exporting countries may have little need for merging with a relatively small United States production, it may be that the reverse is true.

(B) International field:

1. Study of the operation and experience of BAWRA (British-Australian Wool Realization Association) in the liquidation of Empire surpluses following World War I. A big job was done, and government stock piles were liquidated.

2. Study of the present joint control, with the object of determining common ground on which a working agreement might be based. (If you can't lick 'em, join 'em.) Should it become evident that the world wool problem is too big for permanent settlement except through the United Nations Organization, such study will have clarified the issues.

3. Study of the practicability of joint auctions of domestic and suitable foreign wool in the United States, with reserve limits jointly set according to relative values, losses to be apportioned according to pool contributions.

Objections (mostly psychological):

(a) Resistance to international agreement.

(b) Auctions still looked upon in some domestic quarters as "fire sales."

(c) Auction marketing methods feared by small dealers as being too direct, and as favoring the large topmaker or manufacturer.

Advantages:

(a) Practical experience on a large scale has shown the auction method to be the least cumbersome and most direct method of surplus wool disposal. Quantities offered and reserve limits can be adjusted to market conditions, but the net effect is liquidation of surpluses as fast as the markets can absorb them.

(b) Prices to the consumer tending to stimulate wool consumption and competitive with synthetics, the consumer-taxpayer thus having an offset to Government losses.

(c) Government in business is ended as rapidly as possible, and the free enterprise system is encouraged.

(d) A further step, however small, is taken in the slow growth of international collaboration on common world problems—found vitally necessary in war, but still in its infancy in the problems of peace.

HERBERT J. HOLLAND.

DECEMBER 3, 1945.

## The St. Lawrence Seaway

EXTENSION OF REMARKS

OF

### HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

*Saturday, December 15 (legislative day of Monday, October 29), 1945*

Mr. LANGER. Mr. President, I ask unanimous consent to place in the RECORD an editorial from the Detroit News of November 29, 1945, dealing with the St. Lawrence waterway and favoring that project.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SEAWAY'S OPPONENTS GRADUALLY FADE AWAY

The Economic Club listened this week to an address by Julius H. Barnes on the St. Lawrence seaway, of which he has been an active, persistent, and never-discouraged supporter for 30 years.

The role and experience of the News in relation to the seaway has paralleled that of Mr. Barnes. We have a special bond of sympathy with him. Like him, we never doubted for a minute that some day the seaway would be built and operating to justify, not just our faith in it, but our certain reasoned knowledge of the great blessings it will confer on the landlocked interior of the continent.

Men of the News who had a part in the launching of this project, so many years ago, long since have passed to whatever reward is reserved in heaven for those who dream such big dreams and work to make them come true. Those who came after them have caught their enthusiasm and gone on working.

Mr. Barnes, it seems to us, goes on forever. He was a young grain shipper from Duluth when he came to see what would be done for the great grain-growing area west, north, and south of there, if only 30 miles of St. Lawrence rapids were flooded out and Duluth thus made a seaport.

He is an old grain shipper from Duluth now, but his vision of the seaway's meaning to the landlocked interior is as clear and his enthusiasm as fresh as ever.

Here in Detroit, because it was Detroit, he talked this week of what the seaway means to Detroit's industrial future. But the meaning is much the same for Duluth, for every lake port, which will become a seaport, and to the whole vast interior region now many hundreds of miles from low-cost ocean transportation.

We, like Mr. Barnes, never have doubted that a time would come when this dream would be fulfilled. Of late, we have begun to hope more actively than in a long while that he and we, on the News, yet may live to see it fulfilled.

The old provincialism and the old gullibility toward the special-pleading arguments on the rail and power interests seem to be passing. Those interests, which for the best part of 30 years have generated and fomented the opposition to the seaway, have not relaxed their vigilance. But New England and New York, long in the forefront of the opposition, have come over to support of the seaway and it appears that other regions will follow.

A factor has been the huge sums of Government money profitably spent on improvement of the Tennessee River Valley and the further sums now proposed to be spent on the Missouri and other valleys.

Such projects demonstrably add to national wealth, efficiency, and well being; yet no project for regional development offers such prospects of profitable returns—as to cheap electric power alone, for example—as does the Great Lakes-St. Lawrence Valley project, which Congress has been kicking around for over a generation.

The moral claim of the Great Lakes-St. Lawrence Basin but even more the national necessity of the project are coming to be recognized. The seaway bill now before Congress well may be enacted, as President Truman, the eighth President to do so, has asked. Hasten the day. We want to live to see it.

## The Way to Peace

EXTENSION OF REMARKS

OF

### HON. COMPTON I. WHITE

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

*Friday, December 14, 1945*

Mr. WHITE. Mr. Speaker, as a citizen and a Member of Congress, with a deep and abiding devotion to our principles of government, I fully subscribe to objectives of the democracies in waging the war to a successful conclusion—that the world might be freed of dictators and militarism.

Now that the war has been won and the way has been cleared to establish fair dealing among men and permanent peace among nations, it is time to turn our efforts to bringing peace and not militarism and future wars to humanity. Surely the democracies did not sacrifice the lives of their sons and pile up mountains of debt for their children to pay so that the nations of the world would enter an armament race to vie with each other to build up huge armies and mighty navies.

The world will agree that this is not the end of our present-day civilization. We have progressed far since the days when might made right. Our States have their courts and policing authority and we have lived in peace and amity with our neighbors on this continent for over 100 years.

If civilization is to advance, we must go forward in a plan to establish peace and amity among all the nations of the world. The way is not by building bigger and stronger armies and mightier navies but by using our influence to get all the world to accept permanent peace as its main objective.

Under permission of the House, there is inserted herewith a statement of a great labor movement on peacetime military conscription:

STATEMENT OF HARVEY W. BROWN, PRESIDENT, INTERNATIONAL ASSOCIATION OF MACHINISTS, BEFORE THE HOUSE MILITARY AFFAIRS COMMITTEE ON PEACETIME MILITARY POLICY

I am Harvey W. Brown, president of the International Association of Machinists, with offices at Ninth and Mount Vernon Place NW., Washington, D. C.

The International Association of Machinists represents over 700,000 American workers as their agency for collective bargaining with their employers. The citizen-workers who make up the membership of our association are drawn from every industrial section of our Nation and are for the greater part skilled craftsmen, helpers, apprentices, and production workers in the metal industries.

My purpose in appearing before your committee today is to convey to you the considered position of our association relative to the important question of peacetime compulsory military training.

First, we would like to point out that we agree with those who advocate the necessary matériel and military personnel to maintain our freedom, and the dignity and security of our American way of life. We differ with some who have testified before your committee when we face the question of the best methods to pursue in acquiring the military force found to be necessary, and the wisdom of maintaining a peacetime military force of such huge proportions as favored by some who have testified before your committee and as proposed in the May bill, H. R. 515.

We submit that an Army and Navy made up of the youth of America, trained by compulsion in peacetime, without consideration to their mental attitude toward military life or whether or not they are emotionally suited or desirous of such training, will not be possessed of the qualities needed to meet military requirements. Certainly the compulsory training of the young men of Italy, Germany, and Japan in the past 20 years and the defeated state of those nations today is a living example of the delusion of such thinking.

To make America strong in the years ahead, we do not need compulsory military training; we do not need to resort to undemocratic methods of holding our Nation's youth in a reserve army whether or not they are capable of being of service from a military

standpoint; we do not need to raise our male children with the understanding that they must reach the age of 25 years before they can declare themselves free men; we do not need to bear the tremendous cost of maintaining a vast armed force in peacetime when there is no unfriendly nation on the face of the earth with the potential power to attack us on land, sea, or in the air.

We reason that our Nation, with its great and successful heritage as a democracy, with its wealth and natural resourcefulness, can best afford to make voluntary enlistments in our needed military forces sufficiently interesting to attract and win the attention of the best suited of our Nation's youth without the element of compulsion and force as found in House Resolution 515, which is before your committee for consideration. The recently released figures of the War Department reveal the success of voluntary methods to keep our armed forces at the required strength. Enlistments in the Army alone are proceeding at the rate of 175,000 monthly, more than tripling the 50,000 figure given by President Truman as the monthly requirement.

The purpose of the May bill is—to quote from the measure—"that the reservoir of trained manpower built up at such enormous expense during the present war should not be permitted to become empty again as after World War I, but should be perpetuated for the peace and security of future generations." We do not agree with the illogical reasoning of such an expression of purpose.

The implication that compulsory peacetime conscription would soften or lighten the enormous expense spoken of in this bill is not a convincing argument in favor of youth conscription. The cost of maintaining a citizen army by compulsion, with its high percentage of misfits for duty, if they are ever actually needed and the Government's financial responsibility for the injury and sickness of conscripts brought on through training, would not permit any reduction in expense from a taxpayer's standpoint.

With the enactment into law of compulsory military training there would be no convincing point in attempting to maintain that our victory over the Axis nations had resulted in the preservation of our traditional American freedom. If our youth are to be forced into military training in time of peace against their own decisions and are placed in reserves for 6 years thereafter, it is logical to assume that marriage and the building of homes and raising of children will be delayed, and that such delay will virtually destroy the prospects of normal family life at an early age, which is a cherished goal of most Americans.

The sponsors of military conscription and those who endorse such proposed legislation have failed to tell us which nations endanger our peace or security. Germany and Italy are completely defeated and Japan is in a state where her philosophy of conquest is eradicated for all time.

The citizens of America have a right to ask and be told the truth regarding the danger that threatens our security to such an extent that compulsory military training is necessary. If we are to militarize our 18-year-olds at the rate of 1,000,000 per year for an indefinite period, it is our right to know just who our dreaded enemy might be. Is it Great Britain or Russia or China? Those great nations were our effective allies in destroying German nazism, Italian fascism, and the imperialism of Japan, and the facts as we know them indicate that they are as anxious as we in America to settle differences that may arise, through peaceful means. Where else can be found nations that would have potentialities of successful aggression?

Certainly, the weapons of war that have been developed during the conflict that is just over should show us the absolute necessity of a future of peace if our civilization is to continue. To this we all agree whether or not we can see eye to eye on the wisdom of compulsory military training as a national peacetime need. If it is a true and intelligent analysis of present-day weapons development, to expect that any possible future war would be fought with rocket bombs, atomic missiles of destruction and other highly technical air and sea weapons, and that any possible attacks would be so timed as to cause widespread destruction before the attacked nation could organize its equally devastating weapons; then we question the effective value of a force of soldiers and civilian reserve with only a slight knowledge of the requirements that would arise in an era of technological warfare of such magnitude.

The International Association of Machinists is deeply interested and sincerely concerned with the causes and prevention of wars, believing that the beginning of wars of aggression can be traced to the poverty, insecurity, and desperation of the people, resulting in their readiness to accept the destructive leadership of warmongers. Hitler's leadership over the German people was successfully attained because of mass unemployment and starvation which destroyed the thinking of the people to a point where they readily followed his organized plan of destruction, and his ruthless program of annihilation of Jews and others, finally resulting in the humiliating defeat of the German Nation, notwithstanding the fact that the numerical strength of Hitler's conscripted army was enormous. Had there been no mass unemployment and hunger in Italy, Mussolini, with his distorted ideas of national superiority, would not have been successful in his program to become dictator. These are two present-day examples of the effect of large-scale insecurity upon nations. We contend that America should profit by the lessons which we have learned from the tragic mistakes of these nations and provide the necessary machinery so that this situation will not occur in our own country. Instead of considering the passage of laws to conscript our Nation's youth by compulsion in time of peace, we maintain that Congress should be giving more attention to the passage of legislation which would provide full employment, higher standards of education, better standards of living for our people, and the development of an adequate and highly skilled military force made up of those who voluntarily wish to follow a military career.

President Truman says that the objective is not to train professional soldiers, but to train citizens. If the training is not to get competent soldiers, then, we ask, why are they to be trained?

We contend that the churches, homes, schools, and colleges of America are proper sources of good citizenship development, and we seriously believe that compulsory military training would have the opposite effect upon many who would view peacetime training as a sentence that they must serve, against their will and judgment.

Certainly good citizenship in a democracy does not depend on military training, and can best be gained through civilian channels.

Our association together with other responsible unions, have fully endorsed the Federal apprenticeship training program and have cooperated in the development of joint labor-management apprenticeship committees in many industrial plants. By this means, thousands of America's young men are being systematically trained for skilled trades, that will certainly be of great value in the days of technological advancement ahead. This is the kind of training we need to keep America strong, and those who enter such training should be assured that their work will not be interrupted by military training. In this connection, we would like to point out that the members of our association built the famous B–29 bombers in the past war, and we know the tremendous amount of time and skill required to perfect such equipment. The press has carried, within the past few days, the story of the new 28-cylinder Major airplane motor. This engine, only now going into production, was in the blueprint stage long before we entered the war and like all other airplane engines has taken years of work from design to production. Instead of a massive military force in peacetime, we sincerely recommend that more attention be given to the encouragement of young men to become apprentices and junior engineers to the skilled trades in modern industry.

The American people know that better educational programs in our schools will best serve the interest of the Nation and its future security.

The National Opinion Research Center of the University of Denver—whose noncommercial Nation wide polls are considered by many social scientists to be more accurate than Gallup—reported on June 23, 1945, the result of a Nation-wide poll on the subject of conscription legislation. Question: "If this Government had $2,000,000,000 a year to spend, would you rather have it spent on a program of better regular education in the schools, or on a program of compulsory military training in the Army or Navy?"

| | *Percent* |
|---|---|
| Regular education | 56 |
| Compulsory military training | 25 |
| Neither or both | 11 |
| Undecided | 8 |

On November 3, 1945, the Denver organization reported a poll. All were asked: "If the United States had to do one of these two things after the war, which one do you think would give us the best chance of helping to keep peace in the world?"

| | *Percent* |
|---|---|
| 1. By trying to build a bigger army than any other country? | 31 |
| 2. By trying to get the world organization to build a police force that would be bigger than the army of any country in the world, including the United States? | 56 |
| Neither | 2 |
| Undecided | 11 |

If the war has taught us anything, it is that it wasn't lack of military training that caused our difficulties when we were attacked, but lack of general and technical education, lack of public health, lack of facilities, installations, munitions, ships, planes, and supplies. Military training in peacetime by compulsion will not cure these shortcomings.

A strong bulwark of our democratic heritage will not be produced by military conscription, but by widely extended education; proper medical examinations and corrective physical programs made available at reasonable cost to all people; healthful housing and full employment. By these means we shall prepare the way for a healthy and properly equipped America ready for any eventuality.

We can see nothing sound in the argument that military life in itself can be credited as the best method of improving the health of our Nation, for one of the basic requirements upon entering the armed services has always been sound health before induction.

We sharply disagree with the testimony of Mr. William S. Knudsen, who recently appeared before your committee and spoke in favor of peacetime military training. It is certain that his contention, that a year of military training for our youth will "make them more democratic," "they will learn each other's ways, they will be more patriotic," is a prediction entirely without foundation. In all the years of our history of devotion to the principles of democracy and fair play, we have never before had to force our 18-year-olds into military camps in order to "make them more democratic."

We question whether this leader of industry whose contribution to democratic society is respected, but who, according to his testimony, came to free America 1 year before he would have been inducted in the army of his native country, can be accepted as an authority on whether or not peacetime compulsory military training is a builder of patriotism and democracy. We challenge the implication that patriotism and love for democracy is weak in our land, or would be strengthened by compulsory military training.

The International Association of Machinists is opposed to compulsory military training for the reasons stated and also because we have seen many evidences where deferred American workers needed during the war were suddenly drafted and their deferments canceled because of their registered opposition to injustices imposed by their employers. We can see nothing in the present proposals for peacetime military conscription to assure labor that these industry-dominated pressure practices will not be continued in time of peace, if conscription is to be a national policy.

President Truman's message to Congress, in which he recommended compulsory training, clearly sets forth the objective when he says, "Some would be trained for combat, others would be trained for whatever war service they are physically and mentally qualified to perform." In our considered opinion, this would mean nothing short of military direction of labor, in addition to control over the fighting forces. Such a plan is against the ideals of our democratic freedom, and in the light of the splendid record of American labor in the past war we sharply disagree that legislation should be enacted supporting such a program, which would destroy the workers' opportunity to exercise their freedom of occupational choice.

In closing, I would like to say that we believe the bills presently being considered by your committee which deal with the conscription of our youth in peacetime should, in all fairness to those who sacrificed so much on the fighting fronts, be held in abeyance at least until they are back on their own soil, thus permitting them to have a voice in those measures that if enacted into law will seriously affect the lives of all American veterans and their children.

DECEMBER 10, 1945.

## Need for Expansion of Georgia's Health Services

EXTENSION OF REMARKS

OF

### HON. ROBERT F. WAGNER

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

*Saturday, December 15 (legislative day of Monday, October 29), 1945*

Mr. WAGNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement by the Georgia rural-health conference showing the need for expanding and improving Georgia's health services.

Similar studies of other States show that every State in the Union is in need of some expansion and improvement in its health services.

The chairman of the Education and Labor Committee and I have introduced a bill—S. 1606—which provides a comprehensive health program designed to improve health services in every community in the United States. Representative DINGELL has introduced a companion bill in the House of Representatives—H. R. 4730.

Our bill provides for a four-point health program:

First. Existing Federal grants to the States for public-health service are broadened and increased to speed up the progress of preventive health services.

Second. Existing Federal grants to the States for maternal and child-health and welfare services are broadened and strengthened.

Third. Health insurance is made available.

Fourth. Grants-in-aid are provided from social-insurance funds to nonprofit institutions engaging in medical education or research.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

IS GEORGIA ONLY HALF WAY TO HEALTH?

This is true so far as public-health nurses and health officers are concerned. Georgia needs twice as many as its present health program provides; it needs three times as many public sanitarians. Hospital facilities are even further below par compared with the Nation as a whole.

WHAT IT MEANS

Compare Georgia's vital statistics record with the Nation's to see what this means in wasted human resources—sickness and death. The table here contrasts the records for 1940. (Rates are per 100,000 population except where noted.)

| | Maternal death-rate[1] | Infant death rate[1] | Typhoid death rate | Malaria death rate | Diphtheria death rate | Tuberculosis death rate | Syphilis death rate |
|---|---|---|---|---|---|---|---|
| Georgia | 5.3 | 57.8 | 2.2 | 2.8 | 1.9 | 49.1 | 18.8 |
| United States | 3.8 | 47.0 | 1.1 | 1.1 | 1.1 | 45.8 | 14.4 |
| Difference | 1.5 | 10.8 | 1.1 | 1.7 | .8 | 3.3 | 4.4 |

[1] Per 1,000 live births.

RURAL HEALTH IS THE KEY

Georgia's health problem is largely a problem of medical care and facilities for its predominantly rural population. There are not enough doctors, nurses, health officers, and hospitals in the rural areas.

For instance, although the population of the State is 65.6 percent rural (in 1940) most of the doctors and dentists and hospital facilities are concentrated in city areas. A report of the health panel of the State agricultural and industrial development board says that what medical facilities we have are badly distributed in relation to population.

Doctors and dentists: Georgia has 1 doctor for every 2,000 people. That is accepted by health experts as an adequate ratio. However, 1 doctor for every 1,000 to 1,500 people is considered a better standard. And although we have an adequate number of doctors, they are not spread over the State in the right proportion to take care of our rural population. Only 20 counties have the adequate ratio of 1 doctor for every 2,000 people. In 75 counties 1 doctor has to care for 3,000 or more people. In 61 counties 1 doctor has to serve from 2,000 to 3,000 people. Two counties have no doctor at all. The problem of dental care is much the same. Forty-five percent of the dentists of the State are concentrated in the Atlanta area.

Hospitals: Georgia does not have enough hospitals. The State's hospital facilities add up to an average of 1.4 beds for every 1,000 people. The national average is 6 beds per 1,000. What hospital facilities we have are badly distributed. Half of the hospital beds of the State are concentrated in the Atlanta area, where there is only 24 percent of the population. Only 6 counties have 5 or more beds per 1,000 population. Eighty-five counties have no general hospital beds at all.

Personnel: The health panel report says Georgia's present expenditure of 80 cents per capita (made up of local, State, and Federal funds) provides only half the number of public health nurses and health officers and only one-third of the number of sanitarians needed for an effective health program. One nurse for every 5,000 people is called an adequate minimum, 1 for every 2,500 the ideal ratio. Georgia has only 1 public health nurse for every 10,000 people. One health officer for every 30,000 people is considered adequate. Georgia has 1 for every 65,000 people. One sanitarian for every 20,000 people is considered the minimum ratio. Georgia has 1 for every 60,000 people.

THE ANSWER?

The health panel report says Georgia vital statistics show that diseases which can be controlled by immunization—such as typhoid and diphtheria—"are rapidly approaching the irreducible minimum," but that diseases not controllable by immunization have not decreased at anything like a comparable rate. The reason, says the panel, "constitutes the gravest problem * * * facing Georgia in the field of health—lack of physicians and medical facilities. * * *"

The only answer seems to be more doctors and dentists, more hospitals, more public-health services for Georgia's rural population. Statistics show that the death rate for most diseases is higher in rural areas than in urban areas. Rural people are ill more often and for longer periods of time than city people. The selective-service rejection was higher among farm youth than any other occupational group. Obviously, our rural health program needs considerable expansion.

PROPOSALS

The health panel report sets out a detailed plan for expanding and improving Georgia's health services. It proposes a State-wide program to attain by long-range planning the following goals:

Three beds per 1,000 persons for acute general hospital facilities.

A general hospital within 35 miles of every patient.

Acute general hospital to be of not less than 100-bed size.

Maternity shelter and emergency facilities in each county.

A well-developed medical center at each of the State's two medical schools.

Modern out-patient health center facilities, including dental, in all towns of more than 500 population.

Tuberculosis hospitals in each of the nine health areas into which the State would be divided, each large enough to furnish two beds per annual tuberculosis death.

Why State-wide? The alternative to an integrated State-wide health and hospital program is for each county or municipality to establish its own facilities. On this basis, 90 of Georgia's 159 counties would have to spend more than 10 percent of their local revenue to pay for one public health nurse. If each county had to operate a separate hospital for its citizens only the hard fact is that only 16 counties in Georgia have populations large enough to justify a 100-bed hospital. Since it is generally accepted that hospitals of less than 75-bed size cannot provide the best of medical care and at the same time be operated economically, the sparsely settled rural areas would still suffer from insufficient facilities.

Low cost care: Any program designed to raise the standards of Georgia health must reach all citizens. Low cost or free medical care must be provided for part of the popu-

lation. This is made obvious when we consider that 30 percent of the people of Georgia have incomes under $1,000 a year, and 53 percent live on incomes ranging from $1,000 to $2,000. In these facts lies the proof that poverty and poor health go hand in hand.

HOW TO DO IT?

Such a full program of health education and medical care as Georgia needs obviously costs money. Yet the waste of human resources caused by disease is even more costly. The need for a program cannot be denied. Rural people themselves certainly realize this need and want something done about it. A recent bulletin of the United States Department of Agriculture said surveys reveal that more than four-fifths of farmers interviewed favor an increase in public-health clinics for rural areas.

GEORGIA RURAL HEALTH CONFERENCE,
*Academy of Medicine, Atlanta, Ga.*

SEPTEMBER 13, 1945.

## Loan to Great Britain

EXTENSION OF REMARKS
OF
### HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
*Saturday, December 15 (legislative day of Monday, October 29), 1945*

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article headed "Mallon derides British loan," written by Paul Mallon and published in the Fargo (N. Dak.) Forum of December 12, 1945.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MALLON DERIDES BRITISH LOAN

(By Paul Mallon)

WASHINGTON.—A few of the bravest administration Congressmen said God loves everyone and the British loan agreement is a good one immediately after it was announced.

The suspicious or knowing Congressmen roundly denounced it.

But the bulk ducked and ran when they saw newsmen coming to seek comment. These detected a high aroma of unpopularity about the whole affair wafted in the first puff of the news from the State Department. They did not know much of its vast unfathomable ramifications.

What they knew, they did not like. And the deeper they went into it, the less they liked it. It was so bad few wanted to be connected with it one way or another.

Indeed its sponsors, in the sacred halls of the Department, were not eager to champion the success of their negotiations in Congress. They rather made plain they would welcome a delay at least until Parliament has acted on the Bretton Woods agreement, and would not press for approval until after the Christmas holidays.

If Britain turns down Bretton Woods, our sensationally modest official enthusiasm for this thing will be revised downward.

The first superficial examination of the proposition by the Congressmen was enough for most.

We are to lend Britain far more than her whole canceled First World War debt. The amount to be advanced is $3,750,000,000 while the old war debt still owed is $2,331,000,000, less than two-thirds as much.

The only way we can raise this money is by borrowing from our people. The interest charge to us is not less than 2⅜ percent. The loan to the British carries only 2 percent. But we must pay our people interest from the date of the loan.

For the British, interest will not start until 5 years, at least so the publicity said. Actually her interest payments will not start until 5 years after December 31, 1946—more than 6 years hence.

The British permanent under chancelor of exchequer, Sir Edmond Bridges, succeeded in slipping the extra year in at the last moment.

Britain can use this money any way she chooses. The publicity put stress upon her likelihood of buying American products. This is but one purpose among many specified. The others are so broad as to permit her to spend the sums through her treasury any way she wishes.

Simultaneous announcement was made by Mr. Attlee to Parliament that, of course, he was going ahead with the socialization of Britain. To buy coal mines, utilities, and other businesses, he will issue bonds to his people, but not delayed action bonds. No one can give offhand the cost of British socialization but it will be certainly $3,750,000,000 added to British exchequer obligations.

The use of our money to protect the British financial position permits the socialist experiment. Otherwise that added debt could not be carried, judging from the official British statements of her financial plight.

But on our loan, we get nothing for 5 years (what will happen in this atomic age by then?) while Britain can draw the money as she wants it.

This is, strangely enough, the best feature of the deal. It gets worse from here on. The lend-lease deal is almost unbelievable. Britain owes us about $25,000,000,000 under what Mr. Roosevelt deceptively called lend-lease.

Now it is officially said this money and goods were neither loaned nor leased. Mr. Roosevelt had a provision for repayment in kind, so we could at least get some of our equipment back for use or scrap. That is forgotten in the current arrangement.

Britain gets the title to everything we have given her for what the agreement calls a payment of $50,000,000 to $700,000,000.

This is not a "payment." We merely add it on to the loan which is to start becoming a loan 6 years after the money is paid. Actually Britain pays nothing unless or until she pays the new loan 56 years hence. In short we throw away $25,000,000,000 of debt for a new debt of "$50,000,000 to $700,000,000" to begin in 6 years.

What do we get? We get promises. Nothing definite about anything. No time limit or signed specific plan of immediate action. We get a hope of negotiating the abandonment of the various gypping arrangements by which Britain has maintained her trade—Empire preferences, antidollar pools, sterling blocs, and cartels.

They do not promise to abandon all these immediately or at any time. They promise to negotiate about abandoning them, which, of course, means nothing. Whether they do abandon these practices or not is left to future negotiation—and a world trade conference next year.

Note well Mr. Truman's careful words about the credit "making it possible" for the United Kingdom to expand multilateral trade; and Mr. Vinson's claim that it opened "the likelihood" of a less competitive trade world.

We got "possibilities" and "likelihoods"; and they got the $25,000,000,000 we have already supplied, plus $3,750,000,000 more at less interest that it will cost our Treasury to raise the money for any purpose she chooses.

## The Threat of Inflation

EXTENSION OF REMARKS
OF
### HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
*Monday, December 17, 1945*

Mr. PATMAN. Mr. Speaker, I am inserting herewith an editorial taken from the Veterans of Foreign Wars publication, Foreign Service, December 1945 issue.

The veterans are very much concerned about the threat of inflation. It is going to take the cooperative efforts of all groups to prevent the kind of inflation that is now threatening us.

The editorial is as follows:

THE THREAT OF INFLATION

The danger that cost-of-living prices will zoom upward to calamitous levels is today's most serious threat to the welfare of the Nation's returning veterans. Unless positive, cooperative action is taken to ward off inflation, the returning veteran is destined to be the No. 1 victim of conditions that will destroy his faith in America—and his every chance to build anew for the future.

Following World War I in 1917 everybody expected living costs would drop. Government controls against inflation were promptly liquidated. For a few months following World War I, living costs actually did sag but there soon followed a scramble for raw materials and goods that sent prices up faster than during the war.

The records show that more than 40 percent of the increase in living costs during the World War I era, took place between March 1919 and June 1920. Then the American people reached the point where they could no longer buy the things that they needed at prevailing prices. Deflation swept the country nearly overnight. Factory pay rolls shrank 44 percent. Employment fell off more than five million. Business profits turned to losses. Between 1919 and 1921, farmers' incomes dropped more than 60 percent. In the next 5 years more than 450,000 lost their farms.

We have been told that production is the only effective antidote against both inflation and deflation. This means there is only one way to prevent economic chaos. When goods and commodities are scarce, the people who have money to spend will readily pay more for the things they want to buy. Thus they will give the green light to spiraling prices. However, when people can easily purchase the commodities they need, the tendency to demand the most that they can get for their money will keep prices in reach of all.

As long as the consumer has the necessary purchasing power the wheels of industry will

keep turning, our farmers will find a market for their products and returning veterans will find profitable employment.

The temptation to cut loose from the shackles of Government controls is sweet but let's not make the same mistake we did after the First World War. There must be no complete relaxation of Government controls until the danger of inflation is over—and when all the men who are due to leave the armed forces will have the chance to speed their readjustment to civilian life as quickly as possible.

Without question, America is faced with a situation which demands nearly perfect teamwork between Government, business, labor, farmers, and all other elements of our national life.

If we invite a repetition of the tragic consequences of the early twenties, then the men who won the victory over the Axis Powers will have every right to question the gratitude of the American people.

## Protest Against Enemy Alien Testimony

EXTENSION OF REMARKS
OF
### HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
*Monday, December 17, 1945*

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Evalyn Walsh McLean and also a letter written by Dr. Carruthers, a former Navy chaplain, to the Times-Herald:

MRS. M'LEAN PROTESTS JAP AS COURT-MARTIAL WITNESS

The following telegram was sent last night to Secretary of the Navy Forrestal by Mrs. Evalyn Walsh McLean:

"DEAR MR. SECRETARY: When I first read and heard the rumors that the Navy Department was going to call a Japanese captain of a submarine to testify against one of our own American boys, I simply did not believe it.

"When I read the paper this evening I was shocked and horrified to think that you, as the Secretary of the Navy, or anybody connected with you in your office, would allow such a farce and travesty to be perpetrated against our American democracy.

"Knowing what these wretched perverts have done to our people and to the other peoples of the world who they have had in their power, knowing full well that their oath and their word of honor is less than a scrap of paper—yet men like you still have faith in their word and their honesty to allow them to testify against one of our own.

"I just hope, Mr. Secretary, that you and the people under you who are responsible for allowing this to happen will never realize how bitterly the soldiers and sailors feel about it tonight.

"It is one of the most disgraceful actions that our democracy has suffered up to date under the theory we must have justice for all.

"Remember, Mr. Secretary, there is no such word as "justice" when you deal with liars, with perverts, and with human scum that is lower than any animal.

"If the perverted Jap testified that our boy was wrong, and our American boy—who I have the greatest faith in—said the Jap was lying, who would you believe?

"I personally would believe our own boy, but apparently the Navy is ready to at least give consideration to the testimony of a lying little Japanese handy man, who, thanks to the credulity of the Navy, has been made an important poor fool for a few days.

"Mr. Secretary, is the United States of America being asked to choose between the testimony of a Japanese or the testimony and word of one of our American boys?

"I know how I would decide this matter. What about the rest of the United States of America?

"EVALYN WALSH MCLEAN."

COSMOS CLUB,
*Washington, D. C., December 15, 1945.*
EDITOR, THE TIMES HERALD,
*Washington, D. C.*

DEAR SIR: The surrender instrument which the Japanese signed on the U. S. S. *Missouri* occasioned a notable historic statement by the supreme commander of the Allied forces in the Pacific war zone, which should be noted and most closely studied.

General MacArthur in effect stated in one clear sentence a point of view that all chaplains of all faiths accept. I think we may include scholars of all religions and discerning statesmen scientifically versed in legal history, philosophy, and jurisprudence. Clergymen, citizens, and professors with real understanding and patriotic appreciation confirm his view that the basic question was theological in the peace settlement.

The Japanese were told that their surrender was not so much a military victory as a finale for Japanese theology now defeated after conflict with an American theology which produced a Christian civilization of law, ethics, freedom, mercy, justice, and right.

What he meant was that the phrase "God and country" which the veterans of the American Legion and Veterans of Foreign Wars of War I and II accept as the ideal of war service cannot be in any ethical sense theologically the same as the Japanese banzai to Emperor Hirohito because he is nothing more than the puppet god of the world, whatever his pseudo claim is.

With a lieutenant commander son in the Navy and a seaman first class daughter in the WAVES, I am compelled as a former chaplain of the United States Navy myself and as the first appointed chief chaplain of morale, education of the Navy and Marine Corps, representing the Secretary of the Navy, to say that the MacArthur statement is the most profound, acceptable, and simple reduction of the war issue between Japan and the United States to be found in one sentence in current history.

What others may think is their affair in this free country. But I find myself unable to view without grave national concern the highly improper precedent of admitting the testimony of a Japanese enemy alien (?) into the court-martial history of the United States Navy, especially because this enemy allegedly torpedoed the vessel of the defendant in the case. My observation would be that such a course is unwise, unsuitable, legally dangerous, un-American, and damaging to the Christian traditions.

How did this enemy alien Japanese officer enter this case over the protest of Captain Cady, attorney for the defense? It seems rather incredible that this could happen while a state of war still exists between Japan and the Allied Powers. Still more astounding is the fact that this Japanese officer apparently sank the vessel of the defendant and now his word takes on face both here and doubtless in Japan, where much can be made of it.

As a sometime chaplain of the Navy, I find I must dissent from the apparent assumption of the court that the oath this Japanese officer takes is in any comparable legal sense sacred alongside the oath of an American officer educated in the honorable tradition of Annapolis and commissioned to serve God and country in line with his forebears in the military forces of the Nation.

As a private citizen, born in the bible belt of Kansas, and resident for 20 years in Pasadena, where the Japanese component of population was rather large during these 20 years, it would be my impression that the President of the United States and the Congress might well undertake to see to it that this shintoistically-sworn oath and testimony, whether it serves or hinders the legal situation, be expunged on the record as incompetent and an improper military precedent dangerous and unbecoming to a Nation that respects the Christian and legal traditions of America.

In this decidedly unique instance of what seems to me to be an error in procedure, it would be my feeling that it is time for light and not heat to be turned onto this question. With that in mind I would welcome a research into the Army and Navy archives which would probably take some time to find out whether or not it would be wise to change the general philosophy of military urisprudence. So far I have been unable to find any precedent in the Army and Navy archives that in the slightest degree approach this instance identically. Research may show that I am wrong. With sincere conviction.

Dr. JOHN F. B. CARRUTHERS,
*Former Chaplain, U. S. S. Oklahoma, Overseas World War I. Former American Legion Post Chaplain, Pennsylvania. Member, Veterans of Foreign Wars, California.*

TELEPHONE CALL FROM CHAPLAIN DR. F. B. CARRUTHERS AT THE COSMOS CLUB

My opposition to the admissibility to an enemy alien Japanese officer into a United States Navy court martial rests upon moral grounds because I was a former chaplain of the battleship *Oklahoma*, sunk at Pearl Harbor, and I am the father of a daughter and son in the United States Navy now. I do not pretend to be an authority on naval law nor to criticize the fair-play intent of the Navy Department.

As a graduate of Princeton University, Princeton Seminary, Princeton Graduate School, I feel competent to say that the honor and truth are something that a Japanese alien officer cannot understand as a chaplain understands those words. It is more than a problem of semantics. It is a problem of Christian America versus Japanese Shintoism. That is why General MacArthur called the issue between Japan and America a theological one in nature.

## Loans to Foreign Countries

EXTENSION OF REMARKS
OF
### HON. ROY O. WOODRUFF
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
*Monday, December 17, 1945*

Mr. WOODRUFF of Michigan. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article by George Rothwell Brown from the New York Journal-American of November 21, 1945:

LOANS TO FOREIGN COUNTRIES

(By George Rothwell Brown)

WASHINGTON, November 21.—If Prime Minister Attlee's chief errand in Washington was in connection with the proposed British "loan"—rather than with the secret of the atomic bomb, as many believe—he has not aided his cause in Congress.

Congress may not have the last say with regard to splitting the atom, but when it comes to splitting our Treasury deficit it cannot be ignored.

As pointed out in this place some time ago, Washington is jittery over the application of atomic energy to military purposes. Notwithstanding the United Nations Organization, there are freely expressed fears of a third world war.

So what many realists in Congress are asking is "In that event and if Europe cannot prevent another war, why should we finance it?"

It isn't a foolish question at all for that is precisely what we did after World War I.

On the eve of World War II, 16 European countries owed to the United States Government $11,433,857,402.72, on a total indebtedness of nearly thirteen billions.

All but little Finland had defaulted on interest and principal. The argument was that they could not afford to repay sums which had been borrowed from Uncle Shylock to save them from conquest.

In 1937 in a speech in the House, Representative ROY WOODRUFF, of Michigan, a Republican Member of the Ways and Means Committee, made certain statements about these debts which are being recalled today, as Europe again turns to the United States for financial assistance in fabulous amounts. He said:

"It was officially announced recently that the British Government is to spend for war materials and supplies during the next 5 years the enormous sum of seven and one-half billion dollars.

"His Majesty's Government now owes us the sum of $5,107,000,000. Of this amount $739,446,980.97 in principal and interest is past due.

"Their total debt to us constitutes approximately two-thirds the sum they propose to spend within the next 5 years for their Navy and other war equipment—and yet they would have us believe they are financially unable to pay us, their saviors, the comparatively modest sum they formerly agreed to pay."

Mr. WOODRUFF then went on to discuss the debt of $4,081,227,249 which France then owed the United States—and which France still owes. He thus referred to France:

"And what have they been doing since the day they declined to make further payments on their debt to us? They have been spending more and more each year preparing for war. A small part of the money they are spending each year for this purpose would meet their pledged payments to us, and we would have some assurance that the American people are going to be taxed eventually to discharge this obligation."

Turning then to Russia—which is again seeking an American loan—Mr. WOODRUFF said:

"The Government of Soviet Russia has been recognized officially by the United States. The people of that country owe the people of this country $366,688,455.88. Payment of this debt constitutes a sacred obligation upon the existing (Russian) Government, regardless of its character."

Germany, in 1937, owed the United States, as Mr. WOODRUFF pointed out, $1,200,000,000. And Germany, he added, was rebuilding her military machine.

How escape the conclusion that it was with money owed to the American people that Europe after World War I armed for World War II?

## National Intelligence Authority

EXTENSION OF REMARKS

OF

## HON. VICTOR WICKERSHAM

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 17, 1945*

Mr. WICKERSHAM. Mr. Speaker, this summer a committee of 11 Members of Congress made a study of conditions in several countries, and upon our return we made certain recommendations, one of which was a recommendation that our intelligence forces be combined into a superintelligence force.

The State Department has about completed its master plan to blanket the world with a superintelligence system, it was disclosed last night. As chairman of the group, consisting of Congressmen WICKERSHAM, DONDERO, WEISS, FEIGHAN, MERROW, RAMEY, CHELF, CARNAHAN, HORAN, FULTON, and HUBER, I wish to compliment the President and the State Department upon their decision to inaugurate this plan. I feel sure I speak the sentiments of each member of the group which composed the committee.

The United States has never had such a system in peacetime. Perhaps the lack of one permitted Japan to plot world conquest virtually undetected and allowed Hitler to move into many countries before he was checked. Soon after President Truman took office he took action to correct the situation.

The plan will definitely strengthen the foreign policy of the United States of America and provide sources of valuable information for the policy makers. It will be presented to the President for final approval soon.

This plan calls for establishment of a National Intelligence Authority. It would be composed of the Secretaries of State, War, and Navy, with Secretary of State Byrnes as chairman. In security matters the heads of the Federal Bureau of Investigation and the Treasury would join those previously mentioned.

In the past especially during wartime, the intelligence units of the United States of America have been somewhat disjoined. Principal aim of the new program is to coordinate them through the State Department. This would rightfully provide a cohesive espionage service throughout the world.

The intelligence agents will be required to keep an active and thorough check on everything in foreign countries from the development of atom energy to conditions of unrest which might lead to another war.

The proposed system would be an outgrowth of the Office of Strategic Services which is credited with giving the United States excellent and worth-while intelligence protection during the war.

It is expected that Col. Alfred McCormack, an able director of Army intelligence, is likely to hold the key assignment in the new system. He will likely be appointed executive secretary to coordinate interdepartmental operations. He would be supported by two advisory groups, one for intelligence and the other for security. The latter would include FBI and Treasury officials.

Mr. Speaker, I feel that the adoption of our recommendations in this instance and in other instances since our report was made proves the value of such studies and substantiates our trip which we made in the national interest.

## Oil, Blood, and Sand

EXTENSION OF REMARKS

OF

## HON. HUGH DE LACY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 17, 1945*

Mr. DE LACY. Mr. Speaker, under the privilege granted me, I wish to call attention to a forceful article by Inge Kaiser, published in the December 17 issue of the New Republic. The article is a brilliant analysis of the role which oil plays in the Near East and of the inspired opposition to a democratic Jewish commonwealth in Palestine. It bears out many of the points I made when I spoke on the House floor in favor of a free government in Palestine that would offer a real homeland to oppressed Jewish people and rest upon the solid support of Arab and Jew alike.

For that reason, Mr. Speaker, I desire to include Miss Kaiser's article in the RECORD. It follows:

OIL, BLOOD, AND SAND

(By Inge Kaiser)

(King Ibn Saud, according to a recent news dispatch, is said to have stated his satisfaction with American oil companies and to have labeled rumors of cancellation of concessions as "a big wind." In answer to an inquiry by the Arabian American Oil Co., he repeated his deep concern about Palestine, but said he differentiates between American companies and government, which makes policy. His present revenue in royalties is estimated at $6,000,000 annually. It is possible that he has found during the last month that he could not follow through on his earlier threat, or he might want to hold that strategy until later. We believe the following considerations are still relevant to the situation in the Middle East.—I. K.)

In the eastern section of the Arabian peninsula the monotony of endless sand dunes is interrupted by the slim derricks of the Arabian American Oil Co. Out of these wells flows oil—and trouble. On the west side of the peninsula lies Palestine. Here the stranded Jews of Europe are trying to find refuge from persecution. No railroad or pipe line connects the two areas. Yet the request for unlimited immigration into Palestine has had strange repercussions: Ibn Saud, King of Saudi Arabia, has threatened that if this request is granted he will stop the flow of oil from Saudi-Arabian wells.

Until the arrival of the atomic age, the present is an oil age. In the words of Senator O'MAHONEY, "There is nothing that men and nations will not do to gain control of it [petroleum]. They have been known to bribe kings and potentates, to foment revolutions, to overthrow governments. Purely individual rights and interests have frequently been of very little moment in the struggle for petroleum." On the other hand, when questioned about the Palestine situation, Foreign Secretary Bevin declared, "The

British will not be affected by considerations of oil. This is a human problem."

What makes up this human problem? According to the Harrison report on conditions in Germany, there is a dire need and a great desire on the part of Jews to go to Palestine. The oft-stated obstacle of animosity between Arab and Jew doesn't jibe with recent reports on the ease and friendliness of relations between these two groups. The argument of Palestine's inability to support an increasing population has been boldly answered by one of the best reclamation experts of this country. The vast difference between the standard of living in present-day Palestine and that of surrounding Arab countries affords a glimpse of the agricultural and industrial potential.

Yet the Palestine question is being used as a political issue in Arab countries. The immediate demand all over the Western World for a settlement in Palestine has made the question acute. Ibn Saud, without reference to the human problem, threatens to cut off the oil. He is taking this stand because he fears the introduction of western ideas by Palestine-educated Arabs and the example of an industrialized Palestine to his feudal rule.

Ibn Saud must know full well that he could not operate the oil fields himself. Although Arabian American, the operating company (it is owned jointly by Standard Oil Co. of California and the Texas Co.), employs thousands of Arabs, for more complex jobs it imported Italian prisoners from Ethiopia and Eritrea, and repeated advertisements here beckon American workers to come to Saudi Arabia to perform the skilled tasks for the company. Of course, all administrative work is done by Americans. Actually to disown Arabian American would be to kill the goose that lays the golden eggs, unless His Highness has other plans in mind. Ibn Saud's treasury is too dependent upon outside contributions.

There are two explanations for Ibn Saud's bluff. He is either counting on Standard to put up a stiff fight for a continued State Department policy of appeasement, or on the economic rivalry among the Allied Powers with interests in the Middle East.

When, last May, the five berobed Arabian princes came to the San Francisco Conference, they were whisked about in Standard of California cars, their bills were paid by Standard. On their way up, they had been shown through some of the Texas oil fields and refineries by Standard Oil and Texas Co. officials, and in the Galveston area it had been arranged for them to be guests of the Navy.

Ibn Saud's relationship with Standard dates back to 1933. In 1930 Standard had acquired a concession on the Island of Bahrein, a sheikdom in the Persian Gulf. In order to gain marketing facilities, Standard sold a half interest to the Texas Co. Production had followed initial exploration so rapidly that Ibn Saud was deeply impressed with American methods. (English interests earlier had prospected and given up in that area.) Besides, the United States was not an imperialist power and would not be likely to interfere in his internal affairs. The Palestine question was not then acute. He granted Arabian American a large concession in 1933. Apparently, Ibn Saud was so well pleased with the way this relationship worked out that in 1939, in preference to much higher bids from the German and Japanese Governments, he awarded an additional concession over the remainder of his territory to this company. The payment was $1,500,000 in gold coin and a yearly rental of hundreds of thousand of dollars. In addition, Arabian American came to Ibn Saud's rescue financially with loans on advance royalties of about $10,000,000 between 1939 and 1941 alone. The annual royalty was about $1,500,000.

The Jews are still living in concentration camps in Europe. That is the human aspect. Ibn Saud knows that the combined investment of Standard and Texas in Saudi Adabia and Bahrein amounts to $100,000,000 already, and he appeals to Standard's interest in oil. Ibn Saud also knows that Standard is in a good position to take strong steps to protect its investment. Standard's people hold high jobs in many American Government departments.

Standard of California's vice president, Ralph K. Davies, is the Deputy Petroleum Administrator for War. In that capacity he had tremendous powers to direct the activities of the oil industry at home and abroad. He aided Secretary Ickes in negotiating the Anglo-American oil agreement. (Secretary Ickes himself stated that this agreement was designed to deal primarily with the Middle East oil problem.) James Terry Duce, vice president of Arabian American, was head of the Foreign Division of the PAW for 2 years. Under PAW's directive 70, he had almost plenipotentiary powers over foreign oil operations. The assistant director of the Theater Division of the Army-Navy Petroleum Board was Lt. Col. Eugene T. Kavanaugh, former Washington representative of the Bahrein Petroleum Co. (Standard of California and Texas' other Middle East subsidiary). Max W. Thornburg, vice president of Bahrein, was petroleum adviser in the State Department. And Arabian American's liaison man with the court of Ibn Saud was a main source of information on economic conditions in Saudi Arabia for the Cairo Embassy. It is no reflection on the honesty or patriotism of these individuals to point out that obviously, they could not be expected to follow governmental policies inimical to the interests of the companies from which they had come and to which they naturally expected to return.

When the trans-Arabian pipe line was first publicly proposed in February 1944, a project to be financed by the United States, there was such protest that it seemed as if Standard had overplayed its hand. Secretary Ickes, by the way, was not only concerned with oil problems; he was also interested in solving the human problem. Later in the same year he declared, "I * * * hope that the world's statesmen who gather to write the terms of an enduring peace will keep before them the tremendous possibilities for good which are inherent in the development of Palestine as a homeland for Jews, particularly for those unforunates who were the victims of the Germanic madness." Based on security considerations, the pipe-line plan was quite sound. The terms were so favorable, however, to the oil companies in the Middle East, and so unfavorable to the American people, that public opinion was aroused. And so was the envy of the nonparticipating oil companies, who clothed their objections in an outcry against Government entry into the oil industry. The strategic value of the pipe line to a powerful role of the United States in world politics remains. And Standard can be assured that diplomatic protection will be afforded this project if it is built privately by Arabian American, as now contemplated.

If United States security can be used by Standard as a tool to protect its interests in the Middle East, then Ibn Saud will be able to get away with playing his fifth ace. His bluff can be called only if United States foreign policy is based on the broad principles now established, integrating the supply of petroleum requirements with a democratic solution for Palestine.

Ibn Saud's other plan would also foil the hopes of homeless European Jews. Since companies of American nationals are by no means the only ones in the Middle East, he could try to play various national interests against each other.

As early as 1901 the British Government obtained a concession covering five-sixths of Iran. Iran is estimated to contain 25 percent of proved Middle East oil reserves: 4,000,000,000 barrels. In 1944, the Anglo-Iranian Oil Co., whose majority stock is held by the British Government, was producing 100,000,000 barrels of oil, more than twice as much as the other Persian Gulf fields combined.

This Anglo-Iranian Oil Co. is one of four groups, each owning 23.75 percent of the stock of the Iraq Petroleum Co., the only concessionary in Iraq. The other groups are Royal Dutch Shell, Compagnie Nationale des Pétroles, and Near East Development Co., which, in turn, is owned by Standard of New Jersey and Socony. Iraq's reserves are estimated at 4,000,000,000 barrels. Production in 1944 was 28,000,000 barrels. In 8 years, from 1934 to 1942, more than $90,000,000 was paid to the Iraq Government.

The French, in addition to their share in Iraq Petroleum Co., hold the League mandates over Syria and Lebanon, although officially these countries were given their independence in 1943. Preliminary surveys promise large reserves in southern Syria. Iraq Petroleum's pipe line traverses both countries, with its terminal in Tripoli, Lebanon.

Russia obtained a large concession in northern Iran in 1907. In 1921, renouncing all imperialist objectives, she gave this right back to the Iranian Government, with the provision that no other concession be granted in that area without Russia's consent.

Ibn Saud might seek an agreement to operate his oil properties with one of these three governments. In 1938 the British were importing only 25 percent of their petroleum requirements from Iraq and Iran. Most of the remainder came from the Western Hemisphere. If forced to remain within their sterling bloc, the British might welcome an offer of the Saudi Arabian wells. France, too, might want to add to her economic and political strength by taking them over. Russia was recently trying to obtain an oil concession in Azerbaijan. She might find it opportune to spread her influence along her southern flank. Ibn Saud would probably fear this influence more than he would welcome the economic assistance. Yet he might approach any one of these powers for aid. If successful, he might gain support in his threat to immigration into Palestine.

The Anglo-American oil agreement, concluded in October, was designed to prevent schemes of this sort. Perhaps Secretary Ickes, in pushing it through, was concerned simultaneously for the solution of the Palestine problem. The agreement provides that concessions already granted shall be respected. But it is not yet binding. Moreover, only England and the United States are parties to it. The oil industry had been so aghast, at the first draft in 1944, at this new "Government interference" that it forced the elimination of the more constructive articles. Only immediate negotiation among all four powers concerned of a strong and binding treaty based on the principles of the Atlantic Charter can effectively call Ibn Saud's bluff.

The discussion of Ibn Saud's possible plans shows up the irresponsibility of past policy in respect to the exploitation of oil-bearing countries. Although their rulers grow rich on royalties, almost no improvement is made in the lot of the people, either by the producing company or by the potentate. Arabs are still dismally poor, diseased, and largely dependent upon the charity dispensed by their feudal lord. This situation is the source of Ibn Saud's strength.

If the living standards of the people themselves were improved—as a condition of oil production—by the introduction of irrigation and of modern agricultural methods, by the establishment of schools, hospitals, and other sanitary facilities, not only would some human problems be solved but a better relation between foreign nationals and Arabs would result. Markets would be created for oil and for American exports—and, incidentally, this method would more closely correspond to announced principles of

foreign policy. This program would also further weaken the present threat of a holy war, which even now is mere saber rattling. There are no organized troops at Ibn Saud's command. Nor is there the hatred of Jews depicted by some Arab leaders. Whatever there is of animosity seems chiefly inspired.

If American security depends upon access to Middle East oil, the suggestions made above could contribute to a solution of the oil problem and they could aid in solving the human problem of the Jews—and of the Arabs. A firm policy for Palestine combined with a firm policy for oil, carried out not by Standard's agents, but by responsible top executives, is the only method of proving Ibn Saud wrong. Otherwise, he will be justified in his faith in Standard's omnipotence, and in the inability of the Allies to resolve their economic conflicts.

## United States Policy Toward China

EXTENSION OF REMARKS
OF
### HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
*Monday, December 17, 1945*

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by President Truman:

[From the Washington Sunday Star of December 16, 1945]

The Government of the United States holds that peace and prosperity of the world in this new and unexplored era ahead depend upon the ability of the sovereign nations to combine for collective security in the United Nations Organization.

It is the firm belief of this Government that a strong, united, and democratic China is of the utmost importance to the success of this United Nations Organization and for world peace. A China disorganized and divided either by foreign aggression, such as that undertaken by the Japanese, or by violent internal strife, is an undermining influence to world stability and peace, now and in the future.

The United States Government has long subscribed to the principle that the management of internal affairs is the responsibility of the peoples of the sovereign nations. Events of this century, however, would indicate that a breach of peace anywhere in the world threatens the peace of the entire world. It is thus in the most vital interest of the United States and all the United Nations that the people of China overlook no opportunity to adjust their internal differences promptly by methods of peaceful negotiation.

END OF HOSTILITIES URGED

The Government of the United States believes it essential:

1. That a cessation of hostilities be arranged between the armies of the National Government and the Chinese Communists and other dissident Chinese armed forces for the purpose of completing the return of all China to effective Chinese control, including the immediate evacuation of the Japanese forces.

2. That a national conference of representatives of major political elements be arranged to develop an early solution to the present internal strife—a solution which will bring about the unification of China.

The United States and the other United Nations have recognized the present National Government of the Republic of China as the only legal government in China. It is the proper instrument to achieve the objective of a unified China.

PACTS WITH CHINA RECALLED

The United States and the United Kingdom by the Cairo declaration in 1943 and the Union of Soviet Socialist Republics by adhering to the Potsdam Declaration of last July and by the Sino-Soviet treaty and agreements of August 1945 are all committed to the liberation of China, including the return of Manchuria to Chinese control. These agreements were made with the National Government of the Republic of China.

In continuation of the constant and close collaboration with the National Government of the Republic of China in the prosecution of this war, in consonance with the Potsdam Declaration, and to remove possibility of Japanese influence remaining in China, the United States has assumed a definite obligation in the disarmament and evacuation of the Japanese troops. Accordingly, the United States has been assisting and will continue to assist the National Government of the Republic of China in effecting the disarmament and evacuation of Japanese troops in the liberated areas. The United States marines are in north China for that purpose.

The United States recognizes and will continue to recognize the National Government of China and cooperate with it in international affairs and specifically in eliminating Japanese influence from China. The United States is convinced that a prompt arrangement for a cessation of hostilities is essential to the effective achievement of this end. United States support will not extend to United States military intervention to influence the course of any Chinese internal strife.

REMOVAL OF JAPANESE INFLUENCE

The United States has already been compelled to pay a great price to restore the peace which was first broken by Japanese aggression in Manchuria. The maintenance of peace in the Pacific may be jeopardized, if not frustrated, unless Japanese influence in China is wholly removed and unless China takes her place as a unified, democratic, and peaceful nation. This is the purpose of the maintenance for the time being of United States military and naval forces in China.

The United States is cognizant that the present National Government of China is a one-party government and believes that peace, unity, and democratic reform in China will be furthered if the basis of this government is broadened to include other political elements in the country. Hence, the United States strongly advocates that the national conference of representatives of major political elements in the country agree upon arrangements which would give those elements a fair and effective representation in the Chinese National Government. It is recognized that this would require modification of the one-party political tutelage established as an interim arrangement in the progress of the nation toward democracy by the father of the Chinese Republic, Dr. Sun Yat-sen.

PECMISE OF AID HELD OUT

The existence of autonomous armies such as that of the Communist Army is inconsistent with, and actually makes impossible, political unity in China. With the institution of a broadly representative government, autonomous armies should be eliminated as such and all armed forces in China integrated effectively into the Chinese National Army.

In line with its often expressed views regarding self-determination, the United States Government considers that the detailed steps necessary to the achievement of political unity in China must be worked out by the Chinese themselves and that intervention by any foreign government in these matters would be inappropriate. The United States Government feels, however, that China has a clear responsibility to the other United Nations to eliminate armed conflict within its territory as constituting a threat to world stability and peace—a responsibility which is shared by the National Government and all Chinese political and military groups.

As China moves toward peace and unity along the lines described above, the United States would be prepared to assist the National Government in every reasonable way to rehabilitate the country, improve the agrarian and industrial economy, and establish a military organization capable of discharging China's national and international responsibilities for the maintenance of peace and order.

In furtherance of such assistance, it would be prepared to give favorable consideration to Chinese requests for credits and loans under reasonable conditions for projects which would contribute toward the development of a healthy economy throughout China and healthy trade relations between China and the United States.

## American Policy in China

EXTENSION OF REMARKS
OF
### HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
*Monday, December 17, 1945*

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following articles of William Philip Simms and Ernest Lindley from the Washington Post of December 17, 1945:

TWO-EDGED SWORD

(By William Philip Simms)

President Truman's statement on China policy, old China hands say, is a two-edged sword which can cut the ground from under either the Chinese Communists or the national government, depending on a number of "ifs."

If the Communists agree to merge their army with the national forces, and Generalissimo Chiang Kai-shek then refuses to broaden his government to include other political groups, he will find himself on the spot. Clearly he could no longer expect aid from the United States.

If, on the other hand, the Communists ignore the President's polite plea to cease hostilities and amalgamate their armies with the Chinese regulars, national unity will remain impossible. Blame would be laid on their doorstep.

There is still another "if." If the United States refused aid to China because unification had been prevented by the Communists' insistence on an army of their own, such refusal almost certainly would doom the generalissimo. Without American aid, China would face chaos and that would play into the hands of the Reds—especially if they retain their army, now strengthened by recently acquired Jap equipment.

Thus, it is pointed out, the President's policy can hardly be as inflexible as some seem to think. True, he indicated that future American loans and credits to China would depend on unification and the "broadening" of the Chungking regime to include the Communists. But should unity fail as the result, say, of the Communists' refusal to give up their army, it would hardly be fair to blame the National Government and so deny it assistance.

This is regarded as important because, hitherto, efforts at unity have always failed on the issue of a single national army. As President Truman stated, "the existence of autonomous armies such as that of the Communist army is inconsistent with, and actually makes impossible, political unity in China." The generalissimo has always said

the same thing. But while he has more than once offered to take Communists into his government, grant a considerable degree of local autonomy in Red districts, and so on, agreement has consistently failed on the army issue at the last minute.

Chinese circles say the generalissimo will go along with President Truman. In fact, they observe, he made this clear as long ago as last September. Shortly after VJ-day he announced a three-point program: (1) Amelioration of the lot of farm and factory workers; exemption from land tax and a 25-percent reduction in land rent. (2) Inauguration of constitutional democracy; early convocation of a peoples' assembly; freedom of speech and association. (3) National unification and nationalization of all armed forces in the country.

The President's statement, therefore, would now seem to put it squarely up to the Communists. At the same time he has put a powerful weapon in their hands.

Some Chinese dissidents do not want help from the United States—if the help goes to the National Government. For more than a decade they have maintained an army in the field to overthrow that Government. Without help, the plight of the Chinese will rapidly become such that the Government may find itself so unpopular that a little push might send it toppling.

But, even now, General Marshall is on his way to Chungking. In his new Ambassador, the President will have a top-notch diplomat to carry out American policy in China and advise him on future interpretation.

---

GENERAL MARSHALL'S JOB—AMERICAN POLICY IN CHINA

(By Ernest Lindley)

President Truman's statement on American policy toward China is based squarely on our commitments and our interests—not only our narrower national interest but our broader interest in the preservation of world peace.

We continue to recognize the National Government of China as the legitimate government of China and the central instrument for achieving Chinese unity. We will continue to cooperate with it internationally and give it military assistance in disarming and evacuating Japanese troops. But we will not back it unconditionally in a civil war. We urge, instead, that Chiang Kai-shek abandon one-party rule and immediately convene a national conference of all political elements to organize a broadly representative government. We are prepared to give economic aid to a broadly representative regime.

The President's statement will not entirely please those who hold that we have no interest in what happens in China—that we should withdraw completely and let Nature and civil war take their course. It will not entirely please those who, for one reason or another, think that the Chinese Communists, or some other groups in China, provide a better vehicle than the central government for promoting democracy and eventual unity in China. Nor will it please those who think that we should back Chiang unconditionally.

The first two groups forget our commitments to a wartime ally, and our historical interests in the unity of China. They overlook the danger that a prolonged civil war would revive open rivalry among the other great powers in China.

Under the leadership of the United States all the other great powers have come to recognize the National Government of China not only as the legitimate government of all China but as one of the Big Five of the UNO. All of them have agreed that the Chinese territory wrested from Japan shall be placed under the jurisdiction of the National Government. The Russians appear to be fulfilling this commitment faithfully in Manchuria.

Thus, finally, after decades, the last international obstacles to historical American objectives—the territorial and administrative integrity of China—appear to have been removed. To pull out now and let Chinese internal strife take its own course would be unimaginably short-sighted.

We do not want to impose upon China an unpopular or unrepresentative government. We are interested in promoting democracy as well as unity within China. We recognize that the Chinese have the right to choose their own government. We therefore call on Chiang to abandon one-party rule and broaden his government, giving representation to other groups—including, of course, those which are unarmed, as well as the Chinese Communists. We recognize that with the broadening of the government, autonomous armies such as those controlled by the Communists must be eliminated and all armed forces integrated into the Chinese National Army.

We are not asking of Chiang anything which he himself has not offered to do. He has promised political and economic reforms. There have been previous efforts to unite the Chinese Communists and the Central Government and there has been disagreement among American observers as to whether the failure was due chiefly to the Central Government or chiefly to the Communists. Some of them felt that former Ambassador Hurley would have succeeded if he had put more pressure on the Central Government. Others felt, with Hurley, that his efforts were frustrated by the encouragement given to the Chinese Communists by some American representatives.

President Truman did not try to specify what, in his opinion, would be fair terms for the inclusion of the Chinese Communists in the Central Government, or what representation should be given to other groups now outside the Central Government. He said, in effect, that it is up to the Chinese to work this out for themselves. Yet, the United States probably will not be able to avoid judgment on the terms proposed by the various Chinese groups. For if the negotiations bog down, we will have to decide what to do next and we cannot very well decide that without deciding who is responsible for their bogging down.

The task before General Marshall is delicate: More of a diplomat's task than a soldier's. His objectives have been clearly stated by the President. But the means of furthering them will have to be determined very largely by General Marshall himself. Fortunately there should be no doubt, either in China or in this country, that he speaks and acts with authority.

---

## Thanks to OPA

EXTENSION OF REMARKS

OF

## HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 17, 1945*

Mr. PATMAN. Mr. Speaker, I am inserting herewith a news item emanating from Greenville, Tex., praising the OPA. It is as follows:

BELATED THANKS TO THE OPA

With the end of meat rationing, a recent news item had this to say in regard to a statement by OPA: "We can't help but feel hurt. After all we've done for the public, not one single letter of appreciation has been received." The Messenger hastens to send a belated message of thanks to the OPA for a job well done, a job that in itself was a thankless task, but we are supposed to grow wiser with the years. World War I should have taught us the folly of not being organized into a compact rationing system. OPA tried to organize so that a fair distribution of all available goods and products would be issued to the public. Because the heads of OPA were human beings, they were susceptible to mistakes, just as even the President or any human is susceptible. We were, indeed, fortunate in that most of us got a balanced diet, perhaps better for us physically, than most diets we have been accustomed to. We came out of the war a better Nation as a whole than we entered it. Some of us missed the big steaks, the bacon, hams, etc., that we used to enjoy, but our soldiers fared better, were in a better frame of mind, and were more physically fit. We were supposed to sacrifice. Most of us did. Most of us played fair, else the whole rationing program would have broken down. So our thanks go out to the CPA, its officials, clerks, and all others connected with it. We are sure that most people really are appreciative of the good work done by the OPA, but most of us looked upon it in the same sense that a child looks upon its parents—we just took everything for granted, without the thanks. Another thing, OPA, you had been telling us that this, that, and the other would soon be off the ration list, and again we just took it for graned. We just forgot. Because we are truly grateful.

---

## Dear Washington

EXTENSION OF REMARKS

OF

## HON. DEWEY SHORT

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 17, 1945*

Mr. SHORT. Mr. Speaker, under leave granted to extend my remarks, I include the column Dear Washington by Helen Essary, which appeared in the Washington Times-Herald of December 16, 1945:

DEAR WASHINGTON

(By Helen Essary)

The general had been invited for cocktails. But on his way to the living room he passed the open library door and the staring keys of a typewriter.

"Excuse me," he said gruffly. "This is where I stop. This is my chance." Hastily turning "squads right," he marched to the desk, pulled out a chair, sat him down, and started to peck away at the keys. "I simply must do this. I've got to the point where I have to explode about the way this damnfool country of ours is committing suicide. How about giving me a couple of paragraphs to tell what I think? I've got to blow off steam. I'm not exactly a columnist. But if in any kind of a way I can make people—can make as many as two people—see that instead of holding the position we had in June 1945, when we were the most important nation on earth, we are running down to about a fifth-rate power. A fifth-rate power, I tell you! Why, of all the idiots, we Americans are the worst. We, we * * *"

With an ease that surprised me, inspired by indignation, no doubt, the general went to work. The typewriter table shook with the pounding of his fingers. His words, as I read them later, actually were milder than his manner. This is what he wrote:

"The United States is willfully, wickedly squandering its great power. We are break-

ing up our Army. Our Navy. Our air power. We are giving away money. We are destroying billions of dollars worth of ships and planes. Throwing away munitions. Food. Leaving supplies of all kinds to rot in foreign dumps.

"Our only thought is: We don't want to hear any more about war. We're sick of war. Get rid of the things of war. Melt down the guns. Scrap the ships and planes. Get the men out of uniform. Scrap everything. If I could write a national theme song I'd make it, 'Scrap it! Scrap it!'

"And I'm ashamed to confess," he added, "but 'Scrap it' would be a more popular note today than 'The Star-Spangled Banner.'

"The tragedy is that while we're saying, 'Scrap it!' out of one side of the mouth, we're whispering out of the other side about the next world war. We are saying that the Russians, the Argentinians, and Fiji Islanders and most of the other peoples of the world are itching to fight us. Does this make sense? I ask you—does this even begin to make sense?

"How in the name of the god of war do we expect to combat these enemies we insist are at our doorstep, if we disband our Army, blow up our Navy, sink our merchant ships, and give away our money?

"I'm convinced we are the most inconsistent human beings ever put on this earth. Many of us didn't want the United States to get into into this World War. We thought this country should mind its own affairs. Stop making excursions into the devious rabbit warrens of European politics.

"In many ways this kind of thinking was right. We Americans are not successful meddlers. However, once we began to meddle, we should have been prepared to see the thing through. You can't see the thing through abroad now without an Army and a Navy to back up your tall words. Yet when some disgruntled soldier appears before Congress and says that the Pentagon "Boy Scouts" are keeping men in service because thereby the officers hope to hold their wartime rank, the uproar starts again 'Get the boys home!'

"It wouldn't hurt to keep some of those new draftees away from mamma and the girls for a year longer. But we aren't doing that. We are leaving our gains unprotected at the mercy of any marauder.

"Six months ago we were the world authority on peace and war. We could go where we wanted to go. Create what we wanted to create. Our voice was respected. Our favor sought. Soon we shall have no air force, no Army, no Navy to prove we mean a single demand. We'll be where France is, I tell you. Nobody seems to mind, but Washington is slipping on more than the ice which covers her streets."

"Hurrah, General," I said. "Three cheers and a columnist's citation for you! You've said what thousands of people are thinking. We won this war at a fearful price. And now we are pouring our gains straight down the sewer. We sometimes have no more sense than jack rabbits."

"Let's change the subject," ordered the general, handing me his two typewritten pages. "The new year is almost here. Let's be gay if we can."

"Speaking of the new year and something gay," remarked a just-arrived caller, "look what I found in the classified ads of a Washington newspaper.

"Have you a furnished house to rent from December 31, 1945, to January 1, 1946? Must be within hour's run of Washington."

"H'm'm'm," grinned the General, suddenly cheery, "looks like a big night ahead. I've got some ads myself to contribute to the occasion since saving classifieds is now a Washington pastime. How are these two:

" 'Temporary woman, white, wanted for partial care of householder and two small children.' And this: 'Cultured lady wants to ride to Palm Beach December 28 with small quiet dog?' "

Washington is indeed a funny place. For our proper indignation over the country's "scrap it" program now vanished. We soon were laughing over our amusing ways and thanking heaven that since all human beings were idiots, we had the good luck to be the American kind.

---

## Not Unduly Exacting About the Laws—I

EXTENSION OF REMARKS
OF
## HON. CLARE BOOTHE LUCE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES

*Monday, December 17, 1945*

Mrs. LUCE. Mr. Speaker, when Mr. Secretary Byrnes said that the United States was "not unduly exacting" in its relations to the Soviet Government he expressed, perhaps unconsciously, the extent to which we have abandoned our basic concept of law as a principle governing our actions to each other and our national acts toward other nations. For it is the nature of law to be both exigent and upright. It cannot "lean over backward."

In his book, The Anatomy of Peace, Mr. Emery Reves writes:

> Throughout known history only one method has ever succeeded in creating a social order within which man had security from murder, larceny, and other crimes, and had freedom to think, to speak, and to worship.
>
> That method is law.
>
> And integrated social relations regulated by law—which is peace—have been possible only within social units with one single source of law, irrespective of the size, territory, population, race, and religion of such social units.

For the past 2,000 years over an increasingly large area of the globe there has been such a single basic source of law. From time to time, and in various places, its enforcement has varied, and its liberality to individuals has been steadily strengthened. But the concept of individual responsibility to the law, and of individual protection under the law has not been questioned, though it has often been violated.

Today, however, legislators must ask themselves upon what basis the laws they pass will be respected and supported by the courts and by the public. This is, quite possibly, the fundamental question of our time. Every control we seek to set up, whether for the safeguarding of atomic knowledge or against the spreading of disease and crime, depends upon the public attitude toward law.

This attitude, even within the boundaries of the United States, is now being profoundly, rapidly, and almost imperceptibly affected by two influences heretofore unknown or relatively weak.

The first, and most immediately powerful of these influences, is the new doctrine of "mass guilt" accepted by Mr. Justice Jackson, of the Supreme Court of the United States, in his opening statement to the trial court for German war criminals at Nuernberg. How this doctrine violates our historic concept of law is defined in the following article by Dr. Rustem Vambery, former dean of the law school in the University of Budapest, which was published in the December 1 issue of The Nation:

LAW AND LEGALISM

(By Rustem Vambery, professor of criminal law and former dean of the law school at the University of Budapest)

Jurists may still be wrangling over their concept of law, as Immanuel Kant accused them of doing nearly two centuries ago. There are, nevertheless, some established principles governing these allegedly indefinable rules of conduct. "Blut ist ein ganz besonderer Saft," wrote Goethe: and law, which circulates in the veins of the body politic, is a particular kind of precept. It is not merely a variety of prose divided into articles and sections. No lawmaker can afford to disregard the fundamental principles of law and jurisprudence. If he does, the enforced rules will be law only in name, as were the so-called laws issued by Mussolini and Hitler. Civilized nations have evolved these principles at the cost of millions of human lives, sacrificed in the struggle against tyranny, and no change in the substance of law should ignore them, for they are constituent parts of man's bill of rights and of our western civilization.

There can be no difference of opinion about the necessity of exterminating the monsters who were responsible for the unspeakable horrors in Europe and Japan. That the Nazi and Fascist leaders should be shot or hanged by the military or political power goes without saying, but has nothing to do with law. The selection of the culprits is the business of the political or military machinery. Application of a legal procedure in dealing with an unsuccessful revolution is not adequate, for, as a familiar couplet puts it:

> "Treason can never prosper—What's the reason?
> "If it does prosper none dare call it treason."

If an attempt is made to apply the law of a stable society to the atrocities of revolution and war in a world turned topsy-turvy, the narrow frame of law will burst without restoring the desirable order.

However, it was in defense of law and justice that the Allied forces fought and died—unless we use these terms as a euphemism cloaking imperialist interests. The law was not Polish or Dutch or French or Czechoslovak law, but the fundamental principles which are common to all civilization and which the authoritarian revolutions had flouted. Judges guided by sound popular feeling, introduction of the principle of retroactivity, the presumption of future guilt, the collective responsibility of a racial or political group, the denial of protection to the individual against the arbitrariness of the state, the revival of tribal revenge, and the most atrocious cruelty were salient features of what Hitler's Germany understood by law. Anyone familiar with the history of criminal law knows how many centuries or rather millennia it took before the exact opposite of this Nazi theory and practice became generally recognized as an integral part of law and justice.

This historical development should not be ignored by the Allies in their endeavor to restore pre-Nazi law. Thus far the trial of war criminals in France and elsewhere has revealed little respect for prewar legal principles. Unfortunately, the indictment of the leading war criminals filed with the International Military Tribunal also exhibits characteristics reminiscent of Hitlerian jurisprudence. Of course the United Nations War Crimes Commission would not confess to the application of such homeopathic methods, but the fact seems clear. The indictment is partly a succinct account of the events of World War II, partly a summary of the horrors perpetrated by Germans in occupied areas and in Germany itself. However, when it declares without any supporting evidence that about 4,000,000 persons were exterminated in Auschwitz and

one million tortured in Rovno and does not say who committed these unprecedented crimes, it must be regarded as an explanation of why the Allies waged the war rather than as a legal document.

In his report to the President, Justice Jackson warned against the danger that the trials would become enmeshed in "doctrinal disputes, which are part of a lawyer's paraphernalia." It appears from the indictment itself, which repeatedly refers (sections VIII and X) to "the general principles of criminal law as derived from the criminal law of civilized nations," that the fundamental principles of jurisprudence are not merely whimsies of pettifogging lawyers or, as Lord Wright has put it, "pseudo-legal or legalistic rules having no basis in the common conscience of mankind." Observance of these principles is not merely the craft of the legal guild; the doctrine of law is not a professional artifice but the guaranty of the freedom of all the citizens.

It is regrettable that the indictment, which conforms neither to the principles of law in general nor to the principles of international or criminal law in particular, as these are "derived from the criminal law of all civilized nations," should not be in accordance with the first principle of all justice—impartiality and disinterestedness. Prior to Hugo Grotius the victors had the right to punish the vanquished, but in our age it seems strange that an international court composed exclusively of the victor powers should pass judgment on the war criminals of the vanquished. It is true, however, that one of the judges, Prof. Donnedieu de Vabres, may be considered impartial, since he insisted in one of his books that the democratic states should accept the criminal policy of the authoritarian governments.

Moreover, it is the charter establishing this International Military Tribunal which defines the crimes for which the war criminals are going to be tried—if the words "other inhuman acts committed against any civilian population, before (how long before?) or during the war" can be termed a definition at all. According to the late Elihu Root, "If the law of nations is to be respected, the theory upon which the criminal law is founded must be adopted in respect to offenses against international law."

Thus far no authoritative attempt has been made, in custom or in general practice, to extend the precepts of international law—the sources of which are listed in article 38 of the Statutes of the Permanent Court of International Justice—to cover the condemned and forbidden conduct of individuals. After the assassinations at Marseilles the French Government suggested that the League of Nations set up an international criminal court, but to no avail; and as one of the greatest American authorities, Manley O. Hudson, has said (International Tribunals, 1944, p 186), "The time is hardly ripe for the extension of international law to include judicial process for condemning and punishing acts either of states or individuals." The jurisdiction of the International Military Tribunal can therefore scarcely be said to rest on a firm basis, since its charter, like all rules of international law, requires acceptance by the customs of all civilized nations. Even if we agree with Viscount Simon, former Lord Chancellor of England, who said on March 20 last in the House of Lords, that a "properly constituted military court has jurisdiction in an occupied country to deal with war crimes," the competence of such a court with regard to "crimes against peace and humanity" is doubtful. There is no reason whatever why a German who murdered or enslaved anyone in Germany should not be tried by a German court. Lord Wright, one of the judges at Nuernberg, wrote: "We are proud that we live under the rule of law and of the legal machinery for enforcing it." I wonder whether we should be proud of the rules of procedure which the prosecutors appointed by the victor powers have agreed upon.

Even more contrary to the principles of criminal law and as unprecedented in the nonauthoritarian part of the world is the determination of what should be considered "crime" by the victors, that is, by the prosecutors, as it appears from the report of Justice Jackson to the President and the definition of the "crimes" in the charter. A liberal German scholar, Franz von Liszt, termed the penal code the magna carta of the criminal; certainly it is the magna carta of the honest citizen, whom it protects against the arbitrariness of the authorities. A fundamental principle of law is that the law should decide the punishment and define as precisely as possible the acts constituting the punishable crime. But the charter not only leaves to the tribunal, as Viscount Simon expressed it, "the prodigious responsibility to select the punishment" but defines the crimes in a legally inexact, indeed in an appallingly vague, manner. Article 6, point C, of the charter speaks of "crimes against humanity," namely, murder, extermination, enslavement, etc. Murder, which by the law is no crime against humanity but against human life, is defined very differently in the English common law and in the French Penal Code. Who is going to decide what was an "inhumane act" 20 years before the war? If the International Military Tribunal does so, what differentiates it from Hitler's law courts, where the judge passed sentence according to the "sound sense of the people"?

Count I of the indictment is a "common plan or conspiracy to commit crimes against peace, war crimes, and crimes against humanity." Leaders and accomplices are "individually responsible for their own acts and for all acts committed by any persons in the execution of such plan or conspiracy." In plain language, the collective responsibility that prevailed in the tribal age of mankind is restored, in spite of the principle, recognized even by Roman law, that "a society cannot commit crimes." It took a long time for the recognition of responsibility for criminal guilt to become "the basic principle of the judicial and legal system of Western civilization in the last century" (Sutherland, Principles of Criminology, 1939, p. 352). In violation of this fundamental principle all participants of the conspiracy are being indicted not only for their own acts but for those of other conspirators, no matter whether they knew of them or not. This is all the more reprehensible as the crime termed "common plan or conspiracy" embraces also all crimes against peace, all war crimes, and crimes against humanity.

This means, for example, that Gustav Krupp van Bohlen—or perhaps his son, who has become a criminal according to the rules of the Pentateuch, which visit the sins of the fathers upon their sons—having helped the Nazis to power and used labor for the conduct of an aggressive war, is supposed to be responsible for all murders and other horrors perpetrated by any Gestapo or S. A. man, even if he is unaware where, when, and by whom these crimes were committed.

Collective responsibility hinges on the crime against peace, which is "defined" as planning, preparing, or waging a war of aggression or participating in the planning of such war. We are not told exactly what constitutes an "aggressive war," but the facts substantiating this crime are all political and military events that occurred after the foundation of the Nazi Party in 1920. We may take it for granted that the outrageous deeds of the Nazi regime, as a report to the President assumed, offended the conscience of the American people, who "viewed the Nazis as a band of brigands." However, the United States maintained diplomatic relations with this "band of brigands" up to Pearl Harbor without, apparently, preventing the execution of "the Nazi master plan."

We are told that only acts should be punished "which have been regarded as criminal since the time of Cain." Many despots, tyrants, and dictators have indeed committed atrocities which from time immemorial have been considered crimes. But in no country has the planning or waging of aggressive war ever been tried by a law court.

Autant pis, some people may say. If aggressive war thus far has been no crime, it is certainly desirable that it should be made punishable. Whether the charter has the authority to fill this lacuna is doubtful. But such legislation cannot be made retroactive anyway—not only because article 9 of the Constitution of the United States interdicts ex post facto laws but because all tyrants from Nero to Hitler have used retroactivity, as Professor Lauterpacht puts it, "for cloaking arbitrariness in the garb of law." But this is exactly what the indictment is doing. One of its authors, Justice Jackson, asserts the contrary and as evidence refers to the Briand-Kellogg Pact of 1928, which outlawed war, and to the Geneva protocol of 1924 and the resolution of the Pan-American Conference of 1928, both of which declared that war of aggression is an international crime. This argument, however, is fallacious in two ways. The Nazi Party and its subsidiary organizations, founded in 1920, became "the instrument of cohesion among the defendants and their coconspirators" (Indictment, count I, 4, A). In other words, the accusation refers in part to action predating the above-quoted international conventions, which declared aggressive war to be an "international crime."

Assuming, however, that the conspiracy to wage an aggressive war continued after such a war had been declared a crime. It still cannot be ignored that "a conspiracy to commit a crime is a different offense from the crime that is the object of conspiracy" (W. Mack-W. B. Hale: "Corpus Juris," vol. XII, p. 542). Now, crime is "a wrong directly or indirectly affecting the public to which the state has annexed certain punishments" ("Corpus Juris," vol. XVI, p. 51), and the "guilty knowledge of the act done by the conspirators is a necessary element without proof of which there can be no conviction" ("Corpus Juris," vol. XII, p. 552). Moreover, it is generally accepted that "a law providing punishment for an act which was criminal when done but for which no punishment was provided is ex post facto as to that act" ("Corpus Juris Secundum," W. Mack and D. J. Kiser, vol. XVI, p. 8892). Can it be sanely assumed that all members of the Nazi Party "with knowledge of its aims and purposes became an accessory," to the murder of all the 4,000,000 persons exterminated in Maidanek? After all, no crime can exist without the combination of a criminal act and criminal intent ("Judicial and Statutory Definition of Words and Phrases," 3d ser., II, p. 694). To be made responsible for all the war crimes and crimes against humanity specified in counts III and IV, the knowledge of the aims and ends of the party, the Gestapo, and the SA or SS is scarcely sufficient, since to be an accomplice, an accessory, or an abettor the knowledge in each and every case of when, where, and by whom the crime was committed is an irremissible element unless we accept the Hitlerian principle of presuming a future guilt.

There are other principles of law and jurisprudence with which the indictment is at variance, but the violation of nonretroactivity sets the most dangerous example. Patrick Gordon Walker, speaking over the BBC, acknowledged that the acts which the defendants are accused of were not deemed crimes, but he thought the indictment contained not an infringement but the establishment of a rule of law. However, no law

can be established by violating the elementary principles on which both law and human civilization rest. It is not a lawyer's crotchet to insist on these principles. Recklessly to disregard them is to threaten the very foundation of our social life. Maintenance of law is of permanent interest; revolutions are transitory episodes in the history of human society. In liquidating revolutions legal means are unfit instruments unless they help to restore prerevolutionary law and order. Observing legal formalities while ignoring the essence of legal principles necessarily results in atrocities against justice itself.

In Kipling's poem, Norman and Saxon, A. D. 1100, we have been told:

"The Saxon is not like us Normans.
His manners are not so polite.
But he never means anything serious
Till he talks about justice and right."

Is the Nürnberg trial going to dispute this statement?

## Address of OPA Administrator Bowles Before the New Council of American Business, Inc.

EXTENSION OF REMARKS
OF
### HON. JAMES M. MEAD
OF NEW YORK

IN THE SENATE OF THE UNITED STATES

*Monday, December 17 (legislative day of Monday, October 29), 1945*

Mr. MEAD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of a speech which was delivered in New York City by Hon. Chester Bowles, OPA Administrator, on Wednesday evening, December 5.

Mr. Bowles' speech is, I believe, of unusual importance. It is a fine expression of the danger which this country faces from uncontrolled inflation. I believe the Members of the Senate will find it to be of great interest.

Mr. Bowles spoke before the New York Chapter of the New Council of American Business, a national organization of businessmen. His address was squarely against the lifting of price controls because he believes that such controls will continue to be necessary until more normal competitive factors in trade and industry come into play. The alternative, he feels, would lead straight to uncontrolled inflation and a deep business depression.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is a great pleasure to take part in this opening banquet of the New Council of American Business. You are a young organization with a fresh point of view, and I notice that most of your members are young men—men with enthusiasm and ideals, men who are not ashamed to be called crusaders.

The country needs your crusading point of view. American business needs it. You have undertaken to reverse the pressure group slogan of a certain section of business—the slogan which says that whatever is good for business simply must be good for the country. As businessmen, you believe that only what is obviously good for the country as a whole can bring lasting benefit to business.

The old hackneyed pressure group slogan, that what is good for business must be good for the country, flatters some businessmen into believing that he is the center around which the economic universe turns. You are out to urge the more sobering truth that business moves with the rest of the economy, and that there cannot be any abiding business prosperity except when the entire Nation is economically prosperous and sound.

Back in the late twenties this country ran its economy into the ditch when it accepted the false notion that the pulse of the stock market ticker is a measure of the country's economic health. In the ensuing crash, not only did the country take a terrific beating, but Wall Street took a beating and business, great and small took a beating. The business leaders who had championed the false notion of new era prosperity took a moral beating from which it required 10 years to recover.

I was also a businessman before I took my wartime assignment in Washington. It is as a former businessman and as a friend of business, that I feel an obligation to sound a note of warning. If we as a nation decide to follow the lead of the small minority of business pressure groups seeking purely selfish advantages, we shall sooner or later have a repetition of the 1929 disaster, and a repetition this time on a far larger and even more dangerous scale.

The possibility of such a crash, as I say, is not immediately around the corner and for that reason we still have time to stop, look, and listen and to take action to straighten things out. But if our action is to be really effective we have to think and talk frankly and we have to be ready to face some unpleasant facts.

During the war we had to deal with the danger of inflation as an impersonal economic phenomenon. The Government was taking half of our production for war, and the resulting scarcity of goods in relation to available purchasing power was creating a terrific pressure on prices.

There was a grave question in many minds whether the inflationary situation, created not by anybody's will but as a result of the war emergency, could be controlled. Never before in our history had we successfully prevented wartime inflation. But this time we pitched in together and did it. Notwithstanding that the war expenditures in this conflict were 10 times the scale of World War I, we demonstrated that as a nation we possessed the means and the know-how to keep under lock and key the greatest inflationary pressures that this country has ever seen.

What is the situation today? The inflationary forces have not subsided and they are unlikely to subside for many months to come. We know we can continue to control those forces. The only question is, have we the courage and above all the will to do so.

But here is our greatest dangers—the will to control inflation seems to have disappeared from some business groups. During the war, when the physical survival of the Nation was at stake, all business groups, and in fact all economic groups in the Nation, loyally supported price control. Today, however, we find some business leaders who are demanding the crippling or elimination of price or rent control. They seem to feel that since the actual fighting has ceased there is no more need of restraint and self-discipline. Although most businessmen are sincerely convinced of the need for continued controls until danger to the whole economy is over, there is a powerful minority that seems determined to make a killing on uncontrolled rising prices and rents. And they have rationalized their position by telling everybody that what seems good for them simply must be good for the country.

I am confident that is not what most businessmen think. Hundreds of businessmen have urged us privately to stand firm. They have told us that they are with us, and that we must not be misled by the voice of the minority. But the American people can only believe what they hear. And they hear only from the vocal minority.

It is this vocal minority which has spread the propaganda that the way to solve the reconversion problem is to increase prices and increase profits. Profits, they tell us, are the mainspring of our economy, therefore, profits can never be too high for the economy's good—even in the face of inflationary pressures which threaten to overwhelm us.

Again and again they have told us "take the lid off prices—or we can't produce." In the housing field where prices are already dangerously high, they have called for the elimination of price controls on building materials and they oppose any proposal to hold the price of finished houses within the reach of the 2,000,000 married veterans who are coming back from the war with no place to lay their heads.

Others are letting it be whispered that they are holding their goods for a while—that price controls will go soon and that prices will be higher. A crop of identical rumors recently broke out in a few department stores that went like this: "Better buy now, lady," the clerk said, "prices are going up."

These people are betting on inflation. Their dangerous activities have given rise to a flood of contracts with escalator clauses and with prices and deliveries stipulated on a when-as-and-if basis. Their activities have also given rise to a crop of predictions in the tip-sheets and even in the business press that inflation will be here soon. Their activities also unquestionably play a part in explaining the spurting stock market in Wall Street where some stocks have even reached 1929 highs.

Some of these people are counting on the prospect that OPA will yield under this kind of pressure. I can clear up that point right now. OPA has no intention of yielding.

Since the hold-the-line order was issued in April 1943, the level of prices has been held under control except in two major areas—finished houses and the stock market. Only in these two cases may it be said that inflation is under way. In every other field the American people, working with their Government, have done a job which the skeptics said couldn't be done.

I am confident that as a result of the courageous legislation recently introduced by Representative WRIGHT PATMAN ceilings may soon be established on the price of completed houses so that in this field also the American people can prevent the blind forces of inflation from turning the American dream home into a nightmare.

But the danger is far from past. It is hard to believe that responsible leaders of business would knowingly light a fuse to the explosive economic mixture around us. Most of those, who oppose continued price controls undoubtedly are sincerely persuaded that the danger of inflation is now definitely past and that the time has come to return to the conditions of a free market.

It is all too clear, however, that this is not true. Commodities all across the board—with rare exceptions—are pressing hard against OPA price ceilings. In a few cases, where we have counted on supply-and-demand factors being more or less in balance, we experimented with the suspension of ceilings. The response of prices in most instances was terrific.

The plain fact of the matter is that the inflationary danger today cannot be appraised solely by rational calculations of supply and demand—great though the purely economic pressures may be. What we are up against is a far more dangerous menace—the apparent will for inflation on the part of some minor but powerful groups.

Most of them do not, of course, appreciate fully the explosive forces with which they are toying. They feel, very likely in full sincerity, that the inflation that would result from their action would be relatively

minor—even healthy. But that's the same old "didn't know it was loaded" theory with which disasters have been explained in the past.

Let's make no mistake about it. Unless we can win the fight against what might properly be called this "pressure group urge to inflation"—and we have to win it in the next few weeks, in the next few months—we shall condemn America—all America, consumers, agriculture, labor, and business—to a brief period of false boom followed by a shattering smash-up that will shake our economy to its foundations.

Statisticians may dispute as to the exact length of the boom—whether it will last into 1947 or end in 1946. People argued that way in the twenties as to the length of the bull market. But everybody knows that if we go through an inflationary boom, we shall suffer a deflationary crash whose consequence nobody can foretell.

We still have time to think and contemplate the possibilities. Price levels under OPA controls are still holding steady. Wholesale prices are still less than 2 percent above the levels of 2½ years ago. Only in the uncontrolled real estate and stock market areas is inflation actually under way.

Let us stop then and consider what a broad inflationary advance would mean for the various economic groups in the economy. What would it mean to the veteran? To labor? To the farmer? To the small and independent businessmen? And even to big business?

Nobody escaped the consequences of the crash of 1920 or the crash of 1929. That is why today, while reckless groups are optimistically talking up inflation, our farmers, our workers, and the great majority of our businessmen are swept by a sense of foreboding.

You don't see the veterans welcoming the Wall Street talk of inflation. You don't see labor or the consumers asking for the lifting of price and rent controls. You don't see the farmers cheering the bull market, and you don't see the great majority of businessmen doing any cheering either.

I think the people of this country are entitled to have their present fears set at rest. I think they are entitled to have the specter of willful inflation banished from our midst once and for all. The way to do it, it seems to me, is for the country to agree firmly, courageously, and beyond question or doubt upon its determination to see the job through. Then and only then will the speculative, inflationeers, and those sincere but misguided advocates of a free market under present inflationary conditions, be kept from selling price control short.

We need, I believe, to do three things:

First. As I testified to the House Banking and Currency Committee this morning, we need to establish controls over the prices of completed houses to put an end to the all-too-obvious inflation already underway in this field.

Second. We need to maintain firm price controls on all commodities, and ceilings on all rentals until the dangers of inflation in each commodity field and each rental area is over. In determining the time at which controls should be removed, there are no magic dates. It depends entirely upon the speed with which supply comes into balance with demand.

Third. We should remove controls as promptly as possible, in one commodity field and rental areas after another as soon as it is safe to do so.

A firm decision to control prices and rents is an indispensable preliminary to any satisfactory transition from war and peace. Without it we can kiss good-by the brave new postwar world of security and prosperity, full employment and opportunity which we promised to build once the Nazi threat to our civilization was removed.

I would be the last to claim that price control in and by itself would be sufficient to call that brave new world into existence. That world must be built by the hard work and cooperative thinking and planning of all groups in the community—business, labor, agriculture, and government.

There has been a lot of talk of cooperation. Some of it has sounded hollow because it has come from people intent on advancing their own private interests, regardless of the general welfare. Cooperation under such conditions becomes an empty farce. The only time cooperation between groups becomes fruitful is when each group makes an honest effort to put the national interest ahead of its particular private interests.

That is why I like your businessman's platform. It not only urges all business to take the stand that what is good for the country is good for business, but it is an invitation to labor and to other groups to approach their problems from the same point of view.

To be sure, each group is not expected to neglect its own special State in the total national picture. We don't expect business to put forward a program which leaves out business enterprise and business profits, and we don't expect labor to put forward a program which leaves out the protection of good wages and steady jobs. But the particular planks which the various groups put forward for themselves must fit into an honest program calculated to advance the welfare of all groups.

That is exactly the kind of program you have put forward. You are back of the full employment bill. You are back of the bill to set a 65-cent-an-hour floor under wages. You are for liberalized unemployment compensation. You oppose the weakening of collective bargaining. You are for a permanent FEPC, so that no man—whatever his race, color, or creed—is denied the benefits of American opportunity.

You are for a program to protect the farmer—to protect his prices and protect his income. You support the broadening and deepening of the social security program to cover everyone in the entire working population, and to raise benefits to a level of decency. You are for a medical care and health insurance program to bring the blessings of medical science into every home.

You are for the development of our natural resources, the application of the TVA idea to the Missouri River, to the Columbia River, and to the other river valleys. You are for all these good things and many others—last but not least of which is world cooperation and world trade.

This is a program in the national interest. This is a program for all the people. This is a program behind which men of good will everywhere may rally.

Your program shows us the way at home. But more than that it shows us the way to international peace as well.

In recent months the eyes of the world have been focused with a new anxiety on international problems, seeking to find an escape from war in the atomic age. Thinking men recognize that if mankind is to escape destruction, the nations of the world must build a new international society, a society built not upon greed and selfishness and irresponsible power, but one in which there is freedom and abundance and security for all. But thinking men recognize that we cannot have these things abroad if we do not have them at home. We cannot have security, freedom, opportunity, and abundance abroad while we have insecurity, fear, and economic disorder at home. We cannot have peace with other nations while we wage undisguised economic war at home.

The hopes of the world rest on us to provide leadership in the present crisis. Ours are unparalleled resources and productive power. Ours is the tradition of freedom—freedom not for the few but for all. If freemen here in America should fail, where can freemen anywhere succeed?

The world is looking to us to build a society in which there are jobs and opportunity for all who seek them, a society whose abundance is not denied to anyone whatever his race, color, creed, or economic status. It is only a society dedicated internally to the principle of live and help live that can take the lead in establishing the same principle of live and help live in international affairs.

Gentlemen, ours is a great and urgent responsibility. Time is running short. At home and abroad the forces of misunderstanding, of ignorant greed, of fear and conflict are mounting swiftly. These forces must be checked and reversed before it is too late.

The Nation needs men of unselfishness and of vision. The Nation needs crusaders.

That is why I salute your organization. More power to all of you.

## There Is No Peace

EXTENSION OF REMARKS

OF

### HON. DEWEY SHORT

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 17, 1945*

Mr. SHORT. Mr. Speaker, under leave granted to extend my remarks, I include the enlightening and timely article There Is No Peace, by Morris H. Rubin, editor of the Progressive, which appeared in the Progressive of December 17, 1945:

THERE IS NO PEACE

(By Morris H. Rubin)

They are calling the approaching holiday season the world's first peacetime Christmas in 7 years, but there is no peace on earth, no good-will among men or nations.

In one-half of the world, from Palestine and Iran to India, Indochina, Indonesia, and China, where live half the people of the earth, the war goes on, in one form or another.

In the other half of the world, where the guns are stilled at last, there is a paralysis of the spirit, a numbness of mind and morals, a haunting fear that the fruits of victory are rotting even before we pick and taste them.

Everywhere, whether it be where they are fighting or only brooding, there is a bitter sadness among the people as they watch the four horsemen of war—imperialism, competitive armaments, power politics, and revenge—crush all their hopes that the end of the bloodiest war in all history would usher in an era of peace and international cooperation.

The political and economic instruments of cooperation were forged months ago at San Francisco and Bretton Woods. Weak as they may be on paper—and that they are—they have yet to be used and tested. Instead of a meeting of the United Nations Organization on the functioning of the economic agencies agreed upon at Bretton Woods, there has been a revival of naked imperialism, the launching of a new armament race, and a unilateral lunger for power and spoils.

The grim situation in the Orient is best illustrated by the bloody warfare in the Netherland East Indies, where impotent Dutch coupon clippers have refused the Indonesian demand for self-government, and shaking their fists from their safe perch in Holland, have succeeded in mobilizing British imperial troops and American money and materials for a brutal subjection of the independence forces.

In Europe, Asia, and Africa British imperialism and Soviet imperialism are jockeying for position in the old game of power politics while America drifts somewhere in the middle. In the Western Hemisphere the United States is brandishing the "big stick" while talking piously of the good-neighbor policy.

Nor is this all. In Europe, spawning ground of world conflict for three centuries, our policy of revenge is turning sour even more rapidly than the Progressive warned it would. The collapse of the Potsdam settlement, which was based on blind vengeance and dismemberment, is now so complete that during the past week President Truman, Gen. Dwight D. Eisenhower, and Byron Price, the President's special envoy in Europe, joined in calling for a modification of those harsh and unenforceable terms.

Every report from Germany and Austria, whether from newspaper correspondents, Army officials, or civilian observers, tells the same melancholy story of how our monstrous policy of revenge is operating against our own self-interest and against the maintenance of peace. Despair is turning to desperation as hunger, cold, disease, and hopelessness grip the non-Nazis as well as the Nazis and paralyze incipient liberal and democratic movements while strengthening the position of the Fascists who feed and flourish on discontent and despair.

More than 6 months after the unconditional surrender of Germany, it is still impossible for the rest of the world to write to German friends or relatives, or send them food or clothing—no matter how anti-Nazi they may have been or how desperate may be their need.

This sordid pursuit of a policy of revenge for its own sake, of planned prostration and calculated misery for a whole people, has extended so far as to ban the shipping of Christmas packages of any kind in this holiday season when the formulators of, and apologists for, that policy are talking with pious hypocrisy of the glory of Jesus and the Sermon on the Mount.

Just as disheartening as the facts of the world situation is the attitude of too many Americans. Gone is the moral indignation over the collapse of principles and the flouting of wartime pledges. Absent is a driving desire to buckle down to the breath-taking problems we face at home and abroad. And present is a sort of dejected apathy, a callous acceptance of the very doctrines of hate and intolerance and force that we thought we were fighting to overthrow, a weariness of body and spirit, and a fitful brooding over the atomic bomb.

From the press, the radio, and the public platforms comes an endless stream of cure-alls, most of them, like the pink pills of the quack, easy to take and less than half the price of good medicine. People everywhere, and among the intellectuals especially, find it so easy to skip over the nasty-tasting problems of imperialism and power politics and competitive armaments, and, instead, find a welcome jag in the thought that if we could only have world government tonight or tomorrow morning sure, all our problems would be automatically solved.

World government may well be the ultimate answer to many of the world's political problems, but the most naive bystander knows that even if the American people could be sold, world government won't be attained in the immediate future.

Would Soviet Russia, which insists on the right to veto every action of the United Nations Organization, and torpedoes conferences which fail to do her bidding, consent to surrender her sovereignty to a world government she could not control?

Would Great Britain, selfishly determined to continue milking her colonies, regardless of the price the world must pay in blood and tears, permit a world government to end her imperial rule?

To ask the questions, it seems to me, is to answer them. Only last week Pravda, the Red daily which speaks for the Soviet Government, lashed out at proposals for strengthening the United Nations Organization and abolishing the power of each of the big five to veto the decisions of the rest of the world.

Pravda made sense, it seems to me, when it scorned the notion that the world could skip over all its immediate problems and find peace in world government.

"Today the press is full of a new panacea that will secure the world from both the atomic bomb and war," it said sarcastically. "The panacea is a world assembly elected by the nations that would be either a world parliament or a world government. This parliament or government, for the sake of which nations are to renounce their sovereignty to a certain extent, will guaranty complete confidence between the nations and will magically create laws that will exclude the possibility of wars."

The cozy theory that you can solve the world's problems by erecting a global tent over them has bewitched too many tired liberals who don't like to face up to the concrete problems of India, Indonesia, Indochina, China, Palestine, Iran, Egypt, Greece, Spain, Italy, the Balkans, and Latin America.

It seems to me a readily apparent fact that no matter how many international organizations we have, or how perfectly they may be drawn, they are not worth the paper they are written on unless the world at the same time gets at the basic causes of war—which are imperialism, power politics, spheres of influence, competitive armaments, policies of vengeance, social and economic dislocations, and racial and religious intolerance.

Looking back over the months that have slipped away since the end of the war, one is struck by the fact that all our attention, all our energies, and all our planning have been centered on the forms of organization to enforce the peace, rather than on the substance of the peace settlement itself. If the United Nations Organization is an international agency to enforce the peace, what peace settlement will it have to enforce when it finally meets? There has been no peace conference, no meeting of the minds, no basic pattern of settlement; rather there has been a unilateral grab of power and spoils by the victorious nations.

Some of the same editorial writers, radio commentators, and politicians who talk so nobly out of one side of their mouths about world government and international cooperation, are just as glib when they use the other side in arguing for conscript armies, buffer states, and spheres of influence for individual nations bent on maintaining their individual security.

Is the situation then hopeless?

Far from it. The fight for a just and lasting peace has only just begun, but it will take a new vision, a courageous willingness to stand up and be counted, and unceasing struggle by progressive-minded people everywhere if we are to reverse the present trend.

What shall our program be?

The course, it seems to me, is clearly indicated:

1. Summoning of a peace conference of all nations at the earliest possible moment to draw up a basic settlement of outstanding issues—the settlement then to be turned over to the United Nations Organization for enforcement. Our present policy of building enforcement machinery even before we have anything to enforce is bound to fail.

2. An organized effort to secure international agreement to prohibit peacetime conscription, provide for orderly, uniform disarmament by all nations, and international control of the atomic bomb. Can't we, without benefit of all the diplomatic hocus-pocus, sit down with the Russians, the British, the French, and the others, and say: "We'll drop our plan for universal conscription. We'll reduce our military establishments—if you'll do precisely the same thing?"

3. Work for the abandonment of imperialism and colonialism and give subject peoples every opportunity to govern themselves—as we have sought to do in the Philippines. The achievement of this vital goal is, of course, far more difficult than it sounds, but we shall never be able to deal with this basic cause of war if we keep running away from it.

4. Reverse our present policy of revenge and dismemberment in the conquered countries of Europe and launch an enlightened program of encouraging democratic forces while weeding out and turning over to the non-Nazis the job of trying and punishing the Nazi gangsters responsible for the plight of Germany and the world.

5. Encourage and transplant to Europe the soundly conceived, Lincolnlike policy Gen. Douglas MacArthur is pursuing in Japan—a policy of encouraging democratic groups to prepare for self-government while uprooting and destroying every possible source of feudal, imperial, militaristic, aggressive action. Our policy in Japan has been the reverse of the course we have pursued in Germany, and has, of course, produced a totally opposite result thus far.

6. Guarantee the political boundaries and integrity of small nations, but strike at their basic, economic problem by encouraging federation and the development of free trade areas, as, for instance, through a United States of Europe.

7. Establish new machinery for the immediate relief of the destitute of all countries and encourage the peoples of the world to help themselves by providing long-time credits for long-range economic rehabilitation for nations prepared to underwrite a just and democratic peace.

8. Draft an international bill of rights setting world standards for freedom of religion, the press, speech, and political action.

9. Democratize the machinery of the United Nations Organization by giving smaller nations a greater voice in its deliberations and by providing for amendment of the Charter by democratic means.

It sounds tough, doesn't it? Well, it is—a lot tougher than drawing diagrams of the perfect world organization. But it must be done—and it can be done—if we have the patience, the vision, the courage, and the energy to fight it out, regardless of the obstacles, the name-calling, and the sneering attacks of the short-cut crowd in the cocktail lounges.

There is only one alternative to such a program—an America armed to the teeth, a world of armed and suspicious camps, and war—an atomic war.

The democratic, anti-imperialist alternative is our only hope—the only hope of a world hungering for peace but saddled by suspicion and power politics with a crushing new burden of armaments and saddened by the selfish maneuvering of the Great Powers with the fear of a new and ghastlier war.

America has a magnificent opportunity to lead the way—not by force of arms or unilateral compulsions but by putting our own house in order and breathing new life into democracy—economic and political—and by using our "reservoir of good will" to tip the scales against imperialism wherever our voice is listened to or our aid is needed.

Every nation has made its share of mistakes and has been guilty of crimes against the peace. This is the time to make a fresh start, to tear up the sordid pages of the past and present, and to begin anew, in a spirit of candor and cooperation, to write a peace based on justice for all. It isn't an impossible ideal. In fact, we have tried everything

but idealism up to now. Many sacrifices will be necessary, of course; but the price of peace, however great, is just a tiny, almost invisible, fraction of the cost of World War III.

## Capt. Sue S. Dauser, Nurse Corps, United States Navy, Retired

EXTENSION OF REMARKS
OF
### HON. MARGARET CHASE SMITH
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
*Monday, December 17, 1945*

Mrs. SMITH of Maine. Mr. Speaker, on December 14 Secretary of the Navy James Forrestal presented to Capt. Sue S. Dauser, Nurse Corps, United States Navy, retired, the Distinguished Service Medal at ceremonies in the Navy Department.

A few days ago the Secretary of the Navy pinned the Distinguished Service Medal upon the blouse of a gracious, modest woman and, in so doing, he gave well deserved recognition not only to this individual but to a branch of our military services whose contribution to victory in World War II is but little known.

The text of the citation for the Distinguished Service Medal reads as follows:

For exceptionally meritorious service to the Government of the United States in a duty of great responsibility as Superintendent of the Navy Nurse Corps during the prewar period of the national emergency and during World War II. Discharging with keen foresight and superb professional ability the heavy responsibilities of this vital assignment, Captain Dauser rendered distinguished service in establishing a post-graduate training program for Navy nurses and for the Navy's participation in the cadet nurse training program. By her sound judgment and careful planning, she was directly responsible for expanding the Navy Nurse Corps from 600 in the prewar period to 11,500, the number essential to provide adequate nursing care for the Navy, Marine Corps, and Coast Guard personnel as the war progressed. Loyal to the ideals established as a standard for her profession, Captain Dauser maintained a high morale and splendid efficiency in the Navy Nurse Corps, and her constant devotion to duty throughout reflects the highest credit upon herself, her command, and the United States naval service.

With Miss Dauser's inherent humility, a characteristic that made her respected and beloved by the thousands of women who served under her, the captain accepted the coveted medal as a tribute to these women rather than as a personal honor. And while it is true that the ceremony cannot but be viewed as an honor to the entire Navy Nurse Corps as well as to the individual who served as its superintendent throughout the prewar and war periods, I should like for the personal element not to be submerged.

An overseas veteran of the First World War, Miss Dauser had less than 500 nurses at her disposal when, in 1939, she came to Washington from duty in her native California to become head of the Navy Nurse Corps. Only a few weeks earlier, Vice Adm. Ross T McIntire had assumed the position of Surgeon General of the United States Navy. It was a happy coincidence that they commenced at the same time their administrative tasks—tasks that grew successively in importance and responsibility as war broke out in Europe, the President declared the existence of a national emergency, and, then, climactically, Pearl Harbor. The integration of the nursing phase, posing its complex problems of recruitment, training, assignment, and advancement, with the over-all aspect of Medical Department services was a model of efficiency. True there were bottlenecks that developed but, under the general supervision of the Surgeon General and the immediate direction of Captain Dauser, the strength of the Nurse Corps grew from 436 to 11,500 with a minimum of wasted effort or resources.

In the meantime, the Navy as a whole was undergoing vast expansion and with it the Medical Department, faced with meeting unprecedented needs in supplying doctors for warships and for the Marines; in constructing and staffing hospitals both at home and abroad; in undertaking research along multitudinous lines, yet all having the common objective of conserving the health and lives of our fighting men; in rehabilitating a legion of wounded and sick whose numbers grew steadily until they ran into the scores of thousands. Save for warship duty, nurses were required in the fulfillment of all these aims. And, with regard to that lone exception, the influence of the Navy's women in white was felt in battleships and submarines, too, for the hospital corpsmen entrusted with nursing duties in our men-of-war had received their training in hospitals and schools "on the beach" from the nurses. It was, indeed, fortunate that with such a tremendous task to be performed by the Nurse Corps alone, Admiral McIntire had the services of a superintendent whose initiative and judgment permitted him to be freed of all unnecessary details so that he could devote himself to the medical program as a whole.

With pride and satisfaction, Captain Dauser viewed the achievements of her little, humane band as weeks passed into months and months into years. It was a Navy nurse who was chosen to be the first person in the Navy to receive the Legion of Merit. A program for the training of flight nurses was started and dividends came high at Iwo Jima and Okinawa. Eleven Navy nurses were decorated by the Army and the Navy for heroic devotion to duty in the Philippines. Nostalgically, Captain Dauser remembered what an Army colonel had written a quarter century earlier of the nursing complement of a troop transport.

The troops on board this ship—

He wrote—

are about to complete a journey which was fraught with many dangers, not the least of which was a very serious epidemic of what appears to be Spanish influenza. The sick report of the troops on board jumped from 6 to 160 inside of 48 hours. The chief nurse and her coworkers did not need any request, but, seeing the danger, came forward and volunteered their services, with the result that what was chaos—there being practically no accommodations or facilities on board to care for such members—was handled in what I consider a most admirable manner under the circumstances. They have worked night and day in the cold and damp, on decks that were being washed by seas, without any lights whatever, exposed to the dangers of contagion with a deadly malady, and they have rendered these services most cheerfully. The troops of the command can never forget the great assistance and the self-sacrifice which this noble body of women has rendered.

Fleet Admiral Chester W. Nimitz gave the Navy's "well done" to the nurses a year ago when he was Commander in Chief of the United States Pacific Fleet and Pacific Ocean Areas:

These nurses bring to the hospital organizations in the Pacific war theater the high standard of nursing service provided in naval hospitals in the United States—

He said—

Their specialized knowledge and training and their devotion to duty are invaluable in providing the excellent hospital care given our sick and wounded. To these nurses who have volunteered their services wherever they may be required we give our heartfelt thanks for duty well done.

After 28 years of selfless service to the United States, the woman who led the Navy Nurse Corps through the most trying, the most momentous, period in its history, is going into retirement. Only memories now are her duties in Scotland and France in 1918–19; at sea in the hospital ship *Relief*, in the Transport Service, and on the Alaskan trip of the late President Warren G. Harding, whom she nursed in his last illness; in Guam and the Philippines, and, finally, in the Bureau of Medicine and Surgery—the most exacting job of her career. Fortunately, the Navy has designated a splendidly qualified woman to take up the work Captain Dauser is relinquishing. She is Commander Nellie Jane DeWitt, who, like her predecessor, entered the Navy Nurse Corps shortly after graduation from nursing school. Too, her duties have been so varied that she brings a wealth of experience and understanding to the position.

I join Admiral McIntire in bidding welcome to Commander DeWitt and saying "Farewell, good luck, and well done" to Captain Dauser.

## Return of Members of the Armed Forces

EXTENSION OF REMARKS
OF
### HON. WALTER C. PLOESER
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
*Monday, December 17, 1945*

Mr. PLOESER. Mr. Speaker, it is a source of great satisfaction to the Members of Congress when members of the armed forces are aware and express appreciation for what most of us are trying to do in their behalf daily.

I thought the members would like to read a letter I have received from a personal friend, a former medical officer in

the Army, who has served with fine distinction:

NOVEMBER 20, 1945.

Hon. WALTER C. PLOESER,
*House of Representatives,*
*Washington, D. C.*

DEAR WALTER: I wish to express the gratitude of the medical officers in my group for the assistance of our Congressmen in facilitating our return to the States and civilian life.

For several months our only hope was reading in the Stars and Stripes about congressional pressure for our return—then all of a sudden the "Green project"—I was returned from Paris in 1 day and within exactly 1 week had cleared the separation center—many of my fellow officers had a similar experience and all are very happy about it.

I was fortunate in receiving one of the 1946 Fords sold to veterans here in St. Louis—have obtained space with several other doctors in the Missouri Theater Building and now only hoping and looking for a place to live. That too is quite a problem here as you probably well know. We were warmly received by the South Side Lions and hope to see you at one of the meetings in the not too distant future.

Sincerely,

PIERCE POWERS.

CLAYTON, MO.

## The Centennial of Texas Statehood

EXTENSION OF REMARKS
OF
## HON. LUTHER A. JOHNSON
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

*Monday, December 17, 1945*

Mr. LUTHER A. JOHNSON. Mr. Speaker, Texas became a State in the American Union 100 years ago this month. In Texas, the Texas Centennial of Statehood Commission created by the Texas Legislature is directing the observance there in a proper manner.

Here in Washington, the Centennial of Texas Statehood is also being observed. In the Library of Congress there is an extensive exhibit on the first and second floors of the Library, consisting of pictures, significant books, and old manuscripts bearing upon the history of the State, and its admission into the Union.

Last Saturday, in Whittall Pavilion of the Congressional Library, exercises were held commemorating the historic event of Texas admission into the Union.

Under leave granted, I am submitting herewith the introductory remarks by Dr. Luther H. Evans, Librarian of Congress, and also the address delivered by me on that occasion:

INTRODUCTORY REMARKS BY LUTHER H. EVANS, LIBRARIAN OF CONGRESS

Congressman JOHNSON, ladies and gentlemen, the Library of Congress is just what its name implies, for it serves Congress in a very practical way, but it is also the national library. It is the largest single depository of our national record as it has been accumulated in books and pamphlets, in printed documents and maps, in periodicals and newspapers, in prints and photographs, and in the manuscript records of significant individuals and societies. There are specialized libraries in various parts of the country which cover some limited portion of that record more minutely and completely than does the Library of Congress, but there is none which covers the whole record so comprehensively. This national record we strive to make available to the whole people of this country as effectively as we are able, and in a multitude of ways. The Library of Congress is thus peculiarly well fitted to take account of anniversaries of national significance, landmarks upon the path along which our people have come in the four centuries and a half since these western continents have been known. On these occasions the Library regularly places in its exhibit cases the books and maps and prints most worth seeing which bear upon and illustrate the events which we are remembering. Of these aninversaries, there are few which can give us greater pleasure than those which mark the centenary of a new State into the Union. In celebrating such an event we invite some distinguished citizen of the State concerned to deliver an address within our walls to mark the opening of the exhibit. This we did last March for Florida, and so we shall do a year from this month for Iowa, and in 1948, if it is safe nowadays to look so far ahead, for Wisconsin. But today's occasion is one which necessarily gives me a particular pleasure and pride, for I am by birth a Texan. One hundred years ago this month my State, and Congressman JOHNSON'S State, became an equal member of this American Union. Our exhibition places on view fascinating materials for the history of Texas, from the first printed narrative of white men in Texas, printed in 1555, to photographs taken only yesterday. I am very glad indeed to have persuaded my good friend Representative LUTHER A. JOHNSON of Corsicana to come and talk to us on the significance of the Texan story. Mr. JOHNSON.

ADDRESS OF HON. LUTHER A. JOHNSON

My colleagues of the Texas delegation, ladies, and gentlemen, *"Resolved, etc.*, That the State of Texas shall be one, and is hereby declared to be one, of the United States of America, and admitted into the Union on an equal footing with the original States in all respects whatever."

By this joint resolution, approved by President James K. Polk on December 29, 1845, Texas on that date become the twenty-eighth State of the American Union. This month we are celebrating the centennial of the statehood of Texas, in honor of which the Library of Congress has brought together this exhibition of rare and significant books and manuscripts bearing upon the history of the State. I should like to point out that what happened 100 years ago was an event quite unique in the history of the United States. For the first and last time in its history, our Union absorbed an independent nation, and a sovereign republic transformed itself into one of the United States. The Lone Star flag gave way to the Stars and Stripes, and Texas came under the fifth of the six flags which have waved against her skies. These flags conveniently and dramatically summarize the eventful history of the region which is now Texas, and so illustrate the making of the Republic which joined our Union a century ago.

The first flag was the fleur-de-lis of Bourbon France. It is of course true that Texas was included in the vast regions for which the discoveries of Columbus and his followers had staked out a Spanish claim, that Pineda charted the coast as early as 1519, that Cabeza de Vaca wandered there after his shipwreck, and that Coronado and Moscoso marched through in search of fabulous kingdoms. But the first attempt to plant a flag in actual settlement was made in the reign of the Grand Monarque, by a mighty builder of the French empire, the Sieur de La Salle. Pathetically transient as was his post on Matagorda Bay, it shocked the rulers of the waning Spanish Empire into their first attempt to establish missions among the Texas Indians in 1693. These soon withered away, and it was two more decades before renewed French activity provoked the authorities of New Spain into an occupation of Texas which proved permanent. Old Nacogdoches was first set up in 1716, but the first Texas settlement with an unbroken occupation was San Antonio, where the mission afterward to be known as the Alamo, was established as a way station 2 years later.

France was eliminated as a neighbor by the Peace of Paris in 1763, which advanced the Spanish frontier eastward to the Mississippi. After nearly four decades of comparative tranquillity, and very slow growth of the Texas settlements, Napoleon compelled the Spanish Crown to restore the old province of Louisiana weste of the great river, only to sell it to the United States within 3 years. From 1811 on Texas was troubled by revolutionary outbreaks and by filibustering expeditions from American soil, and in 1821 came under its third flag, the banner of Mexico, at last independent of the crumbling Spanish Empire. At almost the same time preparation was made for the fourth, for it was in the last days of 1820 that Moses Austin made his fateful journey to San Antonio and entered into the contract whereby his son as empresario brought the first body of colonists from the United States to settle in Texas. The tide that Stephen Austin set flowing ran for nearly a decade before the Mexican Government took steps to halt it, and in those years same 20,000 people, colonists and their slaves, came in to give the Texas land a wholly new population, for they quite outnumbered the 3,000 Mexicans who were the only possessors after a whole century of Spanish settlement.

Eventually the Mexican Government repented of its liberality, brought the current of immigration to a stop, sought in various ways to curtail the autonomy of the Texans and to impose its way of life upon them, and sent an army among them to forestall opposition. The first crisis was weathered, but within a few years Mexico passed under the dictatorship of Santa Anna, and no rights seemed to be beyond the reach of an arbitrary military regime. Just as the American colonists of 1774 had appealed to the British Constitution and to their rights as Englishmen, so the Texan colonists of 1834 appealed to the liberalism of the Mexicon Revolution and to the suppressed Mexican Constitution. But the hand of power was not stayed, and in September of the following year, just as General Gage had sent out to seize the stores at Concord in 1775, so Colonel Ugartechea sent out to seize the brass cannon at Gonzales. The first skirmishes took place and, like the Continental Congress, the Texan Consultation issued its declaration of causes for taking up arms. Santa Anna brought his army to San Antonio and besieged the little force in the Alamo, and the delegates of the Texan Convention at Washington-on-the-Brazos put their signatures to a document which began:

"When a government has ceased to protect the lives, liberty, and property of its people, from whom its legitimate powers are derived."

It was a declaration of independence, and Texas has its fourth flag—its own flag. For some weeks longer Santa Anna continued to advance and seemed on the way to drive the Texans out of Texas, when Sam Houston's bold stroke at San Jacinto destroyed his army and saved the Republic.

For 10 years, then, the Republic of Texas enjoyed the "independent attitude among the nations of the earth," which it had assumed on March 2, 1836, and lived under the constitution which the convention had drawn up into the 2 weeks following the adoption of the declaration. During this decade the Republic was governed, according to that constitution, by a President elected every 3 years and by the heads of executive departments whom he appointed, by a congress consisting of a senate and a house of representatives chosen annually, and by a supreme

court and inferior courts whose judges were elected by the joint ballot of the congress. This Republic of Texas entered into diplomatic relations with the United States of America, and sent a minister to represent it at Washington, while, after recognition, a chargé d'affaires from the United States appeared at the Texan capital. Two treaties were negotiated between the two nations in 1838 one at Houston settling claims of citizens of the United States against Texas, and one at Washington for marking the boundary between them. Texas sent diplomatic representatives to Europe, and was recognized by four European nations; European representatives came to Texas, and the French built an embassy on Robertson Hill in Austin. Among the six members of the President's cabinet was a secretary of the navy, and he actually had a navy to administer during the whole existence of the Republic; some of its vessels were later incorporated in the Navy of the United States.

Although Texas was a full-fledged republic with all the attributes of sovereignty, it was not altogether satisfied with its status. The same plebiscite which ratified the Constitution of the Republic in September 1836 voted on the question of annexation to the United States; only 93 votes opposed, while the overwhelming majority, some 6,000, were in favor of that measure. But in the United States to which they desired to adhere, the Texas question almost at once became all but inextricably entangled in politics, in diplomacy, and in the poisonous issue of slavery. The United States Senate refused to ratify the treaty of annexation which required a two-thirds vote. It was first submitted in this form rather than by joint resolution which merely required a majority vote of both Houses by which latter method annexation was accomplished some years later. When Texas' first overtures were rebuffed, her pride was hurt; she withdrew her solicitations, and some public men in Texas looked toward a policy which would consolidate Texan independence. But this policy would not work; the Mexicans were irreconcilable, and desultory warfare went on. Under these conditions a sparsely settled rural country could not afford sovereignty; the Republic of Texas, as the national debt multiplied, was a business that did not pay expenses. Furthermore, the sentiments of the Texan people toward the land from which they came did not change. Early in 1845 there was at last a significant change in the conjunctions of American politics. A majority of both Houses of Congress adopted a joint resolution (the vote in the Senate was so close that a change of one vote would have defeated the resolution), which consented that the territory included within the Republic of Texas should be erected into a new State and admitted as one of the States of this Union, and President Tyler approved this resolution as one of his last official acts, on March 1, 1845. Very cheerfully the Republic of Texas set about the task of reducing itself from a nation to a State: the president summoned a convention; the congress passed a joint resolution expressing its consent; the convention adopted an ordinance of acceptance and then drew up a new constitution fit for a State of the Union; the people of Texas went to the polls on October 13 and ratified this new constitution and on December 29, 1845, when President Polk approved the joint resolution, the Supreme Court holds that was the day on which Texas became a State. In the following February the Legislature of the State of Texas met in place of the congress of the Republic, and Gov. J. Pinckney Henderson took over the reins of government from President Anson Jones. Once more the Federal Republic devised by our founding fathers had justified itself; with no loss of liberty to the individual Texan, and no loss of self-government, and no breach of continuity, independent Texas had become one of the United States.

Who were these Texans who had won their independence as a sovereign republic, sustained it for 10 years, and now voluntarily surrendered it? The answer is simple: They were Americans, who had come to Texas from all parts of the American Union, and so were simply resuming the old political relationship with their former fellow citizens. When Texas passed under her fifth flag, her citizens got their old flag back. Southern Americans and frontier Americans predominated, but there was at all times a substantial admixture of Americans from the older parts of the country and from the more northerly States. Their revolution- and constitution-making reproduced, as I think my examples have shown, the American national tradition. The largest single element in Texas came from Kentucky and Tennessee; but the men who settled these States were simply the spearhead of the advancing American frontier. Some of these tall men with long rifles who pressed on turned north, like the Lincolns, and settled the States beyond the Ohio, others moved westward into Missouri, and yet others pushed southwestward through Arkansas into Texas. A contemporary list gives the places of birth and of last residence for 57 members of the convention which declared independence in 1836. Three were of Mexican and four of European birth. Twenty-eight were born in the Old South, and eleven of these in Virginia. Fifteen were born in the Southwest, and a majority of these, or nine, in Tennessee. But seven were born in northern seaboard States, including three in Pennsylvania and two in New York. When we come to the place of last residence, there is a considerable westward shift; the Southwest, from Kentucky to Louisiana, leads with 37 members and Illinois and Missouri are represented with 5. Eight came directly from the Old South, and four from the Old North. It is easy to call the roll of men from Northern or Middle States who became prominent in public life in early Texas. The President under the provisional government was David G. Burnet, of New Jersey; the last President of the Republic, Anson Jones, from Massachusetts. Stephen Austin was born in Virginia, but his father, Moses Austin, came from Connecticut, as did Ashbel Smith, who represented Texas in Europe. The first Secretary of the Navy of the Republic was S. Rhoads Fisher of Pennsylvania; the second was Louis P. Cook, from New York.

The first generation of Texans were noted, not only for the diversity of States from whence they came, which is likely responsible for the cosmopolitan population of our State today, but their experience in the life of the American frontier caused them to acquire self-reliance, endure hardship, and ability to carry on in spite of dangers, instilling in them an intense degree of patriotism and a willingness to fight for what they believed to be right, and these traits of the forefathers have been handed down, in part at least, to the Texas people of this generation. The heroic part Texans have played in World Wars I and II is evidence of the truth of this statement. Gen. Dwight Eisenhower, now Chief of Staff, and Admiral Chester Nimitz, now Chief of Naval Operations, are both native Texans, and many heroes of the war, both officers and GI's, were from Texas. Texas A. & M. College furnished more officers than West Point.

Texas became the twenty-eighth State of the Union, but 20 more were to be admitted before the roll of the continental United States would be filled up in 1912, and, yet, one of the Senators opposing the admission of Texas said, "The United States already had territory enough for all useful purposes."

When Congress passed its joint resolution of March 1, 1845, it made provision for the formation of four additional States out of the Territory of Texas, should Texas consent to such division. But Texas has not consented, or at least only in a minor degree. In 1850 Texas did consent to the alienation of its territorial claims to the extreme Northwest, in exchange for a sum which sufficed to liquidate the debts of the Republic, and the lands thus relinquished have become portions of Wyoming, Kansas, and Oklahoma, a good slice of Colorado, and the better part of New Mexico. Propositions to divide the homeland into two or three States met with no encouragement, and Texas has retained a truly imperial domain, the basis of its subsequent expansion, productivity, and prosperity.

The first complete census of Texans came with the national enumeration of 1850. In that year there were 212,000 Texans while United States population was 23,190,000, and Texas was the twenty-fifth in rank among the States. She had already quadrupled the estimated 50,000 who carried out the Texas Revolution, but she was still a comparatively insignificant part of the American Union. The 1850's saw Texas almost triple her population, which reached 604,000, and rise to twenty-third rank. The decade of Civil War and reconstruction, during which Texas obtained and lost her sixth flag naturally saw a retardation of growth, but Texas nevertheless added over 200,000 souls and rose to nineteenth place among the States. During the 1870's the rate of increase shot up with complete economic and political recovery, and Texas nearly doubled her population, arriving at a million and a half and the eleventh rank in the Nation. By the end of the century she had passed the 3,000,000 mark, and at the following census, in 1910, stood fifth in the Nation. She maintained this position for three decades, but at the last census went to sixth rank, having at last been passed by California. In 1940, the population of the United States was 131,670,000 or a little over six times what it was in 1850; while the number of Texans stood at 6,414,000, or more than thirty times what it was in 1850, and about a hundred and twenty times what it was in the year of San Jacinto.

As it has been with population, so has it been with wealth and production. The natural resources of Texas have contributed to the wealth of the Nation, and they have grown in volume and value with the passing of the years, leading in livestock and agriculture, and cotton having always been the chief agricultural product. The census of 1850 reported that in the previous year Texas had made 58,000 bales out of a national crop of nearly 2,000,000 bales. But by 1860 Texas cotton had risen to 431,000 bales, just 10 percent of the national crop of 4,310,000 bales. The vast areas available for expansion to Texas farmers insure in the years after the Civil War a position of supremacy in cotton growing. In 1878 the million-bale mark was passed, with the State producing about a fifth of the Nation's cotton.

Expansion went steadily on in the twentieth century. The record crop was achieved in 1926, when the staggering figure of 5,628,000 bales, nearly a third of the American crop and about a fifth of the world's production, was reached. Since then a diminishing world market for cotton has been a deterrent, but in 1937 Texas produced 5,154,000 bales on a considerably reduced acreage. In 1944 Texas, with 2,640,000 bales, was still turning out about a fifth of America's cotton crop. Cotton, however, although the premier crop of the State, does not represent a great deal more than a fourth of the total value of the products of Texas farms. Wheat, dairy products, onions, tomatoes, pecans, peanuts, black-eyed peas, watermelons, and pink grapefruit must not be overlooked. These products make Texas the greatest farming State in the Union.

Beside this great agricultural expansion of the last century, we have to notice the appearance of other forms of wealth, in each

of which Texas has achieved a position of eminence. From the earliest times Texas has been recognized as an ideal land for grazing, and considerable herds were kept there even before the Americans came. But their expansion was strictly limited by the absence of an available market. Not until after the Civil War were the great cattle drives organized on a scale which enabled the Texas plains to furnish the markets of the North and East. The open range was fenced in in the course of the 1880's, but meanwhile the railroads had come and the Texas ranches had no difficulty in marketing their expanding product and maintaining the position which the State had won. In 1943 there were 7,518,000 cattle of all kinds in Texas, about a tenth of the Nation's total and 2,000,000 more than in the next State on the list. With nearly ten and a half million sheep, Texas has more than a fifth of the national flock, and completely outdistanced all competitors by the production of 75,000,000 pounds of raw wool.

Toward the close of the nineteenth century there was developed a new source of wealth which the men of 1836 and 1845 could hardly have dreamed of. I have some right to speak of Texas oil, since it was the accidental bringing in of the well at Corsicana, my home town, in 1895, that first gave economic importance to the industry. In 1901 came the sensational discovery at Spindletop, and the beginning of a tremendous expansion which has gone steadily on until the present. Texas, fifth in oil production in 1925, skyrocketed to first in 1928, and by 1940 had doubled its 1928 production. The monstrous wartime production, swollen to 748,000,000 barrels, has approximated half of the national total, which, together with sulfur in which Texas excels all others and helium of which Texas has a virtual monopoly of the helium supply in the world, has spelled the doom of Berlin and Tokyo. This development of the extractive industries in oil, natural gas, and other minerals has made Texas first in the Nation in the annual value of its minerals, ahead even of Pennsylvania. I shall conclude this brief review of a century's growth in wealth by noting that in the most recent period Texas has made a very serious entry into the realm of manufactures. She is no longer content to export her resources in their raw state, but now stands eleventh among the manufacturing States of this Union, with a product valued at just over a billion and a half dollars. And in this realm, we are probably only at the beginning of her development.

This development of wealth could hardly have taken place if there had not gone with it a parallel development of transportation. Texas in 1845 was not precisely isolated from the rest of the Union, but getting there was a long and tedious journey. The easiest access was by sea, by sail or steamboat to the tiny ports or landings at the mouths of the rivers which flow into the Gulf. The cotton crop had, of course, to be marketed by sea, or a little later, by the steamboats which came up the Red River beyond Shreveport in favorable seasons. Early in the 1850's Texas began to build her own railroads, but as late as 1870 there were only 700 miles of track, and these ran entirely within her own boundaries and gave no connection with the rest of the Union.

In the latter 1850's came the first rapid and dependable means of travel by land, when the transcontinental stage-coach lines included northern Texas in their routes. The 1870's and 1880's were the era of building during which the Texas railroads came into their own; by 1890 there were 8,600 miles of track within the State, and Texas was at last bound to every other part of the Nation by a mode of transport which could accommodate unlimited quantities of both passengers and freight. Today 10 large systems operate within the State, and Texas, with its 16,600 miles of operated road, is easily first among the States of the Union. Beside the railroads are 24,700 miles of designated and maintained highways, on which operate the gasoline engine vehicles; there were over 119,000,000 motorbus-miles operated in 1943, and 292,000,000 motortruck-miles. Of late Texas has made the fullest use of the facilities of aviation; 9 commercial air lines cover the State with a network of air routes, and, with 294 airports and 1,815 civilian aircraft.

There are many other respects in which I could survey the progress of the hundred years since the Republic became the State, but time forbids. I have merely chosen a few of the most conspicuous landmarks by which the rate of advance can be checked. If those in Congress who opposed the admission of Texas were living now and could see Texas after 100 years of statehood, with all of her growth and development and the contribution in men and material that she has made to the Nation, they would doubtless regret having voted to prevent Texas from becoming one of the galaxy of States.

And looking to the future, let us hope that when the next centennial of Texas statehood is observed, 100 years hence, that no atomic bomb and no enemy from within or without will have destroyed this Nation, and that our children's children can then, as we do now, celebrate the greatness and glory of both Texas and the Nation, and indulge the hope that the Lone Star State may continue to be a conspicuous part of this Republic.

## A Thanksgiving Message From the Pacific Veterans

EXTENSION OF REMARKS
OF
### HON. WALTER C. PLOESER
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
*Monday, December 17, 1945*

Mr. PLOESER. Mr. Speaker, the following letter, which is entitled "A Thanksgiving Message From Pacific Veterans," certainly is entitled to our hearty "Amen." I put in the RECORD for the President, War and Navy Departments, to read. Congressional action is almost futile. It is the administrative action which is necessary to correct all the evils so sarcastically recited.

I have been in the Pacific theater of war twice before VJ-day. These men have experienced the toughest ordeal. Add to that the monotony of idleness and long waiting and you know how these veterans feel.

The administration has the power to correct every evil and injustice recited. When can we expect action?

The letter follows:

A THANKSGIVING MESSAGE FROM THE PACIFIC VETERANS

On this Thanksgiving holiday of 1945, I wish to send a Thanksgiving message from the veterans of the Pacific, especially of the southern Philippines. We have much to be thankful for this season. We can be thankful that we have not been overseas more than 2 years, and some of us more than 3 years—yet.

We are thankful for the efforts being made in our behalf. In this theater, Liberty ships are being converted for our use in returning home. A pitiful few, true, but at least a token effort is being made. The faster, larger cargo ships that could have carried twice as many of us, and twice as comfortably, are needed for commercial purposes at home. We are thankful that our Nation is thinking of commercial interests rather than the interests of a few million veterans who have the unreasonable wish to get home in the immediate future. After all, what does a few more months or years mean in our young lives.

We are thankful that the Atlantic Charter is not entirely forgotten now that the war is over. Naturally, it is up to us to decide who will control the government the people of the oppressed countries choose. We are thankful that our naval power is being used to transport men and matériel for the Chinese Nationalist Armies under Chiang Kai-shek. He needs help. After all, while we were fighting the Japanese invaders of China, Chiang could not control them with the troops diverted from his war with the Japs. General Stilwell had the unreasonable idea that first consideration should be the Japs rather than fratricidal strife. He was replaced. The Japs could not put down the Chinese Communist Party with their armed might while in power in northern China. Naturally we must now throw in our aid in this "worthy" cause.

We are thankful that the war-weary ships of the line, as well as the cargo ships which have performed valiantly during our time of need, are being retired from active service. One-fifth of the ships of the line, and several hundred of the cargo ships are to be retired, we are told.

We are thankful that other interests are not allowed to be interfered with in order to get our overseas veterans home a little sooner. For many of us it has been three Christmas seasons away from our families, and another one more or less matters little. If a ship is needed to transport arms and munitions to the Dutch for use against the Indonesians, the mere fact that this selfsame ship is loaded with troops bound for the United States need not interfere with that. The troops can be unloaded to make the ship available, as the Liberty ship loaded with 350 home-bound GI's was unloaded at Hollandia, New Guinea, in order that it could proceed to Finchhaven to pick up arms and munitions for the Dutch.

We are thankful that the poor members of the K-Nine Corps are not forgotten. These poor pups have been overseas for a long time, too. Why should they be slighted in favor of the GI?

We have many things to be thankful for this Thanksgiving season. But will someone please tell me precisely what? Americans, give us something to be thankful for next Thanksgiving. Public opinion and pressure can force a general speed-up of the demobilization from the Pacific, and end the immense differentiation between the difference areas of the Pacific theater. Many areas have shipped home men with 60 points while in the southern Philippines we have men with 70, 80, 90, and even 100 points still sweating out transportation. Just because we happen to be the ones who are the greatest distance from home is no reason we should be passed by. We want a general speed-up of demobilization from the Pacific, and on a more equitable basis. Then and only then will we have something to be thankful for this Thanksgiving season.

## Housing Situation

EXTENSION OF REMARKS
OF
### HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
*Monday, December 17, 1945*

Mr. PATMAN. Mr. Speaker, I am inserting herewith two articles relative to

the housing situation. They are self-explanatory:

SERVICEMEN'S WIVES DISGUSTED WITH HOUSING SITUATION

Salt Lake City Tribune published feature story on interviews with servicemen's wives who are disgusted with housing situation there. Says one wife, "If I don't have a nice house or apartment with a wreath on the door for Ernie when he gets in at Christmas, somebody's going to hear from me. I'd like to know who fought this war for landlords, anyway." Other wife reports that "if you find a place to live, as you probably won't, they won't give you a lease, and you know what that means—as soon as OPA melts away rent will be doubled. We can't pay it, and it's awful cold in wintertime out on the curb." Another woman reported that a landlord told her as soon as OPA moved out, he'd up rent from $67.50 to $87.50.

FOUR MILLION FAMILIES WANT TO BUILD OR BUY

Chester Bowles, in an article in the New York Times magazine, says that it is expected that not more than 475,000 homes will be built within the next year—only an eighth as many as people would like to build or buy. The OPA, in trying to keep the prices of homes down, has established tight controls on building materials and is maintaining rent controls on rented homes and apartments. Now the OPA is proposing that the prices for completed homes be controlled through the National Housing Administration. Although there are some who oppose this plan, builders stand to benefit from these price-control measures.

## Bill H. R. 5012 Proposes To Eliminate Pauper's Oath for Veterans Hospitalization and Domiciliary Care in Veterans' Administration—Follows Resolution Content of National American Legion Convention, 1945

EXTENSION OF REMARKS

OF

### HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 17, 1945*

Mr. DOYLE. Mr. Speaker, many months ago I spoke out against the pauper's oath now used in veterans' matters. I then declared that it was not only unnecessary and undignified, but that it was injurious to morale and unworthy of us as a Nation to demand an oath of these lads as to their financial ability before we would allow them to enter and receive care in Veterans' Administration facilities.

My conception of our duty as a Nation to these veterans is to try, in every way, to promptly and cordially continue to extend to the needy and worthy their every reasonable medical care—and do it without running them through a lot of unnecessary red tape and embarrassing questions. I would favor the great mass of those who will not impose upon their Nation. These boys fought a good fight for us. They went the limit for us. Now let us go the limit for them.

While there are several worthy bills on file by distinguished Members of this House, I know of none of them which provides for the deletion, fully and entirely, the way H. R. 5012 does, in accordance with the resolutions of the American Legion study and conclusions. This group of distinguished veterans is close enough to the heart and mind and needs of the veterans, to speak to us sincerely and soundly. Unless it can be shown that their reasoning is unsound, I believe it should be translated into action—and promptly—for the veterans.

For your information I set forth with my remarks the full text of the Doyle bill, H. R. 5012, filed December 17, 1945, and referred to the World War Veterans' Committee of this House:

A bill to dispense with the requirement that a veteran be unable to pay hospital expenses, in non-service-connected cases, as a condition to hospitalization and domiciliary care in Veterans' Administration facilities, and for other purposes

*Be it enacted, etc.*, That section 6, as amended, of title I of the act of March 30, 1933, entitled "An act to maintain the credit of the United States Government" (U. S. C., 1940 ed., title 38, sec. 706) is amended—

(1) by striking out "and is unable to defray the necessary expenses therefor (including transportation to and from the Veterans' Administration facility)", and by inserting after "shall be furnished necessary hospitalization or domiciliary care (including transportation" the following: "to and from the Veterans' Administration facility in case payment of such transportation by the veteran would cause undue hardship"; and

(2) by striking out the last sentence and inserting in lieu thereof the following: "The statement under oath of the applicant on such form as may be prescribed by the Administrator of Veterans' Affairs shall be accepted as sufficient evidence that payment of transportation by the applicant would cause undue hardship."

## Voluntarism Versus Compulsion in Labor Relations

EXTENSION OF REMARKS

OF

### HON. WAYNE L. MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES

*Monday, December 17 (legislative day of Monday, October 29), 1945*

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address on the subject Voluntarism Versus Compulsion in Labor Relations, delivered by me before the American Trade Executive Association in Chicago on November 17, 1945.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is a pleasure for me to participate in this open forum discussion meeting with you on the general subject of labor relations. If I were to give my speech a title I think I would call it Voluntarism Against Compulsion in Labor Relations. However, I do not intend to confine myself too closely to the limitations of any subject because there are several important issues confronting our country today upon which I wish to comment in spite of the fact that not all of them are directly related to the general topic of the type of procedure which should be adopted in settling labor disputes.

I would like to talk quite informally with you about the general problem of the right and responsibilities of industry in the field of labor relations today, and then you may subject me to cross-examination when I close. I don't expect you to agree with all of my viewpoints any more than labor organizations with whom I discuss these problems agree with me, because we are dealing here with a subject so controversial that reasonable men, if they are intellectually honest, are bound to disagree. I don't think anyone, however, should discuss any domestic issue these days without relating to it the all important international issues.

I think that I would fail in my obligations to any audience if, as a Member of the United States Senate, I did not point out that the success or failure of the program and objectives encompassed by the San Francisco Charter will determine our domestic well-being. The international crisis which will confront us for the next few years, and an intelligent handling of that crisis by this country will determine in the last analysis the economy of America.

By nature I am inclined to be optimistic, but I am certainly pessimistic about the trends of America's foreign policies today. When you think that in July 1945 we rose to great heights in America, insofar as reorganizing our international obligations are concerned when we became a subscribing party to the San Francisco Charter, and then when you think of the toboggan ride down the slide of nationalism that we have taken since July 1945, I think I am justified in asking you to ponder the ultimate consequences of reversion to nationalism. I think we need to keep in mind the fact that if we give the world the impression that there is an alinement between the British Commonwealth of Nations and the United States on all international issues, and that decisions are reached by that alinement before an opportunity is given to all nations of the world, through the United Nations Organization, to reach decisions, it ultimately will be to the disadvantage of this country.

I think good progress has been made as the result of the conference between Prime Minister Attlee of Britain and the President of the United States on the atomic-bomb issue. However, we must not ignore this issue. Can you think of an issue which, over the long range of years, is more important to our economic interests? This is an issue which is going to have to be settled on a world-wide basis, and not upon a basis of an alinement between Great Britain and the United States. I hope—although there has been a considerable modification of the attitude of the President of the United States in regard to the atomic-bomb issue from what he held prior to the conference with Prime Minister Attlee, nevertheless, I hope that those two world statesmen will take the next step, and that is to see to it that the atomic-bomb issue is put on the conference table of the United Nations Organization for final policy formulation.

We must realize that it is only a matter of time before the atomic-bomb secrets will be the possession of the world. We can't stop that development. As I said on the floor of the United States Senate recently, the so-called secrets of atomic energy do not belong to the people of the United States. I say now that the bomb does not belong to the people of the United States and to the people of the British Commonwealth of Nations. It belongs to mankind. We cannot nationalize it because we cannot nationalize science. We cannot close the minds of scientists or block the researches of scientists in countries which were not parties to the Attlee, King, Truman communique. The time has come, I think, to heed the teachings of the scientists of America in regard to the policies which must ultimately be followed in connection with atomic energy. Unless they are heeded, then your immediate economic interests will be of only temporary value. Don't delude yourself about it.

There is no room in America for a supernation complex. Read the pages of history and recognize, ladies and gentlemen, that we are dealing today with international problems that call upon us to act as statesmen with vision, with recognition of the fact that in the immediate future—and by the immediate future, I mean the next 2 or 3 years—we are going to have to decide issues through a world organization that will determine the destiny of this Nation for the next century. That destiny will never be determined in the interests of peace, if we adopt a nationalistic attitude toward world problems. An alinement based upon atomic diplomacy will not be conducive to peace unless all nations are included within the alinement.

With that preface, I come to this domestic issue of labor relations. I am confused about it. You are confused about it. I know of no intellectually honest people who aren't confused about it because here, too, we are facing a crisis. I had hoped—I want to continue to hope—that the management-labor conference will bring forth some statesmanlike solutions to labor problems that are impinging upon the economy of this country. On the basis of such releases from the conference as I have read to date, I am discouraged, because I think the conference has given little indication to the American people that it really has come to grips with the basic problems that confront industry and labor in this reconversion period.

I think there are three or four premises which, for purposes of this discussion, we ought to consider basic. One is that a revolution is taking place in the minds of men the world around. Why ignore it? You aren't going to be able to get away from it. We are entering into an era now of the greatest enlightenment in the history of man. We have developed in America the most enlightened workers of any peoples of the world. It is a direct result of 150 years of free education. This enlightment which is a direct product of the great publicity forces, educational forces, and advertising forces, has been wrought over the years upon the consumers of America. Free education and trade advertising have produced a great deal of wishing and desiring on the part of workers and consumers for a better standard of living. Unless you want to stamp out the forces of education, unless you want to try to stop the common men and women of America from thinking, you are going to find it impossible to prevent their ever pressing demand for an increasing share of the products of their labor. That is basic economic-labor fact and industrial statesmen who do not recognize it, I think, will pull a Sampson act in the house of private industry.

Now, I happen to be one who intends to fight for the preservation of a capitalistic system of economy in America if for no other reason than for the reason that I am satisfied, as a student of history, that common men and women will enjoy a better standard of living under such a system than under any state economy that can possibly be devised by politicians. But that does not make me blind to some of the mistakes of employers in the field of labor relations. As I have appeared before labor groups—sometimes in the midst of their "boos"—and pointed out to them that they have a great interest in the profit system, I now point out also to you that there is no other economy that really develops and protects to the same degree as our American system the dignity of the individual.

We should do what we can to get the people of this country to become fully conscious of the fact that political democracy and a profit system economy are inseparable. Destroy the profit system economy and you destroy political democracy for the very simple reason that you have to substitute then for a private enterprise economy a state economy. That means Government dictation not only over business but over workers and employers alike. We have national socialists in America who want to see our private enterprise system destroyed, and they are not looking with disfavor upon the widespread labor struggles of today. I say to labor groups, "Whether you know it or not, unless you work out more peaceful procedures for the settlement of your disputes, you are playing right into the hands of those who seek to destroy the private enterprise system, which you allege you want to maintain, and you are helping along the cause of the regimenters who want to impose upon us a state economy." There is no freedom for labor under such a system. The state becomes the workers' master, not its servant, under any breed of fascism, communism, or national socialism.

But, ladies and gentlemen, if you are going to make the private-enterprise system work, then I tell you, employers as well as labor are going to have to make the voluntary system of collective bargaining work. They are going to have to make some concessions and sacrifice some prejudices if they are going to make it work.

I want to talk now in terms of some specific suggestions that I think American industry is going to have to accept if it is going to make the principles of voluntarism work in the field of labor relations. Needless to say, I am very much opposed to that segment of industry today that is arguing for and trying to have adopted various forms of compulsory arbitration. They will lose their shirts, so to speak, under compulsory arbitration because they seek to substitute for independent action on the part of industry and labor, governmental decrees as to how industry shall function. Although a plausible case can be made for compulsory arbitration on paper, the major objection to it is that it won't work. It won't work because, as long as employers insist upon being free men, and as long as workers insist upon being free labor, they are not going to accept a compulsory arbitration decree, once they are convinced that it is rooted in injustice.

The labor movement is basically a social movement. Let me make clear that I do not mean a socialistic movement, but rather a social movement. Or to put it another way, it is a great human movement with so many factors that it cannot be put in a legislative strait-jacket. It is one thing to legislate against specific abuses of the labor movement. Such legislation is not only necessary from time to time in order to protect the public's interest, but such legislation will receive the support of labor, businessmen, farmers, and consumers generally.

However, on the other hand, such legislation as compulsory arbitration legislation, which has the effect in the last analysis of substituting governmental decree for free collective bargaining, voluntary arbitration, and economic action on the part of industry and labor, is bound to have the opposition, in the long run, of all economic groups, particularly industry and labor. Thus, you will find most industrial leaders and most labor leaders opposed to compulsory arbitration because they see in it an attempt on the part of government to regiment the economic life of the country, and, further, they are realistic enough to know that the spirit of independence, the love of liberty, and freedom of economic action are so basic in our American way of life that any legislation which seeks to stifle them is bound to break down. Volumes of legislation and hundreds of prisons will not prevent free labor and free employers from striking and locking out because in the field of labor relations we are dealing in a very real sense with freedom itself. Both labor and industry fear—and I think rightly so—governmental dictation of labor relations. Such governmental controls as compulsory arbitration are characteristic of totalitarian states be they communistic or Fascist, and there are forces within our Government today in this country which are unwilling to pay some of the prices of freedom, and hence would like to see a governmentally regimented economy.

Labor and industry oppose compulsory arbitration because they well know that the social and human facets and implications of the labor movement cannot be directed or controlled successfully by the adoption of legal analogies. I doubt if anyone has pleaded more than I have for a judicial approach to the final settlement of labor disputes, but I have always been careful to make the reservation that the judicial approach must be upon a voluntary basis and not a compulsory one. Under a compulsory arbitration approach the arbitration tribunal inevitably becomes the dictator of economic policy, with the result that if its decisions are enforced inherent managerial rights of industry and free collective-bargaining rights of labor are destroyed. Under such a system we would find a constant challenge to government in a field in which, in my opinion, government is least qualified to judge with finality.

I do not think we should ever lose sight of the fact that freedom of economic action on the part of both employers and labor is a very precious right, high on the list of American liberties. In my judgment it is so basic in the psychology of our people that any attempt to destroy it by legislative compulsion will result in so many various types of resistance that any such legislation is doomed before it is even written on the statute books. Free labor and free industry will see in it the danger of loss of economic liberties which, over the long years, have been more beneficial to the development of the American standard of living than could possibly have been the case if such freedom had not existed. After all, the right of free men to organize and bargain collectively and to strike or lock-out, if necessary, has been a great check against exploitation. Don't forget that Government can be an exploiter, too, but usually it takes a very long time to remedy the exploitations of Government.

It is very fallacious to argue that compulsory arbitration promotes Government by law. We should not assume that every proposal which seeks to control human and economic activity by way of legislation is consistent with the ideal of Government by law. It is frequently too difficult to get the layman to see the limits and confines of proper governmental regulations of the affairs of free men. Usually the point can be made clear only when the Government sees to transgress our liberties to such a degree that we can see in bold relief the danger of governmental tyranny. However, when Government seeks to control the economic lives of industry and labor in the field of labor relations by way of compulsory arbitration, we can be sure that a spirit of noncompliance will manifest itself time and time again, and to such a degree that such legislation will weaken rather than strengthen government by law. In my judgment, a movement for compulsory arbitration in this country would result in a serious set-back to the very dramatic advancement of procedures for the peaceful settlement of labor disputes which is going on throughout the country today. For instance, there is a great increase in the use of voluntary arbitration mediation and conciliation. Good-faith collective bargaining and the settlement of labor disputes in direct negotiations between employers and labor are advancing with such strides that all students of the labor movement are thrilled with the advance. For the Government to step in, however, and substitute

itself as a compulsory arbitrator of labor disputes would change the very nature of the type of peaceful procedures which the parties are now using to an ever-increasing extent in the voluntary settlement of labor disputes.

One of the many objections to the Burton-Ball-Hatch bill is that it is designed to develop compulsory arbitration. If I were an employer, and I wanted to buy for myself the maximum amount of labor trouble, I would invest my money in lobbying for some compulsory arbitration proposal or support some such proposed legislation as the Burton-Ball-Hatch bill. I think that bill would give me the best assurance that I would have constant labor turmoil in my plant. My plea to you is that, if you want to keep the private enterprise system—and we must keep it if we are going to keep our form of government—then veer away from these proposals that are being made in the present crisis which would seek to put labor relations of this country in a legislative straitjacket.

If we are not going to use compulsory measures then what hope is there through voluntary methods? May I say next that in my thinking on these problems I insist on drawing a line between two types of labor controversy: A controversy which involves the social and economic implications of the labor movement, as those implications relate to hours, wages, and conditions of employment; and issues which involve the legal rights of innocent parties and third parties. As to that latter great group, as I said in my foreword to Teller's new book about to come off the press, in the field of legal rights—and I will give you some specific examples of what I mean in a moment—I think it is the obligation of government to maintain government by law, and pass such legislation as is necessary to protect those legal rights. But over in the field of wages, hours, and conditions of employment I want to see a Government hands-off policy to the maximum extent possible. I want to see labor statesmen and industrial statesmen sit down around a truly free, collective bargaining table and, on a basis of voluntarism, come to agreement as to what conditions will prevail between them.

Labor and employers must keep in mind the fact that there are significant differences between the legal rights of parties to labor disputes and the legitimate social and economic objectives of such disputants. As to the former, such as the right to protection of property and person from unfair labor practices engaged in either by employer or union the public's interest is paramount. The protecting of such recognized and publicly accepted legal rights in the field of labor relations as in other spheres of human relations fits into a pattern of legislative and legal sanctions. It is in this phase of labor relations that judicial processes enforced by government are most effective. This is true because once there is universal public acceptance of and demand for certain patterns of conduct between disputants in relation to their property and persons, legal sanctions through legislation for the protection of such obligations of conduct become feasible and usually necessary.

However, most of the operative facts of labor controversies do not relate to legal rights but rather to social and economic objectives in regard to which the parties should be allowed the maximum of voluntary action and freedom of choice compatible with the public's interests. Legislative bodies usually create more serious labor trouble than they seek to solve whenever they attempt to place legislative restrictions upon social and economic objectives of a labor program which are consonent with our system of government and the legal rights of persons affected by those objectives even though they may be affected to their economic detriment.

It is in connection with the economic and social objectives of the labor movement, as they manifest themselves in specific industrial disputes, that the area of conflict between the principles of voluntarism and freedom of individual and group choice as contrasted with governmental compulsion and legislative restrictions, exists. Both labor and industry are constantly confronted with legislative attempts to destroy their freedom of action within the area of legitimate economic and social aims. The public's concern is to be found in its Government maintaining a proper balance between freedom of action on the part of labor and employers to settle their differences and advance their interests by means of free collective bargaining and all it implies in respect to voluntarism, and attempts on the part of labor and employers to abuse their freedom of action by infringing upon well-recognized legal rights of each other and of third parties. In addition the public rightly looks to its legislators to provide for fair and decent labor standards and for administrative and judicial machinery which will protect those standards. During the war great strides were made by industry and labor in developing procedures of quasi-judicial wartime tribunals set up for the peaceful settlement of disputes. Many procedural, as well as substantive labor law precedents, were established by wartime labor tribunals, notably the National War Labor Board. It is to be expected that out of this experience industry and labor will look to Government to make available to them on a voluntary basis administrative machinery and quasi-judicial tribunals as aids to them in collective bargaining and in the peaceful settlement of their disputes.

When I speak about the obligation of government to protect the legal and property rights of innocent parties and of third parties in labor controversies, I think of such examples as these: The jurisdictional dispute. I say to this audience, as I have for years to other audiences, that I, for one, believe that the jurisdictional strike is absolutely unjustified in our country, and I have yet to hear a labor leader who has been able to advance a single sound argument that justifies going out on strike because his union is in a jurisdictional dispute with another union. My record on this issue was made long before I went into politics. I have said in decision after decision, as an arbitrator under a contract, that I would not support a stoppage of work under the contract on the basis of a jurisdictional dispute. I have held that I would not support a union, as far as a picket line is concerned, whenever the picket line is a collusive one resulting from a jurisdictional dispute. A third party—the employer as well as an innocent public—is damaged in his legal rights by jurisdictional strikes. The Government has an obligation in such cases to see to it that property rights of innocent parties are protected by whatever force of law is necessary to protect them in such cases. I consider such strikes a challenge to government by law, and I have said so many, many times. Thus on the floor of the Senate the other day I said:

"I particularly wish to commend the statement the President made with respect to jurisdictional disputes, because I happen to share the view that unless labor, by voluntary agreement, comes forward with a procedure whereby jurisdictional disputes can be settled without strikes, it is the public duty and obligation of the Congress of the United States to establish whatever court procedures may be necessary to settle jurisdictional disputes by legal sanctions and determinations. I say that because jurisdictional disputes impinge upon the legal rights of people not parties to an economic struggle. I hope that this conference will keep constantly in mind the very important line of demarcation between the legal rights of parties to labor disputes and the social and economic rights of such parties. In the latter category I do not believe that straitjacket legislation can provide us with any permanent solution to the problem. However, government does have the responsibility to see to it that parties in an economic struggle which impinges upon the legal rights of groups or individuals, be they labor or employers, must be prevented from the transgressions against the legal rights of others. I believe that the President made that very clear by implication, if not by exact language yesterday, when he told the conference in effect that some procedure must be found for settling jurisdictional disputes."

It has been my hope that labor and industry leaders, as to this particular issue, would work out a peaceful procedure without governmental action. I have hoped that something would come out of the present industry-labor conference on the point. Maybe it will. I have seen no public indication of it.

I remember the first week that I served on the War Labor Board. We had a jurisdictional strike in a midwestern plant. One union was objecting because another union was maintaining machinery that the striking union had installed. The striking union insisted on the right to also maintain the machinery. The dispute came to us about 5 o'clock in the afternoon and it involved a vital war plant. I made what in my judgment was just a formal routine motion. I said, "I move that the men be ordered to return to work at the next shift, and that Mr. Green and Mr. Murray be requested to settle the dispute without further stoppage."

I was figuratively lifted out of my seat, because one gentleman on the labor side of the table, hit his fist on the table and shouted, "We dare you to call for a vote on that motion. We serve notice that this Board is not going to tell us when our men have to work."

There I was, under the law of national necessity, sitting as a member of a compulsory arbitration tribunal for the war period. That is what the War Labor Board was during the war, and I am perfectly willing to justify it as such in a war crisis but I want none of its compulsory powers in peacetime. I think we had to have a supreme court of labor during the war and those of us on the War Labor Board tried to so function. Hence the challenge thrown down in this case challenged our jurisdiction over such disputes.

Don't forget that the Defense Mediation Board had just recently been broken up because one segment of labor didn't like one of its decisions, and I recognized at once that if we were going to be confronted with that challenge constantly, with one side or the other walking out because they didn't like some decision, we had better get that issue behind us, so I said, "Mr. Chairman, I move the previous question." And then that great public servant, Frank Graham, seconded my motion. Then I said, "I want to get this issue behind us. I want to know whether or not war production is going to be stopped in this country by jurisdictional strikes. If you labor members are going to take the position you are suggesting the sooner this board folds up the better. I am willing to take the issue to the country."

The labor side—and I am speaking of all factions because they were as one on this jurisdictional matter—ask for a 10-minute recess. They came back after 10 minutes and said, "You won't have to put that motion, because we have ordered the men back to work."

I said, "Ah, that is not good enough. That doesn't settle the issue. Now, Mr. Chairman, I move that the following resolution be the policy of this Board," and I then introduced the resolution which provided that in the case of jurisdictional disputes, Mr. Green and Mr. Murray, or whatever labor

leaders were involved, would be notified of the dispute by the Board, and unless they had it settled within 24 hours, we would appoint an arbitrator whose decision would be final and binding." The vote was 8 to 4, with labor dissenting, but it became the policy of the War Labor Board for the period of the war.

Privately some of those labor leaders said, "You gave us an awful beating, but we asked for it. We recognize that certainly during wartime we shouldn't have jurisdictional strikes." I say we cannot justify them in peacetime, either.

Because of the limits of time, I will mention just one other point on labor's side of the line. I am a firm believer that when a labor organization signs a contract, its signature should be cherished as its bond. Hence, in all my arbitration work I have taken the position that the contract must speak for itself. I didn't write it. I didn't sign it, but the parties did. If they signed a poor one, that is too bad, but they cannot have orderly peaceful procedure in labor relations unless both parties live up to their contracts. Hence, when either an employer or a union violates a contract provision I think they should be held responsible. I think they should settle disputes arising under a contract by voluntary arbitration. If they don't I think the contract obligations must be enforced by government. If labor and management don't want to come forward with such proceedure as will permit of contract enforcement voluntarily, then I happen to share the view that it is an obligation of government to insist upon it.

Now let me say a word or two about your obligations as employers in labor disputes. I think yu need to do some rethinking. I think you need to throw away some of your escape mechanisms which you use to avoid giving up to the full obligations of voluntary arbitration. Personally, I do not think any American employer can justify taking a position before the people of the United States of refusing to be willing to submit to voluntary arbitration all issues that have created an impasse between himself and his workers. If you can't settle the dispute in collective bargaining, if you can't work it out in conciliation and mediation, then I do not think you have a right, or should be permitted by the public, to exercise the right of saying, "I will not put the merits of my case on top of an arbitration table for the full consideration of the public, and let the decision rest upon the merits."

I know there are a lot of employers who are dragging their feet on this issue. Predictions are dangerous, but I think you are going to be forced in the next decade to stop hiding behind the worn-out alibi, "inherent rights of management." Not immediately, because right now the employers of America—because of some mistakes that labor leaders have made—are in a very favorable position with public opinion. But don't forget the pendulum of public opinion swings. Hence, I would like to see American employers grasp the great opportunity they have now, and come forward with a program which shows that they really mean to practice these principles of voluntarism for which I have been pleading. I say to American labor and employers, as I said to a group of employers in my office yesterday morning about a strike of great importance to a large section of this country, "Why don't you offer to arbitrate all the issues which have been raised between you?" They said, "Oh, first, we don't know what kind of an arbitrator we would get, and second, we feel that the issues impinge upon some of our inherent rights of management."

Now, you won't like this one, but I want to tell you what I said to them: "You should stop talking about determining the jurisdiction of arbitration for yourselves by taking the position that every time you think you may be weak on some certain issue, you won't arbitrate it because it interferes with some inherent rights of management." Employers generally hide behind that fiction when the fact is that many of the labor disputes in this country arise over the question of whether or not the demand of labor does interfere with the inherent rights of management. Now, if you had a compulsory arbitration system, that would go to arbitration whether you wanted it or not, and if you have got confidence in the merits of your case, you ought to be willing, if that is what is causing the major trouble in the case, to submit that issue to voluntary arbitration and let the facts speak for themselves. So I say, ladies and gentlemen, that I am not at all impressed with the contention of industry in some great cases that they can't submit the issues to arbitration because they involve the inherent rights of management.

If you are going to use voluntary arbitration in good faith, let me very quickly suggest a few procedural safeguards that I think are vital: Keep the affidavit of prejudice to be used against an unqualified arbitrator. When you accept an arbitrator, do not bind yourselves to accepting him beyond that particular case. I say that for two main reasons: First, I don't like the system of so-called industry impartial umpires appointed as standing arbitrators. An industry impartial umpire sooner or later becomes a substitute for collective bargaining. The parties pass the buck to him, and he is soon doing the things in your labor-relations work that you should be doing for yourselves in negotiations with the labor group. Further, I don't like the impartial umpire set-up, because I have noticed that those umpires don't remain impartial very long. At least, they are suspected of not being impartial after they have rendered a few decisions. I am at a loss to understand why some of them seem to want to keep their jobs after they have lost the confidence of one or both sides of the parties to the contract.

Further, I suggest keep the affidavit of prejudice, because it not only is a good check upon the arbitrator but, psychologically, it is a great reassurance to yourself. I have always taken the position in my arbitration work that at the beginning of a case either side should be allowed to stand up and say, "Mr. Arbitrator, we prefer not to have you handle this case." I don't want to hear a reason. Maybe a party doesn't like the color of my necktie, or my last decision, but he should be privileged, in my judgment, to object to my further services. Interestingly enough, as far as my own experience is concerned, guaranteeing the affidavit to the parties has resulted in its not being exercised in a single case. I think the very fact that the parties were guaranteed the right to use it built up their confidence in the arbitrator.

Second, if you are going to use voluntary arbitration, do not forget to include in your contract procedures that guarantee a full consideration of the case by the arbitrator. I happen to be one who believes firmly in reasonable judicial procedures for arbitration. Let me take the wage issue. Incidentally, let me say that if you want an example of the abuse of proper arbitration procedure, you only need to look to the conditions of reference which the Secretary of Labor attempted to impose upon the oil industry in this country when he said, in his proposal, "Give them 15 percent and then arbitrate whether they should have any more." In my judgment, that did violence to a fair judicial process for voluntary arbitration.

If you are going to use voluntary arbitration as a judicial process, then on the wage issue let the arbitrator have access to all the facts. A judicially minded arbitrator will say in reply to your argument, "We cannot pay higher wages," "I want to go into your books." Every time that issue has come before me, as a private arbitrator, it has been interesting to note how frequently the employer withdrew his objection on ability to pay and permitted me to go ahead with the wage issue without a consideration of his books. On the other hand, I have had many instances in which the books have been submitted, and I think you would be surprised to discover how easy it is to develop confidence in honest arbitrators by letting them go into your books and render a decision on the wage issue in accordance with what the facts of the business show. Too many employers use the claim that they can't pay higher wages as a red herring argument, and they should be required to submit proof and not mere allegation on that point.

The constant drive of labor for a greater share of the product of its labor is a natural drive. It is going to continue, because free men and women in this country are going to constantly try to improve their standards of living. It is well that they should. However, reason and facts under this voluntary system should prevail. Hence we must try to inject into the picture an honest exchange of facts between the employer, the arbitrator, and labor so that the arbitrator's decision can rest on facts and not on suppositions or economic threats.

I have talked already longer than the program committee suggested. Therefore, I shall close with one last point, but still a vital one. I think that temporarily American industry in the present labor chaos is going to be in a stronger position with the public than will be labor. But you are going to make a mistake if you do not recognize, as industrialists, the importance of maintaining the high purchasing power of American workers. Unless you maintain that power, you are going to deflate the value of the American dollar. After the immediate splurge of buying that is ahead for the next 4 or 5 years based largely on spending present savings, a low-wage structure will throw us into a depression which will prove to be very costly to American industry.

So I say to that segment of American industry that still thinks labor is a commodity, that still believes it is essential, under a private enterprise system, to maintain a large pool of unemployed out of which they can pull their labor to meet their labor needs as labor conditions change—you are selling industry short if you fight for low wages now. You cannot treat labor as a commodity any longer and get by with it in this country. Labor will not tolerate and should not tolerate low wages and a low standard of living. We must make these voluntary procedures of free collective bargaining work if we are going to keep labor free, if we are going to keep employers free, if we are going to keep America free from some form of state socialism.

## Feed

EXTENSION OF REMARKS

OF

### HON. HENRY O. TALLE

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 17, 1945*

Mr. TALLE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include: First, a letter; second, some recommendations; and, third, an analysis which the Department of Agriculture furnished me in reply to certain questions with reference to the feed situation which I directed to that agency of the Federal Government, as follows:

PRODUCTION AND MARKETING ADMINISTRATION, GRAIN BRANCH,
*December 14, 1945.*

Hon. HENRY O. TALLE,
*House of Representatives.*

DEAR MR. TALLE: This will acknowledge your letter of November 27, addressed to Mr. Walter C. Berger, Chief, Feeds Division, concerning a possible order to limit the amount of protein ingredients being used in mixed feeds for livestock and poultry. We have also noted your request for a general summary of the feed situation at present and the outlook for next year.

The protein meal situation had become so critical that the Department proposed the issuance of an order designed to limit the amount of protein used in mixed feeds for livestock and poultry at the present time to the amount which was used during the same months of last year. When this proposal was presented to the feed industry, representatives of the industry took the view that the inequities in the distribution of protein feed ingredients could be corrected on a voluntary basis. The Department is giving the feed industry this opportunity.

In order that the necessary adjustments be brought about by the industry itself, we have asked the feed manufacturers to adopt a program designed to adjust their production schedules to last year's operations and eliminate a number of undesirable trade practices which have developed because of the critical supply situation. We are enclosing a copy of the recommendations which have been submitted to the feed industry.

These recommendations are to effect a reduction in the amount of protein ingredients currently being used in mixed feed for both livestock and poultry. Our records on the quantities of proteins being produced at the present time indicate that we have only enough protein ingredients to produce the same amount of mixed feed for all classes of livestock and poultry that was being produced at this time last year.

In compliance with your request for a statement on the general feed situation, we are enclosing a summary which, we believe, should meet your needs.

Very truly yours,
JAMES W. BROWNING,
*Assistant Chief, Feeds Division.*

---

RECOMMENDATIONS FOR EFFECTING A MORE EQUITABLE DISTRIBUTION OF PROTEIN FEED INGREDIENTS

(By Walter C. Berger, Chief, Feeds Division)

Numerous and increasingly insistent complaints on the part of the feed industry about its inability to obtain enough oilseed meals for current requirements have given rise to the consideration of an order restricting the use of protein meal for feed. An order limiting the quantity of protein meal used in mixed feeds during the period December 1945–February 1946 to the amounts used during the same months of the preceding year was discussed with representatives of the industry. The order also proposed to limit the production of poultry feeds during this period to the same amounts produced in the corresponding months of the preceding year in order to effect an equitable distribution of protein meal among the various classes of users.

Although the institution of such an order would bring about a more normal distribution and use of protein meals, we are very hesitant to recommend issuance of an order at a time when our efforts are directed toward the lifting of wartime governmental controls. We want to give the industry every opportunity to solve their problem on a voluntary basis.

In order to correct the protein-meal distribution difficulties on the basis of voluntary action, the industry itself must make adjustments such as the following:

1. Any feed manufacturer having materials on hand or bought, that will enable him to produce more mixed feed than he produced in the corresponding month a year ago should reduce his production schedule accordingly. The manufacturer should then release to the market at least part of the materials, which, if the order were in force, he would not be allowed to use in making mixed feeds.

2. The industry as a whole should take particular note of its production of poultry feeds and adjust its output for the month of December to the same level as a year ago.

3. Commission merchants and terminal elevators who formerly were not in the feed distribution business should immediately discontinue the practice of demanding oilseed meals for oilseeds. Such a practice is not part of their normal business and only aggravates the distribution difficulties.

4. Country elevators should discontinue requiring that processors supply them with oil meals for the oilseeds that they are selling to the processors in excess of their immediate needs.

The small amount of meal that is being demanded by the seed growers who supply the country elevators is justifiable. The country elevators should refrain from taking more meal than they need for their retail sales to their former customers in their own territory. The practice of accepting meal for the purpose of reselling to other feed dealers and feed manufacturers should be discontinued.

The total supply of protein feeds available in 1945–46 is sufficient to maintain production of meat, dairy, and poultry products to meet all peacetime requirements. The difficulties some users are having in securing their equitable share of protein feed ingredients can be attributed only to maldistribution. It is hoped that cooperation of the industry will make it unnecessary to issue the proposed order.

---

THE FEED SITUATION

A total supply of 160,000,000 tons of feed concentrates is available in the 1945–46 feeding year, including carryover, production, and imports. This total includes feed grains, byproduct feeds, and wheat and rye for feeding. It compares with a total supply of 161,500,000 tons a year ago and a 1937–41 average of 137,000,000 tons. In terms of units of grain-consuming animals, the supply of concentrates per unit of livestock estimated to be on farms on January 1, 1946, will be 1.09 tons compared with 1.10 tons a year previous and an average of 1.06 tons in 1937–41. In addition to this supply of concentrates, there is a near-record supply of hay in relation to cattle numbers, with the geographical distribution unusually favorable.

The total supply of concentrate feeds fed to livestock has included in recent years from eighteen to twenty million tons of byproduct feeds which constitute roughly 15 percent of the total feed concentrates fed. Mill byproducts contribute nearly one-half, oilseed cake and meal about one-third, and animal proteins the remainder. The total amount of byproduct feeds available in 1945–46 will be smaller than the record supply of 19,500,000 tons in 1944–45. Mill feeds will be about the same, with the indicated sharp decrease in brewers' and distillers' dried grains offset by increases in wheat mill feeds and beet pulp. The supply of oilseed cake and meal will be significantly smaller, with the estimated 25 percent decrease in cottonseed cake and meal only partly offset by increases in the production of linseed and peanut cake and meal. Estimates of the supply of cottonseed meal available in 1945–46 had to be repeatedly scaled down, reflecting continued deterioration of the cotton crop. Cottonseed production from the 1945 crop, as indicated on December 1, is estimated to be 24 percent less than produced in 1944 and 28 percent below the 10-year average. The supply of animal proteins is expected to be somewhat larger than a year ago, reflecting increased slaughter operations and larger production of dried buttermilk and skim milk for feed.

Estimates of livestock and poultry production on the basis of current livestock numbers and indicated supplies of feed concentrates suggest that total livestock production in 1946 could be maintained at the 1945 level without a significant reduction in carry-over stocks of feed grains. The available feed supply, however, cannot sustain an expansion in poultry production such as is indicated from current statistics on hatchery operations. The readjustments which must be made from the wartime level of agricultural production are greater in the case of eggs than for other livestock products. Production of eggs and poultry during the war increased to a volume sufficient to meet all military and export requirements and, at the same time, permitting a substantial increase in civilian consumption. This has not been possible for other livestock products. Civilian per capita consumption of livestock and poultry products in 1945 compares with the 1935–39 average about as follows:

Eggs and chickens, 25- to 35-percent increase.
Turkeys, 50-percent increase.
Meats (other than poultry), unchanged.
Dairy products, unchanged.

If livestock production in 1946 is maintained at the 1945 level, it represents a substantial readjustment to peacetime requirements. Since the wartime peak was reached in 1943, total cattle numbers have decreased each year; milk cow numbers in 1946 will be at least 2 or 3 percent below the wartime peak of 1944; and hog production in 1946 is expected to be nearly 30-percent down, leaving little for export after meeting civilian needs. This decline in livestock-dairy production has taken place in spite of the fact that civilian demand calls for an increased output of these products. While these readjustments to decreasing feed supplies have taken place in livestock production, output of poultry and poultry products continued at record levels. Although the number of hens has declined, egg production in 1945 was only 5 percent below 1944, and new peaks have been set this year in broiler and turkey production.

Substantial reduction in poultry and egg production will be imperative not only to adjust our agricultural production pattern to peacetime needs, but to preserve our extremely limited feed supplies, of which an uncalled-for large proportion continues to go into poultry products at the expense of output of meat and dairy products. The greater flexibility of poultry production and its increased production efficiency resulting from expanded commercial operations have enabled the poultry and egg industry to compete more effectively with other livestock enterprises for our available protein feed resources. This has been possible largely because of the ceiling prices imposed upon feeds which suspended the operation of supply and demand factors in the distribution of feed supplies. If prices were allowed to fluctuate freely, our feed supplies would be automatically allocated among the different uses and the distribution would be in the best interest of agricultural producers and the consuming public alike. Price controls cannot be terminated until our over-all agricultural output has increased sufficiently in relation to demand to effectively check inflation. While these controls must eventually go, their premature removal may not only bring inflation, but would greatly aggravate the problem of fair distribution.

The restrictive effect of a continued wartime level of poultry and egg production upon other livestock enterprises is demonstrated by the following facts:

(a) Of our total supply of high-protein feeds, 65 percent is used in the manufacture of mixed feeds.

(b) Approximately 60 percent of our total production of mixed feeds consists of poultry feed. This indicates that over 50 percent of our high-protein feeds goes into the production of poultry and eggs.

As a result of the decreased supplies of high-protein feed ingredients as compared with a year ago and the continued heavy demands on protein feeds from poultry producers, the tight feed situation, which had been anticipated to ease considerably by this time, shows no signs of relaxation. The situation for poultry feeds is much less favorable than for livestock feed in general. The large amount of the corn crop which is soft this year is sure to make for a tight corn situation in poultry areas. Soft corn can be fed to advantage to cattle and hogs but not to poultry, especially when it must move through commercial channels.

With no improvement in the supply situation in sight, the adjustments needed to restore balance to our feed-food picture will have to be in the form of reduced livestock operations. Poultry and egg producers, so far, have made little, if any, adjustment to the loss of wartime demands, because poultry and egg prices have been holding generally at satisfactory levels. Poultry producers should be urged to bring about the necessary adjustments before prices much lower than those now prevailing will force producers to fall in line. Not only will prices reach a much lower level if adjustments are postponed, but the total adjustment that will need to be made will be more drastic if action is delayed. The coming year gives every indication of being one in which efficiency in operations rather than volume of production merits principal consideration.

## Destiny in Our Hands

EXTENSION OF REMARKS

OF

## HON. HUGH DE LACY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 17, 1945*

Mr. DE LACY. Mr. Speaker, under the privilege granted me, I would like to include in the RECORD, an article entitled "Destiny in Our Hands" by Dr. Walter H. Barkas of the University of Washington in Seattle, Wash. Dr. Barkas, an outstanding scholar and scientist, prepared his paper on behalf of himself and several score other scientists at the University. While some may not agree with his conclusions, Mr. Speaker, Dr. Barkas offers to this Congress and to the American people much to occupy our thought and to challenge our ancient conceptions. The article follows:

DESTINY IN OUR HANDS

(By Dr. Walter H. Barkas)

This Nation has enormous production facilities and a virile people. We have great but demobilizing armed forces, immense military supplies, and a most devastating weapon in the atomic bomb. Now for the first time in history we, with our potential allies, could cause our will to prevail throughout the world. We are not exercising overtly this aggressive power; yet, ultimately, a security for everyone can come only by the establishment of a real world authority. The power and prestige of this country are greater than have been enjoyed by any nation in modern times, and there still remains a considerable store of genuine good will toward us in many corners of the globe. Why must we subscribe only to timid, unimaginative policies when we ought to be outstanding in world leadership?

Our present dominant situation is, nevertheless, transient. Soon we shall have demobilized, others may have closed the gap in the superiority of weapons, new political line-ups will have shifted the balance of power elsewhere, and the opportunity which now presents itself for decisive steps in organization will have passed.

Wealth and vulnerability invite attack, although aggression may also come from fear or desperation. The new and more dreadful character which warfare has assumed demands that the leaders of this country face the facts squarely.

Suppose any nation were in possession of a supply of atomic explosive sufficient for perhaps a hundred bombs. Such a small quantity of material might be transported into this country in embassy luggage or by numerous other means. Well organized smuggling by a foreign power would be very difficult to stop or even detect. One must postulate that in peacetime there are no great practical obstacles to bringing atomic bombs secretly into this country.

The agents of the nation in possession of the bombs could acquire private quarters located in the central areas of each of our large cities, and particularly in Washington. A suitable plan might be to mine such buildings with atomic bombs set to be detonated at a given time which could be arranged, by simple means, to be synchronized in all the cities.

The complete devastation of the governmental and industrial centers of the country with the loss of the key personnel should be quite sufficient to render us incapable of organized resistance.

Certain steps are possible which might aid in preventing such a calamity, but it is believed that military defenses against a carefully prepared undeclared attack of this sort are really not feasible, and a defensive force is powerless to protect the Nation. The dependence on such forces for protection would be an example of the old fallacy of the Maginot Line, and might induce a false sense of security.

We require a basic re-evaluation of our position in the world and a dynamic concept of organization for our own protection and for the welfare of all peoples.

A PROPOSED COURSE OF ACTION FOR THE UNITED STATES LEADING TO AN EFFECTIVE WORLD STATE

In its early history, this Nation brought into practical realization a union of sovereign States. The Constitution of the United States was written amid strife and suffering and the Nation was welded together with wisdom, diplomacy, and compromise. In the War Between the States, a great issue was settled, and the Union thereby strengthened. In United States history, sovereign States have been persuaded or have themselves requested to join the Union and relinquish their sovereignty to the Federal Government.

As in the beginning of this Nation, now is the time for bold and decisive action. The United States in its maturity can lead other nations in establishing a world authority providing constitutional guarantees for the elementary freedoms of men, and freedom from fear for all peoples.

Such an enterprise will require leaders of great stature, but freemen have risen to the occasion and grown in stature when there were great deeds to be done. Witness the response of this Nation to the Pearl Harbor attack of only 4 years ago.

Within the organization of our Government, as it exists, we have the means for establishing a world authority. The following steps are contemplated:

1. A draft of a definite world constitution should be prepared. No better model exists than the Constitution of the United States of America. This document has stood the test of time, providing a government which is stable and which on the whole has protected the freedoms of the citizens very well. It is very important that there be bipartisan agreement on the text of the constitution and on the proposed program for putting it into effect. While there may be necessary amendments and alterations to the existing constitution, a union as strong as that between the present States must be envisaged, and the Executive must be provided with authority to exercise force up to the full strength of the component States when necessary. Only police-like militia may be permitted the individual States.

In putting into black and white definite constitutional guarantees, informal sounding out of foreign opinion doubtless will be necessary to aid in making realistic provisions.

One possible means for gaining the helpful cooperation of the Soviet Union is for representatives of the United States Government to approach the Government of the Union of Soviet Socialist Republic and inform them of the course of action to be taken by the United States of America. The Union of Soviet Socialist Republic would then invite and prepare a world constitution acceptable to the United States of America. Such a move must be undertaken only at the highest levels by men of good will. A similar direct means for obtaining the cooperation of the Soviet Union has been suggested by Professor Einstein.

Alternatively, the preparation of the constitution might be carried out by experts in our Department of State in consultation with the statesmen of both political parties. The bringing in of representatives of more than one country in the actual preparation of the document probably would be unwise and fruitless wrangling might result.

Whoever writes the constitution, we must insist on the preservation of the basic freedoms as understood in this country and in England. It is believed that neither an economic system nor a religion should be forced on any people. To show that organization is possible with individual differences, we may cite Canada. Some provinces are socialist, some capitalist; some Catholic, some Protestant; some speak English, some French.

Legislative representation of individual states in the federation could properly be made equally between the states in one legislative body and proportional to the literate population in a second body.

2. The next step after the preparation of a plan of world organization meeting the approval of the nation's leaders would be to publicize it, using all the skill and know-how which American publicists possess. A program of conditioning all the accessible people of the world, including our own, should be the sole task of a major agency comparable to the Office of War Information. This office should be established for the purpose, and provided with large resources. The executives in the agency ought to be of the highest caliber available in the country.

Every channel for publicity should be utilized fully in selling the proposed organization so thoroughly to all peoples that even the most adamant leaders will be forced to cooperate.

In carrying out the publicity campaign books and booklets in all languages should be prepared and distributed by every means possible. Articles and editorials should appear in all available newspapers and periodicals. The proposition that "the pen is mightier than the sword" must be exploited to the limit. The moving pictures ought to be used aggressively, and a world network of radio stations put into operation pushing the idea. The services of the greatest orators in

the various languages must be obtained. Support can be built up in the great world religious organizations which may be very powerful. Clubs should be formed dedicated to the idea and the organization of these clubs should be international insofar as possible. In addition representatives of our Government provided with large funds should be sent abroad to develop the idea, and to gain support and commitments from influential individuals within the governments of the various nations.

The greatest inducement for entering the federation, of course, would be in the security provided. By joining the federation any people could acquire the protection of the joint resources and manpower of the signatories. Every individual would thereby acquire all the rights and privileges of citizenship. During the campaign the various provisions of the constitution should be elaborated, and the truly utopian possibilities of the world order developed.

It is reasonable to ask what expenditure we can afford for such permanent security. By camparison, what did we buy for $300,000,000,000 in the past war? If even a fair fraction of this amount were spent intelligently to develop the proposed world organization success would be assured. It would be a grave mistake to undertake such a program without providing plenty of margin. If carried out boldly and overwhelmingly no risks of any sort are incurred.

3. The technique of sampling public opinion should be employed continuously so as to gage accurately the progress of the campaigns in the various countries.

As soon as measurement of sentiment both here and abroad indicates that the time is ripe for action, the United States of America should proceed with the organization.

A Federal territory not subject to the jurisdiction of any present sovereign nation should be established. Representatives of countries responding to our invitation to assemble would bring into being the Federation, operating under the previously prepared constitution and having complete sovereignty over the external affairs, and the internal affairs as necessary, of the signatory states. If the campaign will have been handled astutely, a large number of states would rush to participate. The remainder must be handled with patience and given very persuasive treatment. Probably no single nation would be strong enough to stay out. The great danger at this point is the formation of a rival organization of greater vitality. Obviously, the Federation must be brought to completion before the present great advantages of the United States of America have deteriorated. In carrying out the proposed confederation, every shred of United States bargaining power, military, moral, and economic, must be made available to insure its success.

It is virtually certain that the atomic bomb and other weapons under development render sovereign nations things too fragile to exist long in the world. Men of Hitler's type are not uncommon, and where he miscalculated, the next conqueror may well map a campaign reckoned to lead with certainty to success. If we do not take the initiative in world organization, others will, and, after so doing, little of civilization may remain.

ADDENDUM

Since the above was written public attention has been called by American scientists to the vulnerability of our cities to atomic mines. In the meantime, also, the Prime Minister of Great Britain has proposed to pool the secret weapons of all countries in the custody of the United Nations Organization. Even if this is feasible there remains a fear that the degree of sovereignty remaining to the nations making up this Organization so weakens its authority that it may not be effective. Nevertheless, this move on the part of Great Britain shows how far others are willing to go to implement a world organization.

If a sufficiently strong United Nations Organization moves rapidly into the position of authority it must occupy, it may not be necessary for the United States of America to undertake a unilateral course of action. However, if the UNO degenerates into a modern Tower of Babel, then the program outlined above remains open—provided that the United States of America still possesses sufficient bargaining power to carry it through.

## Anglo-American Loan Agreement

EXTENSION OF REMARKS
OF
### HON. JERRY VOORHIS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

*Monday, December 17, 1945*

Mr. VOORHIS of California. Mr. Speaker, because I believe it goes to the very root of the reasons for the recent loan agreement between the United States and Great Britain, I am asking consent to include with my remarks a recent column written by Mr. Edgar Ansel Mowrer:

ANGLO-AMERICAN LOAN AGREEMENT

(By Edgar Ansel Mowrer)

Prompt ratification of the American loan to Britain is an urgent necessity. Ratification with a minimum of debate. Without too much penny pinching. With complete disregard for the Sam-the-Sap and global Santa Claus jeers that will be left around like bird droppings by discredited American crows, frantically seeking revalorization.

For the new agreement, reached after such painful negotiations, is principally a political act. If—which is impossible—every nickel of the three and three-quarter billion loan were to be ultimately lost, it would still be as much a paying investment as winning the war.

Obviously the agreement is, at the same time, an economic measure and a most important one. If it works out as planned, it will help to stabilize the business world. It will go some distance toward restoring multilateral world trade. It should eliminate the exclusive "sterling bloc" of countries restricted to trading in British pounds.

It should free consumers from losses due to international cartels, those footpads of modern commerce. It should end the mischievous German-invented practice of currency manipulation. And it should put Great Britain solidly back on its base as financial pillar.

All these things are well worth doing. But the real stake behind the Anglo-American agreement is something else, something greater—namely, the preservation of a society based on individual freedom rather than on protected unfreedom. For this the existence of an independent and powerful Britain is almost as essential as that of an independent and powerful U. S. A.

We do not have to worry about Britons keeping their independence with or without American assistance, they will keep control over their affairs. They did not challenge the Nazis single-handed in 1940 in order to submit to anybody's dictation in 1945. It is to maintain their essential independence that even now—after the war has ended and the worst is over—they go on heroically submitting to material restrictions the hint of which would throw Americans impatient of OPA regulations into hysterics.

But without temporary American aid, Britain cannot quickly recover its power. And this power is—as I said—essential to the preservation of a society, in the main, based on freedom.

Here the interruptions begin. "What about the Labor government's attack on free enterprise?" shouted the indignant capitalist.

"What about British imperialism?" insist the hypnotized Liberals.

Precisely. What about them?

It is time Americans learned that under mass production methods, civil liberties are no longer a byproduct of declining private initiative.

The late Frank Knox, Republican newspaper publisher, sat one morning in the sunny courtyard of the Byzantine Museum of Athens, Greece. He had just visited Mussolini's Italy and around him once-free Greeks were writhing under the Metaxas dictatorship. Suddenly, the experience began to work. To this writer, he announced:

"It isn't property that's important, it's liberty. Am I right?"

In the last years the same revelation has come to many.

British socialism, so far from choking off, may prove to be the forcing bed of greater liberty. As Britain goes, so—I believe—goes western Europe.

What about British imperialism? Once it was a real danger. The present spectacle of the British Labor Party clubbing Jews in Palestine and bombing Javanese is repugnant enough. But actually, British imperialism is a dying duck and none know it better than the British. Their problem is how to end it without thereby providing fuel for another, more dangerous imperialism.

One way or another, the long subjugated peoples of Asia—and ultimately of Africa—are going to cast off the old yokes. The question is, Who is going to guide their first uncertain steps toward self-government? Will they move toward individual freedom or toward protected unfreedom? Certainly, from the American viewpoint—ignored by too many Americans—it is far better that they should remain associated with Europe. This can happen only if Britain and western Europe remain both strong and free.

We should try to realize that in a world balance between two systems, the intellectual power of western Europe, the weight of Asia's numbers, will ultimately turn the scales.

This is why American politicians more conscious of their country's real interests would long since have gone to work building up France instead of allowing sympathy with Germans to obscure their view. This is why, in aiding Great Britain to recover its economic and political health, Americans are really aiding themselves.

The real stake behind the Anglo-American loan agreement is what is best in the American way of life.

## Our Future Lies in China

EXTENSION OF REMARKS
OF
### HON. HUGH DE LACY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

*Monday, December 17, 1945*

Mr. DE LACY. Mr. Speaker, under the privilege granted me, I wish to include an article from the Machinists Monthly Journal, official publication of the International Association of Machinists, of which I am proud to be a member.

The article, by Albert H. Jenkins, is a brief and trenchant appraisal of what

is happening in China. It should be read by every Member of this House, and particularly by those who have doubted the wisdom of pursuing the policy first established by our late great President, Franklin D. Roosevelt. That policy was for a united coalition government in China, and, as this article says, such an achievement would be good news, indeed, not alone for China but for the United States and the world.

The article follows:

[From A. F. of L. Machinists Monthly Journal of November 1945]

(By Albert H. Jenkins)

The future of the United States may be decided in China.

That may seem unlikely now, when America has proved itself the strongest nation in the world and expects to remain so, but let's look at some facts which show it makes a big difference to us what happens in China, the "sleeping giant" which is awakening.

First, facts on the fundamental sources of power, China has about a half billion people, nearly four times as many as the United States. China is about one-third bigger than the United States in land area. It has more coal than any other country in the world, vast amounts of iron ore, and practically all other natural resources which make a nation powerful.

The Chinese people are intelligent and courageous, make as good soldiers as any in the world. They have proved their fighting qualities even when they had almost no weapons and equipment, and were abused and badly led by crooked war lords.

Now the United States and other countries are sending military and industrial experts to China, to help develop its enormous potential power. Once well started on that road, there is no reason why China cannot become the strongest nation in the world.

Moreover, China is next door to India, Burma, Siam, Indochina, and other Asiatic countries which want to throw off the white man's rule. They will follow a strong China, and add to its power.

WHAT KIND OF CHINA?

Th Asiatic nations should have freedom, and we should not object to China's becoming strong, but what kind of China?

America still has in its power to determine whether China will be a democratic nation, a safe good neighbor in the future, or a tyrannical dictatorship which will continue to enslave its own people and will be a dangerous threat to the United States. It all depends on whom we support in China.

China may seem far away, but this war proved the world is getting smaller. The broad Pacific can be crossed in days or hours, instead of the months is used to take. Around the Pacific are developing the great powers of the future, as once mighty Europe loses its grip on the teeming peoples of the earth.

Far-seeing Americans know that our future largely lies in the Pacific, that China will have a big say in that future, and that during the next few years we have a last chance to turn China toward democracy or dictatorship.

To understand this problem it is necessary to know a little about the history of China.

For centuries that country was ruled by conquerors from the north, from Mongolia, the Manchu dynasty. There was nothing democratic about that rule, but by lopping off the heads of grafters it enforced some honest government.

A GREAT LEADER

Then a great leader arose. He was Sun Yat-sen, a real democrat with an enlightened program for China. He demanded that China become a republic, that the war lords, landlords, and money lenders who impoverished and cruelly mistreated the people be put down.

In 1912, China became a republic, and there was bright hope for better days. The war lords, landlords, money lenders, and crooked politicians proved too powerful, however, to be overthrown at once.

THE RISE OF CHIANG

Sun Yat-sen died and the situation changed again in 1926 and 1927, when Chiang Kai-shek, one of Sun Yat-sen's bright young men and now ruler of China, came to the front.

Chiang was in south China. Around him gathered the best of the young Chinese, who believed in democracy and were willing to make a fight for it. Borodin and several hundred other Russians were sent from Moscow to give Chiang advice and help.

Chiang's army, accompanied and preceded by propagandists for Sun Yat-sen's ideas, marched north and were welcomed by the downtrodden peasants. They won a tremendous victory and the land was bright with hope.

As soon as Chiang was in power, however, he struck a bargain with Chinese and foreign bankers and industrialists. He married a daughter of the richest banking family in China, the Soongs, and turned on the people who put him in power.

CHIANG AND DEMOCRATS

Chiang tortured and killed thousands of the best young Chinese democrats. Even the wife of the great Sun Yat-sen had to flee for her life from China when she opposed Chiang's actions. Some of the Russians were killed, while Borodin and others escaped.

Some of the Chinese who still believe in Sun Yat-sen's program formed the so-called Chinese Communists Army in south China. Chiang's army chased them thousands of miles into barren areas of north China. The ragged and hungry Chinese Reds suffered terribly, but fought their way through, and continued to exist until the Japs invaded China in 1932.

Since then the Chinese Red armies fought the Japs by guerilla warfare and expanded until they claim to govern 100,000,000 Chinese in northern provinces.

Throughout the war Chiang continued to use some of his best armies against the Chinese "Reds" instead of against the Japs. General Stilwell, who commanded the American troops in China, protested against the use of American weapons and supplies to kill Chinese instead of Japs. As a result, Chiang had Stilwell fired from China.

CHINESE COMMUNISTS

What kind of people are the Chinese Communists, and what do they want? Those questions are important, because the answers throw light on the chances for democracy in China.

An article by Capt. William A. Mikkola, an officer who spent some time in north China, was recently published in a conservative Washington newspaper. The article begins with a description of Mao Tse Tung, leader of the Chinese Communists.

"A quiet, soft-spoken man, Mao moves freely among the people," Captain Mikkola says. "He is really a chosen leader, since, in Communist China, elections are even more democratic than our own.

"Each community elects its own leaders. These elect a representative, and representatives elect the central governing body. This central body then elects the head of the Government.

"This is in contrast with Chungking (Chiang's) policy, under which no coolie has power to cast a vote.

"The coolie class has been eliminated in Communist China. Each person is equal.

"When the Communists first went to Yenan it was barren. Now hillsides and valleys are cultivated successfully. The Communists produce enough food and materials for enough clothes in 2 years to supply everyone in plenty for 3.

YENAN'S PROGRAM

"Chinese Communists are intensely interested in American methods of education. Any American book or magazine which arrives is eagerly read.

"They also are interested in American industrial and mechanical developments. While at present they have only the most primitive methods, they are educated and will be ready when modern equipment will be available.

"Much speculation has been caused on whether or not Communist China is dominated by Russian interests. As far as it was possible for me to ascertain, there is no contact with Russia. There are no Russian representatives at all in Yenan, nor have there been.

"Most persons coming from a visit to Yenan agree that the Chinese Communists might have called themselves a new democracy, rather than having a title which the world continually confuses with Russia.

"More and more Chinese turn to the government they regard as a haven for a man who has been despised and ignored, who has been given no relief when he is starving. They regard Yenan as the place where they can work, be educated, get clothes and food and security, and take part in their own government.

"Nobody can look out and not see that here is a real challenge to the old order of misery in Asia."

CHANCE FOR UNITY

American Government representatives in China recently brought leaders of Chiang's Kuomintang government and the Chinese Communists together to discuss the possibility of uniting in a new Chinese government.

Chiang is demanding that the Chinese Communists greatly reduce their armed forces, and permit him to appoint governors for the northern provinces in which the Communists have elected their own governors.

Those concessions might put the Chinese Communists at Chiang's mercy, and they know what that mercy means by long experience.

On the other hand, Chiang appears to be making some concessions. It would be wonderful news from China if a united government is formed on terms which permit all parties—Chiang's, the Communists, and several democratic parties which are small but still alive—to exist and compete with each other in promoting democracy.

The only alternative is a continued dictatorship under Chiang, with China becoming immensely powerful and dangerous to democracy everywhere.

## Halt the New Attack on Price Control

EXTENSION OF REMARKS

OF

### HON. EMILY TAFT DOUGLAS

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 17, 1945*

Mrs. DOUGLAS of Illinois. Mr. Speaker, under permission granted me to extend my remarks, I wish to include an editorial from the Chicago Sun, Tuesday, December 11, 1945. It is entitled

"Halt the New Attack on Price Control":

HALT THE NEW ATTACK ON PRICE CONTROL

Chicago consumers are rallying this week to let Congress and the administration know they still want price control. The demonstration is timely. As OPA Administrator Chester Bowles said last week, the battle against inflation may be won or lost in the next few months.

Tremendous pressure against price controls has developed among misguided special interest groups. The National Association of Manufacturers has demanded abolition of all ceilings by February 15. Real estate and retail dry goods interests are waging steady warfare against control in their fields. Some manufacturers, according to Reconversion Director John Snyder, are holding their goods off the market until the excess profits tax expires on January 1. Evidently they hope to be rewarded for this strike against the public not only by tax savings but by higher prices as well.

Nothing is clearer than the need for continued control if a disastrous inflation is to be avoided. When subsidies were withdrawn the price of butter shot up overnight. Oranges and grapefruit increased 50 to 100 percent when ceilings were removed. If this was the case with commodities which were thought to be in sufficient supply, what would happen in those fields where shortages will be likely for some time to come?

Wartime experience has blasted the contention that business must have higher prices to produce. Vast reserves of purchasing power are waiting to be tapped. The production will be forthcoming if it is made perfectly clear that the price line is not going to be abandoned.

Not only should existing controls be maintained, but new ones should be added where necessary—for example, in the real estate and stock markets, where inflation is already under way. Above all, Congress must make clear its intention to keep all controls as long as they are needed.

An immediate statement of policy, favoring extension of the Price Control Act beyond its June expiration date, together with new legislation establishing price ceilings on newly completed homes and checking the stock market boom, would be the best possible warning that the people do not intend to go through the wringer of postwar inflation as they did in 1920.

## Christmas Letter

EXTENSION OF REMARKS

OF

### HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 17, 1945*

Mr. VOORHIS of California. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following letter which I sent to my constituents:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
*Washington, D. C., December 25, 1945.*

MY DEAR FRIEND: As Christmastime approaches, I cannot let that season go by without at least a word passing between us.

There are two things of great significance about this particular Christmas. The first, of course, is our thankfulness for the coming of peace, our hope that the day of reunion, too long delayed already in many instances between the fighting men of America and their loved ones, will come very soon. The second significance of this Christmas, however, lies in the absolute necessity, if humanity itself is to be spared a terrible fate, of the rededication of men and nations to the principles of the Sermon on the Mount. I have honestly tried throughout my career in Congress, as I know millions of other people in their particular walks of life have done, to apply these principles to my work. All too often, I know, I have in part at least failed to do this. But today we have but two alternatives: either we will apply to our relations both at home and internationally the teachings which come down to us from the first Christmastime, or else we shall, in all human probability, face at some terrible future the devastation of an atomic war. Other questions, of course, are important, but in comparison to this one, they pale into insignificance. For, through the scientists of America, man has dared to bring to earth the basic cosmic power of God's universe. Upon our shoulders, therefore, rests a responsibility greater than that of any generation that has gone before us. We must find the law of God and follow it and we must know that its very basis lies in dedicating this, his last and greatest gift to man, to the welfare of mankind and to the building of a structure of peace which this time will actually be strong enough to prevent a future war.

There is enclosed herewith a speech delivered in the House in which I have tried to give expression to some of the ideas briefly outlined in this letter.

May God be with you and with our Nation in the year that lies ahead.

Sincerely yours,

JERRY VOORHIS.

## Radio Address of Hon. Fred Bradley, of Michigan

EXTENSION OF REMARKS

OF

### HON. FRED BRADLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

*Friday, December 14, 1945*

Mr. BRADLEY of Michigan. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include my radio broadcast of this week which went on the air over the three stations in my district, WSOO, Sault Ste. Marie; WDBC, Escanaba; and WMAM, Marinette-Menominee:

The big noise in the House last week was the question of strikes and labor-management relations. As I previously predicted to you, the House refused to even consider the question by a margin of 18 votes. Without burdening you with the details the reason it refused to do so was by the clever resort to legislative procedure and legislative tactics under the rules of the House. Before we can consider any measure in the House we have to have a rule of procedure granted by the Rules Committee, and if that rule of procedure is voted up, the committee having the bill in question can call it up at any time. If the House votes down the rule the bill is dead. While the rule to consider the so-called antistrike bill was under consideration, the chairman of the committee having the proposal to repeal the Smith-Connally Act in his control, let it be known on the floor that he would not call that bill up for consideration until the Labor Committee had had ample opportunity to consider legislation embodying the President's proposal to clear up the present labor-management mess through the establishment of fact-finding boards, etc. Many Members of the House found themselves on the well-known spot politically with their constituents back home. We were all swamped with messages from the ranks of labor demanding that we take no action on the bill, and yet those of us who read the daily papers, and especially those who had been home recently, realized that the American public is fed up on this present labor-management controversy and wants it settled and settled promptly. The American public doesn't care a hoot about legislative procedure, with which it is not familiar. What they are asking us today is: "Why doesn't Congress do something to clean up this present industrial unrest? We had a chance to do it, but we failed our responsibility by 18 votes. Those who voted against even considering the question, in my opinion, clearly evaded the issue, and believe me, there were many of them circulating around the floor last Wednesday making excuses for refusing to consider the so-called antistrike bill on Tuesday. The point of the matter is that in the 7 years I have represented you down here in Congress, our Labor Committee—to which the President's proposal has been submitted—has not yet, and I predict, will not in this instance report out to us any bill designed to cure the labor unrest in this country.

The chairman of that committee was once reported by the newspapers to have said that her committee would never be permitted to report out any legislation of that nature except over her dead body. In my opinion, regardless of excuses offered to the contrary, any Member who voted not to consider the pending legislation will be generally regarded by the public as giving encouragement to the continuation of strikes in this country. Those who voted as I did to consider the matter and to offer needed amendments to the pending bill were at least discharging their responsibility to the public and voting as their conscience dictated to consider and adopt suitable legislation designed to continue without further interruption a logical, sound reconversion program.

The following day, on Wednesday, the House again passed for the fourth time what has been known as the Hobbs anti-racketeering bill. This bill is designed primarily to permit farmers to get their produce to market without having to pay tribute to some racketeer or labor union or failing to do so be beaten up by some so-called goons. This situation originally developed around New York City but the practice has spread to numerous other large cities including our metropolitan areas in Michigan. In New York City, for instance, farmers have for many years been trucking their produce to the local markets. They naturally pick their vegetables, fruits, and other produce off the farms, load them into their trucks late in the afternoon or in the wee small hours of the morning and then start to town. The A. F. of L. Teamsters Union had by coercion and threats of violence forced many of the New York markets, who are the customers of these farmers, to enter into a closed-shop agreement providing that only trucks driven by Mr. Dan Tobin's union could deliver produce to such markets. The result was that when the poor farmers from New Jersey, Maryland, Delaware, Virginia, and on south sought to truck their produce to the New York markets, they were stopped at the New York State line by Dan Tobin's union goons and were assessed a set fee to have one of those men ride on the farmer's own truck, which the farmer himself continued to drive to market and himself unload his produce. Now Dan Tobin's man did not do one blessed thing but ride on the truck and collect the fee for the union—the poor farmer continued to do the whole job himself. If he failed to comply with their demands, he was hauled out of his truck, given a good going over with a lead pipe or piece of rubber hose or a pair

of brass knuckles and his truck and his produce, grown by his own sweat and blood, dumped overboard and his truck smashed. In my humble opinion this is racketeering of the lowest order. It is coercion. It is un-American. I was proud to be in the usual 2-to-1 majority in the House which passed this bill and once again we, who voted for it, can only hope that the Senate will not again turn a deaf ear to the overwhelming sentiment thus expressed by the House. At least, again, we have done our part.

Well, so much for the labor situation insofar as the House is concerned. Now, I want to go back into the Pearl Harbor matter. I want to point out to you folks a propaganda campaign going on around the country that I don't like. I think it is un-American and I think it is unfair to the American people to be thus misled by name speakers.

We all know that we suffered the greatest military defeat in our history at Pearl Harbor. The American people ever since have been wanting to know why we suffered that defeat. No less than six different investigations have heretofore been held on the Pearl Harbor matter. A seventh, which is the joint congressional investigation by both Houses, is now under way unearthing and disclosing for the first time to the public the real facts and I have been talking to you about it each week.

Immediately after Pearl Harbor you will recall that Gen. Walter Short and Admiral Husband E. Kimmel were removed from their commands following the so-called Roberts committee investigation. That committee was appointed by the President and headed by Supreme Court Justice Roberts. It was followed by an investigation by both the Army and the Navy. That made three. In the present congressional investigation it has been developed that the Army later sent a Colonel Clausen on a secret reinvestigation and from present testimony it appears that he was instructed to, and did, suggest that previous testimony be changed. Then the Navy conducted two additional one-man inquiries by then Admiral, now United States Senator, THOMAS HART, and Admiral Hewitt.

One thing is certain that in each of the several investigations heretofore conducted, when the reports were made public after submission to the White House, considerable portions of them were deleted. These deleted portions are belatedly coming to light in the congressional Pearl Harbor investigation. Very frankly it is also now clear that the reason some of these previous reports had been deleted in part was due to the fact that the war was still in progress and we dared not disclose to the Jap enemy that prior to Pearl Harbor we had succeeded in cracking their code messages and all through the war our commanders were thus able to know in advance just what the Japs' intentions were, where they were going to strike next, where their weakest points were, etc. To this extent these deletions can, of course, be honorably excused.

But one thing I personally cannot excuse is this fact. That when I have been in attendance as I have at many of these Pearl Harbor congressional hearings, I have been amazed at the seeming lack of memory on the part of some of these generals who have testified in the present investigation. After all they had all been subjected to questioning in one or more of these investigations heretofore and certainly they should have kept a diary or kept their memory alive on various incidents which even to the ordinary layman, like myself, pointed to the fact that something was about to happen at Pearl Harbor or certainly that something was going to happen somewhere about December 7, 1941. And yet, just last Thursday afternoon, I frankly was amazed to hear Gen. Sherman Myles, then Chief of our Army Intelligence, repeatedly answer that he could not remember—he could not remember.

But now before I close, I want to go back to this propaganda about which I am concerned, and you should be also. Some time ago President Truman sought to lay the blame for Pearl Harbor on the American people and now it has come to light and I have personally heard some of our outstanding military men state to the public that the American people were responsible for Pearl Harbor because they did not put enough pressure on their Congressmen and Senators to see to it that the armed forces had enough money to get ready for this last war. That is the lowest, rottenest, dirtiest propaganda, in my opinion, that has ever emanated from the White House, and I don't care who hears me say it, because the figures prove otherwise. I am not blaming some of our outstanding generals, some of our outstanding admirals, and other heroes of this war, who are being sought after and carried all over the country night after night and day after day speaking their piece, but always spreading some propaganda. It is hard to argue with those men who are our Nation's heroes today because of what the boys under them have accomplished in winning this last war. It is hard for a Member of Congress to offset their arguments to a listening anguished mother or father whose son may have perished at Pearl Harbor.

Certainly we were not ready for this war. There is no argument about that, but why should these men possibly now from hindsight, but I fear with orders from someone who has malice aforethought, seek to condemn the American people or their Representatives in Congress? As that great American and great Democrat the late Al Smith used to say: "Let's look at the record." Let me give you some figures, my friends, which Representative FRANK KEEFE, Republican of Wisconsin, a member of the committee, put into the record of the Pearl Harbor hearings. Figures which reveal what had been asked for, what the President recommended and what the Congress did with the various requests for funds from the Army and Navy between the years 1934—when Mr. Roosevelt really began to function as President of these United States—and up through Pearl Harbor. For the sake of brevity over this microphone, I will give you round figures only but this broadcast which will appear in the CONGRESSIONAL RECORD will give the complete figures and reprints will be available in my office if you wish to know what the exact figures read:

Between 1934 and 1941, the Army asked for roughly, $17,185,894,377. The Bureau of the Budget, to which all requests for appropriations are first submitted and which is directly responsible to the President, and for which in turn he must assume the responsibility, cut the Army's request to $16,390,079,707, or a cut of roughly $800,000,000. The Congress appropriated almost $17,000,000,000, or in other words upped the President's own figures about $440,000,000.

Now with respect to the Navy. And in this connection remember three things. First of all, that prior to Pearl Harbor and more especially in the third-term campaign of 1940, the President frequently repeated the statement that your boys will not be sent into any foreign war; secondly, remember this, that in all our deliberations in the Congress on the repeal of the arms embargo, aid to Britain, merchant-ship arming, etc., we were always told these were steps short of war, and the administration told us this was the surest program to keep out of war; and thirdly, the President once made the public statement that anyone who advocated a two-ocean Navy "was just plain dumb" and yet 3 weeks later the Congress of the United States—your Congress—forced him to sign the two-ocean Navy bill—which originated in your Congress—and approve the appropriation therefor. So here are the Navy figures from 1934 to 1941, inclusive:

The Navy asked for $9,434,271,533. The President's Budget Director cut that to $7,428,240,190, or, in other words, he cut it slightly over $2,000,000,000. But the Congress appropriated $8,285,934,388. Or, in other words, the Congress restored $857,694,198.

And so, my friends, in conclusion, the next time you hear any high-ranking admiral or general going around the country, indubitably under instructions from the White House to place the blame for our unpreparedness on you, the American people, politely suggest to him that he go back and look at the record. It is becoming increasingly clear from the Pearl Harbor hearings, conducted by your Congress, that the fault—and the entire blame—for Pearl Harbor is right straight in the laps of the "brass hats" in the War Department and in the Navy Department, who were out-guessed and out-maneuvered in the initial phase of Pearl Harbor by the little men from Japan.

---

## That's Telling 'Em—"Private" Hargrove Talks to the National Association of Manufacturers

EXTENSION OF REMARKS

OF

### HON. COMPTON I. WHITE

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

*Friday, December 14, 1945*

Mr. WHITE. Mr. Speaker, there is inserted herewith a talk by "Private" Hargrove to the NAM:

WHAT (SEE HERE, PRIVATE) HARGROVE THINKS OF NAM—"YOU'RE PREJUDICED, BEHIND TIMES, AND MORE THAN A SHADE HYPOCRITICAL"

(This is the text of the talk, See Here, Private Enterprise, given to the NAM by ex-Sgt. Marion Hargrove, author of See Here, Private Hargrove.)

After spending 3¼ years in the Army in the enlisted, or "speak when you're spoken to," branch, it is a genuine pleasure to find myself standing here with some high brass listening to me for a change. I must confess that I feel like a cross between Daniel addressing the lions and St. Francis preaching to the birds, but I feel, in a larger sense, that today I am a man.

As I understand this assignment, I'm here as a spokesman for all the veterans, and you're here to represent all of American industry, and I'm supposed to lay on the line what it is that we all are expecting from you all. There are a number of flaws in this arrangement.

In the first place I have no credentials as voice of the veteran, and I don't know anyone else who has. I'm authorized to speak for only one veteran—myself—and I don't think that I can be called—to use the term employed by the Hollywood columnists and women's page editors—the typical GI Joe.

In the second place, the topic is largely political and I'm not. What you need for this sort of work is the straight-ticket type of firebrand who can see that all right and all justice is on one particular side of any particular question. The sap who will tell you either that you're a gang of Fascists, or that labor, in which group you've apparently classed the veterans, is a bunch of Red Russians out to run the country. In the current style of politics, in which everybody is either a Fascist or a Communist, I look upon myself as God's lonely man; and as an authority on industry and economics, I am only a simple young man who thinks there's a lot wrong with both management and labor. The only thing I can give you is one veteran's opinion and you have to decide for yourselves what it's worth.

I find it a little difficult to speak to you as an organization since I've never been able to figure out your purpose as an organization. I've been reading about the NAM almost ever since I learned to read, and it seemed to me that you were always against whatever was up for discussion. I can't remember offhand a single thing you've been for. I know that any number of your individual members are alert, thinking, progressive men, but I can't remember offhand a single contribution the organization itself has made or a single constructive thing it's done in the time I've been reading or hearing about it.

Possibly the organization is a victim of poor public relations. Possibly it needs a definite well-planned program to show the public that it isn't as bad as the public thinks it is. Maybe it has done constructive things, but if it has, you don't hear much about them. The NAM has such a bad name, a lot of which may be a carry-over from its worst days, that even when it's right about something it can't draw public support to it. Even when a man gets mad at the unions he doesn't side with the NAM.

NAM, to the average thinking person, I would say, means something stubborn and reactionary, and obstructionist. Even when it's right, it always seems to be right for the wrong reason. In an argument in which the National Association of Manufacturers claims itself on the right side, the opposition uses facts and logic even if it's bad logic, and your NAM spokesman gets up and begins to talk about bolshevism, the American way and the evil forces that are out to ruin the country; and all of the old-style "gentleman from Mississippi" hog-wash goes out with the imprint of the NAM and the apparent sanction of American industry as a whole but through public relations.

Mind you, I'm not saying that I think this is an association of righteous and upstanding idealists who've been sinned against in thought and word by the public. I don't think that at all. I think that if you put the association on a take-one, take-all basis—who are prejudiced and behind the times and more than a shade hypocritical, who talk a lot about free enterprise and the profit system—that we still have monopolists and cartels, whether or not a member of the brotherhood is constantly being prosecuted for violations of the laws governing free competition.

You are opposed to raising the minimum wage and you are opposed to compensation for all these people who are going to be unemployed. Maybe you have reasons for your opposition besides the ones that come naturally to hand, but I haven't heard any and I can't think of any.

Industry has been allowed to build up reserves for reconversion and it has what looks to me like a very good minimum profit insurance in this business of refunds on excess-profit taxes.

Industry has its own brand of unemployment compensation and its own brand of minimum wage handed to it by the Government, and if the NAM has good reasons why labor should not be taken care of too, I think it only fair to you that the public hear them. It seems to me that as an organization, you have very definite and very great responsibilities when you refuse to meet them.

I am not denying that you show good instincts. I think that inviting me here for the sole purpose of abusing you was a very nice, ingratiating sort of thing, but even your good instincts go astray at times.

I went over to your place on Forty-ninth Street the other day to have my picture taken with Mr. Wisenbuger, and one of the fellows in the office there was telling me about the awful problem you are anticipating with the shipping clerks and such like who were drafted into the Army and are coming back now as lieutenant colonels and brigadier generals. According to the fellow I was talking to, industry is going to have a tough time fitting these exalted office boys and shipping clerks into jobs as industrial lieutenant colonels and brigadier generals.

Well, this is a sad sort of thinking and it isn't the sort of thing to endear you to the great masses of returning veterans—most of whom have not even made corporal. It's a little silly to think that because your shipping clerk made $450 a month in the Army, he has to get $450 a month in civilian life. There were a great number of unmitigated jerks in the war holding a major's rank while their work was being done by privates first class, and the fact that they were in the gravy in the Army doesn't entitle them to the gravy in civilian life.

Any number of men, I will admit, were given a chance to prove themselves in the Army, and actually earned their pay. This should be taken into consideration and they should be tested to see what worth they have for better jobs, but it would be a bad mistake to promote them automatically on the basis of their Army ranks. Too often in the Army you find that the relationship between a man's rank and his ability is purely accidental.

The average American soldier underwent financial hardships in the war and he took a lot of abuse from these incompetent office boys who were drawing plump salaries and seniority promotions. He was pushed around a lot in the Army and he's come out determined to take a minimum of pushing around in civilian life.

I would advise you as individual employers gradually to forget what a man was in the Army. The Army is past now and only the man is left. The American veteran does not think of himself primarily as an American veteran. He thinks of himself as a civilian who has been out of the running for 3 or 4 or 5 years and who needs a decent job now and a chance to settle himself in at least as good a civilian job as he gave up when he went into the Army or the Navy.

This is the way you should feel—considering what he was when he went away, what he missed in the way of enlarged experience and chance for advancement while he was in the service and what he learned in the service, and you'll find some vastly broadened men outside of the officers registered.

Treat your veterans as individual problems. Try to strike a balance between what they want to do and what they can do, and I think you'll find the problem of the veteran isn't nearly so staggering as you thought it is.

## Merger of Army, Air Corps, and Navy

EXTENSION OF REMARKS

OF

### HON. HENRY D. LARCADE, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 17, 1945*

Mr. LARCADE. Mr. Speaker, this Congress will have presented before it in a few weeks for consideration a bill for the unification of the Army, Air Corps, Coast Guard, Marine Corps, and the Navy, and I desire to include in my remarks a copy of an editorial which appears in Collier's magazine of date December 22, 1945, as follows:

SINGLE COMMAND FOR TOTAL WAR

So far as we can see, the case is just about completed for bringing all the fighting services—Army, Navy, Air Forces, Marine Corps, wartime Coast Guard—under one Department of Defense, or Department of War, or whatever we may choose to call it.

Modern war is total war, as we've been hearing ever since the Germans demonstrated the fact in Poland in 1939. It can be won only by the highest attainable cooperation among all services, plus superiority in quantity and quality of weapons and supplies.

Lack of Army-Navy cooperation was one factor in the Pearl Harbor disaster, and in our melancholy experiences of the first few weeks after the invasion of Guadalcanal. When MacArthur and Nimitz achieved a reasonable degree of Army-Navy cooperation, things began to look up.

Since VJ-day, a number of wartime secrets have been coming out on this subject. The most alarming of these thus far unveiled were contained in a special report drawn up last April, before the German war was over, by a committee of the Joint Chiefs of Staff. The report was withheld from the public until a considerable time after Japan quit.

In that report, it is stated that "true integration of the effort of the forces has not been achieved in any theater"; also, that "the armed forces will not reach their maximum of effectiveness at the point of contact with the enemy until these handicaps are overcome." In down-to-earth English, that means we paid more in lives for victory than we need have paid.

As we understand the plan to unify the services, it would not destroy any service's individuality or merge them all in one colorless, clique-ridden military bureaucracy. Under the single Secretary of War would be assistant secretaries for Army, Navy, and air. Pride of service, differences in uniforms, esprit de corps—all these would survive. Procurement and equipment duplications and overlappings would go, to the great benefit of the taxpayers. As for interservice envy and rivalries and backbiting, the unified command would have power to root them out as the petty-minded and childish but grave dangers that they are.

Not that this reform is a cure-all. It couldn't be. But it does look like the logical next step in the evolution of our defense machinery, and it is favored by a preponderance of our best military minds. We'd like to see Congress put the services under one command without further delay, and we cannot see what further arguments can be brought forward. The essentials of the debate are now on the record, pro and con: and it looks as if the pros have it, by at least a nautical mile.

Mr. Speaker, I am gathering factual and statistical data on this subject, and beginning in January it would be proper to present this information each day.

## Jurisdiction of the International Court of Justice

EXTENSION OF REMARKS

OF

### HON. CHRISTIAN A. HERTER

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 17, 1945*

Mr. HERTER. Mr. Speaker, I have today filed a joint resolution authorizing the President of the United States to sign on behalf of the United States the declaration under paragraph 2 of article 36 of the Statute of the International Court of Justice, recognizing as compulsory ipso facto and without special agreement the jurisdiction of that Court in certain types of legal disputes. This resolution is

somewhat similar in form to the one submitted in the Senate—Senate Resolution No. 196—by Senator MORSE, of Oregon, on behalf of himself and Senators TAFT, GREEN, FULBRIGHT, SMITH, FERGUSON, AIKEN, BALL, CORDON, WILEY, TOBEY, MAGNUSON, JOHNSTON of South Carolina, MYERS, and MCMAHON.

There is, however, an essential and very important difference between the two resolutions. The Morse resolution is in the form of giving advice and consent to the President and requires an affirmative vote of two-thirds of the Senators present at the time the vote is taken.

My resolution is a joint resolution of the two branches, requiring a majority vote in each.

I shall not at this time attempt to discuss the merits of accepting compulsory jurisdiction for certain types of disputes by the Court of Justice. That has been done with extraordinary thoroughness and skill by Senator MORSE and is recorded in full in the CONGRESSIONAL RECORD of Wednesday, November 28, 1945, beginning on page 11088 and carrying through to page 11109.

I do, however, wish to comment briefly on my reasons for desiring to see the House of Representatives take a part, which I believe to be an entirely proper part, in authorizing the President to take the step indicated. No international lawyer can say with certainty where the power lies in the United States Government to authorize the President to accept the compulsory provision in the statute of the International Court of Justice. That statute is in the form of a treaty which has been approved by the Senate of the United States by a two-thirds vote. Paragraph 2 of article 36 allows a nation the option to accept compulsory jurisdiction in certain legal disputes or to retain the right to agree voluntarily that any dispute as it arises may come under the jurisdiction of the International Court. It is my personal belief that a joint resolution can confer this power on the President inasmuch as I do not believe that any question of ratifying a new treaty is involved in this grant of power.

I further believe that it is important that the House of Representatives should take an increasing measure of responsibility with respect to the conduct of our foreign relations and that it is most important that there be established at the earliest moment a definite precedent for determining where the ultimate power lies in the making of decisions of the type contemplated.

It is my hope that the Committee on Foreign Affairs of the House will grant an early hearing on this matter, as I feel strongly that it should be speedily resolved.

The text of the resolution is as follows:

Joint resolution authorizing the President, on behalf of the United States, to accept and recognize the jurisdiction of the International Court of Justice in certain categories of international legal disputes involving the United States

Whereas article 1 of the Charter of the United Nations, to which the United States is a party, declares the purpose "to bring about by peaceful means, and in conformity with the principles of justice and international law, adjustment or settlement of international disputes or situations which might lead to a breach of the peace"; and

Whereas the people of the United States desire to encourage the functioning of the United Nations Organization, so far as possible, within the framework of justice and international law; and

Whereas article 38 of the Statute of the International Court of Justice, to which the United States is a party, declares it to be the function of that court "to decide in accordance with international law such disputes as are submitted to it"; and

Whereas the role of the International Court of Justice in the international administration of justice will be enhanced by states conferring on it jurisdiction in advance; and

Whereas article 36 of the Statute of the International Court of Justice provides that states "may at any time declare that they recognize as compulsory ipso facto and without special agreement, in relation to any other state accepting the same obligation, the jurisdiction of the Court" in defined categories of legal disputes; and

Whereas such declarations have been made by a number of states and are now in force, conferring on the International Court of Justice compulsory jurisdiction over legal disputes; and

Whereas the people of the United States desire the largest possible extension of such jurisdiction in the interest of justice according to international law: Therefore be it

*Resolved, etc.*, That (a) it is the policy of the United States to adjust its international disputes by pacific means and in conformity with the principles of justice and international law. Accordingly, the President of the United States is authorized and requested to deposit with the Secretary-General of the United Nations a declaration under paragraph 2 of article 36 of the Statute of the International Court of Justice recognizing as compulsory ipso facto and without special agreement, in relation to any other state accepting the same obligation, the jurisdiction of the International Court of Justice in all legal disputes hereafter arising concerning—

(1) the interpretation of a treaty;

(2) any question of international law;

(3) the existence of any fact which, if established, would constitute a breach of an international obligation;

(4) the nature or extent of the reparation to be made for the breach of an international obligation.

(b) Subsection (a) shall not authorize the President to deposit a declaration which does not exclude from its application—

(1) disputes the solution of which the parties shall entrust to other tribunals by virtue of agreements already in existence or which may be concluded in the future (article 95 of the Charter); and

(2) disputes with regard to matters which are essentially within the domestic jurisdiction of the United States (art. 2, par. 7, of the Charter);

or to deposit a declaration which does not provide that it is to remain in force for a period of 5 years and thereafter until the expiration of 6 months after notice may be given to terminate the declaration.

## Do Not Write Your Congressman

EXTENSION OF REMARKS

OF

### HON. HENRY D. LARCADE, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 17, 1945*

Mr. LARCADE. Mr. Speaker, under leave to extend my remarks in the RECORD I wish to include herewith a tear sheet from page 28 of a Navy booklet entitled "Do Not" and from which you will note there is stated "Do not write letters concerning your duty to Navy Department or Congressman."

The excerpt from the Navy Department publication is as follows:

TIMELY ADVICE

Do not—
Disobey orders or instructions.
Borrow money or effects.
Lend money or effects.
Buy on credit (always pay cash).
Have anything in your possession not your own.
Leave anything adrift.
Smoke in unauthorized places.
Hesitate to ask questions.
Be friendly with strangers who promise you a good time.
Hitch hike.
Buy nonregulation uniforms.
Try to be funny on duty.
Discuss movements of men or ships with civilians.
Write letters concerning your duty to Navy Department or Congressmen.
Drop cigarette butts, papers, orange peels, or other trash on deck or walks.
Use another man's drinking cup, tooth brush, or towel.
Wear another man's clothes or sleep in his hammock.

Mr. Speaker, if an enlisted man is in trouble, or has some problem and cannot obtain any consideration from his commanding officer, who in the Sam Hill can he write to unless he writes to his Congressman for help?

Mr. Speaker, with your permission, I would like to also include in these remarks the letter from one of my constituents, the father of a boy in the Navy, as follows:

EUNICE, LA., *September 8, 1945.*

Hon. HENRY D. LARCADE,
*Member of Congress, Washington, D. C.*

DEAR HENRY: My son was at Navy recruiting station at Lafayette, La., July 30 and they gave him a little book about the Navy. I tore out a page, which I am sending you, just for you or other Members of Congress to see for yourself that the Navy brass hats don't want to be under any restraint from our elected Government officials.

I want to predict that unless we stop this peacetime draft and cut the size of the Army and Navy in 15 years the United States Congress and civil authorities will be subordinates to Army and Navy brass hats.

We will have a bigger and better military machine than Germany or Japan ever dreamed of having—and that will be the end of democracy.

Can't our elected representatives see what happened to Japan and Germany under military rule? What makes them believe we will not end up the same way?

Your friend,

GEORGE STAGG.

## Labor Supply and Demand in Utah

EXTENSION OF REMARKS

OF

### HON. WALTER K. GRANGER

OF UTAH

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 17, 1945*

Mr. GRANGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I am submitting a survey made by

the Utah Manufacturers Association relative to the supply and demand for labor in Utah, not only to what the situation is today, but what might be contemplated in the immediate future.

The letter, I think, is self-explanatory and indicates a rather hopeful picture for industry and labor. So far as I know, this is the first time in Utah where management, on its own account, is endeavoring to gather its own information whereby it can gage its activities accordingly:

UTAH MANUFACTURERS ASSOCIATION,
*Salt Lake City, Utah, November 19, 1945.*
Hon. W. K. GRANGER, M. C.,
*House of Representatives,*
*Washington, D. C.*

DEAR MR. GRANGER: Because of our great interest in the problem of providing job opportunities in productive enterprises, we are watching closely the unfolding pattern of labor supply and demand in Utah, and undertaking frequent checks of industrial employers to keep constantly informed on the developing employment picture. Our most recent inquiry directed to a representative group of manufacturers demonstrates a dynamic condition in Utah industry that should provide jobs for all who will give honest service.

We inquired, (a) How many male employees could your organization now put to work, and (b) how many additional employees over and above the current employment potential could your organization place in 1946? The replies reveal that 14 firms currently employing approximately 3,600 could provide immediate jobs for 521 more employees and 542 additional jobs early in 1946, or an immediate increase in jobs of 14 percent and a combined increase in employment of almost 30 percent.

It would be hasty generalization to conclude that the same percentages would apply to the 25,000 Utahans currently employed in manufacturing and kindred enterprises, but strong supporting evidence of continuing steady Utah labor demand is presented by concurrent figures provided us by the Utah Metal Mine Operators Association. With 6,900 on October pay roll, current labor demand for a balanced operation in Utah nonferrous mines, mills, and smelters is 3,025, with an additional 1,500 job potential for 1946 operations. These figures apply to daily wage earners alone and increased employment of roughly 10 percent, or 450, can be anticipated for salaried workers employed in this industrial field.

Although there are in Utah a considerable number who are voluntarily idle while waiting for a "soft" job, we believe there is an increasing tendency for workers to make the readjustments in work and pay which are necessary during this reconversion period. Workers are beginning to realize that it is of the utmost importance to better living and increased security that people work and produce. They understand more and more that it is a necessary part of the reconversion process for some workers to shift from one type of work to another, from specialized work to less skilled and less technical operations. As the local manager of the USES stated in a recent press release, "Men who will accept a bottom-rung job with a future are wiser than a worker who looks only to current pay. Many of our best employment opportunities exist in overalls," and he cited the example of a veteran hired in February as a warehouse laborer now earning $250 a month as salesman of the parts he handled as warehouseman. Employers often prefer to select men for top positions who have thoroughly learned and produced through work as warehousemen, truck drivers, laborers, or other non-white-collared jobs.

We believe that the physical job of reconversion has proceeded faster than expected. As a result, the anticipated shock of unemployment is not developing. Veterans and war workers are finding and taking peacetime jobs. If labor disturbances are avoided and deterrents to production lifted, a rapidly mounting production of goods and services will supply workmen with satisfactory wages and industry with sufficient employment in an expanding industrial economy.

Very truly yours,
UTAH MANUFACTURERS ASSOCIATION
L. K. NICHOLSON, *President.*

## Secretary Byrnes Keeps Feet on the Ground

EXTENSION OF REMARKS
OF
### HON. JAMES P. RICHARDS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
*Monday, December 17, 1945*

Mr. RICHARDS. Mr. Speaker, under leave to extend my remarks, I include the following article from the Christian Science Monitor:

WASHINGTON.—The American Department of State has never been precisely what one would call a big, happy family. But it can be reported that it is a little more, not less, of a family unit for the onslaughts upon it of Maj. Gen. Patrick Jay Hurley.

What made the difference was the manner in which Secretary Byrnes reacted to the Hurley charges. He went warmly to the defense of his berated subordinates, more warmly than some of them had anticipated. It has been good for morale in the organization. It was a test of the Secretary's loyalty to his staff.

They had been fairly confident of how Mr. Byrnes would react to attacks from the left. No one ever accused Mr. Byrnes of being on the radical side, even remotely. He would be certain to defend vigorously against pressure from that side. But there was not the same confidence that he would defend against attacks from the right.

It could be charged that the Hurley attacks did not put a very severe strain on Mr. Byrnes. They were noted for their warmth rather for their detailed documentation. They were marked by apparent inconsistency.

And the manner in which Mr. Hurley resigned his Ambassadorship was not such as to endear him to Mr. Byrnes, who was taken completely by surprise. But still, they were attacks from the right, and there were in the State Department men who had doubted Mr. Byrnes' willingness to defend his Department when the pressure came from that direction. He has done so, and done it generously and firmly. The result is a marked feeling of improved solidarity in the organization.

And the mere fact that attacks have been made from the right have in themselves improved the position of the Department. It is a very long time since it has been under attack from that direction. For some 10 years it has been consistently and almost exclusively under fire from the left. Any organization which takes punishment only from one side tends to acquire something of an unbalance in its views about itself. It was beginning to wonder if perhaps it did partake of all the reaction of which it had been accused. Now it finds itself pilloried as being just the contrary. Therefore, the outside pressure is more nearly in balance than it has been for years.

So the net effect on the State Department organization itself is to improve confidence and loyalty.

As for the effect on American foreign policy—

So far as China is concerned, the real issue which the Hurley blasts have brought to a head is: Who controls policy? The career men of the Department never differed with Mr. Hurley himself nearly as much as they differed with the Army. China policy was a particularly acute case of policy being made by the Army as distinct from the diplomats.

Field officers of the armed forces have made policy during the war. They have been making it in China to a considerable extent without benefit of State Department advice. But the State Department has the legal responsibility for the conduct of our foreign policy. It has been trying to regain control over, or at least obtain a voice in, the conduct of Chinese policy.

The Department itself never for one moment wanted to throw American weight to the Chinese Communists and try to make them into the controlling factor in Chinese politics. But it has doubted that a policy of complete and full support for Generalissimo Chiang Kai-shek would ever produce either a truly united China or the kind of China which would best serve American interest in the Far East.

So long as Mr. Hurley worked for a unification of China, he enjoyed the fullest support of the diplomatic service career men. They broke with him only where and when he seemed to abandon efforts to reconcile Chinese factions and to put his whole weight behind a single faction.

What can be expected now is renewed pressure toward inner reconciliation of the factions in China and less wholehearted American support behind the single Chungking faction. You can also expect greater emphasis on avoiding involvement of American troops in Chinese civil war and also on getting American troops out as soon as possible.

Not much change is to be expected from the Hurley charges about Iran. The tenor of that charge was that American policy had abandoned American commercial interests in Iran to the British. But the threat to such interests comes so very much more from Russia than from Britain that concern about the British seems rather unrealistic.

## Farmers Do Not Strike

EXTENSION OF REMARKS
OF
### HON. HAROLD H. EARTHMAN
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
*Monday, December 17, 1945*

Mr. EARTHMAN. Mr. Speaker, much has been said in the recent past about the patriotic services rendered by the brave lads who have won the world's greatest conflict, and certainly too much credit cannot be given them. My only fear is that we Americans, in our effort to establish normal conditions, may have a tendency to forget their extreme sacrifice and heroism. God forbid that this become a fact, for but for them we would be today ruled and dominated by terrorism and tyranny.

There is another group that deserves our commendation and to whom we should give great credit, for throughout the war it would have been an impossibility for the Allied forces to have succeeded

had it not been for the great army of American agriculture.

We may have a fighting army well equipped in every respect and with the latest implements of war at their command, but, as was seen on Corregidor, no army can survive without food. The American farmer, under great hardships and handicaps, supplied the greatest number of sons proportionately and the largest amount of food on the fewest acres in the history of our Nation, and today, when all types of labor, whether justifiable or not, are striking on every hand and thousands of potential producers of much-needed products are nonproductive as a result. This is happening when the economic structure of our Nation hangs in the balance and when the great monster, inflation, can most successfully be defeated by means of great production, they continue to strike. This is not true of the American farmer. He does not confine his labor to a certain number of hours each day under the very best of working conditions but day in and day out, winter and summer, you will find the men and women, the boys and girls that composed 32,000,000 farm people in the United States, working diligently and patriotically to produce all that is possible and in some cases when due to Government regulations the cost of production is greater than their remuneration.

The above facts are so well expressed in the following editorial which has been contributed by the Franklin County Progress, which is published monthly by the Franklin County Farm Bureau at Winchester, Tenn., in their November issue:

FARMERS DO NOT STRIKE

During the war years when a tremendous effort was being made by everyone to achieve an early and complete victory some of us thought that when peace did finally come we would be so thankful that we would settle down to rebuilding our peacetime economy, generally content with our wages. When peace came the very opposite to this occurred. Strikes flared up on every hand, endangering the security of the Nation, causing us to lose face with our allies, undermining the chance for the world to have a lasting peace under the leadership of America. All this is happening as the planes and ships are unloading our young men and women on the shores of their native land for which so many have given so much. It is a slap in their faces as they come home and see those who made big wages during the war refusing to go ahead, and work for wages almost as large as those received in wartime. Surely labor and management can find a basis for working agreements without wholesale strikes at this time. Yes, it is a sorry sight to behold.

Farmers never have staged a walk-out or been a party to a sit-down strike. They have always produced an abundance of food and raw materials, often at very little profit to themselves. If they were not satisfied with the returns from their labors they went to the halls of Congress for help. They did not quit. During the war just ended American farmers increased their production 50 percent over prewar levels. This was done with less labor, very little new equipment, costly delays in getting repairs and obtaining supplies. Even now they are working early and late feeding and clothing the Nation, including the strikers, and sending supplies to starving people in other lands. Farm people make their mistakes, have their shortcomings, but as a group they never quit.

---

## Reconstruction Finance Corporation Supplies Evidence To Show How Murray-Patman Act Saved Small Dealers in Rationed and Frozen Commodities During Wartime—Measure One of Several Sponsored by House Small Business Committee

EXTENSION OF REMARKS
OF
## HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

*Monday, December 17, 1945*

Mr. PATMAN. Mr. Speaker, last Wednesday a number of Members of the House expressed themselves in reference to the need for the continued operation of the Small Business Committee and the over-all action of the House in this respect was indeed gratifying.

During the remarks on past achievements of the committee, mention was made of the assistance rendered the automobile dealers of our Nation in financing frozen stocks of automobiles.

This particular measure went beyond the automobile dealer—the legislation sponsored by the Small Business Committee and which was subsequently enacted into law by the Congress was a measure to provide relief to all dealers in certain rationed articles or commodities. This law was designed to aid small businessmen who had on their hands inventories frozen by action of the War Production Board and who were financially distressed because they could not therefore dispose of such stocks or because they could not obtain loans against such stocks. The Reconstruction Finance Corporation was authorized either to purchase such frozen stocks directly or to make loans against them on a fair basis of valuation.

In this connection, I think it might be of interest to the Members to note a letter and a report which was sent me the other day by the Honorable Charles B. Henderson, Chairman of the Board of the Reconstruction Finance Corporation. These are as follows:

RECONSTRUCTION FINANCE CORPORATION,
*Washington, December 14, 1945.*

HON. WRIGHT PATMAN,
*Select Committee on Small Business,*
*House Office Building,*
*Washington, D. C.*

MY DEAR MR. PATMAN: I am enclosing herewith a copy of a report sent to me by W. E. Willett, Assistant Chief of our Examining Division, relative to our handling of loans and purchases under the Murray-Patman Act.

I thought you would be interested in the assistance this act has been to dealers, particularly automobile dealers.

With kindest personal regards,

Sincerely,

CHARLES B. HENDERSON.

[Enclosure]

REPORT ON THE RATIONED ARTICLE AND COMMODITY SECTION OF RFC—THIS SECTION WAS ORGANIZED TO HANDLE LOANS AND PURCHASES UNDER THE MURRAY-PATMAN ACT

On June 5, 1942, or 25 days after the Murray-Patman Act (sec. 5 (h) of RFC Act) became law, the Directors of RFC issued general instructions to RFC's 31 loan agencies with respect to the procedure for handling loans and purchases thereunder.

We entered into this program with a most liberal but sound point of view. Our approach was to accomplish the desire of the Congress, to prevent and relieve distress among dealers, and our interpretation of the act was based on that premise. Every question that has arisen during the 3 years that the program has been functioning was considered on that basis. The Directors of RFC felt that under this act they had an opportunity to do a most constructive piece of work by keeping the various trade dealers operating during the critical period before them, particularly the automobile dealers, whose repair shops were so vitally needed in the country's transportation problems.

Our principal concern after the enactment of the law was to assist automobile dealers in stabilizing what appeared to be a panicky automobile retail market. So within 3 days after our general instructions were prepared, or on June 8, 1942, we authorized our loan agencies to make loans to authorized automobile dealers on rationed automobiles and commercial vehicles. These loans were made for an amount representing the net cost of the vehicle to the dealer, plus transportation charges, and plus a monthly increment allowed by the OPA, or, in other words, for an amount representing the dealers' full investment in the vehicle.

Automobile purchase instructions were issued to our loan agencies soon thereafter. Vehicles were purchased on the same basis that loans were made. We were able to assist dealers wishing to sell, rather than to borrow, by finding other dealers who were willing to purchase. In most of these latter cases we loaned the purchasing dealers funds with which to complete the sales. We did this principally to keep vehicles in their normal sales channels.

In addition to making direct loans to automobile dealers, we also entered into agreements with banks and finance companies interested in cooperating with us in our program to aid automobile dealers under this act. A total of 142 banks and finance companies signed such agreements, and through such agreements these private financing institutions were able to assist over 18,000 automobile dealers in financing about 200,000 vehicles in amounts aggregating approximately $213,000,000. These agreements were take-outs (in effect, guaranties) of all vehicles which the banks or finance companies might have to take over under such financing.

Loan and purchase instructions were given our loan agencies also on oil-burning and gas-burning equipment, liquefied petroleum gas equipment, typewriters, tires and tubes, electric ranges, commercial and industrial refrigerating equipment, bakery equipment, fluorescent lighting fixtures and tractors.

In determining which rationed articles were to be declared eligible under this program, we endeavored to base our decision on the anticipated number of dealers that would be affected by the rationed-article order under consideration because the act (sec. 5h (a) (1)) specifies that "such loans and purchases are to be made only in the case of rationed articles under circumstances resulting in a substantial number of dealers being affected." Our views on this particular subject in the early part of this program were undoubtedly too liberal in scope as the

following table of the total number of loans and purchases authorized will indicate. However, our intent was to help as many dealers as possible consistent with the act.

*Loans and purchases authorized by RFC*

| Articles | Loans | | | Purchases | | |
|---|---|---|---|---|---|---|
| | Number of loans | Number of articles | Amount | Number of purchases | Number of articles | Purchase price |
| Automobiles | 2,639 | 59,460 | $63,363,587 | 189 | 2,282 | $3,579,592 |
| Oil burners | 110 | 7,540 | 478,067 | 442 | 25,682 | 1,349,547 |
| Typewriters | 35 | 2,268 | 120,353 | 1 | 153 | 5,139 |
| Tires and tubes | 42 | 31,149 | 262,327 | 1 | 212 | 612 |
| Liquefied petroleum gas equipment | 10 | 383 | 47,683 | 1 | 85 | 9,710 |
| Electric ranges | | | | 5 | 135 | 11,358 |
| Gas burners | 34 | 2,990 | 148,556 | 99 | 2,756 | 242,180 |
| Commercial and industrial refrigerating units | 12 | 848 | 112,193 | 9 | 131 | 71,684 |
| Bakery equipment | 1 | 37 | 4,106 | | | |
| Fluorescent fixtures | | | | 7 | 1,502 | 19,452 |
| Tractors | 1 | 5 | 8,504 | | | |
| Total | 2,884 | | 64,545,376 | 754 | | 5,289,274 |

In summarizing, the RFC has, under the Murray-Patman Act, assisted directly 3,638 dealers to the extent of $69,834,650, and indirectly, 18,021 automobile dealers to the extent of $213,209,302. Developments show that the greatest assistance has been given to automobile dealers.

The act provided thousands of dealers with a means of remaining in business, through loans, to carry on under rationing, with monthly increments to cover all carrying charges on the rationed articles concerned. And those dealers who desired to discontinue business were able to liquidate their rationed articles without loss.

W. E. WILLETT,
*Assistant Chief, Examining Division.*
NOVEMBER 15, 1945.

## Suggestion of Navy Island as Site of United Nations Organization

EXTENSION OF REMARKS
OF
### HON. JAMES M. MEAD
OF NEW YORK

IN THE SENATE OF THE UNITED STATES

*Monday, December 17 (legislative day of Monday, October 29), 1945*

Mr. MEAD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article written by LeRoy E. Fess in support of the selection of Navy Island as the seat of the United Nations Organization.

It is my hope that one of the many attractive places or sites on the continent, such as Navy Island, which is in close proximity to Buffalo and Niagara Falls, N. Y., will be considered and selected as the site for the permanent seat of the United Nations Organization.

There are many splendid sites in this country, and in my State in particular. I trust that within a short time a suitable one will be selected. Hyde Park and Saratoga, in New York, would also make exceptionally fine locations for the seat of the United Nations.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

Navy island, that little chunk of wilderness which splits the Niagara River at the northwest tip of Grand Island, is having its day in the sun after more than 100 years. If efforts of the joint United States-Canadian committee now in London are successful, it will become the permanent seat of the United Nations Organization.

Such a peace role would be entirely new for the island whose history is one of war, rebellion, and rum-running. When the French had it, back in the 1700's, they built a navy yard there and named it Isle de Marine, from which it undoubtedly takes its present name. The British acquired it during the French and Indian War. The spot of woodland was a buffer and jumping-off place for troops in both the American Revolution and the War of 1812.

CEDED TO CANADA IN 1825

The tiny island officially was ceded to Canada in 1825 by an international survey commission which functioned under mandate of the Treaty of Ghent, which terminated the War of 1812. At the same time, Grand Island was given to the United States to offset Canada's acquisition of Grand or Long Island in the St. Lawrence.

Navy Island had its first taste of world fame a dozen years later, during the Canadian Rebellion of 1837, when William Lyon Mackenzie, leader of the insurgents and grandfather of William Lyon Mackenzie King, Prime Minister of Canada, made it the headquarters for his handful of troops. For a few hectic weeks, the island was an independent republic.

A memorable incident of this fracas was the burning of the steamer *Caroline*, a 46-ton Buffalo vessel which was used for communication and supplies between the island and the American mainland. On the night of December 29, 1837, volunteer Canadian troops hunted out the *Caroline's* pier at Schlosser, set her afire and adrift. The blazing vessel plunged over Niagara Falls.

Mackenzie, who previously had been driven out of Canada, soon found Navy Island untenable and abandoned it on January 14, 1838. He spent the next 10 years as an exile in the United States. When King George VI visited Canada just before World War II, the Prime Minister showed him the picture of his grandfather, which he has on his desk together with a framed notice from Her Majesty's Government offering £1,000 reward for Mackenzie dead or alive.

"The King seemed interested," the Dominion's Prime Minister commented.

Save for these few red-letter days, Navy Island has been mostly uninhabited. For a few years, a government caretaker lived there and operated a small farm in a clearing. William Bennett, a former Niagara Falls City engineer, at one time leased tillable acres on the island. Old-timers in the Falls and LaSalle recall that 30 or 40 years ago a sizable hotel flourished there, supported by gay river party trade. This hostelry boasted "the longest bar in the country."

Recent visitors say a few ruins of buildings and remnants of old wharves may be seen near the water's edge.

The few clearings carved out of the forest for farm land look bare from the air, but are covered with waist-deep underbrush. All the rest of the land, an estimated 25 of the total 315 acres, is woods, some of it probably virgin timber. Wildlife is said to abound, including some deer.

There is a popular legend that the island also harbors wild boar, a reverted type of domestic pig which escaped from early settlers. A theory also has been advanced that the wolves recently shot on Grand Island used Navy Island as a stepping stone in their trek down from the Canadian north.

FAVORABLE POINTS STRESSED

The advocates of the spot as United Nations headquarters hold out the lure that, with a minimum of face-lifting, Navy Island could be transformed into the New World's capital within a few short months, if not weeks.

A small army of woodsmen equipped with modern machinery could clear the land quickly, while a fleet of bulldozers would follow in their wake to do the uprooting and leveling. Only a portion of the trees would need to be removed, it is pointed out, the rest being left in landscaped arrangement to provide natural parks.

Being almost level, the land would lend itself to quick transformation, the committee making the offer to the UNO points out. Other obvious advantages include the location in an international river, the fact that only fractions of a mile of water separate it from the mainland of Canada and Grand Island, making bridges inexpensive to build, and its central position in the Niagara frontier, a metropolitan area with 900,000 population and easy of access to the principal cities of Canada and the eastern seaboard of the United States.

TRULY PEACEFUL SETTING

Perhaps the biggest selling point for the proposed world capital is that the tiny island is on the border of two of the United Nations which boast the longest unfortified border in the world—longest in distance, shortest in years. Since the Rush-Bagot Agreement of 1817, no hostile shot has been fired across its 3,500-mile expanse.

The invitation to the UNO to consider Navy Island as its permanent home has been presented in the form of an elaborate brochure, beautifully illustrated and setting forth all the reasons why this location would be an ideal site.

Should the UNO look favorably upon the offer, it is proposed that Canada and the United States enter into an agreement whereby half of the island will be ceded to the United States so the new world capital may be considered a joint gift of these two leading members of the United Nations.

## Crain Resigns as District of Columbia Navy League Head

EXTENSION OF REMARKS
OF
### HON. HENRY D. LARCADE, JR.
OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 17, 1945*

Mr. LARCADE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an article captioned "Crain resigns as District of Columbia Navy League head," which appeared in the Washington Post of date December 16, 1945, as follows:

CRAIN RESIGNS AS DISTRICT OF COLUMBIA NAVY LEAGUE HEAD

Bennett Crain, Washington lawyer, yesterday resigned as president of District of Columbia Chapter of the Navy League of

America in protest against the league's and the Navy's methods in opposing unification of the armed services.

His resignation was contained in a blistering open letter to Ralph A. Bard, president of the Navy League of America, which also included his resignation as a director of the national association.

Crain stated that he joined the Navy League in 1942, and is a charter member of the District chapter. "I joined in the hope that I might thereby serve in a small way the war effort and interests of our country. In view of recent developments I find myself apparently participating, by implication, in statements and policies which I by no means approve.

"Officials and certain members of the board have seen fit to speak on behalf of the league without consulting the membership on a vital question affecting our national security."

SHELDON CLARK'S LETTER

The immediate cause of his resignation, however, was a letter, dated November 2, from the former president of the league, Sheldon Clark, of Chicago, to Senator EDWIN C. JOHNSON, Democrat, Colorado, of the Military Affairs Committee, and a telegram from the same source dated December 1 to President Truman. Of these messages Crain wrote:

"I would under no circumstances approve the imputations of bad faith * * * contained in the letter of Mr. Clark to Senator JOHNSON, and his telegram to President Truman.

"I do not propose to be a party, even by implication, to assertions that a proposal, openly and earnestly advocated by such citizens and patriots as Secretary of War Patterson, former Secretary of the Navy Daniels, Assistant Secretary of War McCloy, General Marshall, General Arnold, General Eisenhower, and outstanding Members of both Houses of Congress, represents an 'undercover movement,' a 'grab for power with a disguised purpose,' an attempt to 'establish rule by a military clique' or a 'military coup by stealth of political interests.'"

ADMIRAL'S "EFFRONTERY"

Later in his letter Crain decries efforts of the Navy to use the league as a mouthpiece. "I cannot overlook," he said, "the recent action of an admiral commanding one naval district who, after employing naval personnel to assist in expansion of the league membership, had the effrontery to advise the league that unless it carried out a program suggested by him the Navy would cease to look to the league for public support.

"I cannot support a policy which permits, as at the December 7 national board meeting, attendance of active naval officers for the purpose of influencing league action."

Crain has his law office at 815 Fifteenth Street NW., which is also the offices of the District chapter of the Navy League. His Washington home is 1304 Thirtieth Street NW., and he also has a home at Mount Victoria, Md.

## GI Loans

EXTENSION OF REMARKS

OF

### HON. HENRY D. LARCADE, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 17, 1945*

Mr. LARCADE. Mr. Speaker, I have received a letter from one of my constituents in regard to obtaining GI loans, which is as follows:

VILLE PLATTE, LA., *December 12, 1945.*

DEAR CONGRESSMAN: Thank you very much for your help while I was in the Army.

Now I am out and am trying to get information on how to go about borrowing money with the Government to go into business of my own.

It looks like there is nobody here that knows anything about the same.

If you know anything about that matter, would you kindly advise me?

Truly yours,

LANDRY SOILEAU.

Mr. Speaker, many of the banks and financial institutions are unable to obtain help to handle these loans. The constituent writing the above quoted letter lives about 15 miles from my home town where the bank there has been trying to have the Navy separate an officer of the bank who lacks about 2 or 3 points in order that the bank may handle these loans, but without success. The officer is not suffering as he is a golfer and there is a golf course where he is stationed, but the bank and the GI's are suffering because there is no one to handle GI loans.

## Our No. 1 Problem

EXTENSION OF REMARKS

OF

### HON. JAY LeFEVRE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 17, 1945*

Mr. LeFEVRE. Mr. Speaker, it seems to me that the No. 1 critical problem facing our Nation today is the housing problem. There are approximately 25,000 retail lumber dealers in the United States, of which I am one. Judging from my own contacts with many of these gentlemen, I know they are just as opposed to runaway prices as the general public. Most of them can recall the last building boom and the sad results many of them experienced with the building collapse. I have hesitated a long time in coming out against price controls, as I feel that price controls should be maintained until supply and demand were in reasonable balance. I had hoped that OPA might take a realistic attitude, and by working with other governmental agencies they might aid the production of lumber and building materials adequately and promptly. However, as time goes on, there seems to be little hope that the fundamental thinking of the OPA authorities can possibly be directed along realistic lines.

As a lumber dealer, I am acquainted with the excessive prices paid by retail dealers for nonstandard items, for remanufacturing in transit, for unusual and abnormal purchases through distribution yards, and the alleged black-market operations. It seems to me it is only a matter of time until either legally or illegally economic forces will burst the bounds of legal control. Therefore, will it be possible for OPA to maintain an unrealistic control policy before the whole structure breaks down under its own weight?

I hope I am wrong, but we cannot ignore some of the factors in the situation. The lumber dealers have complied with the various regulations during the war. Generally speaking, I believe they recognize the attitude of the OPA has been generally constructive. All worked to help accomplish the difficult task the industry faced. Now that the war is over, that spirit of compliance is past. Every lumber dealer knows there is a job to be done. Houses must be built to take care of the veterans who need houses. The lumber dealer knows that if the regulations and red tape surrounding the manufacturers and distributors are dropped, production will get underway and the consumer will be benefited through normal market procedure.

If controls are dropped legally, it is my humble opinion that prices will go up, but this condition will adjust itself by the increase in production. The public may pay a little more for their houses, but not much more than they would through an uncontrolled black market. In getting production increased the hardship period will be greatly reduced and more houses constructed.

The longer we wait in bringing this matter to a head, the more confusing the picture looks. Steps to control the prices of both old houses and new houses are just impracticable. Bills such as the Patman bill and the Wagner-Ellender-Taft bill definitely tend to federalize the housing industry and do not guarantee any increase in production or decrease in cost.

It is my understanding that here in the East, the Connecticut, the New Hampshire, the Massachusetts, and New York State Retail Lumber Dealers Associations have passed resolutions that Congress take the necessary steps to bring about increased production, and if it becomes necessary to attain this end, to abolish price controls. I am including in my remarks the opinion expressed by our Northeastern Retail Lumberman's Association adopted November 26, 1945.

Personally, I have a lot of faith in the judgment of the American retail lumber dealers. These men, along with the cooperation of other businessmen, bankers, and local citizens, can control the inflation problem better than a national agency. It is up to the President to use his present powers to see that lumber allocations are channeled to the dealers serving communities where housing is critical. We hear about the millions of feet that are being shipped to foreign countries. Possibly under ordinary conditions these export relations should be maintained. However, with over 100,000 veterans needing houses, our relations with these gentlemen must come first.

This is an expression of the considered opinion of the Northeastern Retail Lumbermen's Association:

We believe that the only real source of wealth for the Nation and its citizens is from production.

We believe that whatever retards production is against the public interest and whatever increases the Nation's productivity raises the standard of living.

We believe that the paramount duty of every agency authorized by the Congress is the attainment of this end.

We believe that it is the special duty of the construction industry to fill quickly the great need for more and better housing.

We believe that the discharge of this duty is being seriously impeded by the unrealistic policy of some Government agencies.

We believe that the policy of OPA in particular is one of the factors which is retarding production in the following respects:

1. It fails to act promptly to correct obvious inequities.

2. It has failed to set price ceilings adequate to encourage the production of building materials, especially lumber, required to build homes, such as flooring, ceiling, siding, and small sizes of framing, while continuing relatively high ceiling prices on the types of lumber required for the prosecution of war.

3. It has become involved in the technicalities of the hold-the-line order to the point where production has been so retarded as to cause rather than prevent inflation.

4. Its present policies, if continued, will make it impossible for OPA or any other agency, to prevent a black market which will build up the cost of new homes to a point which will defeat the purposes of price control.

Therefore, we respectfully ask that the Congress take appropriate measures to the end that every other objective be subordinated to the fundamental goal of increased production, even if in order to attain this production, it becomes necessary to abolish price controls over construction materials.

Adopted November 26, 1945.

---

## United Automobile Workers of Detroit Contact Prime Minister Attlee of Great Britain

---

EXTENSION OF REMARKS
OF

### HON. WILLIAM A. PITTENGER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 17, 1945*

Mr. PITTENGER. Mr. Speaker, as we approach the proposed recess of the House and Senate over the holiday season, it is interesting to note a news item in yesterday's Times-Herald, of Washington, D. C., Sunday, December 16, 1945. This news item indicates how far the trend toward internationalism has developed in the United States. It also shows just how far the interests of foreign countries in the affairs of the United States may be extended. These facts are very significant and challenge the consideration of everyone. The news item reads as follows:

CIO ASKS BRITAIN AID IN GM STRIKE—CITE 434,000 SHARES OWNED BY BRITONS

DETROIT, December 15.—The CIO United Auto Workers, in a dramatic appeal to Prime Minister Attlee of Great Britain, tonight called on Britain's labor government to support the union's strike-enforced bid for a 30-percent wage boost from General Motors Corp.

R. J. Thomas, UAW-CIO international president, made the request in a letter to Attlee.

Thomas based his appeal to the Prime Minister on "reliable" information that the British Government owned 434,000 shares of GM common stock.

(If the British Government holds control over any stock in the strike-bound General Motors Corp., it would not dream of interfering in an American domestic problem, authorities in London declared.)

UAW officials, meanwhile, prepared for resumption of negotiations Monday both with General Motors and Ford Motor Co., and also with a newcomer to the savagely competitive automotive field—the Kaiser-Frazer Corp.

Both sides were organizing for appearances in Washington Wednesday when President Truman's first fact-finding board organizes to examine the GM dispute.

These facts, Mr. Speaker, are very significant and point out much better than any language I might use the necessity for the American people to examine carefully all legislative proposals in this country relating to foreign countries. This episode shows clearly the interest another country might have in the passage or the defeat of any pending legislative proposal.

"Eternal vigilance is the price of liberty."

LOANS TO FOREIGN COUNTRIES

This story of the Congress of Industrial Organizations—CIO—asking Prime Minister Attlee of Great Britain to interfere in the dispute now being carried on between the United Automobile Workers, on the one hand, and the company which employs them, on the other hand, naturally associates itself with the question of the pending $4,000,000,000 loan to Great Britain.

One American columnist has just recently indicated that the loan was proper, and he has written at some length to explain just why a loan should be made. I do not want to dignify his nonsense by even mentioning his name.

It is my opinion, Mr. Speaker, that the American people agree with another columnist, who has pointed out rather clearly that this pending loan is just a plain hand-out.

It is estimated that this country has spent $250,000,000,000 in the winning of World War II, and presumably this additional $4,000,000,000 does not make any difference to these intellectuals in the United States who want to be good fellows and give away everything we have to foreign countries, as long as it is done at the expense of the American taxpayers. It is time that we cut out this foolishness, because this idea of loaning France $500,000,000, Great Britain about $4,000,000,000, and Russia some five or six billion dollars can't be justified on any sensible basis. I am opposed to such a program of loans or hand-outs.

THE PROBLEMS OF UNRRA

In this connection, it should be noted that, up to date, the United States has already agreed to contribute to the United Nations Relief and Rehabilitation Administration the sum of $1,300,000,000. This outfit is commonly called UNRRA, and the money is to be contributed to the set-up, along with funds from other foreign countries—small in amount—for the purpose of aiding people in Europe who have to have food, clothing, and medicine. Otherwise, we are told they would starve.

When this thing started, the sensible argument was made that the quicker these people were rehabilitated, and they are war victims, just that much quicker would things return to normal.

Recently there has been powerful propaganda, stressing the needs to help these suffering people by overlooking the misdeeds, mistakes, and politics which UNRRA has played with human misery. Congress has been asked to authorize another and an additional $1,000,000,000 for UNRRA. In my opinion, the American people are opposed to giving any further funds to UNRRA. I think they are opposed to this additional $1,000,000,000. They would not be opposed to having Congress appropriate money to be used by the American Red Cross, the Salvation Army, or relief agencies, such as the churches. The American people know that those groups would not play politics with human misery, but would really help people in need of food, medicine, and clothing. Those people ought to have our help. But we have had enough experience with UNRRA to know that it is unfit to meet the situation.

According to the newspapers for yesterday, the deficiency bill, which passed the House recently, has been amended in the Senate to add an additional $750,000,000 for UNRRA. In my opinion, the House of Representatives ought to defeat that amendment. It has no place in a deficiency bill. There ought to be further hearings in the appropriate committee to determine the need for this additional $750,000,000. UNRRA ought not to get that sum of money until we have definite assurances how the money is to be spent and that it will go to relieve people who are hungry, people who are sick, and people who need clothing. As I said, I am in favor of having the United States help out these unfortunate people. On the other hand, we have a duty to our own people.

WE NEGLECT OUR OWN CITIZENS

I pointed out in my remarks, Mr. Speaker, on December 5, 1945, in dealing with the question of aid for unfortunate war victims, that we have money to spend on everything that is international, and at the same time we are asked to shut our eyes to the fact that there is plenty of rehabilitation work to be done in America. In spite of the boast of New Dealers and brain-trusters that they have been good to the American people, it was not so long ago that they bodly proclaimed that in this country we had plenty of ill-fed, ill-clothed, and ill-housed. As I recall, that was uttered during a campaign year, and naturally was intended to get votes. However, it had a large element of truth. But it was simply an idle gesture, and everything that has happened since that historic declaration simply proves that those in control of our Government did not intend to do anything about the unfortunate people in this country. They have done nothing about it. They are not going to do anything about it.

Here we are, with a housing shortage, and it is going to get worse. In all fairness, let the record show that the building of homes had to stop while this World War was going on. But I want to ask you to tell me just what the administration has done to meet the crisis we now face—a shortage of homes. The answer, of course, is that nothing has been done, and many of our people are going to live in conditions worse than what used to be described as "slum areas." In other

words, they are going to have a live wherever they can get shelter, and no questions asked.

Then think of this: "We export lumber, though homes are needed." That statement is no political oratory. It is the headlines in an article in the Washington Daily News for Friday, December 14, and this article points out that enough lumber to build 75,000 to 100,000 much-needed houses has been shipped abroad this year. The item then goes on to say that this lumber went to England, France, and a number of other countries. Such a procedure demands that the administration explain.

OLD-AGE ASSISTANCE

In my remarks when UNRRA was under discussion on December 5 I referred to a letter that I had received from a man who was 68 years of age and his wife was 70 years of age, and they were lucky to get $40 a month for living expenses. The recital of these facts carried its own conclusion, namely, that this alleged humanitarian administration of ours has just made a lot of empty promises and has sadly neglected these pioneer citizens.

In yesterday's mail I received a letter from a neighboring State. The writer pleads for a national old-age pension law which will let him and his wife live the balance of their years on this earth without leading a pauper's existence. He calls attention to the fact, and I quote:

> This old-age assistance is no good. I am 75 years old. I get $30 per month. I am not able to do any work. I have no other income.

This writer, in some verse that he enclosed, appeals to the present generation to remember their mothers who have now grown old and who are entitled to national old-age pension legislation so that they may spend their declining years with a little comfort and homelike necessities, rather than the present program, which treats them little better than a lazy bum who refuses to work.

And so, Mr. Speaker, as we approach this holiday season, when good thoughts crowd out evil from the minds of men and generosity and a helping hand go out toward others not so fortunate, let us think about our own people and their needs while giving so much effort to the problems of others.

## Occupational Material

EXTENSION OF REMARKS

OF

### HON. LANSDALE G. SASSCER

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 17, 1945*

Mr. SASSCER. Mr. Speaker, under leave to revise and extend my remarks, I include an article which appeared in the Gravel Agitator, published by the Three Hundred and Nineteenth Infantry in Czechoslovakia. This article is such a fair and constructive outline of the well-warranted feeling of the men now in occupational duty who have seen active battle service that I thought it should be called to the attention of the Congress. The article follows:

OCCUPATIONAL MATERIAL

In Stars and Stripes we read that the "hate Germany" educational program, with all its courses designed to combat fraternization involving orientation classes, moving pictures, statistics, and photographic evidence on Nazi atrocities meets with a general indifference and a "what the hell" attitude. Another part of the article tells of the jeers accorded one GI when he ventured the opinion that Germany should be occupied for 20 years, and the question was hurled at him, "How many points have you got, bub?"

It is no wonder that antifraternization publicity is accepted so lightly. Most of the men who are here have been in the ET from 8 to 20 months, and the possibility is that they will have to remain here for some time yet. Most all of these realize the value of occupation, and also realize the subtlety of the German civilian. However, most of the GI's here feel their duty done and can't see occupation if it must take their own efforts to perform this task. Most of us were snatched out of civilian lives and shoved bodily overseas, which so abruptly severed all family relations and ties very cruelly. Married, single, or family men all have suffered. All this tends to make tempers short here about the subject of going home or occupational duties when this subject is brought up.

What is being done to relieve this situation both by the Army or Congress. We read on the front page of the Stars and Stripes, as follows: "Congressmen today demand suspension of the draft." So many words, and do they add up. How does this affect the soldier already overseas? Who will relieve the unfortunate nes overseas if the draft is suspended? Due to lack of men, will the occupational army fold up? All these questions and many more are running through the minds of all concerned. In the occupational army are now many men who have not enough points for shipment home and, due to lack of replacements, cannot look forward to starting soon. Yet these men are the ones who served in combat—some in Luxemburg, some in the Siegfried line—the hell holes that the regiment and division participated in overcoming.

From a GI outlook over here, we see 6 months overseas as enough for any man. Increase the draft, train men in Europe and Japan—but only 6 months' service overseas. Have training occupational areas that have large-scale educational facilities available and hire efficient teachers, civilian if necessary, to maintain them. Each day could be regulated for so much vocational study. Have recreational facilities galore. Keep the men so busy in things they like to do that they would have no time for fraternizing.

Wake up, America—don't be fooled. Occupation is necessary, and if handled properly would be beneficial for all concerned. This article defends no one, but when Congress attacks the Army for its alleged high-pressure reenlistment practices, it should be considered that men for occupational forces have to be procured somehow, particularly if Congress refuses to draft sufficient men to meet the demands. All these accusations may be justified, but the question remains, "Will the right steps be taken if the draft is suspended?" Will the draft, if suspended, be altogether done away with? Let's not make the same mistake we made after the last war and forget the matter entirely. Occupy for 5 or 10 years and observe what develops. No chance can be taken this time, because another world conflagration with the use of the new and horrible weapons may be almost racial suicide on our part unless proper preventatives are taken.

What about the men overseas—yes, you GI's? It is true many of you have by far done your duty well and deserve everything that civilian life has to offer, but is that the end of your duties? You, the GI still overseas, are yet soldiers it is true, but your word will carry much weight and a world of influence.

## Farmers Support St. Lawrence Project

EXTENSION OF REMARKS

OF

### HON. WILLIAM A. PITTENGER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 17, 1945*

Mr. PITTENGER. Mr. Speaker, just so that my colleagues will know that I have lots of company in efforts to promote the St. Lawrence seaway and power project, I want to call attention to how the farmers feel about this matter. Agriculture is basic and if we do not have the farmers to feed us, serious consequences will happen to people engaged in the operation of railroads and utilities and the ports of New York and other great cities. So anything you do to help the farmer get his products to market is a constructive step toward promoting his prosperity and well-being. The farmers of America have consistently supported the St. Lawrence seaway and power project.

NATIONAL GRANGE ENDORSES ST. LAWRENCE PROJECT

One of the outstanding groups in this country representing the agriculture interests is the National Grange. Its membership is composed of leaders in the agriculture world and these people have made a careful study as to the needs, the feasibility, and the results that will follow the completion of the seaway and power project. It is, therefore, interesting to note their action taken on November 23, 1945, when this outstanding group of farmers held their annual session at Kansas City, Mo. Their resolutions which were unanimously adopted are as follows:

RESOLUTIONS ADOPTED BY THE NATIONAL GRANGE AT ITS SEVENTY-NINTH ANNUAL SESSION AT KANSAS CITY, MO., NOVEMBER 23, 1945

Whereas the National Grange has for many years gone on record as favoring the development of the St. Lawrence River for navigation and power: Therefore be it

*Resolved*, That the National Grange reaffirms its support of the St. Lawrence waterway and power project and urges that Congress appropriate funds to complete this project at the earliest possible date.

ACTION TAKEN AT THE SEVENTY-SEVENTH AND SEVENTY-EIGHTH ANNUAL SESSIONS OF THE NATIONAL GRANGE

At its seventy-eighth annual session, at Winston-Salem, N. C., November 23, 1944, the National Grange reaffirmed resolutions adopted at its seventy-seventh annual session at Grand Rapids, Mich., November 18, 1943, as follows:

"Whereas the National Grange has for years advocated the completion of the St. Lawrence seaway, nearly 90 percent of which is already completed, and opening this wonderful artery of commerce to carry the products of the interior of our country to the markets of the world at reduced costs; and

"Whereas the completion of this project would permit the development of vast electrical energy, now going to waste in the onrushing waters of this mighty river, resulting in cheaper electric power to all our people; and

"Whereas there is legislation now pending in Congress to bring this project to completion as soon as material and labor are available: Therefore be it

*Resolved*, That the National Grange reaffirms its position favoring completion of this project for navigation and power purposes."

Action taken by the National Grange at its recent seventy-ninth annual session at Kansas City, Mo., November 23, in support of the St. Lawrence seaway and power project, is consistent with the program favored by the Grange over a period of many years.

The Grange supported the St. Lawrence Seaway Treaty of 1932 and the Federal-State Accord of 1933 on the power development submitted to the Committee on Foreign Relations and the Senate, 1932–34. When the United States and Canada signed the pending agreement of March 19, 1941, to complete the development, the Grange recommended legislation to authorize the project—H. R. 4927, Seventy-seventh Congress—at public hearings before the Committee on Rivers and Harbors in 1941. Legislation to implement the 1941 agreement and the 1933 accord was reintroduced in the Seventy-eighth Congress—H. R. 2280 and S. 1385—and in the Seventy-ninth Congress—H. R. 671, Senate Joint Resolution 104, and companion bills.

Mr. Albert S. Goss, master of the National Grange, has been an outstanding supporter of the development of water resources throughout the Nation for navigation, power, and other beneficial public purposes. On many occasions Mr. Goss has advocated the St. Lawrence project, and on November 29, 1944, declared that "had it been developed prior to the present war its value to the Nation would have paid the total cost several times over."

At the last congressional hearings on the St. Lawrence project, Mr. Louis J. Taber, master of the National Grange, 1923–41, testified before the Committee on Rivers and Harbors, July 17, 1941:

The pending bill authorizes the modernization of an existing waterway, not the undertaking of an entirely new development. * * * By spending less than $200,000,000 in Federal funds, we shall thus greatly enhance the value of the investments already made by the United States and Canada on the upper lake channels, the Welland Canal, and the other great improvements now in use. In addition, we shall make available 2,200,000 horsepower of the cheapest hydroelectricity in the world, to be divided equally and distributed by public agencies of the State of New York and the Province of Ontario. * * * The use of all of our transportation facilities, including the St. Lawrence, to reduce the cost of shipping our products to market, will obviously help our entire country, not hinder it, in meeting competition in the postwar period.

In a statement presented at the congressional hearings, August 6, 1941, Mr. Fred J. Freestone, master of the New York State Grange, 1928–36, and chairman of the executive committee of the National Grange, 1933–41, said:

The St. Lawrence development authorized by the pending bill will be of advantage to producers and consumers in every section of our country. Any project that helps to create low-cost transportation and low-cost power will bring benefits that are general in character and not confined to any one section.

IN CONCLUSION

Many Members of Congress are familiar with the records of some of the men who were in attendance at this annual meeting: Mr. Albert S. Goss, master of the National Grange; Mr. Louis J. Taber, one of its former national officers; and Mr. Fred J. Freestone, one of its leading members, and they are all recognized as outstanding men. They are unselfish in their devotion to America and to the support of those matters which will make our country happier and a better place in which to live. I cite these men as examples of the type of people who are found almost everywhere in this country and who are supporting the St. Lawrence project. It is too bad that the administration does not give the American people and the National Grange a Christmas present this year in the shape of the St. Lawrence project.

## General Marshall Blows Up Pearl Harbor Smear Plot

EXTENSION OF REMARKS
OF
### HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
*Monday, December 17, 1945*

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an editorial from the Philadelphia Record for the week of December 2–8, 1945:

GENERAL MARSHALL BLOWS UP PEARL HARBOR SMEAR PLOT—F. D. R. HATERS ONLY BOOST HIS STATURE

Gen. George C. Marshall, then Chief of Staff, made a grievous error in the critical days preceding the disaster of Pearl Harbor.

He underestimated the daring—or the foolhardiness—of the Japanese, he told the Congressional Pearl Harbor Committee.

The Nation's top and most responsible man thought an attack on Hawaii was virtually impossible. He had so informed the late President Roosevelt.

LAND INVASION

Marshall's testimony showed that whatever thinking he had done on Hawaii was in terms of a land invasion by the Japs. Apparently it had not occurred to him that the Jap intention would be a hit-run blow to break the back of the United States Navy.

But General Marshall's place in history must be judged by his over-all record. Every general makes mistakes.

Nobody makes a hit every time he comes to bat.

Marshall redeemed himself by subsequent brilliant direction of our victorious war effort.

Marshall informed President Roosevelt on May 5, 1941, that the island of Oahu was "the strongest fortress in the world," and that an attack was highly improbable.

F. D. R. HAD MEMO

Roosevelt had that memo during the war years when those who hated him so viciously charged that he had neglected the defenses of Pearl Harbor to invite a Jap attack and thus plunge this country into war.

Yes, F. D. R. had that note. He could have made it public and silenced the tongues of all his enemies.

GOP Candidate Dewey was reported to have information which "would destroy Roosevelt's chances in the 1944 election."

Dewey knew that we had cracked the Japanese code before Pearl Harbor and that Roosevelt was aware the Japs probably would attack somewhere.

Dewey did not divulge his knowledge—a gesture of patriotism according to the conservative press. Actually, Dewey had no choice. To reveal his information would have been unpatriotic and meant political suicide.

President Roosevelt showed his towering stature by refusing to defend himself against calumny.

He could have disclosed the Marshall note. But it might have impaired public confidence in the Chief of Staff and it would have injured an able officer. Roosevelt, devoted to winning the war, refused to do that.

The more the Roosevelt haters, in and out of the Pearl Harbor Investigating Committee, try to smear Roosevelt, the more they reveal him as a man for the ages.

## Presidential Yacht Club Takes a Look at St. Lawrence Project

EXTENSION OF REMARKS
OF
### HON. WILLIAM A. PITTENGER
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
*Monday, December 17, 1945*

Mr. PITTENGER. Mr. Speaker, for the benefit of those readers of the CONGRESSIONAL RECORD who have not followed the line of progress, let me say that I have inaugurated the practice of making a weekly report to the people on the state of the Union. This report is wholly occupied with the progress being made in the construction of the St. Lawrence seaway and power project. My report today makes the seventh successive Monday that I have discussed this proposition with my colleagues in Congress and also with the people of the United States.

As we have approached the holiday season, when the era of good tidings is with us and people expect the bearer of good gifts, I had fondly hoped and fervently desired to say that something had been done, aside from just mere babble and serious talk as well, to assure the construction of the St. Lawrence project. However, it is with deepest regret that I have to report no tidings, either good or bad, and no gifts from those givers of all good things in Washington to the American people. In other words, 76 days have now gone by since that historic day on October 2 when a note of good cheer was sounded in this troubled world.

Just so that you may keep the facts correct in mind, here is the record:

October 2, 1945, Senate Joint Resolution 104. This provided for construc-

tion of the St. Lawrence seaway and power project and was introduced by Senator BARKLEY of the great State of Kentucky and others. I quote correctly from the Appendix of the CONGRESSIONAL RECORD, page A5258, where this language is used:

This legislation has strong bipartisan sponsorship. In the Senate, Senate Joint Resolution 104 was introduced on October 2, as a joint resolution, by Senator BARKLEY, Democrat, Kentucky, for himself and Senators WAGNER, Democrat, New York; HILL, Democrat, Alabama; TAYLOR, Democrat, Idaho; AIKEN, Republican, Vermont; FERGUSON, Republican, Michigan; LANGER, Republican, North Dakota; VANDENBERG, Republican, Michigan; SHIPSTEAD, Republican, Minnesota; and LA FOLLETTE, Progressive, Wisconsin.

This resolution, Senate Joint Resolution 104, was referred to the Foreign Relations Committee, where it now reposes, and, as I have said, 76 days have now elapsed.

October 3, 1945, President Truman sent a message to Congress calling for construction of the St. Lawrence project.

October 4, 1945, I called for immediate action on the Barkley resolution, Senate Joint Resolution 104. See the Appendix of the CONGRESSIONAL RECORD, page A4170.

On November 12, 1945, I called attention to delay, and no action on the Barkley resolution. See CONGRESSIONAL RECORD, page 10601; also Appendix, page A4835.

On November 19, 1945, I called attention to delay. See CONGRESSIONAL RECORD, page 10811; also Appendix, page A4988.

On November 20, 1945, this matter was discussed in the Rivers and Harbors Committee of the House of Representatives. Appendix of the CONGRESSIONAL RECORD, page A5230.

On November 26, 1945, I called attention to continued delay. See CONGRESSIONAL RECORD for November 26, page 10985; also Appendix of the CONGRESSIONAL RECORD, page A5109.

On December 3, 1945, I again called attention to the unexplained delays. See Appendix of the CONGRESSIONAL RECORD, page A5230; also Appendix, page A5246.

On December 10, 1945, I again called attention to the unexplained delays. See Appendix of the CONGRESSIONAL RECORD, page A5377; also Appendix, page A5395.

PRESIDENTIAL YACHT CLUB

Now, Mr. Speaker, it has been suggested as a Christmas present for the American people, something new be tried in efforts to break the log jam which has occurred on the St. Lawrence River. We may have to call on the old lumberjacks of the northwest for help, but before that we want to give nature a chance. So, in anticipation of the promise of the future we are going to suggest the organization of a new and powerful group or society for the promotion of the St. Lawrence project. Let us call it the Presidential Yacht Club.

THOMAS E. DEWEY

No better Christmas present can be conceived than this plan to present to the American people some navigators, tried and untried who are interested in water transportation. We are going to aim high.

One aspirant for membership in the Presidential Yacht Club is the Honorable Thomas E. Dewey. He thinks he knows a lot about navigation. He has a fine background and most of you will recall that it was Tom Dewey who sent a few racketeers to the penitentiary, and the people were so delighted in discovering him that they made him Governor of New York. They called him "Silent Tom."

Governor Dewey has long been interested in navigation as well as power. On many occasions he has been outspoken in his endorsement of this project. Witness his message to the New York State Legislature on January 3, 1945, wherein he said in part, as follows:

For years I have advocated the completion of the St. Lawrence seaway and power project. During the past decade the means have been found and billions in Federal funds have been appropriated to develop great rivers in other sections of the country, for power, navigation, flood control, irrigation, and like purposes. The incomparable resources of the St. Lawrence River should no longer be wasted. If the Federal administration is unable or unwilling to proceed, then the State of New York itself should undertake to complete the project on a self-liquidating basis, in cooperation with the Dominion of Canada and the Province of Ontario.

So you see, Mr. Speaker, that Governor Dewey thoroughly believes that yachts, as well as other boats, should travel the inland seas of this Republic unhindered by channel depths and other obstacles.

GOV. HAROLD E. STASSEN

Another man who has aspirations for the Presidential Yacht Club is that modest former Governor of Minnesota, Harold E. Stassen—late a captain in the United States Navy. Stassen is on the natural in claiming to know something about navigation, because he has sailed the Atlantic Ocean and the Pacific Ocean in the uniform of his country. He takes to water like a duck.

Some people call him "loquacious Harold," because he does and can talk on any subject—the atomic bomb, peace, labor disputes, and the UNO.

In 1941, when hearings were in progress on the development of the Great Lakes-St. Lawrence Basin, Governor Stassen testified before the Rivers and Harbors Committee of the House of Representatives. His testimony appears in printed hearings for June 17 to July 9, 1941, on page 915, and I quote from the committee hearings verbatim the following forthright statement:

STATEMENT OF HON. HAROLD E. STASSEN, GOVERNOR OF THE STATE OF MINNESOTA

Mr. PITTENGER (acting chairman). I now take pleasure in presenting Governor Stassen, of Minnesota.

Governor STASSEN. Congressman PITTENGER, Chairman MANSFIELD, and gentlemen, I am appearing before this committee this afternoon on behalf of the people of Minnesota to support the proposed St. Lawrence seaway and the project as it is now before this committee.

I support it not only from the standpoint of the local historical background of support for the project from the people of my State, going back for many years, but also in a very deep sense at this time in the recognition of the propect as the type of development of our resources that will add to our strenth from both an economic and a military or defense standpoint. We feel development of resources of this nature, adding a very excellent means of transportation and at the same time developing very considerable amounts of electrical power, is the type of a thing that is basically sound. We feel that this great country of ours can better afford to have a surplus of methods of transportation and a surplus of power, than it can afford to be caught short in either respect; whether it be a matter of defense needs in these future years, or the future development of this Nation and this continent in an economical sense and in its relationship to the rest of the world.

The foregoing comment, Mr. Speaker, requires no elaboration. It is a plain recital of fact and entitled the Governor to a whole fleet of oceangoing steamboats.

THE HONORABLE FIORELLO H. LAGUARDIA

But, Mr. Speaker, candidates for the Presidential Yacht Club are not limited to men who have been are now are governors of great States. Friends of the former colorful mayor of New York City, the Honorable Fiorello H. LaGuardia, sometimes speak of him as Presidential timber. While it is thought he would like to operate a Presidential yacht, he will have to have some training. His experience is that of an aviator in World War I. Presently he may achieve his efforts for undying fame because announcement has just been made that he will write for PM, a New York City magazine, which publishes its Sunday edition in two sections. The mayor will write without strings and restrictions. This sort of "four freedoms" is right down his alley, as many of his former colleagues in the House of Representatives can testify.

However, he joined the Presidential Yacht Club in 1941, and listen to this verbatim quotation from the printed hearings of the Rivers and Harbors Committee of the House, June 17 to July 9, 1941:

STATEMENT OF HON. FIORELLO H. LAGUARDIA, MAYOR OF THE CITY OF NEW YORK

Mayor LAGUARDIA. Mr. Chairman, I appear on behalf of and in support of H. R. 4927. I want to make it clear that my city is divided on this subject, and I assume full responsibility for appearing here today in support of the St. Lawrence River development. My own business advisory committee, known as the mayor's business advisory committee of the city of New York, is on record in opposition to this project. I want the record to show that.

The subject is not new. Many of us have been giving a great deal of thought and study to it for many years, and, like every other great project, it meets with opposition from those who know too much about it and those who know too little about it.

My city has the greatest port——

The CHAIRMAN. Mr. Mayor, would you allow me to disturb you for a moment? I understand there is about to be a vote on a rule on the May bill. I am afraid our Members will want to be on the floor.

Mayor LAGUARDIA. That is all right; I used to answer roll calls myself.

(The committee thereupon took a recess for the purpose of answering a roll call.)

The CHAIRMAN. Are you ready to proceed, Mr. Mayor?

Mayor LAGUARDIA. As I was saying, Mr. Chairman and gentlemen, my city has the greatest port in the entire world. It is a typical port city. Surely I would not be endorsing this project if I had the slightest fear that it would injure my city as a port.

I have not come to this conclusion in the last few minutes. Some of us, as I said before, have been with this project for a great many years. It is natural that people might have a fear of competition. We are constantly confronted with that. At one time New York City was the only port on the Atlantic seaboard. Seventy-five years ago all of the ocean traffic, practically all, came into the port of New York. Since that time other great ports have developed on the Atlantic—Baltimore, Philadelphia, Boston, Charleston——

The CHAIRMAN. Norfolk.

Mayor LAGUARDIA. Norfolk. There was a time when all the cotton came up north. Within the last 30 years I would say your great Gulf ports have developed, and we are still in business as a port in New York City.

The CHAIRMAN. And you have continued to expand and grow.

Like Governor Stassen, Mayor LaGuardia has a habit of talking so that his language can be easily understood, and you will have no doubt after reading the foregoing excerpt of his testimony that he is wholeheartedly in favor of the St. Lawrence seaway and power project.

RESTRICTIONS PREVENT FRANK DISCUSSIONS OF OTHER CANDIDATES

From now on, Mr. Speaker, my style is cramped and my language contaminated by Jefferson's Manual. If I express myself fully, I might find myself out of order. I do not want that to happen at Christmas time.

I call attention at this time to section 370 and section 371 of Jefferson's Manual, which constitutes the "ten commandments" of the House of Representatives. They read:

SEC. 370. In Parliament, to speak irreverently or seditiously against the King, is against order (Smyth's Comw., L. 2, ch. 3; 2 Hats., 170).

Then section 371 reads as follows:

It is a breach of order in debate to notice what has been said on the same subject in the other House, or the particular votes or majorities on it there; because the opinion of each House should be left to its own independency, not to be influenced by the proceedings of the other; and the quoting them might beget reflections leading to a misunderstanding between the two Houses (8 Grey, 22).

I therefore call attention to others who are reported as aspirants for the Presidential Yacht Club. If I were not bound by Jefferson's Manual, my discourse might be entirely different.

HON. ARTHUR H. VANDENBERG

A man who is recognized as one of the leading possibilities for the Presidential Yacht Club is the Honorable ARTHUR H. VANDENBERG, of Grand Rapids, Mich. It is reported that he is an ardent champion of the St. Lawrence seaway and power project. Like Governor Stassen, he has taken a leading role in the affairs of the Nation. Like Governor Stassen, he is one who shares in the parenthood of the United Nations Organization at San Francisco, Calif., where the idea was developed that we should have an international organization to look after the affairs of the world from the womb to the tomb.

HON. ROBERT TAFT

Another man who deserves honorable mention in the field of those who could operate a Presidential Yacht with credit and distinction is the Honorable ROBERT TAFT, of Cincinnati, Ohio. He is a man of tireless energy, solid integrity and comes to the deck of the ship with the memories of one of our great Americans, William Howard Taft. Mr. TAFT will probably need some intensive study in connection with the problems of commerce, if he is to become a specialist on navigation matters. The research department in the Congressional Library tells me that since 1940 he has uttered no language which could be construed one way or the other in connection with any discussion of the St. Lawrence project.

HON. JOHN W. BRICKER

Another Ohio man and former Governor of the great State of Ohio is the Honorable John W. Bricker. It is reported that he will come to the Senate of the United States next year and thereafter take a postgraduate course in the arts of navigation. He will need it, because the Congressional Library Reference Bureau lists him as having maintained official silence in connection with the subject matter of this speech. However, this former candidate for Vice President of the United States does have unbounding possibilities.

IN CONCLUSION

We just note these matters for consideration, Mr. Speaker, as the old year draws to a close. President Truman does have a fine White House Presidential yacht. He cannot blame these other boys for looking with eager eyes upon that new acquisition.

It is too bad that somebody does not help the President get things moving. Progress just before this Christmas is on a dead level. Somebody in high Government circles needs a Presidential hair cut. You know the story about Samson, his hair was long and his hair was strong. So was he. Then they got one of the girls to take a pair of shears and cut his hair. He lost his strength until his hair grew long again. It just occurs to me that if a haircut would do any good in the way of breaking the present strong deadlock which is preventing action on the St. Lawrence seaway and power project, then the President ought to get the barber shop in operation at once.

## Navy Ribbons

EXTENSION OF REMARKS

OF

## HON. HENRY D. LARCADE, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 17, 1945*

Mr. LARCADE. Mr. Speaker, under leave to extend my remarks, I wish to include herein excerpt from the article Merry Go-Round, which appeared in the Washington Post, of date December 16, 1945, as follows:

Vice Adm. Louis E. Denfield, Chief of Naval Personnel, had a tough time the other day trying to defend brass-hat discrimination against Naval Reserve officers in awarding decorations for bravery.

Appearing before the House Naval Affairs Committee, the admiral admitted that, while there were about 275,000 Naval Reserve officers to 25,000 Annapolis men—or a ratio of 11 to 1—the total of awards was 34,225 to Reservists and 15,799 to Regulars—or a ratio slightly over 2 to 1.

ANNAPOLIS CLIQUE

Of course, Annapolis men dominate the board which hands out the awards. Here was their ratio of handing out the Navy's chief decorations:

Medal of Honor, Reservists 10, Regulars 8; Navy Cross, Reservists 1,091, Regulars 1,012; Silver Star, Reservists 1,877, Regulars 1,789; Distinguished Flying Cross, Reservists 4,945, Regulars 1,163; Bronze Star, Reservists 4,150, Regulars 3,314; Legion of Merit, Reservists 367, Regulars 1,273; Navy and Marine Corps Medal, Reservists 1,551, Regulars 601; Commendation Ribbon, Reservists 4,721, Regulars 3,342.

Representative W. STERLING COLE, of Bath, N. Y., grew inquisitive about the heavy favoritism for Annapolis grads.

HOLD HIGHER POSITIONS

"I recognize that you cannot give out ribbons on the basis of percentage ratios," declared COLE, "but when you have a military establishment of eight Regulars as against 92 Reservists, and yet your recognition of the work they have done is approximately 2 to 1 in favor of the Reservists, though their over-all representation is about 11 to 1, then there should be an explanation."

"The only thing I can say is that there are a great many more Regulars in responsible positions than Reservists," replied Admiral Denfeld. "The higher awards would naturally go to the Regulars for that reason. In other words, if a destroyer does outstanding work in battle the captain will probably be awarded the Navy Cross. He will award lesser decorations to members of his personnel."

"Is that the only explanation you have?" demanded COLE.

"That is the only one I know of," responded Denfeld.

NOTE.—Admiral Denfeld was not responsible for the above situation, which is a hangover from the days when Admiral King's friends were running the Navy. Admiral Denfeld, new head of the Bureau of Personnel, is bringing in a new group of officers to work with him.

VESSELS KEPT IDLE

Although the shipping bottleneck has been broken in the Atlantic, much still remains to be done before the GI's of the Pacific begin to return at a resonably rapid pace. One big reason for delay is the incredible bungling of "brass hats" who keep vessels idle for months.

The case of the Liberty ship *John Martin Miller* is a good example. It left Baltimore April 14, 1945, carrying 7,111 tons of bombs, proceeded to Lynhaven Roads, England, from whence it left April 28, without unloading, for the Mediterranean.

However, the end of the German war, May 8, caused a change in plans. The *John Martin Miller* anchored in the Azores, then went back to Charleston, S. C., arriving May 20. Then she set sail for the Pacific, arriving in Eniwetok July 11. However, there was still no resting place for her bombs. So, on July 13, she pushed on to Saipan. Then for the next 2 months the *John Martin Miller* wandered back and forth between Saipan and Tinian.

On September 5, orders came to take the 7,111 tons of bombs to Okinawa. The ship arrived September 26 and there she sat, through three typhoons, awaiting orders. One day the first mate met a friend who said he was surprised to see the *John Martin Miller* still in port inasmuch as orders had come for her to leave 5 days before.

VOYAGE COSTS $500,000

The captain then discovered belatedly that orders had arrived to proceed to Batangas in the Philippines. At last report the *John Martin Miller* was still at Batangas, after more than 7 months of trying to unload her useless bombs. The entire voyage cost more than $500,000.

Unfortunately the *Martin* is not the only ship inefficiently handled. The steamship *Vladex*, a Liberty ship, moved out to the Pacific last April 23 with a cargo of bombs and propaganda leaflets. The leaflets were printed in German though the ship was sailing for Japan. The Liberty ship *Henry Austin* lay in the Bay of Batangas for 48 days before it was unloaded. Finally it was converted for carrying troops, then waited five more days to sail. The *Elisha Mitchell*, a Liberty ship, reached Batangas on August 6 and was still in the bay November 21, awaiting orders, 108 days later.

The *Juan Pablo Duarte* arrived in Batangas on September 15, and was still there 67 days later. The *John B. Kendrick* was in Batangas Bay for 100 days after it arrived on August 17. The *George H. Williams* was in the same bay for more than 102 days.

## Statement by Montgomery Ostrander in Support of Senate Bill 1592

EXTENSION OF REMARKS

OF

## HON. ALLEN J. ELLENDER

OF LOUISIANA

IN THE SENATE OF THE UNITED STATES

*Tuesday, December 18 (legislative day of Monday, October 29), 1945*

Mr. ELLENDER. Mr. President, this week several important veterans' organizations have appeared before the Senate Banking and Currency Committee in active support of the housing bill of which I am one of the sponsors, along with the distinguished senior Senator from New York [Mr. WAGNER] and the distinguished senior Senator from Ohio [Mr. TAFT].

A few weeks ago I made a Nation-wide radio address stating why I believe that this bill will be of tremendous help to veterans and their families in securing decent housing at costs within their means.

I am happy to note that the veterans' organizations to which I have referred are so fully in agreement with my views.

I first ask unanimous consent to have printed in the Appendix of the RECORD a statement by Montgomery Ostrander, Washington representative of the American Veterans' Committee.

I have obtained from the Public Printer an estimate of the cost of printing the statement on behalf of the American Veterans' Committee. The estimated cost is $121.40.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Mr. Chairman and members of the committee, my name is Montgomery Ostrander. As the Washington representative of the American Veterans' Committee, I am presenting this statement on behalf of the chairman of our national planning committee, Charles G. Bolte.

At present I am on terminal leave from the United States Marine Corps, having last week completed 3 years of service, about half of which was spent overseas. Prior to the time I entered the Marine Corps, I was engaged in industrial-relations work, having been for several years personnel manager of a manufacturing plant located in Baltimore, Md.

Although the American Veterans' Committee appeared before this committee last summer in support of the full employment bill, it may be appropriate for me to say at this time a few words about the organization which I am representing. The American Veterans' Committee is an organization of World War II. Honorably discharged veterans and members of all branches of the armed forces of the United States, including members of the Merchant Marine who served during the war, are eligible for membership without regard to race, creed, or color. We have chapters throughout the United States as well as overseas chapters in such locations as Manila, Paris, Honolulu, Tinian Island, and others. The overseas chapters are composed of members still in active service. In fact, a substantial proportion of our current membership is still in service.

Rather than seeking to set the veterans off as a class, the American Veterans' Committee has set its course toward the welfare of the country as a whole. This has seemed to us the soundest policy, since the real interests of the veteran are identical with the real interests of any other American citizen—or any group of them. The protection and furtherance of these interests require full and vigorous cooperative action by private enterprise and by Government to assure that every American, veteran and nonveteran alike, shall have—as the minimum consistent with our American standard of living—the opportunity to obtain:

1. A good education, which, limited solely by his own abilities, will enable him to make his full contribution to the democratic society in which he lives;

2. Steady employment with adequate wages at a job which utilizes his training or his skills;

3. A decent home and a suitable environment in which to live and raise his family;

4. Security from want when, because of disability, ill health, age, or other condition, he is no longer able to work; and

5. Freedom from the threat of another war through the active participation of the United States in the United Nations Organization.

The American Veterans' Committee believes that these real interests of the veteran will be most affected—to either his ultimate benefit or disadvantage—by what we, as a nation, are willing to do toward the realization of a most important goal. That goal is the stabilization of our national economy at levels of production and employment which will utilize, as fully in peace as in war, the productive capacity and manpower resources which are ours—and which, together, far surpass those of any nation on the face of the earth. What we have done in the last 4 years demonstrates what we, as a nation, are able to achieve in these respects—even when the end products of the full utilization of our productive capacity and manpower resources were death and destruction. Surely, when the end products thereof are the goods and services required to meet the needs of a world at peace, we cannot accept a lesser goal.

To achieve this desirable goal, which is essential to the future welfare of all our people we must attain in our postwar economy levels of production and employment considerably higher than those which obtained in the prewar years. Like other segments of our economy, house production must accept its responsibility for making its appropriate contribution to that necessary expansion. Moreover, consumer needs for housing are so great and so urgent that they require a much higher and more sustained volume of house production than ever obtained over a long period of the prewar years. In these years, it varied from a high of some 900,000 units to a low of some 90,000 units. Over the 20-year period before the war it averaged just under 500,000 units a year. During the 10 years preceding the war the annual average dropped to about 275,000, and annual production seldom was large enough to meet even the needs of newly formed families to say nothing of that required to replace our slum and other substandard housing.

By either test, there exists an urgent need for a greater and more sustained volume of house production than we have ever achieved before. However, it seems very clear we shall never achieve the required volume of house production unless we are prepared to adopt now a balanced program of long-term national housing policy and action.

Because of the special importance which so obviously attaches to housing, the National Planning Board of the American Veterans' Committee some time ago adopted a program of housing recommendations. Some of these recommendations were directed to emergency action which we felt should be taken at once to at least minimize some of the more painful aspects of the housing shortage which exists today. Most of these recommendations have been embodied in the temporary program of emergency housing action recently announced by the President. While this committee is not now considering that program, we would like to point out that, in our judgment, the proposed maximum-price limitation of $10,000 on priority-assisted housing is too high, and is likely to become a minimum price. We believe that building materials should be allocated among several price ranges; for example, 25 percent to houses selling for less than $4,000; 25 percent to houses selling between $4,000 and $6,000, etc. In this way the very real danger that the maximum price established would become the minimum price would be reduced.

More importantly, however, the balance of the housing recommendations adopted by our Board were addressed to the long-term action and program required. These recommendations included the following:

"A comprehensive long-term program for increasing private and public housing construction should be adopted by Congress.

"A balanced construction program should be established to avoid concentration of construction in the highest price brackets and to insure a supply of dwellings for both purchase and rental, at all price levels by means of the following:

"A. To meet the needs of low income renters, Congress should take immediate steps to help local housing authorities to build at least 500,000 low-rent houses in the next 2 years.

"B. To meet the needs of middle-income renters, Congress should authorize the Federal Housing Administration to insure a return of 2¾ to 3½ percent on private investments in rental housing, when the rents are such as families of moderate income can afford.

"C. To hold down the cost to purchasers of homes, the Federal Housing Administration should be empowered to insure mortgages where repayment is spread over 32 years and the interest is no more than 3½ percent.

"Any Government housing program should not permit the existence of restrictions

which are prejudicial to individuals for racial or religious reasons."

Our main area of interest, therefore, is centered upon the adoption now of a well-rounded program of long-term national housing policy and action along the lines embodied in the bill now before you. It is only through such a program that the current housing shortage can be remedied. The situation, which calls for this kind of action to be taken now, was never better stated than in the following excerpts from the editorial in the current issue of Life:

"By now it is clear that the housing shortage is not a temporary or war-born dislocation. Scarcely a city or town in the United States has as many dwellings as it really needs * * * our homeless veterans are merely the most dramatic victims of a shortage whose ultimate victims are the American family and the American standard of living.

"Never was there an industry * * * so unready to rise to the occasion. * * * If the housing industry had done even a passable job in 1910–40 we would not be in this jam today.

"It has shamefully neglected its biggest market—the small house."

Strictly speaking, it is not the "small house" which has been so neglected by the house-building industry. It is as unfortunate as it is true that such housing cost "reductions" as may have been achieved generally were obtained through the reduction in the size of the house. Through this device the consumer does not get a better house for his housing dollar; he merely gets less house. The small house is being produced—and it still costs too much. It is the good house in the moderate price class where it is within the financial reach of the great bulk of our American families which has been so shamefully neglected. We believe that one of the most commendable features of the bill which you have under consideration is that it not only recognizes this fact, but also embodies specific features designed to meet this most important aspect of our housing problem.

The bill recognizes that there now exists a proven and workable system for meeting the housing needs of our lower-income families. Title VII of the bill appropriately perfects and provides for a continuation of this program of aid to the local communities for low-rent public housing. While the program provided for by this title of the bill is similar in many ways to the applicable recommendations adopted by our committee, the proposed goal of 500,000 houses to be built within the next 4 years is only half of what the National Housing Administrator reported would be a minimum requirement in this field. We would, therefore, like to see this goal increased to 1,000,000 houses. Title VII also provides for a 20-percent gap between the upper rental limits for admission to public-housing projects and the lowest rents at which private enterprise is providing a decent supply of new construction. We can see no useful purpose that will be served by this gap. The bill also recognizes that the housing needs of our families of substantial and fairly moderate income are being met through private-enterprise operations supplemented through the systems of home-mortgage credit and insurance carried out through the Federal Home Loan Bank Administration and the Federal Housing Administration. Title III of the bill therefore seeks to perfect these systems, through various amendments which experience has indicated would enable them to serve the housing needs of these groups more broadly and more effectively than they can under the present provisions of the statutes under which they operate. While these amendments of the Federal Home Loan Bank Administration and Federal Housing Administration statutes may also serve to broaden somewhat the area of housing needs which can be served adequately by private-housing enterprise supplemented with these aids, there is a clear recognition that there nonetheless remains the vast housing market represented by the great bulk of American families of what may be termed "moderate incomes"—incomes too high to be served by public housing and too low to be served through the existing systems of aid to private housing enterprise operations, even when perfected and extended by the amendments contained in title III.

As to both home ownership and rental housing the bill provides in titles IV and V for supplementary and additional systems of insurance of home mortgage loans and direct investments in rental housing for those families who, if they are to have good housing, require more favorable terms than are obtainable under existing systems. It is the housing market represented by these families which must be reached in volume if, in the postwar years, we are to build better America by meeting the consumer needs of all groups for decent housing, while at the same time securing the high and sustained volume of house production which, we believe, is necessary if we are to achieve the high levels of production and employment required.

We are particularly in favor of the plan embodied in title IV for 95 percent insurance of a mortgage loan of not more than $5,000 with a 32-year amortization period and a maximum interest rate of 4 percent. We call attention to the fact, however, that the recommendations adopted by our board anticipated a maximum interest rate of 3½ percent, and we hope that the committee will give full consideration to amending the bill to provide for this lower maximum rate. This type of insurance would cover the financing of a house costing not more than $5,300. The property securing the loan is therefore squarely in the broadest and most stable housing market. The loan is 100 percent insured throughout its entire life. Moreover, the provisions of section 403, as we understand them, would protect the lender against the possibility of incurring any loss on the loan as a result of default in interest or from foreclosure expenses. It is a better loan for the lender—and from the standpoint of the borrower also—than a loan which is guaranteed under the GI Act only up to 50 percent, or a lesser amount, with the liability under the guaranty decreasing pro rata with the decrease in the loan as it is paid off. Yet the maximum interest rate on loans guaranteed under the GI Act is 4 percent.

Also there has been a good deal of testimony before this committee that home mortgage funds will be available in quantity, so that we might hope for a healthy competition as these funds actively seek new outlets. Under such circumstances, we would hope that a maximum rate of 3½ percent would assure a sufficient flow of mortgage funds into the financing of this most desirable type of home.

We are strongly in favor of the provisions of the bill permitting a lapse and extension of the fixed monthly payments when the home buyer is temporarily unable to meet them because of ill health, unemployment, and the like, and also the warranty provisions. We believe that they represent improvements in our home financing and home-building practices which are long overdue.

We also endorse the plan embodied in title IV for the insurance of mutual ownership and rental housing and the plan embodied in title V for the insurance of direct investments in rental housing, both of which are limited to meeting needs of families of moderate income which are not being adequately met without such insurance. These provisions, along with titles III and VII, are needed to assure a well-rounded program and provide good housing for purchase and rental in all price classes. This also is consistent with the recommendations adopted by our Board.

The special provisions of titles IV and V for supplying good housing for our families of middle income, who constitute the largest and most neglected area of the entire housing market, are further supplemented by the provisions of title II relating to technical housing research and matching aid to local communities for studies of their own housing needs and markets. These bear most importantly upon improving our existing means and developing new techniques for reaching in adequate volume the neglected portion of the housing market represented by the needs of the great bulk of our families of modest incomes. This is especially true on the side of technical housing research. While that portion of the house-building industry represented by the manufacturers of various components which are incorporated into finished houses unquestionably do a good deal of technical research, it is concentrated almost entirely upon the improvement or development of their special products. What is most needed, however, is technical housing research directed to the whole house—toward improving the techniques and methods of house building and assembly. Some of this type of research, which is so greatly needed if housing costs are to be effectively reduced is being done in the laboratories of a handful of universities today. The Government could do much to stimulate this type of technical research and to pull the results together. A relatively small expenditure in this area may be productive of enormous benefits through lowered house-construction costs.

We also endorse and support the provisions of title VI which would establish a system whereby the Federal Government would share with the local communities the cost of acquiring and clearing the slums and blighted areas and preparing the land for redevelopment in accordance with its most suitable use. This system, as we understand it, is based on the fact that the revenues which could be derived from the most appropriate re-use of the land in these areas are not sufficient to support the cost of acquiring and clearing them.

We also endorse and support the provisions of title VI which would establish a system whereby the Federal Government would share with the local communities the cost of acquiring and clearing the slums and blighted areas and preparing the land for which will eliminate them. This title should also prove effective as a further supplement to private housing enterprise operations by making land in the more central city areas available for the development of good housing. Operations under this title should also tend to stabilize municipal tax revenues and expenditures.

Specifically on those features of the bill designed to afford special preference to veterans, particularly title IX, relating to the disposition of permanent war housing owned by the Federal Government, we should like to indicate that, in our judgment, they seem to be reasonable and appropriate. Unquestionably, today, it is the veteran who has returned and who is seeking a place to live who is most directly affected by the current housing shortage. To the extent that it is feasible to do so, we think he ought to be assured of a reasonable preference in getting a place to live. It is noted that with respect to the low-rent public-housing program the preference is provided for a 4-year period. Since the contributions supporting that program become available over a 4-year period and the bulk of the dwellings to be provided may not be available of occupancy for perhaps 2 years, it is really only a 2-year preference. We, therefore, suggest that the committee give consideration to extending the period during which this preference should be accorded to veterans to 6 or 7 years.

We also desire to commend the sponsors of the bill for the provisions of section 311,

which would permit the FHA to consent to the extension of the maturity of insured mortgages made by veterans to cover a period equal to the period of military service. This would permit the veteran to obtain by voluntary agreement with the mortgagee and the FHA the same relief which he is entitled to obtain by court action under the Soldier's and Sailor's Civil Relief Act and thus avoid expense and delay. It is noted, however, that there are no provisions which would accord to veterans a preference in obtaining FHA insured rental housing or in that built for sale. We recommend that the committee consider the feasibility of including appropriate provisions in this respect.

We also recommend that there be included in the bill a nondiscrimination clause which would be applicable to the entire housing program.

We regard as appropriate and desirable those provisions of the bill which seek to make good housing available to farm families on terms consistent with their capacity to pay, and as especially important those provisions requiring a periodic report to the Congress by the National Housing Administrator concerning estimates of housing needs and the progress made in meeting them, along with an evaluation of the housebuilding industry's contribution to production and employment.

Although they appear in the first title of the bill, we have deferred until this point our recommendations as to those provisions relating to the consolidation of these related housing functions and activities in a single national housing agency. We have done so because we believe that the essential relationship of the varied functions and activities must be apparent from our consideration of the merits of the proposals embodied in this bill. These functions are interrelated; some are supplementary to others. But if we are to have a national housing policy and program capable of meeting the housing needs of all our people, all of these functions must be appropriately concentrated upon those needs through the application of that policy. Our only recommendation as to this point at variance with the provisions of title I of the bill, would be that, in view of the special importance of housing in terms of both the needs of the people and the national economy, consideration should be given to changing the status of the agency from an independent agency to an executive department represented in the Cabinet.

The American Veterans' Committee, it is thus seen, finds itself in agreement with almost all of the provisions of this bill and feels that its passage would be an important step in providing the housing necessary for this country. Two omissions from the bill, however, both recently referred to by the President, threaten to reduce its effectiveness. There is nothing in the bill which would insure that building materials—now scarcer than ever before—will be available for the construction of houses selling in the lower-price brackets. Some method for allocating these materials is vitally necessary and one possible method is that proposed during a previous section of this statement. The absence of any restriction on excessive pricing may also go a long way in defeating the excellent goals of this bill.

The American Veterans' Committee hopes that action will be taken to incorporate both of these features in the bill.

There is one other matter which I desire to place before this committee before I close. I refer particularly to two types of statements which have been made by some of the organizations who have appeared before this committee and opposed the enactment of this bill.

I think it may be fairly stated that the first of these two types of statements, while generally hedged and qualified to assure a wide avenue for later retreat, is quite apparently intended to convey the impression that the home-building industry—unfettered and unaided—has always produced and is now ready, willing, and able to produce a substantial volume of good housing in the moderate-price class where unquestionably it is most needed.

For example, the statement made by the president of the National Association of Home Builders before this committee on December 6 states: "I find that a surprisingly large number of these builders are pressing to meet the demand for housing in the lower-priced classes. They have learned that it is the best kind of business in that it is by far the largest market for their product. In the South and West particularly many operators who built $5,400 and $5,800 war housing are redesigning such housing for a lower price." In addition, the policy statement released at the time when this same organization was demanding that L-41 be lifted pledged that they would concentrate upon constructing dwellings for modest-income groups.

Now I think some light on the merits of this matter may be found in the statement released by the Home Builders just 4 days before the announcement of President Truman's temporary emergency program restoring the priorities system with a $10,000 price limitation on priority assisted housing. In discussing the plan then under consideration by the President, the release of the Home Builders organization states: "Priority plan penalizes present construction." Prepared hastily without industry consultation the original plan would have drained off critical materials for new construction under $8,000 from all housing presently under construction above that figure. * * * It is hoped that our vigorous recommendations will be accepted that all housing under construction be given the same preferential treatment and that the $8,000 ceiling be raised to $10,000."

I think that many will agree with our conviction that, certainly under present conditions and to the extent that past experience is indicative of what we may expect in the future, a maximum price limitation of $10,000 will result in a minimum price of $10,000 in actual practice.

Now as to the second of these two types of statements. It has been made in varied forms, but they all seem calculated to raise the same inference. In effect, these organizations say this bill would make home ownership available, on reasonable terms, to a large number of American families who otherwise would be denied that opportunity. In any fair appraisal of the merits of such a statement, let us remember first of all that there are veterans too, and large numbers of them, who would fall into this classification and any measure which meets this type of housing need is therefore bound to help the veteran. Perhaps most of us would admit that today the largest burden of housing hardships fall upon the veteran who has returned and is seeking a place for himself and his family to live.

Most of us would probably agree that, to the extent that it is feasible to do so, the veteran in need of housing ought to have a reasonable preference. The policy statement released by the National Association of Home Builders, and which was given widespread publicity at the time they were seeking the removal of L-41, pledged that they would give preference to veterans in all housing which they built. So far as I know, there is nothing which would prevent these builders from giving a preference to veterans in the housing they build—including the "lower cost housing produced" with the supplemental aids provided by this bill.

Well, anyway, they say this bill would present more competition to the veteran seeking a home. For example, the same statement made by the president of the Association of Home Builders before this committee on December 6 says: "It purports to provide a preferential treatment for veterans but actually sets up unprecedented competition for the veterans. * * * This bill through higher mortgage loans would bring a great number of nonveterans into direct competition with him for the lower cost housing produced."

Let me state to the members of this committee, with all the sincerity at my command, that for this very reason alone (and entirely apart from the many other admirable features of this bill) the American Veterans' Committee would enthusiastically support and endorse the bill—because it will bring to great numbers of our people, who otherwise would not have it, the self-respect, the satisfaction, and the pride in their community which so universally is identified with the secure ownership of a good home. No greater tribute could be paid to the sponsors of this bill than the above-quoted statement made by those who so vigorously oppose the enactment of the bill.

---

## Testimony of American Veterans of World War II in Support of Senate Bill 1592

EXTENSION OF REMARKS
OF
### HON. ALLEN J. ELLENDER
OF LOUISIANA

IN THE SENATE OF THE UNITED STATES

*Tuesday, December 18 (legislative day of Monday, October 29), 1945*

Mr. ELLENDER. Mr. President, I also ask unanimous consent to have printed in the RECORD the testimony before the Senate Banking and Currency Committee on the housing bill given by the American veterans of World War II.

There being no objection, the testimony was ordered to be printed in the RECORD, as follows:

The American veterans of World War II, Amvets, through its national commander, Jack W. Hardy, recently recommended to the President a program of action addressed to the current critical housing emergency. A program of action similar to that recommended came a few days ago when the President announced that there would shortly be issued an Executive order reestablishing a priority system under which building materials would be channeled into the production of moderate priced housing with reasonable preference for veterans.

Supplementary to these recommendations made by its national commander, Amvets has made a study of all pending legislation. This study was made in order to arrive at a program which would provide not only immediate and at least temporary relief, in terms of the current housing emergency, but also a permanent and more lasting solution to the long-term aspects of our national housing problem. To this end, the American Veterans of World War II, Amvets, which is the largest exclusive World War II organization in the country with over 250 posts already established in 38 States, recommend the following program of housing action.

As a preface to our remarks on the matter of housing, we wish to state that our program was prepared a few days ago prior to the conference committee's recommendations which include the deletion of the word "normal" in the description of "reasonable, normal value."

Such action on the committee's part substantially officially approves our statement that "veterans seeking to purchase have generally been permitted to follow the market."

Also, our program has not properly endorsed the means by which those desiring housing at levels above the $5,000 mark are provided with means to obtain such housing on a reasonable equitable basis. We wish this interpolated as we recognize the fact that in many communities the $5,000 level would not produce adequate facilities.

We cannot stress too strongly our feeling of the need for some means of preventing the sale at, say, $10,000, of homes whose worth is only $7,500 or $8,000.

AMVETS' PROGRAM OF HOUSING ACTION

The housing shortage with which the country is now faced becomes increasingly critical. It is a cumulative housing shortage. While it had its beginnings in the decline of home building in the middle twenties it is daily being subjected to further pressures of war-born shortages and the additional demands resulting from our military demobilization. It affects the entire civilian economy. But today it operates mainly to the disadvantage of our returning veterans, who are seeking a place to live while they make their adjustment to civilian life.

In its long-term aspects—and today as in the past, it is essentially a long-term problem—it can never be dealt with effectively by temporary legislation. In that aspect it requires long-term legislation.

The immediate problem today—now—is becoming so critical, however, that emergency measures must be taken at once to alleviate the situation so far as possible, pending the Nation's conversion from a wartime economy to a peacetime economy and the resumption of permanent house construction at a rate never before achieved.

Toward the more immediate aspects of this problem, we have recommended before, and again endorse, a program similar to that announced by the President on December 12, which would immediately restore a priority system under which our scarce supply of house-building materials will be channeled into new house construction.

We believe that any system for the allocation of such materials to new house construction should assure that the houses produced under this system should be available to the vast group of moderate income Americans who need them most, and at prices within their capacity to pay. We therefore believe that the proposed price limitation of $10,000 per unit is too high, and that the maximum limit should tend more toward the $7,500-price class.

Likewise, we believe that perhaps the greatest singe unanswered problem in the country today is our housing problem. Accordingly, we believe that the proposal embodied in the President's program to allocate about 50 percent of all building materials into new house construction is too low. In spite of all of our industrial genius and productivity, no business and no industry can resume peacetime production unless the workers who are required to carry out that business or industry can find adequate housing. Housing needs in the moderate-price class must therefore have a fair preference over the competing demands of industrial, commercial, and business structures and higher-priced dwellings. We urge that the allocation system established to effectuate the program announced by the President be geared to channeling 80 percent of building materials into the construction of housing for people of moderate income.

We heartily endorse and strongly recommend the proposal of the President that any system under which materials are allocated for new housing construction shall contain adequate provisions assuring that veterans in need of housing will be given a special preference in obtaining that housing.

No program which seeks to make housing available on reasonable terms to veterans and the general American public can be effective if the present inflationary trend in our housing supply is permitted to continue. The program announced by the President will afford a price limitation only upon new housing constructed under the priority system. At best, it can therefore touch only the smallest portion of our total housing supply. It leaves free from all controls all of our existing urban housing supply today, which consists of some 29,500,000 nonrural dwellings. Moreover, it is predicated entirely upon the authority contained in the Second War Powers Act, which by the recent action of the Congress has been extended only to July 1, 1946. Even today, Mr. Snyder, the Director of War Mobilization and Reconvefsion, has stated that this is not long enough and recommended that these powers be extended through the calendar year 1946.

Therefore, in addition to the immediate program proposed by the President, and which can be carried out only for a relatively short period under legislation now existing, we favor the immediate enactment by the Congress of legislation along the lines of the bill introduced by Congressman Patman. This would permit the continuation, so long as Congress determines the need therefor to exist, of the temporary program now proposed by the President. In addition, it would permit the establishment of maximum prices on existing as well as new housing, and it is on existing housing where the continuing increase in prices is exerting perhaps the most serious threat of inflation. In addition, we believe that it is clear that this should be accompanied by a continuation of the authority now existing for control of rents for such period of time as the Congress determines that need therefore exists.

As a further and immediate step in alleviating the current housing hardship of returning veterans, we urge that the necessary legislation to permit and assure the fullest utilization of all temporary housing and other facilities under the control of the Federal Government in meeting the emergency housing needs of veterans be speedily enacted. We urge the House of Representatives to adopt Senate Joint Resolution 122, which has already been adopted by the Senate, so that the necessary appropriation for this purpose can be made available immediately. We urge that the Senate increase to the requested $191,000,000 the smaller amount which would have been made available under the House version of the current deficiency appropriations bill. This sum would permit the provision of 100,000 temporary family dwelling units for veterans urgently in need of housing, by making possible the removal of war housing and other facilities from isolated areas where they are now located and are no longer needed to urban areas where the housing demands of veterans are acute. While this may appear to be a relatively large sum, these demands are most urgent, a substantial part of the cost of moving and reerecting these units is expected to be shared by the States and local communities themselves, and it is hoped that a reasonable amount of these funds may be reimbursed from the rentals derived from the projects.

The home-loan guaranty provisions of the present GI bill of rights have been held out to the veteran as an easy means of achieving home ownership, while at the same time protecting the veteran against the loss of his home and his life savings. Neither in their technical features nor in their administration have these provisions achieved either objective and in the long run we do not believe they can.

As originally written, these provisions purported to offer some degree of protection to the veteran who is up against the spiralling inflation of the real estate market by prohibiting the guarantee of any home loans if the purchase price exceeded "the reasonable, normal value" of the property. It is common knowledge that appraisals on homes which veterans are seeking to purchase have generally been permitted "to follow the market" to the obvious detriment of the veteran. But even beyond this, various proposals to take more money out of the veteran's pocket under the guise of protecting him have been advanced; for example, various national organizations representing lenders, builders, and realtors have supported proposals to change the law so that the guaranty could be made in any case where the loan did not exceed the reasonable normal value of the property—although the purchase price could exceed reasonable normal value without limit. This is sound business practice in the judgment of some groups because the lender would be fully protected. As to this proposal, few voices were heard as to how the veteran was thereby protected. On the other hand, a great deal of talk was heard that the veteran was a rugged individualist who could take care of himself and in all likelihood would not pay more than a reasonable normal value of the property he sought for his home—this notwithstanding the fact that the veteran was then without a home and under the present short supply of housing had the doubtful choice of remaining in that condition or paying the asking price. The theory was also advanced that the veteran ought to be required to put a little money of his own into the deal. In other words, if the reasonable normal value of a house was $10,000 and the asking price was $15,000, the veteran would be all right under this proposed amendment to the GI bill, if he were able to get a guaranteed loan in the sum of $10,000 (which is improbable) and put up the balance of the purchase price—$5,000 or more—in his own cash.

It might be anticipated that with this kind of amendment to the GI bill, the Congress would soon have before it proposals to provide the adjusted compensation in order that the veteran might be assured of a means of securing additional ready cash, readily convertible into inflated real estate.

In our judgment, the veteran specifically and the country generally would be far better served if the inflationary trend of residential real estate was effectively curbed immediately so that there might be more general resort to the system of home-mortgage financing under the Federal Housing Administration of the National Housing Agency. Under this system, the protection offered to the prospective home buyer through high construction standards, sound neighborhood planning, realistic appraisals and a fairly liberal financing plan has always been and continues to be far in excess of the many supposed advantages theoretically available under the GI bill. The President's temporary program, modified in those repects which we deem advisable, and accompanied by permanent statutory authority for the continuation and perfection of that program while the need continues would do much toward making available to far greater numbers of veterans and other home buyers or renters the benefits of the FHA insured mortgage system.

In the main we have dealt thus far with the immediate and emergency aspects of the current housing situation. That, however, is the smaller part of this problem. Its effective solution, with its resulting benefits to the country as a whole, require permanent housing legislation and a long-term housing program, calculated to meet the housing needs of all groups. This seems clear, by any test, whether it be in terms of housing needs, employment needs, or investment needs.

We believe that the bill to establish a national housing policy and provide for its execution, recently introduced in the Senate under the joint sponsorship of Senators

WAGNER, ELLENDER, and TAFT, represents the most honest and realistic effort thus far put forward to meet this problem.

While we endorse the bill as a whole and while we wish to state specifically that we believe that the various special preferences accorded to veterans by several sections of the bill are reasonable and proper, we are nevertheless especially interested in, and desire to single out for particular commendation, certain features of the bill. Although these features of the bill are not cast in terms of special preference to veterans, in our judgment they will be most suitable and helpful to our veterans who, in large numbers, are again becoming a part of our civilian peacetime economy.

One of the most important of these features of the bill is the plan, designed to produce a larger volume of moderate priced homes available on financial terms which offer the prospect of home ownership to a sizeable portion of our population who otherwise might well be denied the privilege of home ownership. It seems to us that the plan whereby 95 percent FHA insurance or up to $5,000 for a 32-year 4-percent home mortgage loan, coupled with the 85 percent firm commitment to builders, is sound in all respects. We believe it is capable of producing a substantial volume of good housing in the moderate price class, which, without this system and the special inducements it offers, would not otherwise be available. It seems clear to us that this system offers far greater potential possibilities of realistic service to the veterans, who most need it, than any advantages, thecretical or real, obtainable under the home-loan guaranty provisions of the GI Bill of Rights.

It seems to us that, at the present time, the establishment of the maximum rate of interest for this plan at 4 percent per annum is satisfactory and should attract an adequate flow of mortgage money into this desirable type of home loans. In fact, since the principal obligation of the mortgage is completely insured, with the insurance also protecting the lender against the possibility of loss resulting from default of interest or from foreclosure expenses (and we think this proposed amendment extremely desirable) we may hope that under present conditions, adequate funds might be available at less than the current maximum rate. We would not attempt, at this time, to predict what conditions may obtain in the future which may affect the availability of mortgage money at this rate, but we assume that, if necessary, the maximum rate can be adjusted by amendment to meet the then existing conditions.

Under the GI Act, the aggregate amount of the guaranty for the veteran—on business loans, home loans, or farm loans—may not exceed 50 percent of the loan, or $2,000, whichever is the lesser. Moreover, the act specifically provides that the liability under the guaranty must decrease or increase prorata with any decrease or increase of the amount of the unpaid portion of the loan. Entirely apart from the advantages inherent in the FHA system, with regard to high construction standards, good neighborhood planning and realistic appraisals, a guaranty of 50 percent or a lesser amount of an original loan—which guaranty decreases as the loan is paid off—obviously cannot be as advantageous either to the lender who makes the money available or to the prospective home owner who needs the money, as a loan which is 100-percent insured.

The GI Act presently requires that the loan must be paid off in 20 years, and, even under the most liberal amendment thus far proposed, it would only extend it to 25 years—as contrasted with the 32-year maturity permitted under this small-home financing plan. Again, in terms of the advantages which would be offered under the FHA system with the amendments proposed by this bill, both the home owner and the lender would be offered additional protection through those provisions which would permit the postponement of monthly payments by the mortgagor with continuation of FHA insurance in cases where the inability to pay was due to unemployment, ill health, or other conditions beyond the control of the mortgagor. Beyond this, American home buyers would, for the first time, be offered the facilities of a system which, through the warranty provisions embodied in this bill, would provide protection against defects in construction, faulty materials or workmanship, and violation by the building contractor of his contract obligations. Thus, it seems to us that the plan embodied in title IV of this bill offers the opportunity of home ownership to an unhappy and unprovided-for part of our population who could not otherwise enjoy it. More importantly, it is offered under terms consistent with the financial abilities of the great bulk of our moderate-income families and on terms which offer real protection to these people against the loss of their homes and the savings invested in them.

Time does not permit us to state, in the same detail, our reasons for favoring the other titles and provisions of this essentially sound and comprehensive housing measure. Many of these other titles and provisions seem particularly in line with the needs of veterans as they are assimilated into the stream of our peacetime economy. More specifically, these would include those provisions which, by a variety of devices, seek to achieve the production of substantial amounts of good housing for rent as well as sale for the vast bulk of our Nation's families. They include the provisions which would establish a system of aid to local communities for the assembly and clearance of slums and blighted areas and their preparation for redevelopment for suitable uses consistent with the desires of the local communities; they include the provisions for the continuation and expansion of the existing system of aid to the localities for the provision of decent housing for our families of very low income, who cannot otherwise obtain decent housing, as well as the extension of this system to cover similar families in rural areas.

Also on the rural side, we believe the amendment contained in section 801, which would extend the usefulness of the FHA system of insurance by eliminating the requirement that farm loans may be insured only where there is involved construction or repairs calling for the expenditure of at least 15 percent of the mortgage proceeds for materials and labor is sound.

We also regard those provisions which would enable the Secretary of Agriculture to make loans for farm housing, on terms similar to those under which loans for purchase of farms may be made under the Bankhead-Jones Act, represent a feasible device for making good farm housing available as an essential part of an over-all program designed in its totality to effect a more efficient and adequate farm economy.

Finally and specifically, in terms of the needs of veterans, we endorse those provisions of the bill which, with regard to disposition of permanent war housing now owned by the Government, establish the principle that it shall be disposed of consistently with the postwar needs, with preference to veterans. In similar terms we endorse those provisions of title IV, which would make FHA insurance available on liberal terms to educational institutions requiring additional housing facilities for veterans.

Finally, we believe that it is most essential that all of these housing measures be subjected to the cohesive influence of common policy. No single one of our recommendations is unrelated to our other recommendations. They are part and parcel of a single bundle, and no one alone could do effectively the job that must be done in housing. They must be focused upon the sound objective stated in the preamble of the bill of realizing, as soon as feasible, the goal of a decent home and a suitable living environment for every American family. Surely America, with its genius for getting things done, could not set its sights on any lesser goal. Therefore, the proposal, embodied in the bill, which continues and perfects the present organization under which all of the principal urban housing functions and programs of the Federal Government would continued to be vested, in a single National Housing Agency, is sound and should be enacted. Moreover, we believe very strongly that this principle should be strictly adhered to in the case of any other housing legislation which may hereafter be enacted, including that which we have here recommended as essential to meet the current emergency needs, that is, the Patman bill, the continuation of emergency housing powers as proposed for the President's emergency program, and Senate Joint Resolution 122. Any housing functions or activities encompassed by such legislation should, we believe, be placed within that single National Housing Agency, and should not be scattered among various agencies with a consequent division of responsibility and lack of decisive housing policy and action which is so obviously necessary to achieve the admirable goal which has been established.

---

## Statement of Omar B. Ketchum in Support of Senate Bill 1592

EXTENSION OF REMARKS

OF

## HON. ALLEN J. ELLENDER

OF LOUISIANA

IN THE SENATE OF THE UNITED STATES

*Tuesday, December 18 (legislative day of Monday, October 29), 1945*

Mr. ELLENDER. Mr. President, I further ask unanimous consent to have printed in the RECORD the statement by Omar B. Ketchum, national legislative representative of the Veterans of Foreign Wars, on Senate bill 1592.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

My name is Omar B. Ketchum and I am national legislative representative of the Veterans of Foreign Wars of the United States. The membership of this organization is now in excess of 1,250,000 men who have served, or are serving, on foreign soil or in hostile waters during some war, campaign, or expedition in which this Nation has participated. Nearly 1,000,000 servicemen of World War II are members.

The existing housing situation is a source of concern and anxiety to the officers of this organization, especially as it relates to the needs of those veterans now discharged and the great numbers soon to be returned to civilian life.

During the week of December 3, 1945, at Kansas City, Mo., a conference of national officers, department commanders, adjutants, and quartermasters from every State in the Union was held, where reports were received from the grass roots, coupled with reports from other sources coming to our offices, on the need for and lack of housing facilities.

From the nature of these reports we are alarmed at what might be the result if some drastic action is not taken, i. e., (1) immediately to relieve the emergency housing need for returned and returning veterans, (2) to provide a long-range housing construction program to assure adequate and satisfactory

housing facilities for all our citizens, veteran and others, at costs to meet the needs and abilities of all.

The National Council of Administration was so concerned and alarmed respecting the existing and growing housing emergency that they passed the following resolution:

"Whereas the shortage of housing is recognized as one of the most critical problems confronting the Nation; and

"Whereas the National Housing Administration estimates that 2,000,000 veterans are, or will become, homeless in this shortage; and

"Whereas there is indisputable evidence that many veterans are temporarily sheltered in municipal or county jails or camping in public parks; and

"Whereas less than 40 percent of the armed forces have been discharged and that continued demobilization under these conditions will further add to this shameful treatment of veterans and lead to bitter resentment and render them susceptible to Communist influences: Now, therefore, be it

"*Resolved*, That the National Council of Administration, Veterans of Foreign Wars of the United States, assembled in Kansas City, Mo., December 3-4, 1945, go on record requesting the President of the United States to declare the housing shortage to be a national emergency and to direct appropriate Government agencies to take the necessary steps to allocate and divert building materials and surplus housing to alleviate the housing shortage and to call on the construction industry to cooperate to the fullest extent, and that priority in rentals, construction, and sale of homes be given to veterans; and be it further

"*Resolved*, That until permanent housing can be constructed vacant and useful structures, temporary or permanent, under the control of any governmental agency, be immediately made available for temporary housing facilities for our returning veterans and their families."

To that end, we have envisioned the provisions of Senate bill No. 1592 as providing the legal means by which such objectives may be attained, and in line therewith the national legislative committee authorized the national legislative representative to appear before your committee to express to you this organization's support and recommendation of Senate bill 1592 with several suggested amendments thereto.

The housing problem as presently existing involves great consequences to our Nation and its people, especially returning veterans, and if not solved will be the cause of many unfortunate and not-wished-for results.

Low-cost family housing in the $5,000 or $6,000 value bracket is the crying need, and priority and allocation of material to this type of construction must absolutely be provided, until materials become fully available, so as to provide the minimum housing for veterans' requirements, during the intervening emergency period between scarcity of materials and the reaching of an adequate production supply for all purposes.

The current disclosure in a local newspaper of the recent export to other countries of sufficient lumber to build over 100,000 housing units, when we here are in distress, certainly makes it impossible to give any excuse or reasonable explanation to our veterans as to any justifiable reason for the existing situation.

We appreciate that bill 1592 is one of general purpose as it relates to housing, and contemplates a long-term housing program, and as contemplated in this light and view, do we bring to it our recommendation and support, both as to its potential prospects of bringing decent housing to our fellow citizens and making available in the near future and economically possible too, a character of housing duly deserved and earned by veterans and their families, in cities, villages, and on farms, and in every economic bracket.

We appreciate the committee's inclusion in the bill of a preference for veterans and servicemen. However, to satisfactorily effect such indicated preference, we respectfully suggest several amendments to the bill, as follows:

1. On page 57, after line 23, insert the following new section:

"SEC. 503. The National Housing Act, as amended, is hereby amended by adding at the end of title I thereof the following new section:

"'SEC. 8. For a period of 6 years after the date of the approval of this act, the Administrator shall not insure, or make any commitment to insure, (i) any direct investment in rental housing pursuant to title VII hereof, (ii) any mortgage pursuant to section 203 hereof if such mortgage involves a principal obligation of $7,500 or less (except in the case where the mortgagor is the owner and occupant of the property), or (iii) any mortgage pursuant to section 207 hereof (except in the case of a mortgage with respect to a project of a nonprofit mutual housing corporation), unless the investor, the mortgagor, or the builder, as the case may be, shall agree to give preference in the rental or sale thereof to persons who have served in the active military or naval forces of the United States on or after September 16, 1940, and prior to the termination of hostilities in World War II, and who have been discharged or released therefrom under conditions other than dishonorable.'"

2. On page 78, line 9, change "4 years" to "6 years."

3. On page 79, in line 9, strike out "equally"; in line 10, strike out "and at the rent involved"; and in line 13, change "4 years" to "6 years."

4. On page 109, after line 4, insert the following new subsection:

"(d) Notwithstanding any other provision of law, the contract or other instrument under which any permanent war housing under the jurisdiction or control of the National Housing Agency is disposed of for other than low-rent housing in accordance with the provisions of this title shall require the person acquiring such housing to give preference in the rental or sale thereof to persons who have served in the active military or naval forces of the United States on or after September 16, 1940, and prior to the termination of hostilities in World War II, and who have been discharged or released therefrom under conditions other than dishonorable."

We respectfully submit to this committee as a recommendation our observation of veterans' preference over a period of 25 years.

The Congress always has been considerate in the past in enacting into laws passed by it sections which authorized veterans' preference whenever requested, but the veteran has met with sorry results in the administrative field whenever he sought the full benefits to which he was entitled. By subterfuge, evasion, the run-around, and by methods and actions too devious and lengthy to burden this committee with, the purpose and intent of Congress in respect to veterans' preference was thwarted and set at naught.

We feel that the time is now at hand that whenever veterans' preference is granted by Congress in any act, that same must be implemented, by provisions which will attach penalties for the violation of such provision, so that those who in the administration of any act of Congress granting veterans' preference, fails to comply with such requirement, he or they will be subject to such penalties. We have found that this is necessary to effect such preference and the intent of Congress.

In conclusion, may we impress upon the committee that the lack of immediate housing for returned and returning veterans is bordering on a national tragedy; that much suffering, disappointment, heartache, and dissatisfaction is bound to result, before existing conditions improve, but we place full reliance upon our elected representatives, that they will leave no stone unturned to come up with answer solving the emergency in the most satisfactory manner and establishing the basis for the future improvement of the housing problem of all our citizens needing same.

## Home Building Calls for Supreme Effort

EXTENSION OF REMARKS

OF

### HON. RAY J. MADDEN

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, December 18, 1945*

Mr. MADDEN. Mr. Speaker, I am submitting an editorial written by H. B. Snyder, editor of the Gary Post-Tribune, outlining the critical housing shortage in the city of Gary, Ind. Mr. Snyder has some valuable suggestions on the housing crisis in the following editorial:

HOME BUILDING CALLS FOR SUPREME EFFORT

Something exceptional must be done to build several millions of housing units with the greatest possible speed. Not only must we make up the shortage resulting from the lack of construction during the war but the unprecedented shortage during the decade of the thirties.

Several thousand additional homes are needed in Gary alone and a similar situation exists throughout the country. The situation was bad enough during the war when people submitted to being crowded together because of the emergency.

But the emergency is over and millions of soldiers are back and on the way back, nearly all of them prospective renters or buyers of homes. We must do everything we can to give them the homes they need and deserve.

Unfortunately that is easier said than done. The problem looks almost unsolvable, but, like all other problems, a good deal can be done about it if it is attacked in the proper way. A Nation-wide program is called for, and the best one we have seen has been suggested by Harold E. Stassen.

His plan calls for the appointment of a national expediter by the President, which was done yesterday, and then a gathering up of all the loose ends of the construction industry. Skilled workers would be released from the Army and schools for apprentices started. Unused governmental space everywhere would be inquired into, particularly that of the Army and Navy, including their unused materials. Then there should be a national campaign to modernize building codes so that all speed possible could be used in getting homes built.

But with everything possible being done one factor is certain to hold back any program, that is the production of lumber and many other building supplies. There just isn't enough to meet the need and there probably won't be for several years.

That means that most of the supplies we do have must be channeled into building homes rather than into other projects we can better afford to wait for. Fortunately there is an appreciation of this need in Washington and plans for its proper handling are being made.

We doubt that much will be accomplished by placing a ceiling on prices. What we can do to prevent unnecessary price rises should be done but too much of the talk today shows little understanding of economic factors. Supplies cannot be sold for less than their cost.

Old houses will not be sold for less than the owners think they are worth and new ones will not be built unless the builders can make a fair profit at least. Price ceilings do not help unless they permit action underneath them. If they press down too far activity is stifled and it would be better to do nothing.

What we want is houses. Army and Navy building supplies may be found to be vastly greater than is believed but whatever they are they should be put to use now. And that goes for everything else that will expedite this job. This is a national, State, and local job and it ought to be hitting on all cylinders everywhere.

## The Holding Company Act

EXTENSION OF REMARKS

OF

### HON. LYLE H. BOREN

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, December 18, 1945*

Mr. BOREN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me at a forum on public utilities sponsored by Investors League at Chicago, Ill., November 29, 1945:

Today on LaSalle Street in Chicago the times are a far cry from the LaSalle Street of the old board of trade in the era of "Old Hutch," "Dapper Billy," and the picturesque Ed Partridge, and Everingham.

The abuses of the days of laissez faire are not entirely gone. Under restriction and regulation many of the old abuses remain simply wearing new raiment. The wrong and scandal are with us still, but the old swindles are out of style and modern up-to-date ones have succeeded them. They differ no more than milady's gown of 1882 differs from her beach suit of 1945.

In the old days it was crédit mobilier and Teapot Dome. Today it is Swindle, Inc., and the nonprofit corporation.

America has approached its problems always with a realization that there is heart and brain enough in America to meet and solve them.

When first we founded a government in this then new world, we recognized and announced the simple and evident truth that all just powers of government are derived from the consent of the governed.

The first three words of the Charter that constitutes the American philosophy were—"We the people"—and the public interest has ever been the yardstick that both defines and limits each area and boundary of every act of government.

Out of the particular problems of the public as investors have grown many acts of government. Acts that have been altered to meet the tide of circumstances, the flight of progress, and the decrepitude of obsolescence.

It is to one of these, one of the great reform bills of the decade of the thirties, that I address myself. I speak of the Holding Company Act. It was, and is a sound and wholesome law. Experience has proven it to be one of the most salutary of the reform era.

While I claim it to be in its fundamental aspects wise and sound, I do not hold it to be a perfect instrument. A product of times and circumstances that ever change and alter, experience of necessity tests and tries it and discovers some elements of weakness and perhaps some elements of error.

To hold that any product of human minds, however great those minds might be, has attained a permanent perfection, free of fault or frailty, is an untenable position. I am sure the Securities and Exchange Commission would not hold itself, like Caesar's wife, in every act above reproach, nor make a finding of perfection for itself in all of its interpretations—if so, I herewith file a formal disclaimer to such a finding.

The Congress in the form of the Securities and Exchange Commission subcommittee of the great Committee on Interstate and Foreign Commerce has decided to review the Holding Company Act—to study it in the light of its operations—to examine it in the light of the realities of experience. We are examining it carefully, judiciously, without preconception or prejudice.

We are not on a hunt for faults to be found with the act, and may even be better satisfied with the act after this study. We are making a studious review of the act.

It is fitting and our proper responsibility to do this.

The Holding Company Act has not been reviewed nor revised in the 10 years of its existence. The Interstate Commerce Act was reviewed and revised 17 times in its first 10 years.

All the major acts of Congress are properly and frequently revised in the light of experience and to meet the public interest. Thus, and only thus, can we find the path of justice through all the winding ways of error, malfeasance, or deceit.

We have undertaken a task that is a hard task and perhaps a thankless one.

We feel we have a right to expect a spirit of cooperation from the Securities and Exchange Commission that will bring to us unbiased, impartial, and judicial analysis of suggestions offered and constructive recommendations for implementing, clarifying, and improving the act to better serve sound public policy.

We feel we have the right to expect a spirit of cooperation from the industry that will bring to us the facts in their simple realities, clearly delineating between any advocacy of self-interest and recommendations for the common good.

We feel that sound law and good administration should build faith and trust in each other as between industry and the Government's agencies.

I decry the feeling that the Securities and Exchange Commission and industry have in common a mutual mistrust of each other.

Let there be an end to chaos and doubt and punitive and defensive acts, or need for punitive or defensive action.

Rochefoucauld says, "Hypocrisy is homage that falsehood pays to truth." Our committee wants the truth and we have no welcome either for falsehood or hypocrisy.

We cannot look with favor on either fantastic theories or ruthless practices.

If I may divert at this point to a personal view, it is my personal opinion that competition should be equalized between public and private enterprise.

I have seen in widespread areas of our national economy tax exemption tipping the scales against private enterprise in favor of public or collective ownership.

I believe that collectivism or communism can stand only on the strength of its propaganda. I know its claim to equality in the sharing of the benefits of production is a myth.

Economics are made of facts, not fancies.

If we are realists and both examine our own national experience and go abroad for the experience of others, we can only be convinced that the American system of private enterprise and individual opportunity is the world's best system of national economy. No other system, by comparative factual analysis, can enter even the realm of competition with the American system. Those conclusions are the inevitables based only on the facts and figures—on the mathematics of economics apart from the added weight of value in the individual's personal liberty. The American system of private enterprise has worked well. It never should be abandoned.

Collective ownership is growing in America in almost every phase of our economy. Tax exemption for collective ownership is an illusory concession creating real inequities and unjust burdens on all of us who are not the direct beneficiaries of the specific project. In the field of public ownership of utilities the people are victimized by devices for financial manipulation and are persuaded by dishonest accounting.

The American taxpayer is beset with a million snares for the unwary. He is not awake to the realities. He is a somnambulist, sleep walking now but soon to be rudely awakened by the hurt of these hazards. He is whipsawed coming and going in these expansions of collectivism, but he does not know it yet.

Many people join the march of collectivism with hand-me-down or ready-made preconceptions and never stop to check whether they are true or false.

Equalization of competition between public or collective ownership and operation of enterprises and private ownership and operation of enterprises will bring out the facts and test truly the values. Then the claims will be fairly tested and the people will find with Jerome Frank that "We have been cocksure of many things that simply are not so."

Psychological waves of irrationalism and "functicism" have swept the world in many periods of history. The mania of witch-burning, the madness of nazism, the fallacy of communism, all have a cousinship with any sweeping fad or craze or mania whether it be miniature golf or Ku-Klux-Klanism. Wishful thinking dominates mass behavior, and add to it the moving power of sentiment and human psychology will invent a justifying theory for behavior however irrational.

The wishful thinking of those who are honest advocates of public ownership has invented theories that justify tax exemption, or tax evasion; that justify almost any device or expediency. The credulity of the unsuspecting and sincere advocate of collective ownership of public utilities is played upon not only by the demagog who covers up great and long range benefit with enticement to prompt the petty advantage but also by the shrewd promoter and the wizard manipulator.

On this stage absurd performances occur. The unsuspecting public is made stooge to the financial prestidigitator. The lamb of the rural district lies down to bed with the wolf of Wall Street. The black leg and the puritan are wed, and wishful thinking invents a theory to justify it.

In Omaha and in Puget Sound the buyer went to market to buy some wool and laid down his money for a fresh shorn lamb.

The wily opportunist ever searching for the easy plum to pick has found a new crop for his harvesting.

The wolf of Wall Street is huffing and puffing again and this time he has a new disguise that I have, I think, properly labeled—Swindle, Inc.

Believing that Government is under oath to serve the public interest, I hold that we cannot ostrich-ize our vision against a seeing-eye knowledge of such performance. If the Holding Company Act can be implemented to bar such doors, then it should be so. The Federal Power Commission, Securities and Exchange Commission, and Internal Revenue, should be marshaled to combat that wrong. And these agencies of Government should have an arm long enough and a sword sharp enough to cut down such crime where'er it raises its serpent head.

And now speaking again of the committee's work, I might say, and so it is that these special cases involving questionable transactions have been brought also in the forum of our deliberations.

We have in the forum of our committee a scale on which to weigh public burdens. We trust the scale is correctly balanced to register the full weight of public interest. We trust that our eyes are focused to truth, our minds attuned to justice, and our processes considerate and fair.

We know that our acts will be cautious and restrained by judicious care. We feel that the results of our study will justify the arduous labors of our task and that what is finally done by the committee will be done well, as it will be done faithfully. We hope in the end results we can have the unreserved approval of our critics as well as those more favorably inclined. On the Holding Company Act we contemplate no sweeping change, no wide nor radical departure, but we do contemplate constructive improvement and an implementation to the full extent, but only to the extent that deliberate care, studious research, caution, and wisdom clearly dictate.

## I Am My Brother's Keeper

EXTENSION OF REMARKS
OF
### HON. THOMAS J. LANE
OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, December 18, 1945*

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein an article which appeared in the Pilot, Boston, Mass., on Saturday, December 15, 1945:

I AM MY BROTHER'S KEEPER

There are times when Christians must think and act like Christians—or forever renounce their right to the name. A typical crisis of this kind confronts us now. Strongly, eloquently, and with a manifest depth of feeling, Archbishop Cushing, in his address to the St. Vincent de Paul Society Sunday, insisted that the United States is morally bound immediately and completely to fulfill its pledged word to support UNRRA (the United Nations Relief and Rehabilitation Administration).

People are shivering, starving, and dying. Children, denied even minimum subsistence, are already marred for life. Unless succor comes quickly, many of them will never see even a stunted maturity.

The address of His Excellency is magnificent in its fidelity to the authentic Christian tradition. If we understand this superb text correctly, the archbishop is demanding that we quit playing politics with starvation, disease, and exposure.

It would be laudable in the extreme if Europe would establish democratic governments, unhobble the press, show evidence that the lessons taught by the ordeal of the world's worst war have been learned. But "Christian charity compels us to feed, clothe, and house the starving and naked wherever they are. We attached no rider to our lend-lease shipments of war materials. Should we attach one now to charity? If we do, and if UNRRA should fail for lack of funds, then the good Samaritan has been waylaid."

At a time when priests in Russia were being murdered simply because they were priests, at a time when public walls were festooned with blasphemies so revolting as to turn one's stomach, Pope Pius XI continued to pour food and clothing into this famine-stricken country. Neither then nor afterward did Soviet Russia express a syllable of gratitude. But the people were hungry and suffering. That's all the shepherd's heart of Pope Pius XI cared to know. He would warmly endorse Archbishop Cushing's moving appeal to help all who need help for the solitary, sufficient reason that they are hungry and cold. As heartily as his illustrious predecessor, Pope Pius XII would approve. And so, we may feel very certain, would Jesus Christ.

Abroad people are in torment. They are suffering a veritable agony. European mothers are listening to wails of the infants in their arms and they can only wait in dry-eyed despair until death heals the pain of their babies and their own. How—in the name of a compassionate Christ—can we continue to debate when every moment's delay means unpaintable anguish to beings made like ourselves, in God's image, and again like ourselves, redeemed by His precious blood?

## Thoughts and Wishes of the Man in the Street

EXTENSION OF REMARKS
OF
### HON. SHERIDAN DOWNEY
OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES

*Tuesday, December 18 (legislative day of Monday, October 29), 1945*

Mr. DOWNEY. Mr. President, on Friday, November 23, 1945, I obtained unanimous consent to have printed in the RECORD an address by Mr. Robert E. Hannegan, chairman, of the Democratic National Committee, at a dinner of the Indiana Democratic Editorial Association held at French Lick, Ind., November 17, 1945.

Two pages were inadvertently left out of this address in the printing and I ask unanimous consent that the address in full be printed in today's RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I have always considered it an important part of my business to keep posted as thoroughly as I can on the thoughts and wishes of that anonymous individual whom we in America are in the habit of calling the Man in the Street.

To me, that man is important—the most important figure in the whole United States.

Having no name, he may be a big industrialist or a small businessman or a farmer or a factory-hand. He may be a Democrat or a Republican or an independent. But as the Man in the Street he is all of them. He is bigger than any of them. His interests come first.

Now, for those of us who are in politics, this man without a name, without a stated occupation, is a very sound consultant. His thinking, you know, is usually pretty clear. He is a pretty level-headed fellow.

That is why it is always smart politics to find out, between elections, what he is saying, what he is thinking about, what he wants. Ignore him, minimize his importance, put your own objectives above his, and—well, look what has happened to the Republican Party.

But if it is a general rule of good politics to go to the Man in the Street and try to get his responses and discover his thinking, if this is important any time, then it is even more important now.

We are at this time in a period of transition, of change from war to peace. With that far-reaching shift, most of us realize and expect an atmosphere charged with new political and economic currents, a change in the approach of our people toward many issues and controversies that affect us all. It is natural and logical that this should happen. If anyone is surprised by it, I say such a person does not know the American people very well. He hasn't been talking very much with the man in the street.

While war lasted we preserved a national unity in the defense of our country against a foreign aggressor. Even under the stress of this great conflict we were not forced to give up our right of free expression.

We held a national election in the very midst of war. But we subordinated all our interests to the winning of that war. We not only placed restraints on ourselves by law, but we voluntarily refrained from trying to advance private causes that would have imperiled the great cause of our country. I say "we" and I mean most of us—all but a small minority.

Then, overnight, came an end to war, and an end to the extreme calls and exactions it had imposed upon us. This means, in a free country, the moral right to speak out again on any subject or for any cause, public or private, within the limits of legality, and certainly it includes the right of any faction, any organization, and individual, when he thinks he is being hurt, to say so.

Inevitably, when this happens, our national unity is put to a test. But we have stood countless such tests in the past, and we shall go through many more in the future.

If anyone tries to tell me that it is unnatural for an American who has a grievance, or thinks he has one, to speak out about it, I say that person does not know his Americans.

And if anyone tries to tell me that our country cannot stand up under the strain of this free give-and-take, I say that person underestimates the tensile strength of our democracy.

We are just now hearing a good many of these alarms. They are coming from people who seem to think that America cannot pass this test of our national unity, people who fail to see the difference between controversy and catastrophe. They are people who think America "can't take it."

Well, when I hear of these fits of self-induced hysteria, I set aside my copy of the CONGRESSIONAL RECORD, where most of the outbursts first see print. I throw away the editorial and columnists' page of the newspaper, where they are echoed. And I go out and have a talk with my level-headed friend, the man in the street.

I think some of his reactions are worth passing along.

You recall that back in 1940 and 1941, when war threatened us, there were people who said the many groups and factions in America with diverse viewpoints would be unable or unwilling to set aside their differences in defending the Nation against an outside aggressor. That was supposed to be democracy's fatal weakness. There were certain people in Europe saying that, and there were certain people over here, echoing them word for word.

Today the people in Europe who were most vitally interested in spreading that kind of talk are silent. Some of them have poisoned themselves. Some, for the same purpose, use a rope, others a revolver. Still others are on trial and will be taken care of in due course.

But what about the people in America—those who interested themselves in spreading the same doubt of our democracy over here?

Those people are not silent today. As leaders in the Republican Party, they used their membership in Congress 5 years ago as

a sounding board. And they are using that same sounding board now.

They are still voicing defeatism—as loudly in peace as they did in war. Yesterday they were trying to break down the faith of the American people in their gallant Commander in Chief, the late Franklin D. Roosevelt.

Today they are trying to shake America's faith in the man who has quickly and ably shouldered the responsibility of leading this Nation to peace and postwar prosperity, President Harry S. Truman.

It is these opposition leaders who are now howling calamity and who are hoping that a great show of dissent will break the confidence of the people in Harry Truman—and who are doing their best to create and aggravate that dissent.

Well, they are wrong both ways. And do not be deceived, the man in the street knows it. He knows that the people who failed to realize the seriousness of this country's situation in 1940 are the same people who are voicing hysterical fears for the Nation in 1945.

When America stood in real danger for her very life, when complete national unity was vital and every disruptive word might have meant the death of a soldier on the battlefield, these were the people who complained of rationing and the OPA, who grumbled about the WPB, who shouted their pet grievances recklessly.

Now, with the crisis of war behind us, at a time when Americans have once more earned the right to assert themselves and to contend for that which they believe is their due, now these same people are suddenly alarmed for the survival of the nation.

Well, the man in the street knows this. He does not like disputes, international, industrial, or domestic. About the only thing he likes to argue is politics.

Certainly he does not approve of strikes. He is both employer and employee. He is producer and consumer. He is labor, management, and the public. And he knows that industrial shut-down hurt him, that he is the fellow who pays, any way he looks at it.

But when a Member of the United States Senate gets up, and in his great fears for the safety of America, launches a bitter attack on President Truman for his effort to bring labor and management together in conference so that a way may be sought to resolve their differences, that Senator may be speaking for the Republican Party—of which he is a prominent member—but he is not speaking for my friend, the man in the street. He is not speaking for the employee nor the employer. He is not speaking for labor nor for management. And he is not speaking for the American public.

Yet only a few days ago such a speech was made on the floor of the United States Senate by Senator WILEY, of Wisconsin. And that speech, which was made in direct criticism of President Truman, was a very revealing one.

It revealed exactly what is behind all this sudden patriotic fervor on the part of the Republicans in Congress, these pious fears for America which they began voicing after America had won the war, but which they had never expressed while America's enemies were still on the march.

Now, what does this Republican Senator want? What has he been leading up to? What does he think President Truman ought to do so that his own fears will be quieted?

Only this: Throw overboard the principles of the Democratic Party. Cancel out the social gains that have been made in recent years. Raise the tariff, and abandon the principle of collective bargaining.

"I know," he says, "that these realistic views will invite upon all those who voice them the accusations of labor baiting and union busting. I, for one, deny both charges with all the vigor at my command."

And in the same breath—with all the vigor at his command—he demands that President Truman outlaw the principle of collective bargaining—a principle to which both management and labor in all our big industries have long subscribed, a principle which they reaffirmed only the other day at the conference called by the President.

But this same Republican leader was not nearly so concerned for the safety of America a few years ago when war threatened us. Back in February of 1941, less than a year before Pearl Harbor, he told the people he did not believe Japan would be foolish enough to attack American interests.

From the record of his voting, one would not judge that the Senator was very greatly impressed with America's danger then. I think the time has come to cite the various items of that record having to do with the strengthening of this Nation to meet the greatest war crisis that ever threatened its existence. Here is the way Senator WILEY voted:

Against revision of the Neutrality Act.

Against military conscription.

Against offering effective aid to Allied countries.

Against lend-lease.

Against lend-lease appropriation.

Against transfer of Axis ships to Britain.

Against extension of the draft.

Against belligerent zone restrictions to make possible the delivery of lend-lease shipments to nations fighting Nazi Germany and her allies.

Against the armed ship bill, to protect American vessels from submarine attacks.

Against the ship seizure bill enabling us to take over ships belonging to countries occupied by German forces.

Against the second lend-lease bill.

And so on—all down the line of preparedness against the most dangerous enemy America has ever had, this Republican leader voted against every one of the measures of the Roosevelt administration to safeguard and strengthen America while there was still time—measures which, as later events proved, saved the lives of thousands of American boys.

Yes, Senator WILEY, the man in the street of today, who was also the man on the battlefield and the high seas of yesterday, remembers you and your Republican colleagues in Congress. He remembers you well.

And now he is the man, Senator, who has come home alive and safe, to a Nation that has been saved, because a Democratic majority in Congress backed up a Democratic President in an American program of preparedness against the aggressor.

That is why this man is coming home alive and safe today, Senator. And in a matter of life or death—his life or his death—don't you think it is natural, Senator, that he and his family should remember you?

And don't you think it is natural that now, when this man is home again, wanting to go to work, and wanting protection in his job—isn't it natural, Senator, that he should be a little puzzled by your sudden fears for America unless his protection is sacrificed?

My fellow Democrats, I do not expect this Senator or any of those of his party who voted with him in 1940 and 1941 to answer these questions. I expect, rather, that they will go on with their determined effort to smear the memory of one of the greatest Americans who ever lived—Franklin D. Roosevelt.

I expect these Republican leaders to continue turning their faces away from the post-war problems of our country, problems of reconversion and the maintenance of employment—the whole field that has been covered in the 21-point program set forth by President Truman.

I expect them, in their bitterness and their complete lack of a program of their own, to carry on this desperate search for a political smudgepot, a muck rake, and some way of making their accusations and innuendoes stick where they are trying to plaster them—on our country's great and honored dead.

In the beginning, you know, the Man in the Street—and I am talking now of the fellow who may be a Democrat or a Republican or an independent—welcomed the investigation of Pearl Harbor.

He thought the purpose was to get facts. He assumed that there would be a proper investigation of those facts. He expected the facts would be pertinent to the case.

That is what we all want. And what we did not want was a smear. What we did not want was to create the opportunity for an embittered political clique to use this investigation for indiscriminate muckraking, or as a soundingboard for broadcasting unrelated findings which it may dig up and distort at will in a prejudiced resolve to destroy the name of the unanswering dead.

We have relied on the Senators of our own party who are on that Pearl Harbor Investigating Committee to prevent it from becoming just such a soundingboard, and our confidence was well placed. They are going to see that this investigation is a clean job.

The Republican Senators were told that the committee would have access to any and all necessary sources of information through its legally constituted committee counsel.

In other words, the information was to be supplied to the committee as a committee, for committee purposes. Files of the Roosevelt administration were to be opened and documents made available in this manner.

As a safeguard against the threat of political abuse of the investigation, the files were not to be made accessible to individual members of the committee, as individuals, for their individual purposes, whatever these might be.

But was this what those Republican members of the committee wanted?

They demanded, instead, that they be allowed to go themselves, as individuals, direct to the Roosevelt files and search through them for anything they wished, whether it was relevant or not, and to do anything they wished with whatever they might find.

Now, what do you think these Republican Senators could have had in mind when they made that demand? And from the fury they showed when the demand was not granted, what do you suppose they could have been hoping for from this investigation? What plans have been thwarted?

One of them has since lamented that because he was not allowed this privilege, the investigation has been crippled. Crippled as what, Senator? As a congressional investigation with a proper and legitimate purpose, or as a political fishing expedition?

But what is behind this desperate effort to smear Roosevelt? What is the political significance, now, in 1945, of an attempt to turn and twist the history of 1941 so that it might discredit the memory of a man who is no longer President?

If you want the answer to that question, the man in the street can give it to you.

He will tell you that the Republican Party has not once offered a positive, constructive program for America in the past 20 years.

When a political party lacks a program of its own, there is not much else for it to do than attempt to discredit the opposition. When that doesn't work—and it hasn't worked in four national elections—the party is left in a pretty desperate plight.

Clearly, the attempt to smear Roosevelt is a tactic of desperation by a party without a program.

From election day of last year up to the time when President Truman offered his postwar economic program in his message to Congress last month the American people had been given no sign of what the Republican leadership might have had in mind as a policy for the future of this country.

But at that time a brief but revealing expression of Republican sentiment was given us. It came from Congressman CHARLES A. HALLECK, of Indiana. And we can accept it as authoritative, because Congressman HALLECK is not only chairman of the Republican Congressional Campaign Committee but he is also head of a seven-man group named by the party especially to draft a new program of its objectives.

HALLECK and his clique of Republican leaders didn't like the Truman program. And this is what he said:

"This (the President's message) is the kick-off. This begins the campaign of 1946. * * * And in waging the Republican congressional campaign we will go back to old-fashioned conservatism."

That is all he could offer. "Back to old-fashioned conservatism"—the kind which the Republican Party gave us when it was last in power. With it, you remember, they gave us corruption in government, depredation in Wall Street, depression in Main Street, foreclosure on the farm, ineptitude in foreign policy, and consistency and purpose in only one direction—the further aggrandizement of a favored, powerful, wealthy minority.

But a return to those ruinous practices which led to the crash of 1929 would never be accepted by the majority of the people as a program for the America of 1945. And the Republican leaders know it and admit it.

Accordingly they have once more set out in search of a program which they can offer the electorate.

More than 9 weeks ago Congressman MARTIN, the House minority leader, made it known that the perennial quest was on again. He and his colleagues in Congress held a 2-hour caucus, which they announced as the first step toward drafting what they described as a positive program for America. A committee of seven Republican Congressmen was appointed to do the actual drafting. MARTIN said:

"We plan to set before the country a definite and concise statement of the aims and objectives of the Republican Party as represented by Republican Members of Congress. We plan to do this in such manner as will leave no room for questioning as to where the Republican Members stand on the issues before the country."

Well, that was very fine; but it was more than 9 weeks ago and the country is still waiting. To date there has been no definite and concise statement, no program, nothing that might bring to an end the questioning as to where these Republican Members of Congress stand.

A couple of weeks ago I remarked on this at a Democratic dinner in Philadelphia. At that time 7 weeks had passed, and no Republican program. I remembered it because I had marked my calendar on the day of JOE MARTIN'S fine promise, and I had crossed off every day that passed since then. I had at that time 51 crosses on my calendar.

But the very next day JOE MARTIN'S Republican steering committee made an announcement. It was great news. We learned in the newspaper—I quote:

"The Republican committee met for what they said was an attempt to bring closer to realization their 'statement of principles,' which will be the GOP platform yardstick for the 1946 congressional election.

"Foreign affairs, labor and unemployment, soldiers, and the returning veteran were among the subjects discussed, but the conferees said no definite conclusions had been reached."

That story was accurate as far as it went. These members of the Republican steering committee failed to reach any conclusion because they failed to reach any agreement.

You see, they were split by the question whether to come out with Congressman HALLECK'S "old-fashioned conservatism"—which means no solution to any of the problems of the country—or to endorse in principle the program which the Democratic Party has already set forth.

They have been warned by members of their own party to drop the "me too" tactic. They have been told that you have to have something better than "me too" to win an election, and the last two Presidential elections have proved this.

On the other hand, they have also been warned against the consequences of having no program of their own—warned by men prominent in their own party.

A few of the more thoughtful and self-analytical Republicans have come out and stated this publicly. John D. M. Hamilton, for example, who was the party's campaign manager in 1936, recently contributed an article to Liberty magazine entitled, "What the GOP needs."

He writes:

"Over the last few years there has been a growing restlessness within the rank and file of the Republican Party which does not bode well for its future. Too many Republicans, after years of loyalty, find themselves wondering where their party is going and, worse, whether they will be obliged to go along with it as a matter of party regularity rather than through conviction. * * * Possibly our party will win even though it adheres to a negative program based on the other fellow's mistakes. If so, the victory will be neither creditable nor permanent, and the party will have destroyed its usefulness to the Nation and forsaken its destiny."

Well, such are the difficulties of a party without a program. That was the trouble when the Republican steering committee met. The result was, no agreement, no conclusions.

Now, this report of progress was made public last November 2. But since then I have had to go on crossing the days off my calendar, because there is still no program, the Republican leaders continue reaching no definite conclusions. I now have 67 crosses.

But I do not want to predict that nothing will ever come from this Republican committee. What I do predict is this alternative:

These Republican leaders will either have to eat their words of criticism of Harry Truman's program for postwar America and go back to the tactic of crying "me too"—a tactic which they have already tried without success—or go even further back to the old familiar negatives, the do-nothing, offer-nothing kind of government which they practiced with such disaster to the country in three administrations.

To the people of America, to the man in the street, it is a matter of small concern which horn of this dilemma the Republican leadership decides to hang on. What he wants is settlement of our labor troubles without sacrifice of the right of collective bargaining.

What he wants is protection of American workers and American soldiers coming back to their jobs without leaving the matter of their future to chance or charity.

What he wants is maintenance of public purchasing power without price inflation.

What he wants is the continued flow of risk capital and reasonable profits in industry.

The man in the street knows that every one of these objectives is possible in America, and he also knows that something is being done to attain them.

He knows that the administration of President Truman has pointed the way to labor, to management, to Congress, and to the public to make the possibility a reality.

And the man in the street is learning that Harry Truman is not only pointing the way. He is ready to fight for his program, if need be, to fight for every inch of the way until those objectives are reached.

Ever since Harry Truman became President, we have heard references to the honeymoon, as some have called it, between the Truman administration and Congress.

That term was used because the majority of the membership of Congress like other people who have worked with him for any length of time, had come to like and admire Harry Truman regardless of party affiliations. Through his years as a Senator he had earned the reputation of a leader who was easy to get along with.

With his coming into the Presidency, people naturally expected a cordial relationship to spring up between the Executive and the legislative branches of government, and in this they were not disappointed. That cordiality existed, and it exists today. If anything, the relationships with Congress that Harry Truman values most highly are stronger today than on the day when he moved into the White House.

There were some members of the opposition, however, who thought they saw a chance to play on this relationship to further their own political purpose, and that purpose was to force America back into the ways of reaction, to nullify the very principles for which Harry Truman has always stood and on which he was elected to high office in 1944.

When these people failed to get what they were after, they began declaring that "the honeymoon is over."

Well, I take this opportunity to point out that no honeymoon can be over between Harry Truman and the Republican element that has been trying to smear Franklin D. Roosevelt and destroy the social gains made by the American people under a Democratic administration.

That honeymoon is not over because it never existed. On Harry Truman's part, there never was even a proposal.

And there never will be. There is not now, and there never will be, any appeasement of reaction in the form of sacrifice of those basic principles on which the people of America elected this administration.

Rather, our party will go to the people in 1946 and ask them to rid Congress of that type of would-be honeymooner who smiles and beams out of one side of his mouth but out of the other demands political and economic reaction as his price.

I believe the people of America recognize that kind of legislative blackmail for what it is. I believe they will show what they think of it when they go to the polls in 1946. I believe the Democratic Party will not only retain its majority, but will expand that majority in a Congress ready to go forward with America.

---

## On Feeding the Germans

EXTENSION OF REMARKS

OF

### HON. J. WILLIAM FULBRIGHT

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

*Tuesday, December 18 (legislative day of Monday, October 29), 1945*

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter under the heading "On Feeding the Germans."

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

ON FEEDING THE GERMANS

JOHN D. MCCUTCHEON & CO., INC.,
*St. Louis, Mo., December 5, 1945.*

LETTERS FROM THE PEOPLE,
*St. Louis Post-Dispatch, St. Louis, Mo.*

GENTLEMEN: The Germans have sown to the winds, and now that they are reaping the

whirlwinds, a great many honest and well-intentioned Americans, including Dorothy Thompson, persuade themselves that we should immediately send relief and food supplies to help get Germany back on its feet economically, even though the rest of Europe is not yet on its feet.

A few whirlwinds are not too great a price to pay, and, indeed, definitely entered into the calculations of a people bent on the establishment of the supremacy of the Herrenvolk and Deutschland uber Alles. Of course, they wanted to win the war, but their primary concern was that the war leave Germany stronger than before in relation to the rest of Europe. This accounts for their ruthless policy of extermination of intellectuals, teachers, scientists, and all groups from which leadership might develop.

After all, in these days of high industrial technology, any industrial nation can physically prepare for war in less than 10 years (it took Hitler from 1933 to 1939), but it takes a generation or two to prepare biologically.

It is not by accident that the Germans came to be the kind of people they are, but the result of a hundred years of biological selection of population, plus a long period of indoctrination. As a result of these two influences, the so-called good or peace-loving people in Germany have suffered a steady attrition in numbers and their percentage to the total population has been growing ever smaller.

During the period from 1840 to 1860, with the steady encroachment of Prussian militarism into the rest of Germany and the defeat of the liberal movement, the peace-loving people flocked out of the country to escape the warlike atmosphere and military conscription. Over 1,000,000 came to the United States alone in the 13-year period between 1847 and 1860. This migration of the good or peace-loving segment of the population has been going on ever since, so that the residue of people left in Germany were increasingly authoritarian and militarily aggressive. They were thus conditioned for the Herrenvolk and the fuehrer complex.

Five wars of aggression within a period of 75 pears have fanned the flames of extreme nationalism among this residue population to the point where there was no public conscience to oppose Hitler in the final liquidation of the remaining peace-loving elements in the population. It is not illogical, therefore, that today the Germans blame the Hitler regime for losing the war but not for planning and initiating the most horrible and barbaric total war in history. They have no sense of guilt over the liquidation of the peaceful elements of their own population by the hundreds of thousands; no moral revulsion over a diplomacy whose cardinal precept was duplicity and treaty-breaking; no horror over a well-considered, carefully planned national policy of race destruction of their neighbors; no mercy for the labor slaves they illegally impressed into a servitude worse than death; and no pity for the millions of Europe's children starved, dead of disease, or orphaned because of their aggression; only pity for themselves and their low state as losers of the war.

Good American citizens of German extraction do themselves a great disservice when they permit themselves to be identified with these residue dregs of a hundred years because of a nostalgic loyalty to a fatherland they would no longer recognize. Their families were the cream that rose to the top and left this land of brutish hatred and arrogance.

Most historians realize now that Germany was left much too strong in relation to the rest of Europe following World War I, and as of today the Germans have won World War II biologically. This is just as the German general staff planned it, and now if they whine loud and long enough, we are again to help them back on their feet as we did after World War I.

If we don't feed them we are told they might not like us, nor believe in democracy, and they might even ambush and murder some of the members of our army of occupation. Of course, the Greeks, the Yugoslavs, the Poles, and even the French, who are all in a much more pitiable state of undernourishment and disorganization, will starve and freeze, too, this winter, but we have no army of occupation in those countries and are not, therefore, responsible for maintaining order there. So disorder does not worry us too much. They can starve in private, but our Army sees the Germans if they starve.

The fundamental problem of Germany is that, occupying a central geographic position in Europe as she does, she is relatively too strong and too large populationwise. Their population has continued to grow in spite of an enormous emigration of people, because of a national policy since the time of Bismarck of special favors and state premiums on large families and more children. The state needed more cannon fodder. This policy reached its apogee when Hitler offered special premiums for universal illegitimacy. If I must support an illegitimate child, I at least want the parents to renounce illegitimacy as a policy.

They complain that our occupation policies offer them no hope, when the only worthwhile hope to a German is world dominance. It should be made plain to them in the only language they can understand or respect that there can be no hope for a Germany of eighty to ninety million people; but that if they will reverse their policy of state premiums on large families and more children, a population of forty to fifty million can live very comfortably and well in Germany.

First, we should feed our allies for whose misery the Germans are responsible—the Greeks, the Yugoslavs, the Poles, the French, the Belgians, the Dutch, the Czechoslovakians, the Norwegians, the Danes, the Russians, and the Chinese. Then, we should feed the indirect victims of German connivance—the Bulgarians, the Hungarians, the Rumanians, the Finns, and the Italians. After we have raised the nutritional standards of these countries to the minimum subsistence level, if we are then still in a giving mood, it would be a fine humanitarian thing to feed Germans, but let us prevent starvation in these other lands first.

Yours very truly.

## A General Failure

EXTENSION OF REMARKS
OF
### HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, December 18, 1945*

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein an editorial entitled "A General Failure," which appeared in the Lawrence Evening Tribune, Lawrence, Mass., Friday evening, December 14, 1945:

A GENERAL FAILURE

From the mounting testimony going into the record of the congressional Pearl Harbor investigation it is becoming more and more evident that no one in authority in the Government could fully conceive in the late fall of 1941 that the United States was in imminent danger of being attacked. There was a general failure, in the White House and on down, to take the true measure of the Japanese.

A message from the late President Roosevelt to the American High Commissioner in the Philippines on November 26, 1941, put before the committee, offers an illuminating commentary on the state of mind prevalent in Washington during those critical days. In it the President said that "the next Japanese aggression might cause an outbreak of hostilities between the United States and Japan." He observed also that while there were no clear indications of where the Japanese might strike, an "advance against Thailand seems most probable."

Other evidence adduced by the committee has shown that President Roosevelt was under no illusions about what would come if the Japanese continued on their aggressive course. Yet apparently, at the very moment when the negotiations at Washington had all but broken down, he thought that the next Japanese blow would be aimed not directly at this country but somewhere else. What he expected, apparently, was a Japanese move that might compel joint American-British-Dutch action, but not the daring one that was actually taken.

There were good grounds for this appraisal in Japan's previous step-by-step policy and also in the consideration that it would be a mistake for Japan to strike at this Nation—as it was. But the fact remains that the President, though he had the fullest information, underestimated the Japanese. No wonder many of the Nation's military men shared that error.

This does not excuse those who were responsible for defending Pearl Harbor. Their contention is that they did not get the facts they needed to take the right decisions—nor did they get all the information available to General MacArthur whose command was alerted. But they had enough warning to act properly if they had not been misled by the general atmosphere of Washington.

## The Immediate Problems of Asia

EXTENSION OF REMARKS
OF
### HON. KARL STEFAN
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, December 18, 1945*

Mr. STEFAN. Mr. Speaker, the other evening, in the United Nations Forum, more than 2,000 people sat enthralled in Constitution Hall, as they listened to an address by Brig. Gen. CARLOS P. ROMULO, Resident Commissioner of the Philippines to the United States, which under leave to extend my remarks today, it is my pleasure to insert in the RECORD. There is a message for every American in General ROMULO's speech, and I wish to second his appeal that action be taken now on the Philippine rehabilitation bill pending action of this House. I hope every man and woman in the United States will read what General ROMULO has to say on the Asiatic problems that now confront the world.

The address follows:

The immediate problems of Asia today are the immediate problems of the whole world. They are the urgent, dangerous problems of peace or war, progress or reaction, human happiness or human misery.

It seems difficult for many people in the western world to understand the ever-increasing importance of the Far East in world affairs. During the past 3 years, most of which I have spent in the United States, I

have witnessed the development of a subtle yet undeniable tug-of-war between those people who are Europe-minded and those who are Asia-minded.

INTER-RELATION OF EAST AND WEST

But actually there is no reason for this conflict in orientation. Asia and Europe—and America—share the same planet. Franklin Delano Roosevelt and Wendell Willkie gave their lives in the effort to make us realize that this is, indeed, one world. The atomic bomb punctuated their statements with an explosion that will be heard round the world for eons to come.

After all, the inter-relation of East and West is plain for all of us to see. The aggressions of the Axis began in 1931 when Japan raped Manchuria. They came to their peak with Hitler's aggressions in Europe. They swung back to the Pacific with the attack on Pearl Harbor and the Philippines. There is no real dividing line, no Sunday-Monday line in world affairs. We know now that if a full-scale war were to start on one continent it would rapidly spread to all continents and become World War III. And once again the Filipino tao, the Belgian factory worker, the African tribesman, and the American lecture-goer, would find themselves horribly involved. How many would survive? I do not know. Neither do the scientists who worked on the Manhattan project.

All over the world, there are certain present or potential local problems which are in reality world problems. In Asia, to my view, there are four such problems.

THE PROBLEM OF CHINA

The first of Asia's problems is China.

Let us try to stick to the simple facts as we discuss the problem of China. What are they, these simple facts? Foremost, I suppose, would be the very size of the country, both in area and in population. China is a huge land, and its population is so great that nobody knows exactly how many millions of Chinese there really are. In our own time, these hundreds of millions of human beings living in this vast land have suffered misery upon misery. Never have they known a strong, democratic, progressive government that could protect them, promote their welfare, improve their lot. Never have they been free from the specter of outside aggression, of periodic famine and suffering, of unceasing civil war. The people of China are impoverished, and for the most part illiterate. They cannot be blamed for these things. They have been the victims of their own situation—of their ancient history, of the richness of their land, of alien greed, of their own numbers.

In the past generation, China was reborn. In the spirit of Dr. Sun Yat-sen, the people regained their self-respect, their pride, their aspirations, their hope for a decent future. Through the 8 years of unceasing warfare with Japan, it was this spirit that kept the Chinese going. There were times when they seemed to be fighting alone, when they seemed to have lost the friendship or at least the support of the outside world, when the mountain trails that linked them with the rest of the world were blocked by the greedy forces of Japan. But China had been reborn, and she was spiritually strong enough to fight on. Through all time to come, the world must pay tribute to the courage of China.

INTERNAL DISSENSIONS IN CHINA

Part of the penalty of war making is the fact that nations must, as a matter of policy, delude themselves. We of the United Nations deluded ourselves into believing that the war and the ultimate victory might solve the problems of internal dissension in China—that a people who had gone through so much together might somehow be able to unite in the easier stresses of victory and peace.

We know now that this was a wartime illusion. China today is more clearly split than it has ever been.

The Kuomintang, the Nationalist Party of China, is the legal, recognized Government of China. Its leader is the President of China. Chiang Kai-shek has indeed stood for years as the symbol of a China that could never be defeated. His government has consistently fought the Japanese, and in the process it has been forced to relegate domestic problems to a secondary role. It has not yet faced up to the economic and social problems that plague the land. It has taken the first faltering steps toward democratization of China's political life. But it is moving very slowly—too slowly.

To the north in Yenan, are the Communists. They have adopted a program of land and tax reforms, and they, too, have waged war against the Japanese. But they are adherents of an authoritarian system of government which does not gibe with the freedoms which we of the democratic nations have come to take for granted.

These two factions must be brought together Perhaps that is an impossibility. Perhaps the differences are so great that they cannot be bridged Perhaps the moment of conciliation and compromise has passed. If that is true, then civil war in China will continue and expand, and it may in the end engulf us all.

We must make one last try.

GENERAL MARSHALL'S IMPORTANT MISSION

We must attempt to encourage the Kuomintang to carry out the sweeping reforms which will bring it halfway to the Communist position—and which will, more important still, benefit the people of China. For there is pressing need for land and tax reform in China, for an overhauling of the archaic social and economic system, for the program of universal education which alone can establish a literate, well-informed electorate.

We must, at the same time, attempt to encourage the Chinese Communists to meet the Kuomintang at least halfway. For there is also a pressing need in China for political democracy and personal freedom, and for a recognition of the rights of all classes in the society.

We must make the one, final effort to avert chaos in China. That is why General Marshall's mission to Chungking is in a sense as important as his wartime role of Chief of Staff. That is why every sensible person in the world hopes that he will be as successful an ambassador as he was a Chief of Staff.

On him—the representative in China of the most influential democracy—falls a great task. He will have the job of helping China to help herself, of helping China to become democratic, united, and strong. I mention the word "strong" last, for China's strength will inevitably follow if, she is both democratic and united.

THE PROBLEM OF JAPAN

The second immediate problem of Asia is Japan.

We have defeated her in war. We must consolidate our victory in peace.

In the Potsdam Declaration, the people of Japan were told how far the United Nations were prepared to go in the regeneration of their country. "There must be eliminated for all time," reads the Potsdam Declaration, "there must be eliminated for all time the authority and influence of those who have deceived and misled the people of Japan into embarking on world conquest, for we insist that a new order of peace, security, and justice will be impossible until irresponsible militarism is driven from the world."

I take these words to mean exactly what they say. Our purpose in Japan today is to make sure that she will never again break the peace. This means that Japan must never again be permitted military power. It also means that, whatever economic and political and social system emerges in Japan, she must never again be permitted to hold a high place in the realm of economic power.

Japan itself is a country poor in natural resources. Perhaps the greatest of these is the mountainous terrain, and the rushing streams fed by heavy rainfalls. Japan is an ideal country for the development of hydroelecric power; before the war the country was second only to the United States and Sweden in Nation-wide electrification. In this electronic age of atomic energy, this is a vitally important resource. It must be controlled sternly and intolerantly.

THE EVIL CONCEPTS REMAIN

But hydroelectric power is not Japan's most valuable resource. That resource is sheer manpower—not a few million farmers and a few million laborers, but 70,000,000 industrious, energetic men and women and little children, all of whom are trained to spend long hours at hard work for little pay. That is Japan's greatest strength today, and it must never be overlooked.

Indeed, the question of Japan is not much more than the question of keeping its manpower powerless. We do not want to starve the people of Japan as they starved their victims in the Philippines. We do not even want to cut Japan entirely away from participation in world trade as she cut away the lands unfortunate enough to have fallen for a time into the orbit of the so-called Greater East-Asia Coprosperity Sphere. But we certainly do not want to allow Japan to become strong again.

We must remember that in the Far East material destruction can never outweigh spiritual strength. Tokio may be rubble and Hiroshima a ghastly cavity. But the people remain, and they carry within their brains the evil concepts that have been taught to them for generations. They are not repentant. Today America's occupation forces hold sway in Japan. The fuse has been removed from the dynamite. But the dynamite is still there. It can still explode.

THE PROBLEM OF COLONIAL AREAS

The third immediate problem of Asia is the problem of the colonial areas.

All over colonial Asia there is unrest. In India, riots. In Indochina, a revolutionary government and the prospect of more fighting. In Indonesia, an all-out struggle between the Indonesians and the British and the Dutch. In Burma and Malaya, ill-concealed dissatisfaction.

Two nations are responsible for this tremendous upsurge of nationalist feeling. Two nations are responsible for the flame of revolt that has swept over southeast Asia. Two nations are responsible for the revolutionary realization that all human beings—no matter what the color of their skins—do have a right to control their own destiny. These two nations have been bitter enemies. One has stood for freedom, the other for slavery. One is the United States of America. The other is Japan.

With all her evil ambitions, with all her brutality and her arrogance, Japan unwittingly touched a spark of pride in many embittered, rebellious hearts in Southeast Asia. During the first 6 months of the war, when Japan's armies were sweeping almost unchecked—except on Bataan—southward over the colonial areas, a new realization came to these subjugated peoples. They understood, perhaps for the first time, that the white man was only human, that he was neither invincible nor infallible, that he did not rule by divine right but rather by the force of his arms, his wealth and his ability.

THE RESIDUE OF JAPAN'S INITIAL VICTORIES

When the Tokyo propagandists spoke, during the war, of "Asia for the Asiatics," they really meant "Asia for the Japanese." Their aim was to substitute their own brand of vicious imperialism for western colonialism. But the residue of their attempt is quite

different. By their early victories, by the implications of their propaganda, they have left in southeast Asia—not a pro-Japanese cancer—but the seeds of self-respecting nationalism, the kernel of desire for liberty and self-government.

Do not misunderstand me. I am not giving the Japanese credit for anything. I am merely saying that this development, which was never really intended by the Japanese, was an inevitable result of their early victories, their propaganda, and in fact of the very length of the Pacific War.

At the same time, the yeast of American influence has been rising steadily throughout colonial Asia. Perhaps most Americans do not realize how great an influence their own country has exerted in that part of the world. The simple truth is that the United States has opened the eyes of the peoples of Asia by her policies in the Philippines.

ADVENTURE IN COOPERATIVE STATESMANSHIP

Forty-five years ago the United States launched an experiment in colonialism without parallel in the history of the world. Her goal was not subjugation, not exploitation, but liberation. Rapidly, through the years, with American help, we of the Philippines learned the ways of self-government, of democracy, of national development, and of national pride. The Philippines became a breath-taking adventure in cooperative statesmanship. Literacy in the Philippines soared. Participation in government became universal. Trade prospered, industry and agriculture thrived, until our standard of living was the highest in the Orient. All over the Orient the people watched this new experiment with undisguised fascination. When war came they saw that we willingly and wholeheartedly resisted the Japanese—and they know that they themselves did not have so much to fight for as we Filipinos did.

America's policy in the Philippines lies behind the events in Indonesia, in Indochina, in Burma and Malaya, and India. And the question that now faces you in America is a simple one: "You say that freedom is good for you Americans. You say it is good for the Filipinos. Can you say that it is not good for the Indonesians, the Burmese, the Indochinese, and all the rest of us?" A billion pairs of eyes look to the United States for the answer to this question that your own policy has encouraged them to ask.

AMERICAN PATTERN IS SOLUTION

For myself, I believe that the solution to the problem of colonial Asia today is a solution involving all of the United Nations, but along American lines. It may be that some of these rebellious peoples are not yet fully prepared for immediate independence. If that is the case, it is because the powers controlling their homelands have not assisted them in the way that America assisted the Filipinos. It is because they have not afforded these people access to that prime requisite of democratic self-government, universal and free education. It is because they have not raised the level of public health. It is because they have not permitted these people to take part in the trade and industry of their own homelands. It is because they have not consistently increased the local participation in local government.

UNITED NATIONS GUARDIANSHIP

In all honesty, I do not believe that the colonial powers of Europe can be expected to remold their policies along American lines. There is no evidence that they have any such intention. It is, on the other hand, quite possible that by force of arms they may—for a time—put down the insurrections that have broken out in colonial Asia. But those insurrections will thunder again and again. During the 350 years of Spanish rule in the Philippines, my own people averaged one revolt every 2 years. Not until the end of the last century did we begin to succeed against Spain, at the very moment when Dewey was sailing into Manila Bay.

Last spring, in San Francisco, there was intense interest in the trusteeship provisions that were finally written into the Charter of the United Nations. Those provisions express the civilized world's intention that subject peoples shall be encouraged toward ever greater self-government and ultimate independence.

For those peoples of colonial Asia who are not fully prepared for immediate independence, the time has come to carry out the intentions of the United Nations. Let these peoples be placed under the generous guardianship of the United Nations Organization. Let the conscience of the world take responsibility for their education, their economic development, their political development. Let a definite date be set for their assumption of full sovereignty, their unconditional membership in the family of free nations. And let the promise be kept.

THE PROBLEM OF PHILIPPINES REHABILITATION

The fourth immediate problem of Asia is the problem of Philippine rehabilitation.

I shall not retell the story of the Philippine war record. The simple fact is that the American flag was flying over our islands when Japan attacked in December 1941. Of our own free will, our people rose in defense of our country and of your flag. Americans and Filipinos fought side by side, and for months the Japanese timetable of conquest was heroically delayed. Even when the Japanese were in nominal control of the Philippines, the underground and the wide-sweeping guerrilla forces of the Philippines carried on the fight. Throughout the war, there were spots in the Philippines which remained free soil. The story of the Filipino guerrilla has been recounted often. But it has not yet been fully told. When it is, the world will thrill with pride at a moral courage that belongs, not only to the Filipino people, but to all mankind.

Elsewhere in Asia, all of the other brown peoples were watching to see what would happen to their kinfolk in the Philippines They were anxious to know what would be the reward of the Filipinos—whether we would be cast off as stepchildren once the need for us was ended, or whether we would receive the assistance we need in order to rebuild our ravaged land, whether America would keep her plighted word contained in the pledge of President Roosevelt: "I give to the people of the Philippines my solemn pledge that their freedom will be redeemed and their independence established and protected." To us, liberation has meant utter destruction. Manila is no more. Our country is in ruins. We have suffered more devastation, perhaps, than any other United Nation in the world.

AMERICAN PRESTIGE INVOLVED

American prestige throughout Asia is involved in Philippine rehabilitation. We need American help, in the form of understanding and patience, in the form of technical advice and assistance, in the form of trade and commerce, in the form of compensation for the war damages suffered by our people under your sovereignty, in the form of physical relief and physical reconstruction. Last month, our President, Sergio Osmeña, was here in Washington to discuss the problems of mutual help between the Philippines and the United States during this postwar period of rebuilding and rehabilitating. There are before the Congress of the United States two bills covering this matter. I hope they will be acted upon immediately. Not only is our own future bound up in these bills, but also the very prestige of the United States and perhaps the very peace of the Orient and of the world.

These, then, are the four great problems of Asia—China, Japan, colonial Asia, and Philippine rehabilitation. They have in common something more than their geographical locality.

AMERICA'S NEW STATUS AS WORLD LEADER

In every single case, the strength, the moral power, the prestige, and the safety of the United States is deeply involved. The future of China hangs upon the actions of your new Ambassador. The future of defeated Japan depends upon the policy of the commander of your occupation forces. The future of colonial Asia is bound up with your national conscience. The future of the Philippines hinges on the fulfillment of the commitments you made to us before and during the war.

It is not for me to tell you what American foreign policy should be. I have only the right to tell you what your involvement is in the part of the world with which I am personally familiar.

I can say to you now that your new status as a world leader has thrust upon you responsibilities which you cannot shirk. Even if you had no policy, that in itself would be a policy, and it would have very definite and predictable consequences.

For myself, I have known my brother Americans too long to have any doubts about where the United States will stand in dealing with these problems. You will do your best to make China democratic, united and strong. You will do your best to prevent Japan from ever again disturbing the peace. You will do your best to help the cause of freedom in colonial Asia. You will do your best to fulfill your responsibilities in the Philippines.

More than that, no man anywhere has a right to ask of you.

---

## Congress Beware

EXTENSION OF *REMARKS*

OF

## HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, December 18, 1945*

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein an editorial which appeared in the Lawrence Evening Tribune, Lawrence, Mass., on Saturday, December 15, 1945:

CONGRESS BEWARE

The proposed merger of all the armed forces of the United States into one War Department is too drastic and revolutionary to be passed upon impulsively or with undue haste.

The Congress of the United States might best serve all interests by setting aside this important and highly controversial proposal at least until such time as they officially terminate the war just won.

The heat of war has not yet subsided, our men in all branches of the armed services are not yet all back from the scenes of their triumphs, and the Nation is facing postwar and economic problems that are far more pressing than that of the proposed merger. Rushing such a merger as that proposed into reality could have serious and far-reaching consequences that might be avoided by giving it the careful consideration that it demands at a time when there are less diverting influences than just now.

The Army, the Navy, the Air Corps, the Marine Corps, the Coast Guard, and any other agencies or branches of the armed forces that might be affected have too much at stake, as well as the Nation itself, to

allow any wave of hysteria to prevail and rush such a potentially dangerous merger into being without the most complete study and consideration and the coolest deliberation and final action.

Hearings upon this proposed merger now being held are greatly overshadowed and cast into the background because of the more sensational hearings in connection with the Pearl Harbor investigation. The most brilliant leaders of all branches of the armed forces are expressing themselves in the interest of national security. It is true, however, that many of those heroic leaders have hardly had time to rest their weary brains and tired bodies from the ravages of war when called upon to express their convictions and beliefs relative to the better plan for national security in the future.

The outstanding World War II heroes are magnanimous in their reviewals of the greatest military activity and strategy of all time. All seem to agree that no one branch of the armed forces could rightfully claim a preponderance of credit for victory. It is generally agreed that more than ever before the ultimate success was due more to the cooperation of forces than anything else. There were some mistakes and they, as well as the brilliant successes, must be taken into consideration in shaping any changes in national security policy and operations.

The records and traditions of all branches of service should be carefully weighed before any definite action is taken. The brilliant men who guide the policies of the Army, Navy, Air Corps, Marine Corps, and Coast Guard must not ruthlessly be cast into a common military leadership pool. Any reorganization of the world's victorious and most powerful war machine should be done slowly and surely. Let things cool off a bit, allow the men who know to get rested and refreshed, hear the whole story calmly and without hysteria, and then the best plan for future national security will result.

The Members of Congress must not allow themselves to be stampeded into taking action that could result in a concentration of military authority into a dangerous dictatorship. There is no imperative rush to this proposed change in a most vital agency of our democratic government. Other matters of greater immediate importance need not be neglected by the Congress to give attention to the merger proposal.

The rushing through of such a major and drastic program is definitely not in keeping with the highest principles of democracy.

## British Loan Proposal Is Unbusinesslike

EXTENSION OF REMARKS

OF

### HON JAMES I. DOLLIVER

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, December 18, 1945*

Mr. DOLLIVER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial of December 7, 1945, from the Houston (Tex.) Chronicle. Jesse H. Jones is the president of the company publishing this daily paper of the great Lone Star State. The editorial sets forth a viewpoint on the British loan proposal which is informative and practical. It follows:

BRITISH LOAN PROPOSAL IS UNBUSINESSLIKE

United States negotiators have proposed that we make a loan to the United Kingdom of $3,750,000,000, to be repaid in 50 annual installments from 5 to 55 years, largely at the convenience of the British. No interest is to be charged on the loan for 5 years, and thereafter the rate will be 2 percent per annum. Allowing 5 years interest free, the average interest rate on the loan will be 1.62 percent, assuming that the interest will be paid continuously after 5 years. There is, however, a provision in the loan agreement that no interest will be charged in any year where the United Kingdom has an unfavorable international exchange position. If this should happen every year, we would get no interest whatsoever. If it happened in one-half of the years our average interest rate would amount to less than 1 percent.

During the past few years the United States Treasury has been borrowing money from its citizens at an average interest rate of 1.92 percent, so that on the interest alone, assuming that we make the loan and that the British pay it, and pay the interest in full, we will have a very substantial loss in the difference between the interest we collect from the British and the interest we pay our own citizens for the borrowed money.

In addition to the loan of $3,750,000,000, the terms and conditions of which bear little, if any, relationship to business principles, our negotiators have agreed to accept Britain's notes for $650,000,000 in full settlement of our unpaid $25,000,000,000 lend-lease account and all our investments, materials, and surpluses in England. Obviously this is tantamount to a gift.

In consideration of our making this very large loan at a great sacrifice to our own taxpayers, the British agree that—manana—within 1 year after the loan has been ratified by our Congress and approved by the British Parliament they will eliminate the dollar pool which they now control, thereby enabling countries of the British Empire to use their current dollar receipts without restriction. In other words, if Australia or India, or some other member of the Empire, should sell us something and get dollars for it, such country could then use the dollars any way it wished. With the dollar pool in effect such countries can only use those dollars at the pleasure of Britain. They must give Britain the dollars and accept sterling.

There is nothing in the agreement to indicate that the United States will receive anything in the nature of foreign bases, raw materials, communications, or other concessions.

In connection with the loan agreement Secretary of State Byrnes has issued a beautifully written white paper containing many laudable and desirable aspirations with respect to world trade. While recognition of this white paper is made by the British, they are not signatories to it. They agree to undertake to help us work out world-wide multilateral agreements governing such things as tariffs, cartels, qoutas, and production, to be administered by an international trade organization. But these are only promises to "try" to help work out agreements with the other 48 countries of the United Nations. Bluntly stated, the British will only cooperate in working out world trade agreements if we lend them $3,750,000,000 and settle our lend-lease account, and give them title to our hundreds of millions of investments and materials in Britain on a 55-year note. If it costs this much to get the cooperation of Britain in world trade, what will it cost to get the cooperation of the other 48 countries of the United Nations?

If we must continue to help the British temporarily, let's do it by selling them our agricultural products—cotton, grain, meat, tobacco, etc.—on easy credit until the world gets more settled, and we can see our own way a little better, and let's see what we are to get in return. Fifty-five years is much too long.

## Disposition of Surplus Property

REMARKS

OF

### HON. LYNDON B. JOHNSON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, December 18, 1945*

Mr. LYNDON B. JOHNSON. Mr. Speaker, on November 26 I introduced a bill to amend the Surplus Property Act of 1944—H. R. 4793. Its sole purpose was to give to veterans an undiluted priority on surplus commodities that they want to purchase.

My remarks on the floor of the House in connection with this legislation called attention to the fact that time was of the essence. Delay will nullify our pledge to our fighting men that they shall have a real and not a fictional right to purchase surplus war materials. Mr. Stuart Symington, the Surplus Property Administrator, in testifying Wednesday before the Surplus Property Subcommittee of the Senate Committee on Military Affairs, endorsed this legislation.

H. R. 4793 is not revolutionary legislation. It is not even a comprehensive overhauling of the Surplus Property Act. It simply proposed to eradicate an obvious error in law. Rectification of that error cannot wait. A democracy to be effective must be responsive to the will of the people—not yesterday or tomorrow, but today. I respectfully urge your help today.

Mr. Symington's statement, in part, follows:

Are there any changes that could be made in the provisions of section 16 that would help get goods into the hands of the veterans? Two changes have been suggested.

As we have pointed out, under the present statute the veterans' preference is subordinate to the priority claims of Federal agencies, and State and local governments. It has been suggested that the veterans should be given a priority that comes ahead of all claims except those of Federal agencies. Representative LYNDON JOHNSON has introduced a bill to make this change.

In the case of property which will always be in short supply and for which there will be large demands by both veterans and the present priority claimants—for example, trucks, jeeps, and passenger cars—this change would help the veterans. For that reason we favor it. It should be understood, however, that this change would not solve the most important problem—that of outlets. An A-1 priority will help the veteran but it will still leave him with the basic problem of finding the kind of property he wants, in usable condition, and in a location where he can inspect before buying. If this change is made in the statute, therefore, it should be recognized that most of the present problems will still remain to vex us.

The present statute also restricts the veteran's right in another way. The veteran can buy only to establish and maintain his own small business, agricultural, or professional enterprise. We have construed this provision liberally. We have held that a veteran can buy property to use in this business or profession even though he is employed by others, provided, of course, that the property is of a kind that the veteran might reasonably be expected to furnish when he is employed by others. Even so, the veteran cannot buy for his personal use. He can buy office furniture, but not dining-room

furniture. He can buy a car if he is a salesman, but he cannot buy one merely for his personal use.

There does not seem to be a great deal of sense in this distinction. Representative LYNDON JOHNSON'S bill would abolish the distinction and let the veteran buy for his own use. We are in favor of this change provided, of course, it is understood that the Surplus Property Administration must have some authority to limit the amount of property any one veteran can buy. This is necessary because of the limited amounts of some kinds of property that will be available. Here again, however, it should be understood that this change in the statute will not solve our basic problem of getting goods into the hands of the veterans.

In conclusion we should remember this: All of us agree that the veteran should have a preference. But goods are not distributed by statements of principle or by statutes no matter in what detail or with what precision they are drawn. The problem of distribution is a problem of administration and operation. In our private economy goods are distributed through an elaborate and intricate series of relationships—relationships that are the result of years of experience and that involve the services of millions of people. The system of private distribution is not so arranged that it can easily give a priority or a preference to one group of ultimate buyers as against another. In the intermediate stages of distribution it is true there are different prices to different levels of trade—but these practices are not designed to give one group of ultimate consumers a preference against another. By our new wholesalers' plan we are trying to make use of these recognized differences in levels of trade. Whether we shall succeed remains to be seen.

If the new wholesalers' plan is not successful, then in our judgment there will be only one way left for the Government to attempt to carry out section 16; it will have to try to distribute property directly to millions of veterans on a Nation-wide basis. To do this the Government must undertake to duplicate in a small way the private distribution system which as we have said, is the result of years of experience and involves the services of millions of people.

It is not surprising that our attempts so far to deal with this problem have not been successful. We must try to solve it—but the public interest will be served if all of us admit the difficulties, so that neither people generally nor the veterans in particular, will believe that the task is easy or that our failures have been intentional.

## Guam Soldiers Need Additional Food

REMARKS
OF
### HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, December 18, 1945*

Mr. GAVIN. Mr. Speaker, evidently our boys on the island of Guam are not getting enough to eat, according to recent letters received; and I would suggest that both the Chief of Naval Operations and the War Department investigate the situation and see that these boys are well fed.

It is bad enough that they should be isolated on the island of Guam. Certainly, there is no reason why they should not be fed a good and a sufficient amount of food—all they can eat.

One of the letters, signed "The Forgotten Men," is as follows:

If possible I would ask you to take pity on we poor enlisted men who are stuck in the One Hundred and Thirty-fourth C. B. on Guam and find out why they are torturing us with such lousy chow for the last 4 weeks. I wish somebody would find out what chow the officials are using up and why the enlisted man isn't entitled to the same portion. They have a bunch of kids on the chow line with instructions not to give us an extra helping if we ask for it. I walk away from chow every day hungry.

You probably saw in the movies and in the different literature that the Navy puts out about the wonderful Navy chow. There is no evidence of it in the One Hundred and Thirty-fourth C. B. on Guam. I can't understand why, now that the war is over, the Navy is giving us such bad treatment during our last remaining days in the service.

Another letter was forwarded to me by the parents of a boy on Guam, and I quote excerpts from it:

I got in the chow line tonight at 5:30 and it was 7:30 before I got into the chow hall. So you can see there are a lot of men here. Of course, this is a receiving station, but there are still more men over here than they know what do do with. They are trying to find a place to put us now, and they can't do it. I was talking to a kid today who just left the States and he said they went to Pearl Harbor, Okinawa, and Japan, and no one would take them, so they came here to Guam and are now waiting for some place to go.

Evidently something has gone wrong at Guam. They either have too many men on the island and not sufficient food or somebody is getting careless about the situation in not seeing that these boys are given the proper amount of food.

We certainly get ourselves worked up and concerned about feeding the rest of the world and appropriate millions and millions of dollars. Therefore, I can see no reason in the world why we should not be looking after our own boys in the South Pacific and seeing that they are well fed.

## A Plea for Action on Philippine Island Rehabilitation Bill

EXTENSION OF REMARKS
OF
### HON. CARLOS P. ROMULO
RESIDENT COMMISSIONER FROM THE PHILIPPINE ISLANDS
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, December 18, 1945*

Mr. ROMULO. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to call the attention of the House to the fact that some time ago the Senate unanimously passed the Philippine rehabilitation bill, which appropriates funds for compensation of Philippine war damages, and for restoration of public works destroyed by the war. The bill also provides for the transfer to the Philippine Government of surplus properties now in the islands, and for the training of a number of Filipinos in various technical fields.

This bill has not yet been voted on by the House of Representatives. Every day I receive frantic messages from Manila, asking about its status. For the truth is that we cannot begin to rebuild and rehabilitate in the Philippines unless this help is given to us.

I am, therefore, presuming to appeal to the Members of the House of Representatives, and to the American people, for speedy action on this legislation.

By now every Congressman must know the basic facts behind this legislation. Compensation for war damages suffered in the Philippines is not a matter of a gift from the United States but rather a matter of simple justice to those who suffered because the Japanese attacked our country when it was under American sovereignty.

The surplus war materials which would be transferred to us are in the Philippines now. They cannot be used by the American forces, for they no longer have any need for these materials. They cannot be shipped back to the United States right away because of the expense and because all available shipping space must be used to bring high-point troops home for discharge. They are in the Philippines now, and day after day, in our tropical climate, these materials are rusting, spoiling, or rotting. They could aid immeasurably in the rehabilitation of the Philippines.

Eighteen million Filipinos look to the United States for the immediate help that was promised to them during the war and since the war. Unless this legislation is adopted, we will not be able to start our program of reconstruction. Unless it adopted quickly, thousands will suffer and even die, while delay after delay stifles the help that everyone agrees we should receive.

I do not believe that, after the war record we have written with our blood and tears, we need argue the justice of our case. We know that the United States has every intention of accepting its responsibility to the Filipino people. Already, the Senate has voiced half of the will of the United States. Now it is up to the House of Representatives. I cannot believe that trifling reasons will postpone the full expression of America's conscience.

We ask that the Members of the House act now to fulfill America's commitment, prevent further human suffering, and start the Philippines along the road of reconstruction. A single month, even a single week, of further unnecessary delay will cause untold havoc in our precarious economy.

We are not alone in this plea. The Washington Post yesterday morning published the following editorial:

RESUSCITATION

Recently we urged Congress to make a more generous settlement of war damage claims in the Philippine Islands than is provided in the Tydings bill That measure authorizes the expenditure of $450,000,000 to aid the Filipinos in getting back on their feet. War damage in the islands is estimated at $800,000,000. Since the Philippines are still part of the United States and their people fought valiantly to expel the Japanese foe, we can see no reason why full restoration should not be made, except to collaborators, with the proviso that the funds be reinvested in Philippine enterprise.

We recognize, however, that speed in getting this work of rehabilitation under way may be even more important at this time than the specific amount of the claims recognized. The Senate passed the Tydings rehabilitation bill on December 5 by unanimous consent. Unless the House acts before the beginning of the congressional recess this week the year in which the war ended will pass without anything tangible being done toward Philippine rehabilitation. That would be a tragic set-back for American policy in the islands. Consequently, we urge the Insular Affairs Committee and the House itself to speed the enactment of this humanitarian measure before the Christmas holiday.

In part, this proposed aid to the Filipinos represents turning over to them surplus war materials which cannot be returned to this country without heavy expense. A large part of the cash outlay will be covered by the $220,000,000 collected by the Government in war-damage insurance premiums. It is quite reasonable that the insurance fund be used for this purpose, since most of the war-damage in American territory was sustained in the islands. Senator TYDINGS pointed out, moreover, that General MacArthur ordered the Filipinos to destroy their bridges, machinery, and other property in order to cripple the Japs while the war was on. Certainly we have a clear obligation to make good these losses.

Senator TAFT expressed confidence that "throughout the Far East we shall receive from our contribution, because of our accomplishment in finishing the great job we have done in the Philippine Islands, a credit which will amount to far more than any money which we are called upon to spend under this bill." Part of that credit will be lost, however, if the House haggles over the bill or permits it to drag over into next year. The war is over; the work of reconstruction ought to be under way. Don't let it be said that we have weakened the faith and determination of the Filipino people and their neighbors by either indecision or inaction at the right moment. The Filipinos have years of hard reconstruction work ahead of them and only 6 months to go before their independence will come into effect. For their sake and our own, we ought to crowd into each of those 6 months a maximum of cooperative effort.

Mr. Speaker, the American organs of public opinion have expressed themselves vigorously in favor of quick action on the Philippine legislation now pending before us. Two American newspapers, one the Oregonian, representing the viewpoint of the Pacific coast, and another the Rochester Times-Union, voicing the opinion of the east coast, published as their leading editorials a few days ago the following articles:

[From the Oregonian, of Portland, Oreg., of December 7, 1945]

OUR DEBT TO THE FILIPINOS

There is one debt which the people of the United States will pay gladly and gratefully, and that is a bill for war damages to the Philippines. The Senate has passed and sent to the House a measure authorizing $450,000,000 for that purpose. The Senate's Territories Committee scarcely needed an eloquent appeal from Gen. CARLOS P. ROMULO, Filipino war hero and Resident Commissioner, to increase the original figure of $100,000,000.

Money will never repay our obligation to the Filipino people, who were our wards and whom we left defenseless to suffer the brutal occupation of the Japanese. Our brave allies never lost faith in the United States, nor we in them. In battle beside American soldiers on Bataan, in guerrilla bands raiding from the hills, by assistance and protection of American prisoners of the Japs, and by the intelligence they provided to prepare for the return of General MacArthur, the Filipinos have forged unbreakable bonds between their nation and ours.

With our help the Philippine Commonwealth will restore its economy and become one of the great small nations of the world. In the world history of empires, colonies, and protectorates, the relations of the United States and the Philippines stand out as a beacon.

---

[From the Rochester (N. Y.) Times-Union of December 11, 1945]

LIBERATING PHILIPPINES IS ONLY HALF OUR DUTY

The lecture visit of Brig. Gen. CARLOS P. ROMULO, Resident Commissioner of the Philippines, reminds us of how often the course of history has been changed by inaction. A case could be made out that neglect, indifference, and unconcern have changed relations between peoples more profoundly than more dramatic actions.

There should be no indifference or unconcern about the Philippines. Nowhere under the American flag at any time have all the horrors of war been written in the people's blood as in the Philippines. Their men fought at our side, their women and children were bayoneted, their cities ravaged.

Okinawa was bad. But if the Filipinos had not been the loyal people that they are, the Okinawa campaign, so costly in American lives, would have been repeated 10 times over.

So next July 4 the Philippines will be free, not as a reward, but as the logical culmination of a long-time policy.

That by no means ends our responsibility. The independent Philippines will still occupy as close a relation to the United States as any State in the Union.

Under the joint resolution of June 29, 1944, the United States will construct and maintain in the Philippines great sea and air bases which will push the spearhead of our defense 5,000 miles west.

These bases limit the independence of the Philippines in foreign policy and in the power to declare war or even to remain neutral. And they impose on us the duty of keeping our bases operating in an economically strong and loyal area.

Two island measures are before Congress. A Senate bill proposes payment of about a half billion in claims for war damage. Actual war damage is believed to be about twice that total. Except for claims of collaborators the total bill should be paid.

A House bill is open to dispute. It recognizes that the Filipino's standard of living is the highest in the Orient because of American tariffs. It seeks to soften the jar of independence upon Philippine economy by gradually imposing our tariffs after 8 years of free trade.

We do not believe that Congress can say that 8 years from July 4, 1946 or at any other given time, the Philippines can stand alone against the competition of the whole Orient.

Their special position in our defense scheme suggests an integrated economy, too, with free trade between us indefinitely. Meanwhile close economic cooperation should develop a division of labor between us so that products of each would supplement the other, rather than compete.

That will not be easy, for the dairy farmer doesn't want the competition of coconut oil and the beet sugar farmer doesn't want duty-free cane sugar competition.

But there are tropical staples needed here which the Philippines can produce. Patient development of complementary rather than competing trade is the only way we can fulfill our obligation and protect our bases.

## Only White Woman Taken Prisoner on American Soil During World War II

EXTENSION OF REMARKS
OF
## HON. WILLIAM R. THOM
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, December 18, 1945*

Mr. THOM. Mr. Speaker, under leave to extend my remarks, I am inserting the following press release from the United States Department of the Interior:

Mrs. Etta Jones, the only white woman to be taken prisoner on American soil during World War II, has received from Secretary of the Interior Harold L. Ickes a check for $7,374.21, representing back salary as Indian Office teacher on the island of Attu, where she and her late husband, C. Foster Jones, were captured in 1942 when the Japs seized that Aleutian outpost.

Included in Mrs. Jones' check was a salary increase which was awarded her last year upon the recommendation of the Interior Suggestions Committee when she and Mr. Jones won the Award of Excellence in absentia for outstanding valor in the face of danger. From the day that Attu was captured, their fate was never known until Mrs. Jones was found alive and well last August at Totsuka, a village near Yokohama, when General MacArthur's forces roared through after the Japanese surrender.

Mrs. Jones, now at the end of her 3½ years of wanderings as a prisoner of war, including many harrowing experiences during the few hectic days following the capture of Attu, confirmed to Secretary Ickes that her husband lost his life at the hands of his captors, although the details were never vouchsafed to her.

In her story to the Secretary and to other associates of the Department of the Interior she emphatically corrected an earlier hearsay account to the effect that her husband had trained a small band of Attu natives to resist the Japanese landing. "Of my own personal knowledge," she said, "there was never any resistance of any kind. There was nothing to resist with. My husband and one native had a shotgun apiece for game shooting, but I know that neither of them ever fired a shot at the Japs."

While Mrs. Jones' memory as to dates during her long and complete isolation from the outside world is frequently somewhat hazy, the details on the capture of Attu are indelibly stamped in her mind.

"When a Jap ship was sighted in the outer harbor on that Sunday morning, June 7, 1942," she narrated, "we were not in the least disturbed. We had been warned some weeks previously by the Navy at Dutch Harbor that Attu was a danger spot and were told to be ready for an American naval vessel to pick us up for evacuation. Naturally, everybody thought that what we saw was the long-awaited American ship.

"Pretty soon, however," she continued, "some native fishermen came in and said they had seen a lot of little ships surrounding the big ship. These, we learned later, were landing barges and had not been visible at first. Also about the same time, some natives spotted a reconnaissance plane with red circles under its wings. Then we began to suspect that something was amiss, but still we had nothing definite that invasion was near.

"About 11 o'clock we suddenly saw Jap soldiers swarming down the mountainside coming from all directions, shooting wildly as they ran. In a twinkling they were upon

us. Some shots rang through the windows of our little house, shattering the window panes. One or two natives were wounded, but there was absolutely no resistance.

"My husband at the time was at the radio sending the weather report to Dutch Harbor, as was his daily habit as operator of the radio weather station. I rushed to him and cried:

"'The Japs are here!'

"He repeated that cryptic remark on the radio, but we never knew whether it was received, since weather conditions were bad for sending radio messages and he was broadcasting the weather report 'blind.'

"A moment later a young Jap officer entered our house, just as I was going out to give myself up. The first thing he did was storm to the radio and put it out of commission. Then he shouted to both my husband and me:

"'Come outside, and bring nothing with you!' I did manage to pick up my glasses on the way out.

"After a complete search of our house, as well as those of the natives, we were all herded into the schoolhouse for a talk by the commanding officer. The officer gave quite a suave talk about their having 'come to release the Aleuts from American tyranny' and that they would be allowed to carry on their 'normal life'—provided—and this was repeatedly emphasized—that they obeyed orders. The Japs started right in teaching us how to bow low three times each time we met an officer.

"Late that first day the Aleut natives were allowed to return to their homes, which they found stripped of everything valuable. But my husband and I were not permitted to return to our house. We were told to go to an empty house, because, ours being the best house on the island, the Jap officers wanted it for themselves.

"I was permitted to have my own bed, but was forced to carry it myself. My husband was cuffed to one side when he tried to carry it for me. As I was lugging it along in the dark a Jap guard constantly prodded me in the back with the butt of his rifle. Once I fell down in the slippery mud (it had been raining), and then the guard kicked me in the stomach until I thought I would faint. During that trip I saw them knock my husband down three times—for no reason at all.

"That night my husband and I spent together in this barren house, with no lights or other comforts. Neither of us mentioned to the other about how we had been treated. It was simply a subject that we didn't talk about.

"Next morning the commanding officer sent for my husband to come to headquarters. I never saw him alive again. From then on my temporary abode was strictly guarded every minute, and the natives had been instructed not to talk to me.

"A day or two later, however, some of them managed to get near enough to me to whisper:

"'We buried Mr. Jones near the church.'

"I whispered:

"'Did you have a box?'

"'No,' they whispered, 'we were not allowed to have a box.'

"Each day thereafter, as was his daily custom, my Jap guard would say:

"'Your husband is well. He sends his love. We've got him where it's warmer.'"

One week later—on June 14—Mrs. Jones, still not having been told by the Japs the true fate of her husband, was taken away to Japan on a Jap ship, which evidently had been converted to war service from a tourist vessel. Mrs. Jones, in contrast with the brutal treatment on Attu, was given every consideration, even to having a well-appointed cabin to herself.

During the first few months of her captivity she was lodged at the Bund Hotel in Yokohama, and thereafter at a yacht club until she was transferred about a year ago to Totsuka.

She had been evacuated from Yokohama, she said, because the Japs had correctly suspected that Yokohama would be bombed.

During her whole time as a prisoner, Mrs. Jones said, she was never once permitted to write or receive any private messages of any sort. She and the others interned with her were never even allowed to have a radio. They were permitted to buy the Nippon Times, an English-language newspaper published in Tokyo. Naturally, all the news they got was to the effect that Japan was winning the war on all fronts.

"When the Americans retook the Philippines," said Mrs. Jones, "the Nippon Times saved face by saying the Japs had retreated from the Philippines, since they no longer had any strategic importance. Our capture of Okinawa was given similar news treatment."

Mrs. Jones and her fellow-internees used to spend considerable time at night trying to count the number of American bombers over Tokyo, where the huge incendiary fires were plainly visible.

"In the morning," she continued, "when we would ask the guards what that was lighting up the Tokyo sky last night, they would invariably reply:

"'Oh, that was American planes burning after being shot down by Japanese antiaircraft guns."

"We would just smile. Of course, we knew better."

In spite of being constantly fed with Jap-victory propaganda, Mrs. Jones said she never had a moment's despair over the final outcome or of her eventual rescue. Only at Attu did she ever suffer any brutality or indignity at the hands of her captors.

## National Service Insurance Benefits

REMARKS

OF

### HON. BEN F. JENSEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, December 18, 1945*

Mr. JENSEN. Mr. Speaker, almost all servicemen are concerned these days about their national service insurance. A number of plans have been proposed to correct the present situation in regard to the national service insurance benefits. I understand a subcommittee of the House Committee on World War Veterans' Legislation is now making a study of this problem. I have here a statement submitted to me by a man who is in close touch with servicemen of this war. He recommends a number of changes in the national service benefits. For the benefit of the Congress and particularly the committee now studying the problem, I include this statement, together with the accompanying table:

PROPOSED CHANGES IN THE PAYMENT OF NATIONAL SERVICE INSURANCE BENEFITS

Question. Should the provisions of national service insurance, which now provides for the payment of benefits on a monthly installment basis only be changed?

Reason for suggested change: A change permitting the insured to elect whether benefits under his policy are to be paid out to his beneficiary in installments or in a lump sum should be immediately made.

To understand fully the reason for this let us look at the original motive which caused the present provision for the payment of benefits in monthly installments only to be put in force. During the First World War Government insurance provided for payment to beneficiaries in a lump sum only. It was later found that in all too many cases, where benefits were so paid, the money was either squandered or lost through unwise investment in a short period of time thus defeating the basic purpose of the Government in providing such insurance. Therefore, in order to protect the veteran's dependents and to assure them of assistance over a long period of time the present plan was set up whereby benefits are paid only in monthly installments.

During the war this was a wise and sound policy. The sale of national service insurance was universal throughout the armed forces. Virtually every man carried the full $10,000 maximum policy allowed him. The average serviceman was pleased and satisfied with the arrangement for he knew that if he was killed his widow would receive a monthly pension—entirely separate from his insurance—of $50 per month with additional allowances for his children, and this amount plus the monthly benefits from his $10,000 insurance policy would help materially to provide a permanent livelihood for his family. At that time he had no worry over his death causing an immediate expense of doctor's bills, hospital bills, and funeral expenses.

Now the situation is entirely changed. In the first place no pension is now provided for widows of war veterans who die of non-service-connected causes. Her immediate needs for ready cash with which to pay bills and funeral expenses can only be met from whatever cash—if any—and old-line insurance her husband leaves her. Her national service insurance is of no value here. From it she can expect only small monthly payments depending in amount on her age at the death of her husband and the size of the policy he was financially able to keep in force.

Obviously, even if the husband was able to keep the full $10,000 policy in force and to pay the premiums upon it the benefits his wife would receive from it would not support her or even come close to it. If his income prevented his carrying the full amount of insurance and he was forced to reduce the amount to less than $5,000 (as most veterans will have to), the monthly payments his widow would receive would be a mere pittance.

In other words, the situation that exists now and the one which existed during the war are entirely different in these respects:

1. During the war nearly every serviceman carried the full $10,000 policy and was in a financial position to do so. After conversion, with the higher premiums involved, a majority of veterans will be able to pay for only $2,000 or $3,000 policies.

2. During the war benefits were supplemented by pension payments which together would provide the serviceman's family with the bare necessities of life. There is now no such pension provision.

3. During the war the death of the serviceman did not create additional expense for his family to pay.

It is clearly apparent that the function the veteran's insurance is now called upon to perform is entirely different than it was during the war. In the first place, the average GI cannot carry more than $2,000 or $3,000 of this insurance. He needs every penny of this protection and would like to get it from National Service Insurance, but he needs to have it payable immediately upon

his death, in a lump sum, so that the bills accumulated while he was unable to work—the doctor bills, the hospital bills, and his funeral expenses—can be paid. Perhaps, if there is anything left over it will help pay the mortgage on his little home or at least provide his widow and family with a few dollars during the period of readjustment when it is most needed. That is what he needs and wants—not a pittance of a few dollars a month strung out over a lifetime.

Certainly it cannot be urged that the monthly benefits, even under a $10,000 policy, would provide reasonable support for a veteran's dependents. A mere glance at the table of benefit payments will refute this. Furthermore, it cannot be fairly said that if servicemen were satisfied with the method of payment during the war they should be now as well. The insurance benefits alone never were sufficient to support the veteran's dependants but, supplemented with the pension the total amount was reasonable. Now his widow will not only have no assistance from a pension but economic necessity will, in most instances, force him to reduce the amount of insurance he carries as well.

Summing up the whole matter I would say that the average GI was satisfied with the insurance program as set up during the war. Furthermore, most of the boys would like to carry as much of their national service life as they can afford. However, they do not feel that the method of payment meets their present need for protection and they are not interested in converting any of their insurance unless this is changed. In fact many of the boys feel that the continuation of the present policy is part of an organized plan, sponsored by insurance companies, to force them to drop national service insurance and turn to private companies for their protection. If this is the case a continuation of the present policy should certainly accomplish that result.

I cannot feel that this is the case, and if the individual veteran was permitted to elect whether his beneficiary was to receive a lump sum or monthly payments upon his death the greatest single dissatisfaction with the postwar insurance program would be eliminated.

This should be done now. Thousands of boys have already dropped their insurance. Most of them for this one reason alone. Every day that the situation goes unremedied thousands more will continue to do so. Furthermore, when such a change is effected it should be adequately publicized and every opportunity given those who have already dropped their insurance to obtain its new benefits. The insurance program during the war was satisfactory and reasonable. There is no reason why it cannot be changed to meet the requirements of peace.

Respectfully submitted:

FRED LOUIS, Jr.

HARLAN, IOWA.

*Cost of national service insurance under conversion plan*

| Age of insured | Ordinary life | 20-payment life | 30-payment life |
|---|---|---|---|
| 20 years | $14.56 | $23.20 | $18.23 |
| 25 years | 16.22 | 25.10 | 19.77 |
| 30 years | 18.47 | 27.35 | 21.67 |
| 35 years | 21.31 | 29.95 | 24.03 |

| 60 years | 6.34 |

## Builders of the Future

EXTENSION OF REMARKS

OF

## HON. RALPH E. CHURCH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, December 18, 1945*

Mr. CHURCH. Mr. Speaker, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered in May 1939, by Mr. Philip C. Ebeling, then president of the United States Junior Chamber of Commerce, at Valley City, N. Dak.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Every once in a while it is important that we return to fundamentals. Tonight I shall do just that—discuss with you the underlying philosophy of the junior chamber movement. I shall answer your question, "What is it all about?"

No doubt everyone in this room has at some time been asked the questions, "What is the junior chamber of commerce?" "Is it like a chamber of commerce, a service club, a social club?" "Just what is it?"

It is not a chamber of commerce. While we are interested generally in business and business affairs, our primary concern is not business protection, promotion, or stimulation. We are interested in many other things of a civic, educational, philanthropic, or cultural nature. A chamber of commerce is concerned with the civic as it affects business. We are concerned fundamentally with civic service.

It is not a service club. Our definition of the word "service" is broader than that of "welfare," and includes generally a man's duties and responsibilities as a citizen—the true definition of "civic." Therefore, you will find us in the forefront of programs or projects that will improve the community, State, or Nation, even though they might involve governmental action—something a service club never does.

It is not a social club, a lodge, or a fraternity. While we encourage fellowship and fraternalism among our members, we use them merely as means to an end—to get effective action by young men in worthy projects.

Therefore, when people ask you what a junior chamber of commerce is, the only answer you can give is that it is a junior chamber of commerce. It is an organization with a personality all its own.

Listen carefully, as this is the first time you have heard a comprehensive definition of a junior chamber in one sentence: "A junior chamber of commerce is a supplementary educational organization wherein the young men of Valley City may join together in a friendly spirit to inculcate civic consciousness in its membership by means of active participation in constructive projects which will improve the community, State, and Nation."

That is a junior chamber of commerce as the concept has finally crystallized. You will notice there are seven ideas expressed in it.

The first idea expressed is that it is "a supplementary educational organization." An intelligent man's education does not stop when he has completed his formal education in school or college. It is a life-long process. Until this organization was founded a young man had no organized group wherein he could broaden his knowledge or develop his skills in the company of his contemporaries. He either was forced to hopelessly compete in groups with men many years his senior or spend his leisure hours in lonely solitude or "stepping out" in pleasure haunts. In the junior chamber he can supplement his formal education in practical ways and "step in" to his full share of civic responsibility.

It has been said that education consists of three processes: (1) Acquiring information; (2) developing skills; (3) creating attitudes. Here he can acquire first-hand information on the pressing problems of community, State, and Nation. He can develop quickly his skills in leadership cooperation, working with other people, persuasiveness, tact, and all those traits and personal characteristics which will make him a man among men. He can create correct attitudes of fairness, tolerance, patience, faith. This supplementary educational process can work more efficiently, with greater speed, and with practical effect in this company of friendly contemporaries, free from artificial barriers.

The best definition of education I have heard is: "It is a preparation which enables a man to better understand his environment so that he might live in it happily and usefully." Certainly the junior chamber of commerce meets this test and can justly be called a supplementary educational organization.

The second idea expressed in the definition is that it is "a young man's organization." It is the only truly national young men's organization in this country. In 1931, we had 81 member organizations. We now have over 550 organizations with a basic membership of 110,000 young men. These exist in 44 States, the District of Columbia, Alaska, and Hawaii. We have associate members in Canada, Australia, and China. The idea has been so worth while that it has spread to 16 foreign countries. We can now proudly say, just like the British Empire, that "the sun never sets" on a junior chamber of commerce. And even more proudly we can point out that this has been builded by the voluntary effort of young men without a dime being paid to organizers.

It is strictly a young man's organization with its membership composed of, its policies determined by, and financed by young business and professional men between the ages of 21 and 35 years of age. It must always remain a young man's group, as by this age limit new leadership, membership, and activity are assured. It is a veritable fountain of youth.

It is a representative group wherein worthy young men can find a place. In it Jew and gentile, Catholic and Protestant, Democrat and Republican, rich and poor will be found working shoulder to shoulder for a common goal.

Why shouldn't young men have an organization of their own? There is too much of a tendency to underestimate the abilities of young men. The pages of history chronicle the achievements of young men. Washington was a colonel in the Virginia army when he was 19; William Pitt was Prime Minister of Great Britain when he was 24; Napoleon was Emperor of France when he was 33; McCormick had invented the reaper and Westinghouse the air brake when they were 23; Shakespeare had written ten of his greatest plays when he was 32; Sir Isaac Newton discovered the law of gravitation when he was 24; Jefferson wrote the Declaration of Independence when he was 34; Alexander Hamilton was Secretary of the Treasury when he was 32, and the average age of the Continental Congress, the men who conducted the Revolutionary War, was slightly below 34 years of age. Energy, enthusiasm, and willingness to try—those attributes of virile young manhood can accomplish much.

They can accomplish more by being banded together in their own organization where

those attributes are allowed free play. This idea is not new. A short time ago I was in Independence Hall in Philadelphia, the birthplace of this Nation. There I was told that Benjamin Franklin, whose name is synonymous with wisdom, when he was slightly over 21 years old, joined together with other young men of Philadelphia into a civic-service organization called the Junto Club. History records that many of the fine things Philadelphia enjoys today were started by the young men's organization—a forerunner of the junior chamber of commerce.

The third idea expressed is "in a friendly spirit." We do not operate as a cold business type of organization. We endeavor through luncheons, dinners, and social events to bring about a spirit of fellowship. The junior chamber makes acquaintances, develops friends, and keeps friendships in repair. Need I say more of the importance of this? We all recognize that friendship is "life's sweetest influence." It is desired by king and peasant alike.

The fourth idea expressed in the definition is "to inculcate civic consciousness." Here we have the fundamental purpose of every junior chamber. Personally, I can think of no more important purpose for which an organization can stand.

What can be more important than impressing people with their duties of citizenship? Too often we prate about the privileges of citizenship and overlook the duties. Too many think that they fulfill their obligations of citizenship if they pay their taxes, contribute to some worthy causes, vote and vote for the best man—or the least bad. Civic consciousness involves far more than that.

It means that we must think in terms of the general welfare and not individual welfare. An alarming tendency in this country has been the growth of class groups and blocs of all kind. We almost have government by pressure groups. Pressure groups have their proper place, but when they think in terms of their selfish end only they become a threat to democracy.

It means that we must actually put the needs of others above our own selfish interests. The outstanding thing about George Washington to me is the fact that as the richest man in the colonies, with everything material to lose and little to gain, he nevertheless, put the welfare of his countrymen above his own interests and chose Valley Forge.

It means having faith in your fellowmen, in your leaders, and in the eventual triumph of right. It means tolerance, patience, and "striving unceasingly to quicken the public sense of civic duty, that we may transmit this country not less, but greater, better, and more beautiful than it was transmitted to us," as the last sentence of the Athenian oath of citizenship from ancient Greece tells us.

"High-minded," you say. Yes, high-minded. And there will never be any permanent solution of the problems that bedevil and befuddle us until more and more individuals become high-minded. Intelligence is not enough. Knowledge is not enough. Industry is not enough. We may have any or all of these, and yet the direction in which we go may be wrong.

Laws will not solve our problems. You can't legislate goodness. James Whitcomb Riley said, "the meanest man I ever knew operated within the law." It will ever be thus with laws.

Gold will not solve our problems. The poet reminds us:

"Not gold, but only men can make
A people great and strong.
Men who for truth and honor's sake,
Stand fast and suffer long.
Brave men, who work while others sleep,
Who die while others fly—
They build a nation's pillars deep
And lift them to the sky."

It is only as more and more men accept the philosophy of life consistent with good citizenship that selfishness, greed, and thoughtlessness—those enemies of progress—will give way. Only four philosophies tug at man for his acceptance. "Know thyself," said Socrates, the Greek father of philosophy—knowledge is the highest good. "Be thyself," said Marcus Aurelius, the Roman stoic—personal virtue—as long as I am personally good—that is the highest good. "Exalt thyself," said Nietzsche, the German realist—power—the power that comes from position and money—that is the highest good. But the philosophy of citizenship and the most important one was uttered by a young man 33 years of age. "Give thyself," said Christ—service for your neighbor—if you give your life for him, you will not lose it. You know that philosophy of life. I submit until more and more individuals accept that last philosophy of civic consciousness very little else is of lasting importance.

Fellow Jaycees, you are therefore engaged in very important work. How important is well illustrated by this little story. A man was trying to read the newspaper one night. His small son was playing and making a terrible racket, as children often do. Finally, in desperation, the father tossed down on the floor a picture puzzle of the world cut out from a magazine and told the little boy to put it together. In just a few minutes the son reported that it was completed. The father asked him how he had managed to do it so quickly. The son replied, "Oh, that was easy. There was a picture of a man on the reverse side of the puzzle, and just as soon as I put the man together right the world came out right."

You are engaged in putting young men together right.

The fifth idea expressed is by means of active participation in projects. This is an important point—an unique contribution particularly appropriate for a group of energetic, enthusiastic young men. A junior chamber of commerce is not composed of joiners, but rather of doers. It is not another bunch of resoluters. It is not another one of these organizations that meet, eat, belch, and adjourn. It has always been, and may it always be, a project organization. Every since Henry Giessenbier conceived this idea in St. Louis in 1915, it has been dedicated to action. With the energy, enthusiasm, and willingness to try anything once, so characteristic of young men, it is proper that it should have as its motto, "It will be done." We inculcate civic consciousness by doing, not by talking about it.

In this country we seem to have a fetish for committee meetings and conferences. Too many times that meeting is the last thing ever heard of a worthy project. A familiar way of solving a problem is to appoint a committee, have a meeting, draft a report, file it away. Next year you do the same thing all over again.

Clarence Day has written an interesting little book called This Simian World. It is a soliloquizing or philosophizing on what would have happened if some other animal than the monkey had been selected as the base of the evolutionary process. He takes up these animals one by one. It might have been the tiger. Then we would have been slinky, terrifying kind of people, preying on each other, and having a great time. It might have been the cow. Then we would have been ruminative, phlegmatic, Carnation milk contented kind of people. Interesting, however, is the fact that the monkey was selected, and the outstanding characteristic of the monkey is chatter.

Lots of chatter oftentimes but very little action.

The greatest pleasure I get from traveling around the country this year is to see the many concrete evidences of the up and doingness of these young men—in Oklahoma City, to drive in the warm Oklahoma night to the beautiful Taft Stadium to hear the fine symphony orchestra, both junior chamber projects, and hear there that night the first rendition of the new Oklahoma State song. In Old Oklahoma, a State Jaycee project—in Mobile, to be driven along the beautiful Azalea Trail, a junior-chamber project that has brought a personality of its own to Mobile and thousands of tourists every year—in San Francisco to look out into San Francisco Bay, see beautiful Treasure Island rising from the bottom of the bay, and realize that it would not be there with the gorgeous Pacific Exposition thereon, except for the ingenuity, intelligence, and industry of the San Francisco Jaycees. These, and the many others I have seen in many places, are living proof of the worth whileness of this young man's organization with its inexhaustible leg power.

If I had to define a junior chamber in a phrase, the best I know is, "Young manpower at work"—emphasis on work.

The sixth idea expressed is "in a constructive manner." It isn't enough to be doing. It must be constructive and not destructive. It is hard to be constructive—easy to be destructive—hard to be for something—easy to be against things. This city is full of people who can get excited against civic improvements, but I will wager there are not many who will fight the good, long, hard fight for a thing for the public good. I often wish everybody had this little poem emblazoned on their hearts.

"I saw them tearing a building down,
A gang of men in a busy town.
With a ho-heave-ho and a lusty yell,
They swung a beam and the side wall fell.

"I asked the foreman, 'Are these men skilled,
As the men you would hire if you had to build?'
He laughed and said, 'No, indeed;
Just common labor is all I need.
I can easily wreck in a day or two,
What builders have taken a year to do.'

"I asked myself as I went my way,
Which of these roles have I tried to play?
Am I a builder who works with care,
Measuring life by the rule and square,
Or am I a wrecker who walks the town,
Content with the labor of tearing down?"

Builders—not wreckers! That is part of our "doing."

The seventh and last idea expressed in the definition is "for community, State, and Nation." Of course, the community or city is important. I heard George Verity, chairman of the American Rolling Mills Co., say that he liked to think of a junior chamber as a "philoptimists' club." Philoptimists—not optimists—meaning "lovers of cities." We desire to make our home cities "alabaster cities undimmed by human tears," as the last line of that great song America the Beautiful says. We do want to make our communities happy places where we can live, own property, and raise families.

I pity, however, the young man whose vision is circumscribed by the city limits. The problems which baffle us now, and whose solution are wrapped up intimately with our future as young men, are State and National questions. We must be concerned with them. We can't avoid them.

That is one of the reasons why your State and National organizations exist—to express the young man's viewpoint in State and National affairs and to interest you in these questions. We primarily are concerned, and do a splendid job, in giving parentage, prestige, purpose, and inspiration to member bodies. With just a fraction of the dues that comparable national organizations receive, we enable you to do a good job locally by unloosing a veritable flood of ideas and accumulated experience for you. But part of our function is to make your voice heard

beyond the confines of Valley City by joining it with the voices from hundreds of other cities in a nonpartisan, nonsectarian manner toward the solution of State and National affairs.

That is the reason why last year your national organization was one of the sponsoring groups behind the McCarran-Lea bill. That bill is called oftentimes the "bill of rights of commercial aviation." That bill, now law, resulted in the Civil Aeronautics Authority being established with powers to forward commercial aviation.

We also were one of the original sponsors behind the Pittman-Robertson bill, which was designed to force the use of conservation tax moneys for conservation purposes. The heads of the United States Biological Survey recently expressed to me their debt to us for the splendid help we gave.

That is the reason why within the past few weeks we have vigorously made known to the public officials of Arkansas, Maryland, and other States our stand for the furtherance and improvement of civil service in the public personnel.

That is the reason why this year and last year we have joined health associations in urging the passage of and proper financing of the Venereal Disease Control Act—commonly called the La Follette Act.

That is why we, as sponsors, have arranged to have introduced in the present Congress two bills. One of these would enable the Post Office Department to put a safety message on every letter as part of the stamp cancellation. The other would authorize the creation of a national defense committee, composed of the ranking members of each of the five committees of the House and Senate that would otherwise dabble piecemeal in this important question. This committee would hold public hearings in order to define just what we are trying to defend, and then operate as a unit in its solution.

That is the reason why we are now undertaking a national survey of the long-term financing needs of small- and intermediate-size businesses through our member organizations, which when completed will be turned over to the Securities and Exchange Commission and Congress as a basis for legislation in this important field.

Notice two things about these things that I have mentioned. First, that we are not a pressure group seeking to further the aims of young men only. All the things mentioned are concerned with the general welfare. We don't want any subsidy for young men. We want those things that will make this country a happier and better place for all groups. Secondly, that we, as young men, had better be interested in these significant problems. Consider the last one mentioned, for example—defense. The reason is obvious—27 to 35—we are first-class cannon fodder.

It is important that you be heard. Goethe said, "The destiny of any nation at any particular time depends upon the opinions of its men below twenty and five." Since medical science has advanced man's span of life 10 years, we may now say that the destiny of the nation will be determined by the opinions of its young men under thirty and five.

I have given you a definition of a junior chamber of commerce and its philosophy in these seven thoughts. However, I must say more about its educational value. I said before that education involves the creation of attitudes. This is the most vital of the three because it gives direction to the information acquired and the skills developed, and further because attitudes remain after the other two have departed.

It is, therefore, encouraging to discover that young men have an attitude of fairness.

Fairness will solve nearly any of the problems that bother us. If you had to boil down into one word what Americanism is, you couldn't find a better word than fairness. "Fairness is the one indispensable feature of the American tradition," recently said the Supreme Court. Just being fair about matters seems to be the crying need of the time. If businessmen want protective tariffs, if they are fair, they will consider subsidies for others. If farmers want crop control, in fairness, they will want to consider the interests of consumers. If labor insists in certain demands, in fairness, the employers' interests must be considered. Fairness implies thinking of the other fellow. It does not lend itself to supreme confidence in one side of the story. Fairness would not result in thinking of America as a grab bag, but rather as a treasure chest in which we place everything we hold dear. It would exalt the spirit of compromise, remembering that this Nation was founded in compromise.

This is not a true democracy in which we live. Democracies have always failed. It is a democracy in a republic with a limit set beyond which even the majority may not go. Every citizen has certain rights. In this type of government we must have a spirit of fairness developed to the highest degree. Isn't it encouraging to know that an attitude of fairness is being instilled successfully in the young men of America?

Young men also have an attitude of optimism. They have faith and confidence in the future. Skeptics often say to us when they look at some of our committees, "You young fellows are crazy. You can't do anything about that problem, or that problem, or that one." They look at our public personnel standards committee, for example, and say, "Look at that one. You can't do anything about that. The spoils system is literally steeped in people's nature." It is a long, hard fight—but we have faith and confidence. Young men's faith insures progress.

Yes. We have faith and confidence even when the world is in the terrible state of affairs it is in now. And, gentlemen, it is in a bad way. Let me read to you this quotation from a well-known magazine:

"It is a gloomy moment in history. Not for many years; not in the lifetime of most men who read this—has there been so much grave and deep apprehension; never has the future seemed so incalculable as at this time. In our own country there is universal commercial prostration and panic, and thousands of our poorest fellow citizens are turned out against the approaching winter without employment and without prospect of it."

Consider this excerpt from a speech in Congress.

"We all know that the people were oppressed and borne down by an enormous load of debt; that the value of property was at the lowest point of depression; that ruinous sales and sacrifices were everywhere made of real estate; that relief laws were adopted to save the people from impending destruction; that deficit in the public revenue existed; and that our commerce and navigation were threatened with complete paralysis."

Do those sound familiar to you? You would swear they had been spoken or written within the past 5 or 6 years by some Jeremiah. As a matter of fact, the statement from the magazine is from Harpers of the year 1857—82 years ago, and the speech in Congress was by Henry Clay in the year 1832—107 years ago.

Why shouldn't these young men have faith and confidence? Certainly they recognize history does make carbon copies of itself, and that the bitterest controversies of today will be mere footnotes in the history books of tomorrow. They are a part of a movement that is trying to create attitudes of faith, reverence, self-reliance, tolerance, good will, persistent striving—those pioneer qualities that will solve any problem, regardless of how imponderable the solution may seem.

I address my concluding remarks primarily to the older men present. When I say "older," I refer to those over 35 years of age. We know that a man may be 75 years of age and yet have the spirit of 25. Probably I should say "more experienced young men." We refer in junior chamber circles jokingly and fondly to those who pass beyond their thirty-sixth birthday as "exhausted roosters." May I say then to you "exhausted roosters" that we have no quarrel with you. We are proud of your accomplishments. We solicit your advice, your interest, your friendship. These young men are not callow youth. We trust you receive them not in the "father and son" attitude, but rather in the "older brother and younger brother" spirit. As brothers we can cooperatively do much.

I have mentioned "young men" many times tonight and stressed their virtues. Here is what Sir Francis Bacon has to say on the subject in his essays:

"Young men, in the conduct and management of actions, embrace more than they can hold; stir more than they can quiet; fly to the end without consideration of the means and degrees; pursue some few principles which they chanced upon absurdly; are reckless in innovating; use extreme remedies at first; and that which doubleth all errors, will not acknowledge or retract any. Like a badly trained horse they will neither stop nor turn."

(That should take us young fellows down a bit.) But Sir Francis continues:

"Men of age object too much; consult too long; adventure too little; repent too soon; and seldom drive things to a full completion, but content themselves with a mediocrity of success."

Then to prove the point I made of marching along together, he makes it all right by concluding:

"Certain it is good to compound employments of both because the virtues of either may correct the faults of both."

The Bible says, "Old men shall see visions; and young men shall dream dreams." We fully realize that we need your visions if our dreams are to come true. We know that you know that these dreams of energetic, enthusiastic young manhood are needed if your visions are to be immortalized.

These young men are engaged in a very serious business. From them will come the builders of the future. While all the fine young men in this community are not members of this group, certainly from ones with attitudes like these will come those who will immortalize your visions of a better world.

Back in the days of Mohammed, the prophet, people had great respect for horses with intelligence. The most intelligent ones were selected for war purposes. These war horses were trained to follow the bugle in battle. The great prophet himself had occasion to have some of these horses and went to a famous farm to make personal selections. The horses were pastured in a pasture next to the river. The prophet gave orders that the horses were to be fenced off from the river and left unwatered for 3 days. At the end of 3 days, the bars were taken down, and, of course, the horses rushed in a mad body to the water to quench their thirst. Just as they were about to plunge into the water, the bugle was sounded, and of that great number of horses only 10 answered the call of duty despite their physical needs. Those 10 constituted the beginning of the famous "prophet breed" of Arabian horses.

My point is—we seek to breed such a passion for civic service and a desire to sublimate the individual welfare for the general welfare—that from this kind of young men, this "prophet breed" kind of young men, will come the builders of the future.

Yes. Builders of the future. Builders perhaps not of material wealth achieved oftentimes by devious means and by the sacrifices of others. Builders not of a reputation attained by the cheers of the crowd and the huzzas of the thoughtless. Builders, rather, of a type of character that will seek with a hungry heart for a larger and richer life:

"Isn't it strange that princes and kings,
And clowns that caper in sawdust rings,
And common folk like you and me
Are builders for eternity?
To each is given a bag of tools,
A shapeless mass, a book of rules,
And each must build e'er life has flown,
A stumbling block or stepping stone."

Builders of stepping-stone kind of people because they are the ones who not only hold the secret of personal triumphant living, but likewise will be the builders of the future.

Doesn't it make your heart leap with joy to be able to say, "The young men of Russia are marching under the red banners of communism; the young men of Italy are wearing the black shirts of fascism; the young men of Germany are wearing the brown shirts of nazism—but, thank God, the young men of America are wearing the white shirts of constructive effort and peace in this civic service organization of and by young men, but for a better, finer, and greater America"?

## The Army and Veterans' Administration Hospital Experiences of Tony J. Sloss

EXTENSION OF REMARKS
OF

### HON. CARL HINSHAW

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, December 18, 1945*

Mr. HINSHAW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following affidavit of Tony J. Sloss, a veteran of World Wars I and II. Nothing I might say could add or detract from it. The affidavit is as follows:

GLENDALE, CALIF., *November 25, 1945.*
*To Whom It May Concern:*

Statement of hospital experiences of Tony J. Sloss, Serial No. 5603187, Fifty-seventh Battery, Fifteenth Antiaircraft Sector, W. W. 1; Serial No. R-5603187, Regular Army, Company C, Eighth Infantry; Serial No. 39547358, W. W. 2:

While in training at Camp Joseph T. Robinson, with the Company A, One Hundred and First Medical Detachment, in February of 1943, I was knocked down off an 8-foot wall of the obstacle course, injuring my right shoulder. I went on sick call the next morning and was told that I had sprained my shoulder and that it would be all right in a couple of months. I received no treatment for this injury, and when I went back on sick call, as my arm pained a great deal, I was given an ounce of rubbing alcohol and instructed to massage my arm with it. This is all that was done for me.

When I complained again of pain in the shoulder the doctor, without even examining me, said, "All you want is to get out of that long hike which is scheduled for tomorrow." I made the hike—suffering great pain, as it was a very cold day—raining and sleeting. I never returned for treatment, as I knew nothing would be done for me.

Upon completion of our basic training we were transferred to the One Hundred and Sixty-second Station Hospital at Sheppard Field, Tex. I was put in the kitchen as a cook, and as my right arm kept giving me trouble I had to use the left arm for all heavy lifting.

One day one of the company doctors saw me and asked what was wrong with my right arm. I explained, and after examining me he said I had a clavicle out of place and he ordered some X-rays taken. He said that as it had been 2 months since I was injured it was too late to put the arm back in place without surgery. This was never done.

In May 1943 while preparing a meal in the mess kitchen, I moved a 20-gallon pot of potatoes with my left arm. As I did so, I injured my back so that I was unable to straighten up. My mess officer, Lt. Henry L. Douglas, and my company commander, Lt. Henry J. Guidry, Jr., had me carried to my quarters as I was unable to walk. As they were unable to get an ambulance to come for me, they ordered two other soldiers to help me to the hospital which was across the street from our barracks. Since they were unable to do anything for me at the first aid station there, they walked me to another part of the hospital to find another doctor. When we found the doctor he looked at me and without as much as touching my back ordered me to go to the therapy department for treatments. He said I had a torn ligament in my back.

I was confined to my quarters for a while and when I was able to straighten up, I returned to my work. They were very short of cooks, as the boys were taking their furloughs before going overseas and so they asked me if I could come back to help them out. I did, but continued with the therapy treatments every other day. Soon I was transferred to the Reserve Corps as I was overage and my unit was going overseas. I did not make a request to leave the service but was ordered to do so by my company commander as he felt I was too old for overseas service.

When arrangements were completed for my transfer to the Reserve Corps, June 19, 1943, I was sent to Detroit to take a position with the Ford Motor Co. They sent me to the B-24 bomber plant at Ypsilanti, Mich., where I was given a job operating a large punch press. This work proved too much for me because of the soreness in my arm and back. They sent me to their hospital for X-rays. They told me that because the injury happened before I came to work in their plant they could do nothing for me. They did, however, transfer me to another department where the work was of a lighter nature.

As the soreness and pain continued, I went to a private doctor. He, too, said that I had a dislocated clavicle, torn ligaments, and a dislocated back. He told me that it would take months of rest and a lot of sunshine to improve the condition. He suggested that I return to California as the cold climate there might cause arthritis to set in as it had been so long since I was injured and since nothing was done for me at the time of injury.

I returned to California in March 1944, and after a couple of months rest went back to work. My back and arm continued to give me trouble and in January of 1945 my back pained me so that I again went to a doctor, Dr. E. T. Remmen, of Glendale. In his opinion there was a rupture disk in my spine, and he advised me to go to the Veterans' hospital at Sawtelle.

In March 1945 I was admitted to the Sawtelle Veterans' Hospital. The first 4 weeks there were spent in taking X-rays and making diagnosis. Physiotherapy treatments, consisting of cabinet heat treatments, showers, and massage were given for several weeks. During one of these treatments, I was given a cold shower following a heat treatment. This caused my blood pressure to rise so quickly that I suffered a severe hemorrhage almost instantly. After the hemorrhage I suffered with severe headaches. The doctor ordered X-rays of my head. He then ordered me to continue with the physiotherapy treatments. When I told him the treatments seemed to make my head ache more, he told me they had been ordered for a certain length of time and that I must continue with them whether they hurt or not.

A few days later, while I was taking a treatment, the nursing office sent for me. Upon arrival at the office I was asked to sit down in a wheel chair. I did so, and was given a hypo and a pill. When I asked what all this meant I was advised that I was going down to X-ray for an examination. Without obtaining my consent or without an explanation as to what was to be done, they proceeded to remove 7 cubic centimeters of spinal fluid and inject 7 cubic centimeters of dye into my spine. From 2 to 4:30 p. m. I was X-rayed and examined. During the entire time I suffered excruciating pain.

When they put me to bed the doctor told me I was to remain there for 48 hours. The next morning another doctor came in to see me and ordered me out of bed. I got up, but it made me so sick that I was unable to get up again for a week. I was there 7 weeks when they decided to remove a small, fatty tumor from my back in the hope it might help to relieve the pain. This operation did not help at all. The doctor who ordered the removal of the tumor suggested further X-rays and study of my case. However, 2 weeks after the operation I was told there was nothing more they could do for me. Nothing at all was done for my arm during the entire 9 weeks I was there.

They released me on May 9, 1945, and suggested that I go home and rest for 3 months. If I did not improve in that time I was to return to the hospital.

The Government pension, for which I made application while I was in the hospital, was denied me. Also, I have been making payments on my life insurance during my entire period of illness, and it is my understanding that when a veteran is disabled his premium payments shall be suspended during such period of disability.

After leaving the hospital I went to a private doctor. He treated me with diathermy, massage, and the electric vibrator. After several weeks of treatments, two each week, I began to show some improvement.

On September 4 I was hit by a bus while waiting at the intersection for another car to cross in front of me. I was taken by the city ambulance to the Physicians and Surgeons Hospital in Glendale. My attending physician, Dr. F. E. Poole, ordered X-rays. There were no bones broken, but he said I was suffering from a brain concussion, injuries to my back, and possible internal injuries, and that I should remain in the hospital from 4 to 6 weeks, as I would need heat and massage treatments to my back as soon as the head injury would permit.

As I have been unable to work since the first of the year, I was not in a position financially to remain in a private hospital that long so my doctor had me moved by ambulance to the veterans' hospital at Sawtelle.

While under Dr. Poole's care I was getting hypos to keep me quiet. I was kept on a liquid or soft diet. The first meal I received after being transferred to Sawtelle consisted of a hamburger, potato salad, and a raw peach. They refused me anything to relieve the pain in my head or back, except aspirin. I was there for 5 days before they would give me a laxative. At the end of the week I was released. The doctors there said it was "an old-fashioned idea to keep patients in bed after a head injury," and that I must "get up and walk." This I did.

A week later I suffered a relapse and was unconscious for 8 hours, so Dr. Poole ordered me back to the hospital. I did not want to go back because of the treatment I had received there the other times. However, Dr. Poole said I must return to a hospital and I could not afford to go to a private one. He called Dr. Long at Sawtelle and Dr. Long assured him that if I would return I would not be placed in the admitting ward again but would be admitted directly to the neurological ward. He also promised that they

would have Dr. R. B. Raney, a neurologist, see me at once. I was taken back again by private ambulance, and instead of taking me to the neurological ward as they had promised, I was put in the admitting ward and kept there for 3 days. The second day I was there I suffered so severely with the pain in my head that it was almost unbearable. Four or five times between 10 a. m. and 1 p. m. the attendant in our ward, Mrs. Katherine Stratton, 3214 Broadway, Santa Monica, went to the nurse to ask her to give me something to relieve my pain and each time she promised but did nothing about it.

When my wife arrived at 1:30 p. m., I still had not been given anything to relieve my pain so she called the officer of the day. He immediately came in to see me and ordered a hypo which the nurse gave. They finally transferred me to the neurological ward on the fourth day. There I again asked for something to relieve my pain and was given a sterile hypo and an aspirin tablet. This, of course, gave me no relief. It just so happened that when the nurse came in to give the hypo, she left a slip of paper with the names of several men in our ward, and the medication she was giving them, on my bedside table. My wife, who has spent several years working in a hospital office, picked up the slip of paper and read it. I had told her the hypos were giving me no relief at all but she could not believe it until she read it herself.

When she returned home she contacted Dr. Poole and he advised her to take me out of Sawtelle and put me in the care of a good neurologist. As soon as they found out I wanted to go home they began giving me codeine and told me they could not release me as long as I was under a narcotic. Finally at the end of two weeks after I refused the codeine, they discharged me. I had to lie to them and tell them the pain in my head was better in order to get out to seek relief from a private doctor.

Dr. Poole then referred me to Dr. J. M. Nielsen, a neurologist, who gave me a thorough examination. He then referred me to Dr. R. B. Raney, a neuro-surgeon, for further examination as he felt that I had a ruptured disk in my spine which would necessitate surgery. This is the condition for which I was first sent to the veterans' hospital by Dr. E. T. Remmen last March. Dr. Raney is of the opinion that I will have to have a spinal fusion. He wishes to hold a consultation with a surgeon, who at this time is still in the service, but who expects to be released in a week or two. If they decide the surgery is necessary, it will cost me somewhere in the neighborhood of $2,000. This, of course, makes the operation impossible as I have not worked since the first of the year and have been refused my pension.

I am writing this as I feel something should be done to improve conditions existing in our veterans' hospitals. They are, we are told, the best equipped hospitals in the United States. Unfortunately, however, the patients are not allowed the advantages of this equipment as it seems the doctors are too indifferent to care whether they are taken care of or not. One of them made the remark to me the first time I was there that he hated this damn uniform and would be glad when he could get out of it. That is the attitude which seems to prevail and as long as it does, there will be little real interest in the patients' well-being. They are merely there to fill their place and draw their pay.

This is my story and there are many other boys who could tell stories just like it but who refuse to complain until the very end when they feel it is too late so what's the use. Or they take their lives in their own hands and commit suicide rather than complain.

I am writing this for the sake of the thousands of boys in our veterans' hospitals for whom I hope you may be able to use your influence to better these existing conditions.

Thanking you in advance for your kindness, I am

Sincerely,

TONY J. SLOSS,
*Veteran, World Wars I and II.*

Before me a notary public in and for the county of Los Angeles appeared one, Tony J. Sloss, known by me to be the person whose signature appears above, who upon being duly sworn according to law, states that the above statement is true to the best of his knowledge and belief.

R. MCCARTY,
*Notary Public.*

My commission expires November 16, 1946.

## UNO—A Great Step Toward World Peace

EXTENSION OF REMARKS
OF
**HON. ESTES KEFAUVER**
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, December 18, 1945*

Mr. KEFAUVER. Mr. Speaker, the question we are debating today is one of the most important that has ever been before the American Congress. It is true that the debate in the Senate last week, and in the House today, has not been exciting or very controversial. Nonetheless, by the passage of the legislation, Congress is taking a great step forward on behalf of the American people in preparing to work in peaceful cooperation with the other nations of the world.

The Charter of the United Nations became operative on October 24, 1945, after it had been ratified by the other four permanent members of the Security Council. Thus the Organization which was chartered at San Francisco is becoming a living reality. The next step so far as the United States is concerned is to proceed with the implementing legislation necessary to bring about our effective participation in this great work. Today we are showing that we are prepared to take a mighty step to effectuate our membership in the United Nations. Unless we do this and follow through with the other parts we are to play, we would be merely deceiving the hopes of the people of this country. The people and the Members of Congress understand clearly the consequences of the requirements of our membership in UNO. They are prepared to take the responsibilities of membership. They are willing to do whatever is necessary in order to enjoy the privileges which that membership may bring in the form of world security.

The legislation we are discussing today is one of the most important steps to be taken toward this end, namely, world security. It prescribes the internal and domestic arrangements within our own Government for giving effect to our participation. It enables our national authorities to take certain steps and to make commitments on the part of the United States. It provides for the representation of the United States in the various agencies and organs of the United Nations. It sets up the method of making appointments and the duties and responsibilities of those persons who are appointed.

When the question of the United States joining the United Nations Organization became a matter of immediate legislative concern some months ago, the unreconstructed isolationists in the Senate saw that there was no way for them to repeat in 1945 what their predecessors had done in 1919.

It was clear that American sentiment for participation was too strong to be blocked either by a frontal assault on the Charter or through crippling reservations tacked on the act of ratification.

The strategy then decided on by the opposition was to accept the Charter but to restrict the authority of the American delegate on the Security Council as, in effect, to make our participation in the United Nations Organization meaningless. In this they have failed.

Mr. Speaker, I hope the people will not think that because this issue is not hotly contested that it is not an important commitment we are making. Indeed, I regret that other news of the day might limit the importance that will be given to the action of Congress in passing this legislation. Let us remember, however, that this is only the first implementation of the San Francisco Charter. Others of a more controversial nature are likely to follow. If we are to really play our part in bringing security to the world, it is necessary that we keep in close touch with the activities of the Security Council and of the United Nations Organization. It is necessary that we be ever willing to exert the force and influence of this great Nation in backing up the efforts of the UNO in trying to maintain a stable and peaceful world.

I am very happy, Mr. Speaker, that there is such unanimity on the part of Members of Congress in taking this great step. I think the unanimity is reflective of the will and hopes of our people. Let us ever be constant in making this Organization the great and effective agency for maintaining a stable world which we have prayed for it to be.

## Reductions of the Wine Institute

EXTENSION OF REMARKS
OF
**HON. EMANUEL CELLER**
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, December 18, 1945*

Mr. CELLER. Mr. Speaker, I offer the following resolutions of the Wine Institute of California in the interests of grape farmers and wine producers. The internal revenue must be protected against law violators, but the law should not be so interpreted as to punish the innocent.

The rules applicable to whisky distillation should not necessarily be applicable to wine making. Wine making is an agricultural pursuit whereas whisky making is not. Wine has always been looked upon as the juice of the grape.

Recently the Alcohol Tax Unit of the Internal Revenue Bureau, with more zeal

than caution, pounced upon innocent stockholders of a winery company and sought to hold those stockholders, far distant from the winery, liable for the alleged derelictions of some employees and/or officers of the winery. Although those stockholders participated in no wrong if any, and had no knowledge whatsoever of such wrong, if any.

It were barbarous if our laws were so stretched as to siphon into payment of penalties those wholly unrelated to, and noncognizant of the misdeeds of others, and innocent of moral turpitude.

If the internal revenue laws can be so construed it is high time they were revised in the light of twentieth century enlightenment. The particular offending statutes hark back to the whisky buccaneer and the days of the Whisky Rebellion.

I hope the Alcohol Tax Unit revises its judgment and substitutes sounder sense for a misguided enthusiasm. I shall study this situation and suitably offer bills to revise the entire code referring to grape growing and wine making.

Herewith are the resolutions:

Whereas under the provisions of section 2800 (d) of the Internal Revenue Code every proprietor or possessor of, and every person in any manner interested in the use of, any still, distillery, or distilling apparatus is jointly and severally liable for taxes imposed by law on the distilled spirits produced therefrom; and

Whereas said provision was enacted to protect the revenues due primarily from beverage distilled spirits and upon which the excise tax is to be paid upon such spirits; and

Whereas said provision has been interpreted by various courts to impose liability upon stockholders of corporations and other persons who neither exercise nor have within their power the authority to exercise control over the operations of the business; or have any knowledge of the acts of those operations of the business; and

Whereas said section 2800 (d) of the Internal Revenue Code thus penalizes persons who may be wholly innocent of any wrong or wholly without any knowledge or control of the operations of the distillery and is therefore unjust and inequitable; and

Whereas said section likewise permits an undue proportion of any liability to be assessed against a particular individual solely by reason of his ability to pay; and

Whereas under the provisions of the Federal Food, Drug and Cosmetic Act (June 25, 1938) (C. 675, sec. 1, 52 Stat. 1040) and more particularly under section 333 thereof, penalties, including imprisonment, are provided for in the event of any violation; and

Whereas under the decision of the Supreme Court of the United States (320 U. S. 277, 64 S. Ct. Reporter 134), corporate officers and managers may be subject to imprisonment for violations of which they have no knowledge and in which any intent to commit wrong was lacking; and

Whereas under our present corporate system officers cannot possibly be aware of the manifold transactions of a widely scattered business operation; and

Whereas the Supreme Court itself stated "hardship there doubtless may be under a statute which thus penalizes the transaction though consciousness of wrongdoing be totally wanting." And Justice Murphy, in his dissenting opinion, stated, in part, "It is a fundamental principle of Anglo-Saxon jurisprudence that guilt is personal and that it ought not lightly be imputed to a citizen who, like the respondent, has no evil intention or consciousness of wrongdoing": Now, therefore, be it

*Resolved, the board of directors of Wine Institute in meeting assembled this 14th day of December 1945*, That the Congress of the United States is hereby respectfully petitioned as follows:

(1) To repeal section 2800 (d) of the Revenue Code.

(2) That if said section be not repealed that it be amended to strike therefrom the following words: "and every person in any manner interested in the use of."

(3) That said section 2800 (d) be further amended to provide some equitable limitation of the liability upon any one of several persons jointly and severally liable thereunder.

(4) That section 333 of the Federal Food, Drug and Cosmetic Act, as herein above cited, be amended to provide that no person be subject to imprisonment for a violation of the provisions of said act unless there be a personal guilt on the part of the person charged or that he have knowledge of said violation from which a guilt might be imputed; be it further

*Resolved*, That a copy of this resolution be forwarded to each of the Congressmen and Senators representing the State of California in the Congress of the United States.

## Preview of World Plans To Be Implemented by the Bretton Woods Monetary Program

EXTENSION OF REMARKS
OF
### HON. COMPTON I. WHITE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
*Friday, December 14, 1945*

Mr. WHITE. Mr. Speaker to anyone conversant with the record of British money manipulation and trade restrictions, it should not be difficult to foresee restrictions on free play of international trade that can, and doubtless will, be imposed by Great Britain, a policy in direct opposition to the assurances given in the Atlantic Charter when the United States and Great Britain stated, in article IV:

They will endeavor, with due respect for their existing obligations, to further the enjoyment by all States, great or small, victor or vanquished, of access, on equal terms, to the trade and other raw materials of the world which are needed for their economic prosperity.

The plight of Canada is reported in the December 10, 1945, issue of Times:

Great Britain's single-minded struggle for recovery was shaking Canada's hopes of prosperity.

Since September 2, when the end of the Pacific war closed out mutual aid (Canadian lend-lease), London had piled more and more restrictions on imports from Canada. Almost the whole range of processed articles, from such job-producing industries as farm machinery, rolled oats, newsprint, office machines, and household appliances were barred from the British market.

Some manufacturers, concluding that they would have to build new plants in Britain, prepared to do so. Wheat and lumber were shipped only to tightly budgeted Government buyers. And then Canadian exporters began meeting similar restrictions in India, Egypt, Australia, other countries in the British-money (sterling) circuit.

Businessmen last week yelled for somebody to do something—and quick. They well knew that the Dominion's traditionally best customer, Britain, would have to be the best customer again if Canada's plans for a 33-percent increase in her prewar exports were not to go glimmering.

UNDERSTANDING AND DOUBTS

At Ottawa, trade officials knew the urgency of keeping British shelves open to Canadian goods. They were fighting against British embargoes without hope of across-the-board success until the United Kingdom and the United States came to terms in their Washington deal for an American loan. But the Canadians, historically the third partner in the North Atlantic trade triangle, believed that the United States loan would not be "big enough to let Britain spend dollars freely." The painful symbols of British economic austerity, they figured, might be reduced but hardly eliminated.

Canadian economists did not carp at the British. It was true that Britain did not have enough dollars for all her needs, logical that she should refuse to borrow more than she had a prayer of repaying. But Canada had not been niggardly in meeting Britain's needs in the war. Why should Britain now doubt that Canada would put up the money, somehow, to keep trade going?

Canada's reconstruction loans to Britain would be quickly settled, once the Washington deal was concluded. Meanwhile, two facts stood out: First, the pace of trans-Atlantic trading would be set by the British-United States agreement; second, if Canada could not sell enough to Britain, she would have to sell more to the United States, to Latin America, and to other customers outside the sterling areas.

## The Housing Problem and Plans to Overcome It

EXTENSION OF REMARKS
OF
### HON. HERMAN P. KOPPLEMANN
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, December 18, 1945*

Mr. KOPPLEMANN. Mr. Speaker, under leave to extend my remarks, I desire to insert in the RECORD a copy of my radio speech via WDRC, Hartford, Conn., last Sunday, on the housing problem and plans to overcome it:

My subject today deals with the problem of housing and the plans to overcome it.

We were warned we would have a housing shortage—and yet we permitted ourselves to be led over the brink so that today, suddenly, local communities, the National Government, and Congress have put aside other pressing problems to concentrate on how we are going to meet this one. A national conference of the housing industry is being held this week to develop ways and means to break this housing bottleneck.

Legislation will be acted on in the House this week to use 50 percent of housing material in the construction of homes that will cost $10,000 and less. Price ceilings will be established on existing homes. Price ceilings will not be lifted on building materials.

There are many reasons for the situation in which we find ourselves. For one thing we must remember that there was never enough housing. There was no construction to speak of during the depression years. Some 10 years ago the Government set out to encourage the building and ownership of low-priced homes along with its program of slum clearance and low-cost public-housing projects. Before that, most families in the two-to-five-thousand-dollar-a-year income class had to be content with living in tenements or flats.

By the time the war broke out, throughout the Nation there was a sweep toward home ownership well under way. In addition many public-housing projects had been built. The war interrupted all that sort of construction, and construction was permitted only for essential building needed for the prosecution of the war.

Came the war's end and the construction industry claimed it was ready to resume normal building, provided that war restrictions were lifted.

For weeks that was the big question. Should wartime controls be continued? Should we continue to permit only the construction of homes for the modest income family, or should we remove the lid entirely and permit construction to satisfy any market demands? Should price ceilings for building materials be lifted?

During the early years of the war, home construction was limited to an over-all cost of $6,000. As prices for construction material and labor rose, the building industry demanded an increase in the limit price of the home—and won. The limit cost was raised to $8,000. But even so, thousands of homes for which construction priority was granted were not built because the builders demanded an even higher price limit. That higher limit was refused and the builders instead turned their efforts to other types of construction that brought them more profits.

After VJ-day the demand from the building industry that ceilings be entirely removed became more insistent. The OPA, together with a number of Members of Congress and housing officials, opposed this demand on the ground that removing controls would not insure the home owner fair value for the price he would be required to pay. We lost on one count. The cost limit was removed. But the demand that the ceiling price on building materials be also removed was rightly, and as we now see, fortunately, refused.

Then ensued the tug of war. As the old Chinese laundryman once said, "No tickee, no washee," so now it was "No removal of price ceilings, no low-cost homes."

It is estimated that by the end of 1946, three and a half million families will be in need of housing—almost three million of them will be veterans' families.

The GI bill of rights grants the veteran a loan in order to buy a home—but the administration of the law properly requires that the purchase price be fair.

OPA officials pleaded for a ceiling on real estate during the war but the committees of Congress turned a deaf ear. Consequently the price of real estate soared and desperate people had no recourse but to pay the price asked when they had it.

But the GI couldn't purchase such homes even if he wished to because the Government appraiser would not okay use of a GI loan for inflated real estate. Now at long last ceilings will be placed on real estate. It's too bad we didn't close the barn door before the horse ran away.

All these conditions are partly responsible for the very serious housing shortage. Temporary war housing, which was supposed to be torn down after the war, now must be retained. But there is a curious situation around Hartford. The housing shortage is so serious that the city and State officials have been putting their heads together with the construction industry to solve the problem. Yet, in the South Quaker Terrace project in West Hartford there are 159 units. Only 49 were occupied. At Oakwood Acres there are 335 units; only 77 are occupied. Yet every day I receive letters from veterans complaining that they cannot find homes for their families and ask my help with the housing authorities.

Veterans, to be sure, have preference in public projects, but few people are moving out of the others and there are long waiting lists of veterans. I have suggested to the veterans who have written me that they apply for quarters in these West Hartford temporary projects. It may be a bit inconvenient for them to move out there. The apartments aren't the last word in modern improvements. They were built as a temporary expedient to meet a wartime emergency. But they do offer warmth and comfort, and will enable a veteran and his family to live together.

I have asked the Washington authorities to hold the South Quaker Terrace project in a standby status for a while to see whether there will be sufficient veterans availing themselves of quarters there, for the plan was to ship the building to some other community which has been asking for it.

The authorities in Washington, who last October too hastily granted the removal of the cost limitation, have now conceded their mistake and are supporting the President's recommendation that a price limit of $10,000 be set. Still, there is the big question—whether the home owner will receive fair value for his investment. A new $5,000 house with a $10,000 price tag is not going to be a good bargain for anyone. It is obvious, therefore, that price ceilings on construction materials must be maintained.

Yet right now we are resisting the clamorous demand from members of the building industry that price ceilings of construction materials be removed.

Yet it was revealed the other day that enough lumber to provide for 75,000 to 100,000 houses in the low-cost bracket had been shipped abroad this year because overseas lumber prices are higher than those permitted by OPA. So a bill has been introduced in Congress to halt the exportation of lumber. I certainly shall vote for it if the problem isn't met otherwise. It is just too bad if American veterans and workers cannot provide homes for their families because the lumber industry gets a bigger profit out of selling its goods abroad.

On the other hand, two contractors testified at hearings last week that they were making an adequate profit out of building low-cost homes.

And just before I started my talk this afternoon I received a letter from the New Council of American Business urging my support of President Truman's reconversion housing program, with the retention of the controls he recommended, and claiming that business in the housing field has been grossly misrepresented by the lobbies in Washington.

And today, also, I received a letter from Mrs. John Lee, president of the Connecticut League of Women Voters, an organization which has been quick to champion the protection of the consumer at all times, urging housing controls.

I hope our Government stands firm in its insistence that we do not repeat the tragedy of the years following the last war. Then the real inflation hit us after the war, when the pent-up demand for the goods, with no price control, gave vent to a disastrous inflation with the depression following shortly thereafter, which most of us haven't forgotten.

In conclusion I want to list the outstanding steps the administration so far has taken to combat the housing shortage. A National Housing Coordinator has been appointed, an appropriation has been obtained from Congress to continue the use of the temporary housing projects until adequate housing facilities are again available, an appropriation of $195,000,000 is in its final congressional stages for housing to meet immediate veterans' needs, a $10,000 over-all price limit on housing has been reinstituted. Legislation will be acted on in the House this week to channel 50 percent of housing materials into low- and medium-cost homes, and price ceilings will be placed on real estate.

The facilities of the Government are being geared to overcome the housing shortage in the shortest space of time. And action is moving on the long range housing program embodied in the Wagner-Ellender-Taft bill, aimed at banishing overcrowding and slums and rebuilding our cities with good housing and good neighborhoods.

We are late on the job—but we are not too late.

---

## Gold in Idaho Primitive Area

EXTENSION OF REMARKS
OF

## HON. COMPTON I. WHITE

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

*Friday, December 14, 1945*

Mr. WHITE. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article by Walter Hovey Hill entitled "Gold in Idaho Primitive Area":

GOLD IN IDAHO PRIMITIVE AREA

There is a river in Idaho, known as the River of No Return because one can boat down its 400-mile course, through the mountains of Idaho, but cannot return up by boat, due to the fall of the stream, making it impossible to navigate the swift current, that in places assumes the character of rapids and cataracts. The stream is Salmon River, a major tributary of Snake River which heads where the southerly end of the Sawtooth Mountains rear their granite heads 4,000 to 5,000 feet above the normal valley floor.

From its main source at 8,700 feet above sea level it runs northerly to Stanley basin 25 miles, where it turns easterly and northeasterly to Salmon 118 miles, thence north 22 miles to the North Fork, where it turns westerly with many meanderings northerly and southerly to Riggins, in Idaho County, about 150 miles almost across the State of Idaho, where United States Highway No. 95 follows the stream to White Bird Creek, 30 miles in a generally northerly direction and where the highway leaves it and where it again turns northwesterly and westerly until it joins the Snake River 260 miles from Salmon and 394 miles from its source, falling 7,800 feet in a total drop into Snake River. With its major and small tributaries it drains an empire of about 13,600 square miles, in the area about White Bird Creek, a country as large as Massachusetts and Connecticut combined.

Geologically this vast area that is the Salmon River drainage is made up of old sediments from pre-Cambrian to the Tertiary that have been broken up, tilted and left by continential movements of intrusive granite masses known as the Idaho batholith. Parts of the western area have been covered by outpourings of lava contemporaneous with the Tertiary Columbia River lavas.

Gold and some other minerals have been detached from the enclosing original matrix and deposited in stratas as fine gold in the upper stratas and coarse nuggets on the bed rock of the adjacent bars.

This gold ranges from 860 fine in the fine gold to 960 fine in the nuggets that sometimes weigh as much as 5 ounces.

All this process, covering millions of years of geologic time, has constituted a great nature's hydraulic operation into the Salmon River sluice box. Gold was first discovered on Salmon River in 1862, soon after the discovery of the rich diggings at Florence.

There is hardly a yard of the banks of Salmon River that has not been skimmed or worked by hydraulic methods since 1862; most of this work was superficial, as but few

of the high bars were so situated that water could be brought on under pressure, or that the bedrock was high enough above the river level to allow a dump for disposal of tailings. After the white men skimmed the area for a few years, hordes of Chinese came in and worked the ground over largely by hand methods. Millions in gold were taken out by these methods, and during depression years in 1893 and again in 1929–31, hundreds of men were rewashing the low bars by hand methods and making wages of $1.50 per day. Since the days of successful dredge mining in California, Australia, and other countries, this great sluice box has been an object of interest to many engineers as to how the undoubtedly rich deposits of both fine and coarse gold that lie in the bed of the river itself and in the adjacent low bars that as yet are virgin gravel, except for the few inches of skim with fine gold on the surfaces, could be worked.

If sufficiently large dredges with digging depth to reach bedrock, having ample power for handling hard and heavy gravels, are designed, the Salmon River sluice box will be a source of gold production for many years to come.

WALTER HOVEY HILL.

## Col. Ruth Cheney Streeter

EXTENSION OF REMARKS
OF
## HON. MARGARET CHASE SMITH
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, December 18, 1945*

Mrs. SMITH of Maine. Mr. Speaker, on December 7 Col. Ruth Cheney Streeter resigned as Director of the Marine Corps Women's Reserve, terminating nearly 2 years of outstanding service during this country's crisis. Colonel Streeter typified the unswerving spirit of the women marines in a way that drew the greatest admiration from their fellow brother marines.

The selection of Ruth Cheney Streeter to head the Marine Corps Women's Reserve was widely applauded because of her record in civic and professional activities. It was, however, her superb leadership as the head of the Women's Marine Corps Reserve that proved the wisdom of her selection.

Colonel Streeter, before her selection as head of the women marines, was active in health and welfare work, serving as a member of the New Jersey State Relief Council, New Jersey Commission on Interstate Cooperation, and New Jersey Board of Children's Guardians. Holder of a commercial pilot's license, the colonel was also the first woman member of the Committee on Aviation of the New Jersey Defense Council, a position to which she was appointed in May 1941.

She is the wife of Thomas W. Streeter, retired lawyer and banker of Morristown. They have four children, Lt. Frank S. Streeter, USNR, Lt. Henry S. Streeter, USNR, Sgt. Thomas W. Streeter, Jr., AUS, and Lilian Streeter, a freshman at Bryn Mawr College.

Commissioned a major when she entered the Marine Corps, Colonel Streeter was subsequently promoted to lieutenant colonel, and has held her present rank since February 1, 1944.

The colonel was eligible for discharge under the credit as soon as it went into operation in September of this year, but she remained at her post until the initial problems of demobilization were solved.

Under her guidance the women marines reached a top strength of 18,838. Besides filling thousands of office jobs they served in such varied departments as motor transport, post exchange, photography, and communications. Nearly 40 percent served in aviation, including the highly specialized fields of aerology, synthetic training, and parachute packing. Nine hundred and ninety-seven served in Hawaii.

When requesting a discharge Colonel Streeter said:

My reason for asking to be released at this time is because my sons—who have themselves been in service 3 and 4 years—are on their way back, and I am needed at home. * * * Colonel Towle is excellently qualified to serve as Director and I turn over to her the supervision of the destinies of the Marine Corps Women's Reserve with full confidence in her ability to guide them well.

During the brief ceremony held just before Colonel Streeter left, Gen. A. A. Vandegrift, Commandant of the Marine Corps, said:

It is with deep regret that I contemplate your leaving, and I cannot let the occasion pass without conveying to you some expression of my admiration and appreciation of your outstanding service as Director of the Marine Corps Women's Reserve from its inception in January 1943 until the present time.

Over that period the Marine Corps Women's Reserve grew in size to a maximum strength of 831 officers and 17,714 enlisted. It set a standard of excellence which, in my opinion, could not have been excelled and would be difficult to equal. The ability and qualifications of its personnel, thanks to careful selection and splendid training, made possible theri replacement of thousands of male officers and men and the badly needed release of the latter for combat service during the war. That the Women's Reserve functioned so splendidly and effectively and fulfilled in every way the purposes for which it was organized; and that it established and maintained such high repute for character, conduct, and efficiency, were all due in great measure to your own exceptional administrative and executive ability, your wise judgment, your sound and farsighted planning, and to your complete devotion to duty.

The Marine Corps Women's Reserve, under your outstanding leadership, met fully those high standards of dependability, efficiency, and devotion to duty which are traditional in the Marine Corps. It is an organization in which the Marine Corps takes great and justifiable pride. You take, on leaving, my earnest assurance of the grateful appreciation of the Marine Corps, and the sure knowledge of a difficult task splendidly accomplished.

Both personally, and as Commandant of the Marine Corps, I want you to know that I deeply appreciate your services, that I view your separation with very real regret, and that I wish for you every happiness in the years to come.

With Colonel Streeter's resignation the Marine Corps has lost a leader but this loss is greatly compensated in the succession of Col. Katherine A. Towle, of Berkeley, Calif., to the position of Director. She was the right hand of Colonel Streeter and her appointment guarantees the continuity of the efficient administration under Colonel Streeter.

The performance of Colonel Streeter and all of her women Marines can be summed up in the Marine motto, Semper Fidelis—they are always faithful in the fulfillment of their tasks.

## Address of President John Green, of Industrial Union of Marine and Shipbuilding Workers of America, at the National Shipbuilding Conference

EXTENSION OF REMARKS
OF
## HON. CHARLES A. WOLVERTON
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, December 18, 1945*

Mr. WOLVERTON of New Jersey. Mr. Speaker, I desire to call attention to a memorable address delivered by John Green, president of Industrial Union of Marine and Shipbuilding Workers of America, on December 4, 1945, at the national shipbuilding conference, being held at Colorado Springs, Colo. It is composed of representatives of both management and men, with representatives of the Government also sitting in.

The speech delivered by Mr. Green is entitled to careful and serious consideration by all who are interested in the stabilization of a great industry, because it represents the studied thought and views of an experienced leader of labor and an organization that through all the years of its existence has sought to improve working conditions of workers.

During the war period, when production of ships was so necessary to an Allied victory, the shipworkers not only distinguished themselves by reaching the highest level of production that had ever been attained in the history of shipbuilding, but accomplished it without any disturbing labor strife. Their record in this respect has been so commendable as to entitle the views of their organization as expressed through its officers to the greatest respect and confidence.

In accordance with the unanimous consent granted by the House, I include as part of my remarks the entire speech of Mr. Green. It reads as follows:

The convening of this conference marks a milestone in the history of shipbuilding labor relations. We are now met to discuss our industry in preparation for peace—and no longer in preparation for war. Yet, our long experience during this last war has shown and taught us many things—the most important perhaps is the fact that when we want to do something badly enough, some means can be found to do it which will be acceptable to all concerned. We've learned cooperation—give and take. We've learned from our own and others' mistakes as well as our victories.

The basic problem before this conference, as I see it, is, will we have shipyards and a shipbuilding industry, or will we have junkyards and perhaps another Pearl Harbor? We must keep ourselves on an even keel throughout this reconversion period—or we will sink after we have seen our first action. We sank—after the First World War—and I tell you now that it can't happen again, or we sink for good.

You may ask—what has the problem of wages to do with the continuance of a sound,

stable industry? We can't have a sound and stable industry—we can't have any industry at all—if we can't put our own internal affairs in order. What is the sense of fooling ourselves? Can we paint our house without cleaning it first?

CITES LONG UNION FIGHT

The Industrial Union of Marine and Shipbuilding Workers of America has had the foresight to fight for stabilization long before it started. Since 1933, when it was first formed, our union fought and fought hard for the revitalization of the industry to prepare our country for the dark times ahead.

In 1939 we asked and asked again—until in 1941 it was accomplished—for the stabilization of working conditions in our industry. We knew the job we would have to do—sooner or later; we saw the war coming and we knew that the only way we could do this job was by a three-way partnership of Government, industry, and labor. No one can dare to say that we failed in doing this job.

Look at our record. I am not going to repeat our production totals here—we all know these. But, let us survey the other record of labor—the little known record of productivity, know-how, that record of keeping our promises.

When we first started our program we had to build the Liberty ship—and I would like to point out that the only reason we had to build these ships was that we had no industry, we had too few skilled men, we had been junking our yards, and we had to build ships for war that must be junked in peace—we cut the man-hours required for these ships down from 1,300,000 to 400,000.

Finally, we had enough skilled workmen to build the Victory. Here we reduced the man-hours over 30 percent from keel laying to delivery.

It is true that these are mass-production ships—let's look at the custom-built Navy. Our own Secretary of the Navy has admitted that the costs of ships in this war have been much less than the costs in the First World War. Those of you who build naval ships will know what it means when I ask you to try to estimate the man-hours and money savings of carbon arc burning alone.

SET UP JOINT GROUPS

We wanted so much production that we even set up labor-management production committees. Since the summer of 1942 the employees' suggestion program resulted in savings of over 31,000,000 man-hours and over $44,000,000, for Maritime Commission contracts alone.

Even before the actual outbreak of war—you asked us for a no-strike pledge. We can honestly stand here and say to all America—we kept that pledge. From the beginning of 1943 through June of 1944, the Bureau of Labor Statistics has estimated that strikes in our industry were less than six hundredths of 1 percent of available working time.

If you figure this on the basis of $1.00 an hour—we lost less than two-thirds of a tenth of a cent an hour through strikes.

We built an industry during this war. We all built it. Management felt the building of this industry in its profits a little more than we did in our wages. The four war years of 1941 through 1944, as compared to the four pre-war years of 1936 through 1939, increased shipyard profits in the hundreds and thousands of percent.

The income, before taxes, for all companies wholly or partially engaged in shipbuilding—60 percent of the industry—increased by over 425 percent. For those companies only engaged in shipbuilding it increased by over 1480 percent.

Even after all taxes, reserves—and even after paying out dividends to their stockholders—management's income increased by over 320 percent for all companies and by over 810 percent for those companies solely engaged in shipbuilding.

Even including night shift premiums, piecework and incentive payments, shift credit and so on, average straight time hourly earnings for shipyard workers only increased 34 percent during the four war years of 1941 through 1944, as opposed to the four pre-war years of 1936 to 1939.

This increase has, to all intents and purposes, been wiped out by the increasing cost of living during the war years.

ANALYZES WAGE FREEZE

What circumstances made possible this virtual freeze of our real wages since the beginning of the war?

When stabilization of this industry was first begun—Government, management, and labor all realized that workers' base rates had to be protected against hidden decreases, because of a rising cost of living. Therefore, all four of the original zone standards agreements had escalator clauses—linking base rates with the cost of living.

By the spring of 1942, it became evident that the cost of living was rapidly increasing while wage scales were fixed, and consequently, a national conference was called for April 27, 1942, in Chicago to consider the problem of wage adjustments as provided for in each of the four zone stabilization meetings.

TWO IMPORTANT EVENTS

Prior to this meeting, two important events occurred. On January 30, 1942, the Emergency Price Control Act was passed. Thus, there were initialed the beginnings of a national economic stabilization program.

In addition, on the very day that the members of the National Shipbuilding Confefence were meeting in Chicago (April 27, 1942), President Roosevelt set forth in a message to Congress a seven-point program to stabilize the cost of living.

The labor members of this conference were in an advantageous position for several reasons.

1. By agreement, signed by labor, industry, and Government, wage scales (and not earnings of any sort or kind) were tied to changes in the cost of living where such changes equaled or exceeded 5 percent at periodic intervals. This meant that industry and Government were committed to increasing the wage scale—the basic wage rates—by the percentage increase in the cost of living from the base periods of each of the zone standards to April 15 or May 15, 1942.

2. None of the zone standards were due to expire in 1942. The Atlantic coast zone standards were due to expire on June 23, 1943. The Gulf coast zone standards were due to expire on August 1, 1943; the Great Lakes zone standards were due to expire on June 2, 1943, and the Pacific coast zone standards were due to expire at the end of the national emergency, as proclaimed by the President, and/or at the end of 2 years (from April 1, 1941) whichever was the longer.

The union, therefore, was under no obligation to assent to any changes in the zone standards, and particularly to changes which would eliminate the wage scale-cost of living escalator relationship.

3. Without assent from the union, the zone standards could not have been amended, and no changes could have been possible until 1943.

4. In 1943, no shipbuilding stabilization program could have been administered without the inclusion of labor representatives, and labor representatives were in a position to refuse to agree to such stabilization, if they had wanted to think only of the interests of the shipyard workers, and of no one else.

5. The union would have been within its rights had it demanded that the signatories of the zone standards abide by the provisions for adjusting wage scales to changes in the cost of living. This was recognized by both Mr. Paul R. Porter (then chairman of the Stabilization Committee) and President Roosevelt.

CONSIDERATION OF LABOR

Three considerations determined the union's choice of foregoing full wage rate increases in the interests of national economic stabilization.

1. The union turned its eyes to England where the trade unions in 1942 were faced with a similar dilemma. There, too, a national economic stabilization policy, similar to President Roosevelt's seven-point program of April 27, 1942, was in effect, and its operation was actually stabilizing the relationships between wages, cost of living, earnings, and profits. What England could do, we could also, or so the union thought.

2. The union leaders felt that man's ultimate responsibility was to his country and to the welfare of all the people residing therein, even if this meant the sacrifice of interests and principles for which they not only stood but upon which their fellow workers had chosen them as their representatives and leaders. The war had made such extreme demands upon the productive and distributive capacities of our national economy that national economic stabilization alone could prevent economic disaster at home. The union felt that the other elements of our society—industry and agriculture—would likewise see the close interdependence of their interests with the interests of the national welfare, and that they would sacrifice their interests to that of the national welfare where necessary. Sadly, to the union's regret, this was not to be realized.

3. Finally, the union felt that sufficient public promises were made by responsible Government officials to warrant a trust and faith in the Nation's leaders' abilities to stabilize living costs, profits, and earnings as well as wages; and that the Congress would see that complete, over-all economic stabilization, and not a partial stabilization of wages alone, was the only possible equitable method of stabilization.

The union would again wish to stress two points:

1. The union was under no obligation, except that to the national welfare, to eliminate references to wage adjustments with changes in the cost of living. Had it not assented to their deletion, these wage adjustments would have had to remain in force until the spring of 1943, and this would have necessitated wage increases in the spring of 1943 since the cost of living increased.

2. Had the union not eliminated the reference to wage adjustments with changes in the cost of living, during the Chicago conference, it would not, in view of the consequent failure to stabilize the cost of living, profits and earnings, have done so in 1943. Since no shipbuilding stabilization program could have (or could ever) succeed without the participation of labor, and since no changes in zone standards could take place without the acquiescence of labor, the clause providing for wage adjustments commensurate with changes in cost of living would have continued in full force and effect, or there would have been no shipbuilding stabilization program.

MONEY SAVED GOVERNMENT

The money saved for the United States Government was estimated, for the year of 1942 alone, by the union as follows:

Voluntary acceptance of the abolition of premium calendar days, $70,000,000.

Acceptance of compromise of the change in basic dates due under the cost of living formulas of the four zone agreements, $135,000,000.

Acceptance of less than the cost of living wage adjustments, $400,000,000.

Total saved, $605,000,000.

The sum represented the actual equity of the shipyard workers in the success of the

eventual stabilization of the cost of living. This sum represented what the workers were deprived of in 1942, by reason of the failure of the attempts to stabilize the cost of living. By this time we have saved the Government well over one and one-half billion dollars.

PROMISE BY PRESIDENT

When we agreed not to retain the escalator clauses in the four zone standards agreements, this was done upon a promise of the United States that the cost of living would be stabilized. The President said:

"You have my assurance that all the Executive power I have will be used to carry out all the essential steps of the policy (stabilization) laid down."

The President promised a roll back in the cost of living to March 1942. Therefore, the shipbuilding workers accepted an 8-cent increase instead of abiding by the escalator clauses of the four zone standards agreements. To date, through December of 1945, the shipyard workers will have lost almost 4 months' salary because of the failure of the promise to roll back the cost of living. This is 32.2 percent of 1 year's pay, or a 38.6-cent per hour general wage increase to stabilize the workers' income according to the escalator clauses of the original zone standards as of December 15, 1945.

The shipyard workers of this country have an equity in a wage increase. They have an equity based upon a promise of the late President of the United States. They have an equity based upon their increased productivity. They have an equity based upon the fact they kept their pledged word.

Therefore, without any if's, and's, or but's, I am privileged herewith to submit the program of the Industrial Union of Marine and Shipbuilding Workers of America for:

1. A 17½-cent wage increase across the board, and—

2. A percentage increase of 30 percent in wage payments upon reduction in hours of work so that weekly take-home will be equal to the take-home for a 48-hour week.

## Investigation of the Spanish Situation

EXTENSION OF REMARKS
OF

### HON. WILLIAM B. BARRY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, December 18, 1945*

STATEMENT OF HON. WILLIAM B. BARRY, OF QUEENS COUNTY, N. Y., REQUESTING INVESTIGATION OF THE SITUATION IN SPAIN BY A JOINT MEETING OF THE SENATE AND HOUSE FOREIGN AFFAIRS COMMITTEE, BASED ON THE BOOK RECENTLY PUBLISHED BY OUR WARTIME AMBASSADOR TO SPAIN, CARLTON J. H. HAYES

Mr. BARRY. Mr. Speaker, the French Government, two-thirds of which consists of Socialists and Communists, has requested our Department of State to meet and discuss with them the proposition of breaking off diplomatic relations with Spain for the purpose of bringing about a revolution to overthrow the existing Spanish Government.

Ever since the end of the Spanish Civil War, Communists, fellow travelers, and Spanish exiles have been trying to involve us in restoring the Red-Pink Spanish Government, consisting mainly of anarchists, Socialists, Syndicalists, and Communists back into power.

I do not like Franco's military dictatorship and that is what the present Spanish Government is. The Falangists or Spanish Fascists are only a small minority group in Spain and are losing ground all the time. I do not like the military dictatorships which exist among some of our American neighbors south of the Rio Grande, and which have existed since these nations broke away from Spain; neither do I like the Russian dictatorship under Stalin. However, I am strongly opposed to United States breaking off diplomatic relations or going to war with any one of these countries in order to enforce upon them our type of democracy.

I have read and want to call to the attention of every Member of Congress the book entitled "Wartime Mission in Spain," recently published by Macmillan Co., and written by our wartime Ambassador to Spain, March 1942 to January 1945, the distinguished historian, scholar, and teacher, Prof. Carlton J. H. Hayes.

It is my conviction that the majority of the Members of Congress, after reading this book, would feel as I do that Professor Hayes should be called before a joint session of the House and Senate Foreign Affairs Committees to tell us his experiences in Spain and its attitude toward the United States during the recent war.

This hearing, in my opinion, should be held before our State Department takes any action on the French request. The book, I am frank to say, was a revelation to me, and I am sure it would be to most Members of Congress who have been subject to a constant barrage of anti-Spanish propaganda inspired by Communists, Spanish exiles, and their ilk whose only interest is the success of their own ideologies and not the welfare of the United States of America.

If you do not have time to read Wartime Mission in Spain, I urge you to read the following paragraphs taken from the book summarizing some of ex-Ambassador Hayes' conclusions:

Let me now set forth certain conclusions from my wartime experience and reflection in Spain.

Throughout my entire residence there, from May 1942 to January 1945, I had constant evidence that the large majority of the Spanish people greatly desired (1) to stay out of the international struggle, (2) to avoid recurrence of civil war, and (3) to be friendly with the English-speaking democracies, especially with the United States. These desires have been common, not only to the mass of Leftists (Republicans and Socialists), but also to most of the Rightist groups which supported General Franco in the Spanish Civil War (Liberal Monarchists, Traditionalists, and the Conservative following of Gil Robles) and consequently to members of these groups who held office in the existing government (which was essentially a coalition rather than a single-party government).

General Franco is in a curious position. He is a cautious politician with strong military backing, and, though doubtless the large majority of Spaniards, Rightist as well as Leftist, would ideally prefer another chief of state (if it could be arranged in an orderly fashion), many of them recognize, with varying degrees of gratitude, that by virtue of his cautious policy he succeeded in keeping Spain free from foreign and domestic war during an extraordinarily trying period.

So long as Axis victory seemed to him inevitable, so long as almost the whole continent of Europe was at the mercy of Germany, with German armies massed near the Pyrenees and German submarines infesting the seas adjacent to Spain, General Franco let Hitler and indeed the world believe that he was pro-Axis. Nevertheless, whatever may have been his inmost thoughts and personal fears in the matter, the fact remains that at least from the date of his dismissal of Serrano Suñer from the foreign office and the leadership of the Falange, in September, 1942, General Franco guided or backed the responsible officials of his Government in approximating Spain's official position to the pro-Allied position of the large majority of the Spanish people.

From September 1942 to June 1943, while the Spanish Government was still ostensibly "non-belligerent" and hence technically "unneutral," it not only placed no obstacle in the way of our landings and military operations in north Africa and southern Italy but gave us significant facilities, such as de facto recognition of the French Committee of National Liberation at Algiers and of its official representatives in Spain; free transit through Spain of over 25,000 volunteers (chiefly French) for active service with our armed forces in north Africa; noninternment of several hundreds of our forced-landed military airmen and their evacuation through Gibraltar; immediate delivery to us, quite uncompromised, of secret equipment on forced-landed planes; and freedom and full opportunity to carry on economic warfare with the Axis on Spanish territory by means of preemptive buying of wolfram, mercury, fluorspar, skins, woolen goods, etc., and blacklisting of Spanish firms doing business with the Axis.

From July 1943 to May 1944, the Spanish Government shifted its declared position from nonbelligerency to neutrality, and gradually increased the facilities it was according us to the detriment of the Axis. It not only curbed the discrimination against us in the Falangist-controlled press of the country, withdrew the Blue Division and Blue Air Squadron from the eastern front, and replaced pro-Axis with pro-Allied diplomatic representatives in countries of Europe and Latin America, but it permitted the commercial sale of American propaganda magazines, granted us control of all passenger traffic, by Spanish airplanes as well as ships, between Spain and Spanish Morocco, and withheld recognition of Mussolini's social republican government in north Italy.

Moreover, it speeded up the evacuation of Allied refugees and forced-landed airmen, arranged for the escape to Spain of a considerable number of Jews from Hungary, Germany, and the Low Countries, and tolerated, even to the point of abetting, the very important clandestine activities of our secret espionage services directed toward obtaining from across the Pyrennees invaluable military information about German troop movements and dispositions in France. Finally, as the result of a series of negotiations, pressed by us and vehemently opposed by Germany, Spain embargoed all exports of wolfram to the Axis from February to May and agreed to allow thereafter only token shipments (which stopped altogether after our landing in France in June 1944). Simultaneously, the Spanish Government agreed to submit to arbitration the question of the internment of Italian warships which had been held for several months in the Balearic Islands, to close the German consulate at Tangier, and to expel its staff and other Axis agents suspected of espionage or sabotage against us.

From July 1944, the Spanish Government repeatedly indicated, by word and likewise by deed, that its policy toward us was one of benevolent neutrality. It authorized our use of Barcelona as a free port of entry for supplies for France and other liberated areas. It expelled or interned several hundred German agents. It assured us it would not harbor persons adjudged by competent Allied tribunals to be war criminals. It rescinded practically all censorship restrictions

on American journalists in Spain and arranged with the United Press to utilize this American news service for the Spanish press.

It was the first foreign government to make a general air agreement with ours; and, under this, we obtained transit and landing rights in Spain for three different American air lines and also for our Army planes. It finally put into effect between Madrid and New York the direct radio-telegraphic circuit, which had been the object of protracted and fruitless negotiations by us with the Spanish monarchy prior to 1931 and with the Spanish Republic prior to their civil war. On the eve of my departure from Spain, in January, the Foreign Minister notified me that his Government had released the interned Italian warships. Already the outstanding, and long-standing, difficulties between the Spanish Government and the American-owne telephone company were the subject of amicable negotiations which issued, just after I left, in a mutually satisfactory agreement. Moreover, the Foreign Minister had already agreed to stop the carrying of any merchandise by the German air line between Barcelona and Stuttgart (the only means left to Germany of getting goods from or to Spain), and had expressed a desire to discontinue this German line altogether if only we would consent to the maintenance of some sort of communication between Spain and Switzerland. This also was accomplished shortly after I left Spain. Furthermore, both the Foreign Minister and General Franco himself repeatedly made clear, not only in conversation with me, but by inspired articles in the Spanish press, their hostility to Japan and their intention, in due course, of breaking diplomatic relations with it. This, too, they did soon after I left.

In trying to assess the reasons for Spain's swing toward us and the increasing facilities it granted us from 1942 to 1945—in other words, the reasons for whatever success my wartime mission had—I arrive at four basic considerations. First and foremost, Spain acted, as any nation would act, in what it conceived to be its own interest. In its own interest, Spain needed and desired to stay out of the war. To have joined the Axis in 1940 would sooner or later have brought it into the war. To have shown any partiality for the Allies prior to the end of 1942 would have brought the Germans into Spain, and consequently Spain into the war. To have flouted reasonable requests of the Allies from 1943 onward might have well have led to hostile action on their part and thus brought Spain into the war. In any of these cases Spain would have lacked foresight and failed to serve its own greatest interest. The tactic of our diplomacy was to establish and enlarge a common area of Spanish interest and of our own. For we were not in Spain to oppose Spaniards or their Government, but to get them to help us oppose the Axis.

Second, I must emphasize the economic weapon which we and the British possessed. Spain simply had to have certain commodities from us, most notably petroleum, which it could not obtain in satisfactory quantities elsewhere. These we were able and ready to furnish or to withhold. With what telling effect we wielded this weapon, even before we had any military victories to our credit, must already be sufficiently clear. It should be borne in mind, however, that the mere withholding of a commodity like petroleum was in itself no weapon at all. Only when it was associated with a willingness to furnish the commodity, under conditions reasonably satisfactory to us, did it constitute an effective weapon.

Third, we owed no little of our success in Spain to Axis, and particularly German, misjudgment of Spanish character. The Nazis were at first too sure they had Spain in their pocket, and afterward they overworked their propaganda and threatened too much. They neither invaded Spain, when they could, nor ceased trying to dictate to it, when they should. Moreover, their regimentation, their superior airs and patronizing attitude, and their deadly seriousness were repulsive, when not merely ridiculous, to the large majority of a nation notoriously individualistic, proud and stubborn. The tactic which certain of our journalistic critics in America urged us to adopt toward Spain was essentially the German tactic. It is fortunate we didn't follow it, and I sincerely hope, in our own national interest, it never will be followed.

Fourth, and by no means least, we were immeasurably aided by our moral ascendancy over the Axis. Spain came to recognize that when we made pledges, as, for example, to respect its territorial integrity or to furnish it with some commodity, we meant to keep our pledges, whereas the Axis relied on brute force and made promises only to break them. To maintain our moral position intact is vitally necessary to our prestige in any foreign country and hence to the successful conduct of all our international relations. When we have requests to make of another country, we must support them with reasons that are fair and honorable. If we had acted otherwise in Spain, we should have gravely weakened our moral position and thereby greatly handicapped ourselves.

My mission in Spain was rendered peculiarly difficult by reason of prevailing popular sentiment in the United States against the Spanish Government of the time, that of General Franco. And contemporary and future Spanish-American relations are likely to be troubled for similar if not the same reasons.

Our American Government, being democratic, is naturally and necessarily responsive to public opinion. And public opinion in the United States, as crystallized or reflected by our journalists and publicists, has been, and still is, predominantly hostile to the existing regime in Spain, expectant of its speedy collapse, and opposed to any measure or indication of a collaboration with it which might conceivably serve to strengthen or prolong it. This opinion is reenforced, moreover, by a somewhat similar attitude prevalent in England, by the partisan propaganda of exiled refugees from the Spanish civil war residing abroad, and by the interested and denunciatory propaganda emanating from Soviet Russia and its inspired press and radio.

The central and most widespread popular notions in the United States about the Franco regime have been that it was forced upon Spain by Hitler and Mussolini, that it has been thoroughly Fascist, and pro-Axis, and that, as one of our newspapers has recently said, "if diplomatic and economic support were withdrawn from Franco by all the United Nations, his Government would fall through spontaneous action by the masses of the Spanish people whom he has exploited and tortured for nearly a decade." I, of course, hold no brief for General Franco's Government. I am an American and a Democrat, and I most certainly would not wish to see his type of government installed or copied in the United States, or indefinitely continue in Spain or anywhere else. Yet I have had to face the fact, just as our own Government still has to face it, that if one wishes to deal with Spain one must deal with the existing Spanish Government, whatever it is, and that in order to deal with it wisely and advantageously one must be realistic about it and not the victim of wishful thinking or of fables.

Actually the Franco regime owes its origin only in part to military aid it received from Italy and Germany during the civil war. This aid has been much exaggerated, as that of Russia and France to the Loyalists has been minimized. The civil war was primarily a Spanish affair, in which a half of the Spanish Nation and more than half of the Spanish Army supported General Franco.

Actually, too, as the historical record in this book reveals and as Mr. Churchill stated in the House of Commons in May 1944, the Spanish Government of General Franco has not been thoroughly pro-Axis, but, rather, has long accorded a large number of important facilities to the Allied war effort. Spain's contributions to us in this respect compare favorably with those of any other neutral—Sweden, Switzerland, Turkey, or Portugal. Nor, as I have previously explained, has General Franco's dictatorship been inspired by Nazi ideology or directed solely by Fascists; it has been more in the nature of a military dictatorship traditional to Spanish-speaking peoples.

Actually, also, it is difficult to understand why "the exploited and tortured masses of the Spanish people" must await the withdrawal of foreign diplomatic support from their government before they spontaneously rise up and overthrow that government. Surely they don't fear that France and Russia, and England, and China, and the United States would interfere to prevent them from overthrowing Franco. No, there must be a sizable number of Spaniards who don't regard themselves as "exploited" or "tortured," or who prefer a quiet evolution of the Franco regime to revolution and the uncertainty of succeeding alternatives.

There has been a curiously recurrent expectation in America of an automatic collapse of the Franco regime. It was loudly voiced by journalists and publicists in the spring of 1943, just after our military successes in north Africa; more loudly in September 1943, when Mussolini was ousted and Italy signed the armistice with us; and still more loudly in the spring of 1944 when we entered Rome and landed in Normandy. Thenceforth, in continuous chorus it has been affirmed that the triumph of Allied arms must mean the speedy abdication and disappearance of General Franco and his supporters.

The curious feature of all this is that what actually happened in Spain did not correspond at all to the expectations abroad. Instead of weakening his position within the country, the external events in the spring of 1943, in September 1943, and in the spring of 1944 served rather, at least for the time being, to strengthen it. By now, it should be evident that one is seriously misinformed and unrealistic if one takes for granted that the Spanish Government's collapse is inevitable and imminent—unless, of course, we are ready to employ Allied pressure to collapse it. It is not likely to collapse through voluntary abdication, or, so far as I can see, through any general mass revolt of the Spanish people. The domestic opposition to it is too divided, too broken into quarrelsome groups of Monarchists, Republicans, Socialists, Syndicalists, Anarchists, Communists, and Basque and Catalan nationalists, and too lacking in experienced and respected leadership. The memory of the horrors of the late Spanish Civil War is still much too vivid, and the fear of doing anything to precipitate its recurrence is, with the exception of the Communist minority, almost a national obsession.

After all, the existing regime represents that part of the Spanish nation which finally won a 3-year civil war; and it would indeed be quite a novelty in human history if the victors in such a war should say to the vanquished only 5 or 6 years afterward: "We are sorry; we shouldn't have won; we have made a mess of things; we will now restore you to power and welcome back your former leaders and let them do to us what they will." Imagine General Grant saying anything like that to the leaders of the Southern Confederacy in the midst of our own post-Civil War reconstruction!

Of course, the United Nations could almost certainly exert sufficient joint pressure, through rupture of diplomatic relations and

more especially through economic boycotts, to bring about the disintegration of General Franco's Government. It might be, moreover, that in such an event the half of the Spanish nation which was on the Loyalist side during the civil war would temporarily overlook its factional differences and unitedly acclaim the return to Spanish soil of the government-in-exile constructed at Mexico City. But it would be extremely dubious whether the initial acclaim and unity could be long maintained, whether the acquiescence of the other half of the Spanish nation, including the Army, could be secured, and whether the United Nations could show the same harmony in continuously supporting a new regime as in getting rid of the present one.

Every major nation, I suppose, would like to see every other nation fashioned in its own image and likeness. Most Americans would doubtless like to see Spain a democratic republic functioning under a constitution and bill of rights akin to ours; and some Americans may hope that sooner or later our Government will employ its economic power, and, if necessary, its military force to replace the existing political regime in Spain with just such a democratic republic. But, on the other hand, Soviet Russia and Communists elsewhere in the world hope that Spain will be transformed into a Soviet state, into a dictatorship of the proletariat, with Dr. Negrin, or someone like him, forcibly substituted for General Franco, while the statesman who served as British Ambassador at Madrid from 1940 to 1944 has repeatedly expressed the hope that constitutional monarchy of the English type might be restored in Spain.

From my experience and observation in Spain, I am extremely dubious about an early, happy realization of such hopes. The masses of the Spanish people are largely indifferent, if not hostile, to the Bourbon monarchy, and if it were restored by some military coup it would lack needful popular support and could be maintained in the long run only with foreign—presumably British—assistance. On the other hand, large numbers of Republican and Socialist leftists blame the Communist minority, no less than the rightists, for the tragedy of the Spanish civil war, and at least some of them would make common cause with the entrenched and not inconsiderable strength of the right against any Communist regime, with the result that this would have to be forced upon Spain with foreign—presumably Russian—aid.

It might be that a democratic republic could be established with a large measure of popular support. But we should be under no illusions about the difficulties which would beset it and which would militate against its orderly functioning according to American traditions and ideals. Spaniards have no such political tradition as ours. Their two experiences with republican governments—the one in 1870 and the other in the 1930's—were not fortunate and have not made all of them enthusiastic about seeking a third experience. Moreover, any majority of Spaniards who might support a republic would not consist of two big and moderate parties, like the Republican and the Democratic in our own country, but would comprise a variety of factions so disparate as to render extremely difficult the maintenance of a united and really democratic front against Communist advocates of a proletarian dictatorship on one side and rightist champions of monarchy or a military dictatorship on the other. Dictatorship, in one form or another, is no novelty, but an old habit, in Spanish political life, and historically it has been exercised from the left as well as from the right.

Some Americans seem to think that the United States should follow up the Allied defeat of Fascist Italy and Nazi Germany by engaging in a kind of world-wide crusade against any and every government which we don't like or which someone dubs Fascist or totalitarian. Now, if it is an aim of ours to overthrow all dictatorships throughout the world, we should intervene in Spanish affairs and use all possible means to overthrow General Franco's dictatorship. For this purpose, I imagine, we could count on the cooperation of the Soviet Union, possibly on that of France, and barely possibly on that of Great Britain. But would there be continuing agreement among the Allies as to who or what should take General Franco's place?

And if we are going to intervene in Spanish affairs and use all possible means to overthrow General Franco's dictatorship, why should we stop there? A goodly number of other countries in the contemporary world, including some of the United Nations, are subject to dictatorships, military, or even totalitarian. What about Portugal? What about Turkey? What about Brazil? What about a half-dozen or more Spanish-American countries? What about China? What about the Soviet Union itself? Marshal Stalin was not notably helpful to the democracies from 1939 to 1941.

In the circumstances it would seem statesmanlike, at least from the standpoint of the United States, to ensure a peaceful resolution of current political difficulties and conflicts among peoples recently liberated from Fascist Italy and Nazi Germany before interfering in Spain or in any other neutral or Allied country. My own conviction is that we should not concern ourselves with the internal affairs or form of government of any foreign country, unless that country becomes, or clearly threatens to become, a menace to the peace and independence of its neighbors and hence of the world and of ourselves. I never liked the Nazi regime in Germany or the Fascist regime in Italy, or, for that matter, the Communist dictatorship in Russia. These have all seemed to me fundamentally of the same ilk and quite antithetical to the democracy I know and like in America. Yet, so long as they kept the peace and did not go on the warpath, or threaten our security, I believe our Government acted wisely in having diplomatic relations with them and in leaving to their own peoples any question of their internal affairs and form of government. When Nazi Germany and Fascist Italy did become menacing and aggressive against their neighbors, we had reason to break with them and to oppose them; we finally did so when they joined Japan in an attack upon us.

Noninterference in the internal affairs of foreign countries is not merely personal counsel of mine. It is a long standing, and at least used to be a generally accepted, American public policy. One of its classic expressions was President James Monroe's in 1823, which I quoted at the beginning of this book and which, for emphasis, I here quote again: "Our policy in regard to Europe * * * remains the same, which is not to interfere in the internal concerns of any of its powers; to consider the government de facto as the legitimate government for us; to cultivate friendly relations with it, and to preserve those relations by a frank, firm, and manly policy, meeting, in all instances, the just claims of every power; submitting to injuries from none." This was the policy which President Franklin Roosevelt reaffirmed in specific pledges to Spain, and the policy in accordance with which our wartime mission in Spain was discharged. I don't believe it should lightly be changed.

Frankly, I would leave Spain to the Spaniards. Left to themselves, they are no menace to their neighbors or to the peace of the world, and they are a people whose tradition and temperament are inflexibly opposed alike to domestic regimentation and to interference from abroad. The existing regime is regarded by the mass of Spaniards, rightist as well as leftist, and is admitted by General Franco himself to be but temporary. Eventually there is sure to be a change in it. But change is more likely to be impeded than expedited by foreign intervention or interference, which would probably involve additional suffering for the Spanish people and lead to serious divisions among the major Allied Powers.

Meanwhile, with the existing Spanish Government, as with any Spanish government which, through evolution or internal revolution, may succeed it, the United States would do well, in my opinion, to pursue a policy of friendly relations. Spain and the Spanish people can be, regardless of their form of government, very serviceable to American interests at the present and in the future.

There remains, of course, a public opinion in the United States, besides other public opinions in Great Britain and Russia, hostile to the pursuit of such a policy. But the most hostile of this public opinion is, I am sure, a peculiarly ill-informed, or a most selfishly interested and propagandist-directed, public opinion. There can be no doubt of the need and importance of public opinion in a democracy. But if a democracy is to act wisely, especially in the domain of foreign policy, and at the same time to reflect, as it should, the major public opinion of its people, it is of supreme importance that democratic public opinion be well informed and truthful and honest. Public opinion which is fashioned and propagated otherwise must of necessity lead a democracy like the United States into the most foolish and dangerous paths.

As the United States projects its worldwide leadership into post-war reconstruction and the organization and maintenance of international peace and security, it becomes all the more desirable that our Government, particularly our Department of State, should greatly strengthen and make much more effective its liaison with the American press and other fashioners of American public opinion and thereby contribute actively toward making and keeping that opinion well and wisely informed. This, I hope, would apply to our relations with Spain as with other countries.

Spain desires to cultivate especially friendly relations with the United States. I firmly believe that for the future, regardless of what its Government may be, whether one evolved from General Franco's, or restored monarchy or a republic, we should reciprocate and should cultivate especially friendly relations with Spain.

In support of such a policy on our part I would advance some five basic considerations:

1. Spain (with Portugal) occupies a most important geographical position in respect of commercial aviation of the present and future, particularly between the American Continents and Europe. There is no need of laboring the generally recognized significance of the airplane for postwar communication and transport between nations and continents, or the rivalry which most probably will develop among great industrial nations for primacy in the construction of planes and the proliferation of air routes throughout the world. For the United States it would appear that one of its first objectives in the development of any world program of aviation should be the Iberian Peninsula. Spain perceives advantages to herself in this and is quite prepared to cooperate closely with the United States in aviation matters if she can count upon fair and considerate treatment in return.

2. Spain (with Portugal) also occupies, as the present war has amply demonstrated, a peculiarly strategic position in relation to any major threat to the peace of Europe and hence of the world. If Spain had joined Germany in 1940 or could have been relied upon to offer no resistance to German invasion and

occupation, it is reasonable to suppose that the German war machine would have reduced Gibraltar, closed the Strait, and thereby dealt a mortal blow at Britain in the Mediterranean and north Africa before we could have sent any effective aid or been in any position to undertake a counteroffensive against the "soft underbelly" of Europe. In that case the war might have been gravely prolonged and the final outcome far more dubious.

It should by now be clear to Americans that any power, whether Napoleonic France or Hitlerian Germany or some other madly ambitious power of the future, which goes on the warpath in Europe and attempts to dominate that Continent, automatically endangers the peace and security of the rest of the world and is sure, sooner or later, to involve the United States in a horribly costly overseas conflict. It behooves us, therefore, to cultivate and maintain especially friendly relations with nations which of themselves are not likely to provoke such a conflict, but which can provide, in case of emergency, a convenient European bridgehead for our armed forces. Spain is just such a nation, and especially friendly future relations with her should not undermine, but rather buttress, any policy or program of collective world security. But to make a friend of Spain requires being a friend to Spain.

3. Many ills in Spain derive from economic backwardness. This is fully recognized by the Spanish Government and by thoughtful Spanish businessmen and farmers, who look particularly to the United States to supply machinery, materials, and technicians for the industrial and agricultural betterment of their country. Most Spaniards are industrious and hard working, and economic assistance from the United States would prove profitable to both countries. In the immediate future Spain could be utilized as an important supplier of textiles, tires, and foodstuffs to our armed forces and the liberated areas in Europe, if only she could get from us the requisite raw cotton, rubber, and fertilizers. She has the factories and the workmen. Instead of trying to force on Spain exports from the United States which are deemed luxuries by her Government and which eat up her dollar balances, we might, much more helpfully to ourselves and to the well-being of the Spanish people, remove some of our restrictions on the export of materials vitally needful to the domestic and foreign economy of Spain, and at the same time lower our tariff on the imports with which Spain must pay us.

Spain particularly wants a large number of motortrucks, a large amount of hydroelectric equipment, a large miscellany of agricultural implements, and machine tools and spare parts. She wishes to import them from the United States, and if we meet her halfway, we shall have in her a good customer as well as a good neighbor.

4. Some ills in Spain derive from lack of sufficient popular and technical education. Here, too, thoughtful Spaniards, regardless of political affiliation, look to the United States for aid and example. They want to know what is being done by Americans, both scientifically and practically, in agriculture, in medicine, in chemistry, in vocational guidance, in the industrial arts. In turn, Spain has arts and literary and historical scholarship from which Americans should increasingly profit. A sympathetically developed program of cultural relations between Spain and the United States, on the scale of that between the United States and Hispanic America, would be mutually beneficial.

5. I do not believe that we can successfully pursue one policy in Hispanic America and another in Spain. If we continue to convey the impression that we are a bad neighbor to Spain, we shall increase the difficulties and hazards of remaining a good neighbor to the other American Republics. Contemporary Spain, I am sure, has absolutely no political objectives on the American Continents, but she does have a huge cultural empire there. Her history and enterprise, for four and a half centuries now, have been more fruitfully associated with America than with Europe. She faces westward rather than northward or eastward. She has given to 18 of the 21 American republics her language, her religion, her art, her men and mentality, her virtues, and vices. I have yet to encounter a family in Spain, whether of nobility or peasantry, of professional or artisan class, which does not have relatives and interests in Spanish America. There are hundreds of thousands of first-generation Spaniards actually living in such cities as Buenos Aires, Montevideo, Lima, and Habana, and, for good or ill, exerting influence upon the social, economic, cultural, and political life of American Republics to the south of us.

Nor is the traffic one way. Indeed, I have been astounded by the Spanish-American numbers and influences in Spain. Along with France, Spain has been, and is most likely to remain, the main magnet for tourists and students, artists and athletes and journalists, from Latin America. Almost every well-to-do Spaniard has a wife or mother or at least an aunt who hails from Cuba or Peru or Mexico or Argentina; and in every important Spanish city the "colony" of nationals of each major Spanish-American country outnumbers any other "foreign" colony, German, French, or British.

There are many differences, of course, between Spain and her daughter nations in the New World—differences between an old long-settled country, of monarchical tradition and relatively homogeneous population, and a group of pioneering "frontier" countries with republican and separatist traditions and with very heterogeneous populations. But such differences are, I think, less than those obtaining between England and the United States, and they should not be exaggerated. Throughout both Spain and Hispanic America there are strikingly similar political and social, as well as cultural, characteristics. The social structure is similar, and so, too, are the political currents: The complexity and individualism of party politics; the endless conflicts between "rightists" and "leftists," between "clericalism" and "anticlericalism," between federalism and centralization; the recurrent revolutionary movements and the equally recurrent resorts to military dictatorship. Such currents in one Spanish-speaking country are reflected, sooner or later, to greater or lesser degree, in the others. Here, again, by reason of close cultural and personal contacts, Spain cannot be unaffected by developments in Spanish America, or vice versa.

I assure that the "good-neighbor" policy of the United States toward the countries of Spanish America involves our securing the utmost cooperation with and from them for mutual defense and commercial advantage, without impairing their independence or interfering in their internal affairs. If they tend toward "right" or toward "left," that is their concern and not ours, so long as they are friendly and cooperative and do not endanger the basic purposes of the good neighbor policy. If this policy is to produce the most salutary and enduring effects, then I would conclude from the foregoing that it should be extended to embrace not only the Spanish-American countries and Brazil but also Portugal and Spain.

**Mr. Speaker, if we are to break off diplomatic relations with Spain because the Spanish Government pretended to be or was pro-Axis before the United States entered the war, what about Soviet Russia which not only collaborated with Hitler in starting the war, but took half of Poland as a pay-off and then attacked and seized a part of tiny Finland?** Are we going to establish one principle for Spain because she is weak and the Communists do not like her, and another principle for Russia because she is strong? Furthermore, in evaluating the French request, it should be borne in mind that the Falangists, or Spanish Fascists, are only a small minority in Spain and that more than one-third of France is communistic. Let us have the entire Spanish situation brought out into the open and reviewed completely. If necessary, let us have every American attaché at our Embassy in Spain during the war give his views along with those of ex-Ambassador J. H. Hayes.

---

## Let Us Not Knife Mr. Secretary Byrnes Behind His Back While He Is Trying To Bring About Better Relations Between the United States and the Union of Soviet Socialist Republics

EXTENSION OF REMARKS

OF

### HON. ELLIS E. PATTERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, December 18, 1945*

Mr. PATTERSON. Mr. Speaker, the so-called Un-American Activities Committee recently requested the financial and membership records of the National Council of American-Soviet Friendship.

All of us here, at one time or another, have noted the work of this organization, whose purpose is to bring the peoples of the two great Allied Nations, the United States of America and the Union of Soviet Socialist Republics, into closer intellectual and cultural harmony. The National Council's work has been open and aboveboard, and their sponsors are many of America's leading figures.

In the light of this, I cannot see how this House committee can insinuate, simply through the request by a committee of its name, that the persons and contributors of this fine organization are engaged in subversive activities.

The established policy of this Government is to deal in cooperation with the Russian Government. Only through such cooperation, as with all other nations, can we hope to practice peace. I believe that in attempting to disrupt the activities of an organization, which is promoting the most harmonious relations between the two Republics, is a direct threat by the Un-American Activities Committee at our foreign policy and relations with the Soviet Union.

This is further proof to me that the continuance of the committee is inimical to the welfare of this Nation. It stops at nothing to voice its injudicial practices, and daily lowers the prestige and dignity of the United States Congress by its acts.

Corliss Lamont, the chairman of the National Council, has addressed me the

following communications, which I believe should be reread by every one of our colleagues here:

NATIONAL COUNCIL OF AMERICAN-SOVIET FRIENDSHIP,
*New York, N. Y., December 9, 1945.*

Hon. SAM RAYBURN,
*Speaker of the House,*
*House Office Building,*
*Washington, D. C.*

DEAR MR. SPEAKER: We enclose herewith a copy of a letter this day sent by the National Council of American-Soviet Friendship to Representative JOHN S. WOOD, chairman of the Committee on Un-American Activities. In this letter the National Council states its decision not to open its books and records to investigators of the above committee, which has been requested by that committee since November 12, 1945, and which has been the subject of an exchange of correspondence between the National Council and the committee. The enclosed letter states the reasons for the refusal to allow the requested investigation. These reasons are substantially based on the obvious fact that by no interpretation consonant with the facts does the National Council fall within the scope of the committee's authorized powers of inquiry, either as being engaged in un-American propaganda, as being subversive, or as seeking the overthrow of the principles of our form of government.

The National Council has been fully aware of the activities and conduct of the present Committee on Un-American Activities and of its predecessor, the Dies Committee. As you know, this conduct has merited widespread public condemnation and sharp criticism on the floor of Congress which has led to a move to amend the House rules to abolish the committee as a standing committee of the House.

The National Council is aware, too, of the fact that the present Committee on Un-American Activities was established on the opening day of Congress without full consideration having been given thereto and under circumstances which caused Representative JOHN MCCORMACK, then majority leader, to say that the action was without precedent in the entire history of Congress and to express his hope that the House would not accept the offered amendment.

The activities and methods of the Committee on Un-American Activities have made it plain that its present move to "investigate" the council is not a move to discover things un-American or subversive but rather is a move designed to injure American-Soviet relations upon which, as our letter to Representative WOOD indicates, the peace of the world depends. The committee's action can have no other effect.

We call this matter to your urgent attention because we believe it important to the dignity of Congress and to our national well-being that the activities of this committee to date and its motivations should be given the closest scrutiny by Congress itself to the end that there will be no further abuse of the power of Congress through smear campaigns against the truly democratic forces in American life.

Sincerely yours,

CORLISS LAMONT,
*Chairman.*

Copies to all Congressmen.

---

NATIONAL COUNCIL OF AMERICAN-SOVIET FRIENDSHIP,
*New York, N. Y., December 9, 1945.*

The Honorable JOHN S. WOOD,
*Chairman, Committee on*
*Un-American Activities,*
*House Office Building,*
*Washington, D. C.*

DEAR CONGRESSMAN WOOD: The National Council of American-Soviet Friendship, by unanimous vote of its board of directors, has decided not to accede to the surprising request of the House Committee on Un-American Activities that it be permitted to send in investigators to examine the organization's books and records. We reiterate that in our opinion the National Council is not a proper subject of interest for your committee; and we are unable to comprehend how our important work for American-Soviet cooperation and understanding could possibly be considered an un-American activity.

A brief statement on the work of our national council may serve to clarify the matter. The council is an educational organization in the broad sense, financed entirely by Americans and trying to present the people of the United States with reliable information about Soviet Russia and American Soviet relations. Among our more than 200 directors and sponsors are some of the most eminent citizens of the United States of America, including several Members of Congress.

Since the founding of the National Council of American-Soviet Friendship in 1943, we have done our best to further the ends of our Government for American-Soviet cooperation in war and in peace. And in this patriotic effort we have had on numerous occasions the collaboration of the United States Army, the United States State Department, and other Government agencies. Both President Roosevelt and President Truman have shown sympathy with our work.

On November 14 last President Truman, General Eisenhower, and Admiral King all sent messages to our great Madison Square Garden meeting, at which England's noted Dean of Canterbury was one of the chief speakers. The Dean of Canterbury, as the special guest of the National Council, likewise addressed large rallies in other cities besides New York and was later received by President Truman at the White House.

Other speakers at our Madison Square Garden meetings have been Edward R. Stettinius, Jr., Acting Secretary of State; Donald M. Nelson, Chairman of the War Production Board; the Earl of Halifax, British Ambassador to the United States; Andrei A. Gromyko, the Soviet Ambassador; Joseph E. Davies, former United States Ambassador to the Soviet Union; and Gen. Joseph W. Stilwell.

The day-to-day work of our organization includes a speakers bureau which tries to meet the constant demand for lectures on the Soviet Union; an exhibits department, which supplies photographs on various phases of Soviet life to schools and colleges, libraries, and museums throughout the United States; an educational committee, which initiates teachers' conferences and exchange of students between America and Soviet Russia; an architects committee, a music committee, a religious committee, and a science committee, which stimulate cultural programs on Soviet Russia and cultural interchange with that country.

The activities of the National Council have been open and Nation-wide and reported constantly in the public press. Our organization has nothing to conceal. Your committee has failed to indicate in what manner the activities of the council bring it within the scope of the investigation that the House of Representatives has authorized your committee to make. Nor has your committee given any reason for its demands upon us, though we have repeatedly asked for one.

The National Council does not, to quote the House resolution on this matter, engage in "un-American propaganda activities." It is not "subversive" in any way; and it does not attack "the principle of the form of government as guaranteed by our Constitution."

Your committee must be aware that inherent in its request is the inference that helping the American people to understand our Soviet ally and promoting American-Soviet amity are un-American and subversive. For us to yield to a request based on this erroneous inference would not merely cause wanton injury to the work of the National Council, but would also have a deleterious effect upon America's foreign relations and thus be of disservice to our country. In fact, the request of your committee, if pursued, would in itself contribute to the present reckless campaign to undermine those friendly relations between America and Russia upon which the peace of the world depends.

Accordingly, we must assert our legal and constitutional rights to be free from unwarranted and improper interference by the agents of the Committee on Un-American Activities.

Because of the importance of the issues involved in this matter, I am making this letter public.

Sincerely yours,

CORLISS LAMONT,
*Chairman.*

---

## Import Quota on Watches

EXTENSION OF REMARKS
OF
## HON. PEHR G. HOLMES
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

*Tuesday, December 18, 1945*

Mr. HOLMES of Massachusetts. Mr. Speaker, on November 21, 1945, I introduced a bill in the House of Representatives, H. R. 4770, creating an import quota on watches and watch movements:

*Be it enacted, etc.*, That after January 1, 1946, an import quota on watches and watch movements is hereby established.

The import quota on watches and watch movements shall be determined by establishing an annual import quota that is not more than 25 percent of the total production of watches manufactured in the United States of America in the year 1940.

My reason for this action was due to the fact that I had received information that during the first 9 months of this year the Swiss watch interests shipped into the United States an average of 600,000 watches and watch movements a month. Then in October they dumped into this country 2,000,000, and in November about one and a quarter million; that about eight and three quarters million in 11 months, and I suppose that the December imports will come in for good measure. During the war over 28,000,000 watches and watch movements were imported into this country. What chance will the American watch manufacturers have against that kind of competition?

What is going to become of the eight or ten thousand men and women engaged in gainful employment in these industries? Are they going to be turned out to become part of the army of unemployment? Is that what we mean by full employment? No; the right thing to do is to stop this wholesale dumping of watches in the United States. I can assure the Members of this House that after our recess I am going to ask the Ways and Means Committee for a hearing on my bill.

Last Friday, December 14, in the well of this House the gentleman from New York [Mr. CELLER] made a statement:

That the gentleman who went to the White House represents a company union—a company controlled union.

I suppose he had reference to one of my constituents, Walter W. Cenerazzo, national president of the American Watch Workers Union. Now in order to keep the record straight, let me inform the membership of this House that the American Watch Workers Union is a national union. It is composed of employees of all the American jewelled watch industries. The local unions affiliated are the Elgin Watch Workers Union, the Hamilton Watch Workers Union, and the Waltham Watch Workers Union, located in my congressional district. Each of these unions have been certified by the National Labor Relations Board.

Now, let me further state to the Members of this House that Walter Cenerazzo has been a tireless worker not only in the interest of the employees he represents but also the industries where these men and women are gainfully employed. He realizes that this dumping must be stopped, otherwise the last three remaining American watch manufacturing companies in the United States will have to go out of business, and that would be a calamity. What would happen in case of another war? Would Switzerland furnish the timing devices our Army and Navy would need? That is a question for us to keep in mind.

We have a choice of keeping eight or ten thousand people employed. Yes; with proper protection we could increase that employment to 20,000 or 25,000. Which will it be? It is up to Congress to take action. For my part, I am 100 percent back of Walter W. Cenerazzo and the employees he represents, and I am equally determined to do everything I can to see to it that the Waltham, Hamilton, and Elgin Watch Cos. shall continue in business.

Let me ask this question: When has it become un-American to ask protection for American citizens and American industry?

## Loans to Russia and Great Britain

EXTENSION OF REMARKS
OF
### HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, December 18, 1945*

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Daily Press of St. Marys, Pa.:

OPPOSING LOAN

A couple of papers in Texas the other day conducted a poll among their readers asking whether or not they favored credit loans to Russia and Great Britain.

Now Texas is about as far removed from contact with Europe as any portion of the United States could be, and one would naturally expect a pretty accurate poll of public opinion from residents of that area.

The newspaper readers by an overwhelming majority opposed loans to either country.

We believe the same sentiment exists elsewhere in this country.

Americans in general can see no sense in extending credit to England, already in "hock" to us from the First World War, and a nation that once referred to Uncle Sam as "Uncle Shylock" when he asked if England could not pay at least some interest on her financial obligation.

Great Britain at the present time is conducting an experiment in changing her form of government, and many Americans are skeptical that part of the loan sought from United States is to further that change.

We entertain no illusions that Great Britain will not compete with us in world markets even if she is granted the loan she is now in market for.

We ran across this competition after the last war and there have been some instances told where England has been competing with us for trade even during World War II in the matter of lend-lease material.

We don't fall for high-powered propaganda that England will be financially sunk if she does not get $4,000,000,000 from Uncle Sam.

Her colonial possessions are ranked among the richest in the world. She controls gold and silver mines, untold wealth in agricultural countries, to say nothing of her precious diamond mines in Africa.

We might say the same of Russia. She has in Siberia some of the world's most valuable mining resources, principally gold.

The loan we are in the process of making to England will be interest free the first 5 years, then bear the rate of 2 percent annually after that.

Wouldn't you like to negotiate a loan with your home-town banker on the same basis?

## Address of Hon. James A. Farley

EXTENSION OF REMARKS
OF
### HON. CLIFFORD DAVIS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, December 18, 1945*

Mr. DAVIS. Mr. Speaker, on December 6, last, Hon. James A. Farley, chairman of the board of the Coca-Cola Export Corp., spoke at the convention of Tennessee Bottlers of Carbonated Beverages, which was being held in my home city of Memphis.

General Farley has a host of friends all through the South and especially in my city. His speech was so thoroughly and genuinely accepted, and his whole theme so much like him, that I requested permission to insert it in the CONGRESSIONAL RECORD so that all of us may have the pleasure of reading it:

It is a truism that wars leave their impress upon men and things. But no war approached in magnitude the one we have just fought to a successful finish, and no other war of which history has a record has done so many things to men and to their institutions, whether these institutions be political, educational, commercial, or what not. These inanimate creations of man often reflect the character of their makers. And we have seen men and their enterprises alike affected by the great trial they have so recently undergone. Some men met the test imposed by war and triumphed. Others couldn't meet the test and failed. I am speaking now, of course, of men and enterprises on the home front. We have seen enterprises that failed to meet the test go under completely. We have seen small concerns grow into gigantic undertakings and we have seen some of our large enterprises closed down.

Not alone enterprises and their makers have been affected by the war. It has also altered attitudes and trends, hopes and desires. Nothing human or of human creation escaped the impact of this war. These changes were not unexpected.

History shows us that when great cataclysms occur, the normal trends, which ordinarily move so slowly as to be almost unnoticeable, take on a great head of steam and move with extraordinary momentum, a momentum that leaves most men dazed and wondering. All of us have witnessed a cataclysm hitherto undreamed of. It is the duty of all of us to understand the changed conditions, to meet them, and to master them.

Many commercial enterprises follow these normal trends, and because of the very nature of their capital investment, the wide area they cover, the thousands they employ, they must, even of necessity, because of their massiveness, move slowly. Such enterprises even in war, because of this retarding factor we have described, are apt to move slowly.

This is true of all the heavy industries, of all transportation and communication, of such basic industries such as steel, iron, coal, lumber, railroads, telephone, and telegraph, to mention some. The industries that manufacture goods for consumer consumption, which we designate as consumer goods, where merchandising is a major part of the success, must of necessity deal in both the latest things and the latest improvements. These invariably involve either an element of style, or an element of invention, and the managers of such enterprises must be ever prepared to have ready at the proper time the suitable things to fill the demands. The public, in times like these, must ride on an obsolete pullman or a run-down railroad coach; but the public does not have to buy, nor will it buy, an obsolete model of a home appliance, such as a washing machine, a refrigerator, and the like.

Now, it so happens that this particular industry in which you and I are engaged, is not wholly of the heavy industry, or wholly a consumer-woods industry. While we partake of both and are dependent on them, we occupy a somewhat middle-of-the-road position, and this circumstance is fortuitous. While the aggregate of the investment in our industry is comparable to the largest of the industries, it is broken up into units and an individual, or a group of individuals, can hold a separate part. This makes for sound dispersement of capital and sound dispersement of labor. Consequently, if we handle ourselves intelligently, we escape the many irritating penalties and confusions so frequently involved in concentration of labor and capital. And because we are also geographically scattered, we escape the inevitable and burdensome problems that come from piled-up resources and labor in single communities. And here again we have much to be thankful for in the fortunate nature of our organization.

Some people are inclined to accord respect to high-priced articles. It is just human nature to look behind the highly priced tag and contemplate the effort, skill, energy, research, and ingenuity required to put that kind of product on the market. The very product itself is of a nature that commands recognition for itself and its maker. A locomotive, a turbine, an automobile, looms large in the public's consciousness and fills so much space actually, and in the mind, that it demands notice. The small, inexpensive casual product does not have within itself this dominant factor of cost and size. It, therefore, must stand or fall on other factors. In this group we find ourselves.

Throughout the years we have seen our products accepted by the public in ever-increasing quantities. Many erroneously assumed that these products were accepted purely as a diversion, or as a thirst-quench-

er. They had forgotten that there is a social implication inherent in our product, that people like to be together while sipping a harmless beverage to while away the time, and that this very fact contributed largely to the growth of our sales. All of us in our industry know this. But I am confident that there were many of us who did not realize that our beverages had become part of the American way of life. It took this global war to bring out this truth, a truth apparent on every battlefield where our men fought gallantly and where our women aided nobly. Our fighting forces, even at the uttermost ends of the earth, asked, aye, demanded, as part and parcel of their daily life, the beverages they had learned to drink at home.

Those that see the extent to which we have grown, the high place we have earned in public consciousness, are fully aware that our reciprocal obligations toward our public are greater than ever. We, as never before, must practice every virtue known to the business world. Character and integrity must be respected among us. In any modern industry in these highly competitive times, there is no place for the fly-by-night, the chiseler, the trickster. These types can ruin their honorable colleagues by their shortsightedness and unprincipled conduct.

Our industry must be synonymous with everything that is best so that the public must get its money's worth in intangibles of taste, of bouquet, of flavor, or relaxation. That our products must be trustworthy, goes without saying. But the public must know and must never have reason to question the inherent integrity and the wholesomeness behind every one of our products. The careless fellow, the indifferent fellow, can do great harm to all of us. We cannot have any red flags, or any other kind of danger signals in this business. All products must be safe.

Now a word about techniques. The future problem of business will largely lie in increased costs. Sanitation can best be preserved by the elimination of human contact with the beverages. So we must continue to improve our equipment and machinery, our methods and our processes, until we approximate the ideal in automatic manufacture and handling. Nothing could be more important at this time. And we will have problems enough in the distribution area of our business, which is and must be so largely human.

So, I will close by saying that the ideal for us is to practice the virtues of sound business, to put out products of unquestionable quality, and to be worthy everywhere and at all times of the confidence reposed in us by the public.

## Resolution of Buena Vista County, Iowa, Rural Electric Cooperative Relative to Extension of REA Service

EXTENSION OF REMARKS
OF
### HON. CHARLES B. HOEVEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, December 18, 1945*

Mr. HOEVEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith a resolution recently adopted by the Buena Vista County, Iowa, Rural Electric Cooperative relative to extension of REA service:

Whereas the Buena Vista County Rural Electric Cooperative is now in position to extend electrical service to many additional farms as soon as the funds are available; and

Whereas the farms now requesting such electrical service are in an area where the grain and livestock production is unusually large; and

Whereas the need for such additional electrical service is greater than ever before: Now, therefore, be it

*Resolved*, That this cooperative request that the Federal Government make an additional appropriation for the extension of electrical service; and be it further

*Resolved*, That the Congress of the United States amend Senate file No. 3483 of the Seventy-fourth Congress being an act to provide for rural electrification and other purposes by changing subparagraph (c) of section 3 of the said act by eliminating therefrom the provision that the available funds shall be allotted to cooperatives in the proportion which the number of their farms not then receiving central station electric service bears to the total number of farms of the United States not then receiving such service. In other words, that there be stricken from the said section (c) all after the words "several States" down to and including "receiving such service."

That this cooperative believes that this provision of the law is not the best policy because the production of farms should govern the availability of electric service and not the number of the farms, and the effect of this provision of the law is really to penalize the cooperatives most actively promoting the extension of rural electric service; be it further

*Resolved*, That sufficient copies of this resolution be sent to Representative CHARLES B. HOEVEN, Washington, D. C., so that he can place a copy in the hands of each of the Iowa Congressmen and that copies of this resolution be sent to Senator GEORGE A. WILSON and Senator BERT B. HICKENLOOPER.

On this 11th day of December 1945 in a regular meeting of the board of directors of the Buena Vista County Rural Electric Cooperative, the foregoing resolution was adopted by unanimous vote of the directors, all of the directors being present at such meeting.

## The Chinese Foreign Policies

EXTENSION OF REMARKS
OF
### HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, December 18, 1945*

Mr. MILLER of Nebraska. Mr. Speaker, under permission to extend my remarks in the Appendix of the RECORD, I include a resolution from the North Platte Valley Central Labor Union of Scottsbluff, Nebr.

Mr. Speaker, the American people have grave misgivings about keeping our troops on foreign soil. The recent incident, when a Chinese town was shelled because a soldier, who was out hunting rabbits, was killed, is evidence enough that all is not well in countries where our troops are located.

If we continue on a policy of power politics and attempts to police the entire world, we will find the American people becoming very critical of our foreign policy.

Whereas at the present time American equipment, American ships, and American troops are being used in the Far East, both in helping the Dutch and French imperialists retain their colonies on the old basis in French Indochina and Indonesia and in aiding the Chiang Kai-shek government pursue its civil war against the overwhelming majority of the Chinese people who are trying to establish a democratic and free China; and

Whereas such American interference in the affairs of the far eastern countries is not in the benefit of the "four freedoms" for which World War II was fought, but is only in the interests of big monopoly capital which is out to gain maximum domination over the Far East; and

Whereas unless such interference is brought to an immediate and complete halt, the inevitable outcome will be America's involvement in a huge new sacrifice of mankind in World War III: Therefore be it

*Resolved*, That all American troops, ships, and equipment be immediately withdrawn from China, Indonesia, and the Far East except for that used to complete the destruction of the feudal Fascist regime in Japan; and be it further

*Resolved*, That more and speedier efforts be made to get the men and women in the armed services back home.

Passed at regular meeting, December 13, of the North Platte Valley Central Labor Union.

J. H. THOMPSON, *President*.
GEORGE C. EWALD, *Secretary*.

## Is the OPA Policy "Rule or Ruin"?

EXTENSION OF REMARKS
OF
### HON. GEORGE W. GILLIE
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, December 18, 1945*

Mr. GILLIE. Mr. Speaker, under leave to extend my remarks, I wish to call the attention of the Members of Congress to an outrageous condition which exists in one of the emergency war agencies we created. Instead of following the philosophy of trying to preserve our economy and our system of free enterprise, we discover these agencies are wrecking the very foundation of business upon which our great economic system was built.

When did we empower the Office of Price Administration with the power of life and death over our business concerns? When did we delegate its administrative officials arbitrary and dictatorial authority to indiscriminately hand down decisions contrary to the best interests of our economic way of life?

I am presenting for the consideration of the Members a letter I received from a small businessman in my district. It clearly presents the ruthless and inhuman policies which exist in this Frankenstein we helped create. If such practices continue on the part of the CPA in the face of our efforts to reconvert to a peacetime economy, I greatly fear for our future.

The backbone of our economic structure is the small business firms of this Nation. I believe we can safely estimate on the basis of previous surveys that 80 percent of our people are employed by the so-called small businesses. It is these people who are the customers of the big industries.

Where are we headed, if we permit the OPA to close them out? Can it be there is a sinister motive behind the OPA's attitude? Is it motivated by a desire to wipe out all small business firms, so that

the Government can step in and take over our economic system? Are we to continue to let conditions arise like the one my constituent cites where the OPA finds itself convicted of an injustice, but instead of correcting its mistake reverses itself rather than lose face with its other offices? Are we going to tolerate an attitude from one of our public servants who intentionally spiked a justified rate adjustment because of his personal feelings?

If we permit the continuation of such policies, I gravely fear the consequences. I believe it is time for the Members of Congress to see that the Office of Price Administration performs a public service, rather than follows a policy of rule or ruin over our economic life.

The letter follows:

No doubt Mr. Bowles is a very busy man and does not remember remote cases such as ours, but we were the one parking-lot company in the United States that staged a lone fight trying to get permission to get a 3-cent increase on our first-hour parking rate and a 1-cent increase on the daily rate. This was granted us by local offices in Columbus, Ohio, which gave their permission to make these changes in rates in both Columbus and Cincinnati. We also had a like permission granted in Kentucky. Then we applied in Indiana and it was denied. When we produced the findings in our favor by the price attorney for the OPA in the Columbus office, as well as the findings of the attorney for the OPA in the Louisville office, the price attorney in Indiana became very angry—said he would spike that at once as he was going to make a special trip to Cleveland, Ohio, and have those rates canceled and we would have to go back to our old rate. After operating the new rate about 5 days, we got telegrams from Cleveland demanding that we go back to the rates as they were before we were granted permission to raise and in the telegram we were advised that if this was not immediately done, we would be subject to court action by the OPA.

The one thing that has stuck in my craw is the remark that has been made by several members of the OPA boards and that is that the Government didn't care how quickly I went broke, as we fully believed we would go broke if we were not given the right to get these few pennies more on each transaction. I didn't think that that should be the attitude of our Government or anybody connected with our Government. At the time the remark was made to me personally by two men who were holding well-paid Government jobs in the OPA, I was devoting, and had been for months, anywhere from 60 to 90 hours per week on Government work without one penny of remuneration. That was a new angle for me, as I had always thought in the past that our Government wanted to see businessmen succeed rather than have failures chalked up, and being of a rather tenacious temperament, I decided to see this thing through. We contacted the OPA office in Washington and after cooling our heels in the outer chambers, we finally got to one of the many assistants of the OPA who, after reviewing very carefully our case, said we were entitled without a doubt to this rate, but he would have to uphold the decision of their regional board at Cleveland. Whether we are right or wrong, we must uphold them. And on asking what our next move would be, said there was only one move left and that is to take this before the Federal Court of Appeals, which we did and which was a very costly procedure. We employed a Washington attorney who was licensed to go before this court. Then a very comprehensible brief was drawn and printed and a day set for hearing. Well, on the day before this case was to be heard, I received a telegram asking that I grant the OPA a 20-day extension due to the fact that they had not prepared their brief and were unprepared to go before the court. I granted this extension. Then again the day before the postponed date for hearing, I received another telegram asking for a 30-day extension, as the OPA was still unprepared and which I granted.

When the case was finally heard, my attorney wrote me saying that no doubt we would win our case, as the brief that had been prepared had been so poorly gotten up that they would have absolutely no legs to stand on before a legal-minded court. We were to know in 30 days the findings of this august body, but it took about 90 days. Well, it seems as though the cards were stacked against us as the findings were that if we were permitted to make this increased rate effective, that we would undoubtedly cause runaway inflation in the United States. I think if Mr. Bowles will ask for the file, if they keep files, that he will have a very comprehensive coverage on the entire case.

As I stated in previous letters, that had it not been that our landlords had given us relief we would have been out of business in 1943, which in our minds more or less goes to prove that the Government didn't care how soon or who goes broke. In a small company like ours, we have lost a great amount of money and we have rent indebtedness to make up, that for a small outfit like ours, is a staggering figure. We have been unable to get help due to the fact that we were only allowed to employ people who the USES would give us, and were held to October 1942 wages. In one instance we were told by the USES that we could use a man who was subject to epileptic fits and sometimes would have as many as three in 1 day. Think of the hazard this man would create driving high-powered automobiles on public parking lots. We naturally did not hire this man. And that was about the type of help the USES would permit us to use. We were allowed to have some old men who were not able to get in factories and in most cases were not able to drive cars, but simply permitted the customers to park their own automobiles. This is strictly against the rules of our insurers.

Even if business is at normal, it will take us 4 or 5 years to make up the back rents that we owe. Now we are not only compelled to go back to the rent as set up in our leases but we are compelled each month to start paying on the amount owing due to the rent reductions we had during 1943 and 1944 and 10 months of 1945.

When you price different commodities in stores, the prices are so much higher than they were before the war that it almost leads one to believe there is a distinction in who may and who may not raise the price of their merchandise. Our merchandise is strictly service—therefore, a luxury.

## Lumber Policies of OPA

EXTENSION OF REMARKS

OF

### HON. A. L. MILLER

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, December 18, 1945*

Mr. MILLER of Nebraska. Mr. Speaker, due to methods of applying ceilings on lumber mills, the OPA is choking off production. Government agencies never admit their mistake. They feel that the lumber industry is at fault and now, with their meddlesome interference, they have set up a new housing agency, which attempts to put ceilings on old and new houses. In my opinion, the plan is doomed to failure. The administration has been busy trying to make the public feel that the lumber and building industry is incapable of doing its job and that they need more Government supervision. I do not believe this to be true. What the lumber industry and every other industry needs is less Government regimentation and less whipping of the cow around the proverbial stump. Business just cannot go ahead when the Government is clubbing it from every side.

In 1945, 750,000,000 board-feet of lumber was exported. This would build 100,000 new homes. We are exporting 15,000,000 board-feet of lumber to South America each month. All of this is in addition to lumber taken by the various military units. At Port Heunene, on the west coast, some 80,000,000 board-feet of lumber is tied up by the Army and the Federal bureaucrats. I am reliably informed that both the Army and Navy has an enormous surplus of lumber scattered all over the world. This lumber should be released at once and made available for housing in this country. We should stop all exports of lumber until our own needs have been met. One reason we do have exports is due to the OPA ceiling prices in this country. The sawmills need higher costs and ceiling prices have not been enforced by OPA on sales of American lumber to foreign buyers.

I am suggesting, Mr. Speaker, that the appropriate committee in the House, at once, investigate and report, to Congress, the amount of lumber being held by the military forces and the amount of lumber we continue to export to foreign countries. Steps should be taken to make the proper adjustments on ceiling prices in order to keep this lumber in the United States. There is a tremendous demand for new houses. They cannot be built by Government regulations or OPA directives, nor by lumber which is shipped out of the country.

## On Behalf of Pvt. Jeremiah L. O'Donovan-Rossa

EXTENSION OF REMARKS

OF

### HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, December 18, 1945*

Mr. CELLER. Mr. Speaker, I herewith offer a letter which I have sent to Secretary of War Patterson on behalf of Pvt. Jeremiah L. O'Donovan-Rossa, grandson and namesake of a famous Irish patriot. This soldier, I believe, was unfairly court-martialed during the operations in north Africa and sentenced to death, which sentence was later commuted to 20 years' imprisonment, with dishonorable discharge, and then again reduced to 5, again with dishonorable discharge.

This sentence is entirely unjust, and I shall continue my fight to get this lad completely exonerated. I shall continue my fight to get an honorable medical

discharge for him or a reassignment to duty under a new number, whereby the lad can eventually get an honorable discharge.

The letter to Secretary of War Patterson, which follows, reveals all the facts. In view of what is hereinafter stated, it is utterly wrong that the stigma of dishonorable discharge should attach itself to the lad for the rest of his life. Any further imprisonment is cruel and inhuman. This wrong must be righted.

DECEMBER 18, 1945.

Hon. ROBERT P. PATTERSON,
*Secretary of War, Washington, D. C.*

MY DEAR MR. SECRETARY: May I direct your attention to the matter of the court martial of Pvt. Jeremiah L. O'Donovan-Rossa, 20250618, who had been with Battery D, Four Hundred and Fifty-sixth Parachute Field Artillery Battalion.

I believe a grave injustice has been done the lad, and I am communicating with you in the hope that the wrong can be righted.

The lad had volunteered for duty, and for 3 full years in the Army had maintained an unblemished record. He was recommended by his commanding officer for officers' candidate school. He served in Alaska and then volunteered for paratroop training. He successfully passed all the tests. He and other trainees were assured by the Army authorities that at the end of the course of training it would be their right to obtain an assignment to whatever branch of service within the Airborne Command they might care to choose. The lad's choice was the Infantry. He was, however, directed to the Field Artillery. He protested and was given k. p. duty for 14 days. At the end of this period of punishment, he was given a further similar term for no reason within his knowledge. He protested to the corporal who gave the order and was then confined to his quarters. He went to the Army post exchange and for this infringement of the confinement order, he was sentenced to 6 months' imprisonment.

This sentence was suspended so that he might be sent overseas. Shortly after his arrival in Africa, he was again placed under guard without explanation. He repeatedly inquired regarding the reason, but no information was given him. He was taken the following morning with other prisoners and ordered to dig a latrine ditch. He protested to the sergeant in charge that since he had not been told the reason for his confinement, he did not feel that he should do the work which had been assigned to him.

This could have been termed disobedience of an order of a noncommissioned officer, an offense punishable by a maximum penalty of 6 months. This course, however, was not adopted. A lieutenant was notified, who promptly gathered some witnesses and proceeded to meet him and then repeated the same order which the sergeant had previously given.

The lad again inquired as to the reason for his being held a prisoner. He still was not informed of the reason. The lieutenant, unmindful of his own misconduct, laid the groundwork for a charge that would result in the execution of the accused. The refusal to obey the unwarranted order of a noncommissioned officer had now changed to a refusal to obey a lieutenant, carrying with it the possibility of death before a firing squad.

It was not until 2 days after this incident that he was told that the suspension of the prior sentence had, for some unexplained reason, been withdrawn. I cannot understand, of course, why the lad should be sent overseas to serve a 6-month sentence. If his services were not to be utilized, I fail to see what purpose was gained in shipping him.

When the lad finally was given the reason for his confinement he stated that he was ready to obey the order. He was told it was too late. The charges were being prepared. It is worth noting that the soldier and the lawyer assigned to defend him on such a serious charge met only for the briefest period immediately before the trial. The defense counsel attempted to raise the point that the purpose of the lieutenant giving the order was to increase the punishment from 6 months' imprisonment to death before a firing squad. Such action is prohibited by the Articles of War. This obvious point was brushed aside by the court-martial officers and the sentence of death was imposed.

The records will show that the reviewing officer returned the case to the original tribunal for further consideration, intimating that the sentence had been too severe. That sentence, however, was confirmed by the original tribunal. The lad then wrote to General Eisenhower, a copy of which letter is enclosed. The general replied, stating in part, "No person in the military service can defy orders with impunity. In this respect you were at fault. However, you should have been informed of the reason for your confinement and because the officers were at fault in not so informing you, I have approved a sentence under which you will be entitled to be restored to duty within a reasonable time."

However, somewhere along the line was a definite laxity in carrying out the order of General Eisenhower. The treatment of the lad became much worse after General Eisenhower had written. He had been sent to the hospital, yet before his treatment had been completed, he was removed from the hospital and placed on a bread and water diet for 14 days without charges or explanation. His mind had been affected by the previous treatment and this latest abuse broke it completely. The lad attempted suicide.

It must be noted that at the end of his paratroop training in the United States, he had shown signs of fatigue and was examined by an Army psychiatrist who believed there was something unusual in his mental condition. This factor was entirely ignored by the tribunal.

When General Eisenhower commuted the sentence, he likewise arranged for the suspension of the dishonorable discharge. Without reason, the dishonorable discharge portion of the sentence was reinstated. After the attempted suicide, the psychiatrist ordered the lad returned to the United States under restraint.

The lad's case was reviewed again. The sentence has now been reduced to 5 years.

The latest report from Fort Leavenworth indicates that the lad is somewhat improved physically and mentally.

I am certain that your sense of justice will be outraged, as was mine, in reading the facts in the case. The lad, eager and patriotic, enlisted with the highest hopes of serving his country. Instead of being given every opportunity to do so, he finds himself now shattered in health and spirit, and withal, compelled to carry the stigma of a dishonorable discharge for the rest of his life.

It is my thought that one of two procedures can be followed in his case to permit the lad to go on with his life in a decent, ordered fashion. I respectfully request that the lad be given a discharge of honor based on medical grounds or reassigned to duty under a new number. I believe sincerely that only in this way can the ends of justice be served.

May I hear from you thereon.

With assurances of highest esteem, I am,

Sincerely yours,

EMANUEL CELLER.

---

FIFTH ARMY GUARDHOUSE, APO No. 464,
*April 16, 1943.*

Gen. DWIGHT EISENHOWER,
*Commander in Chief, American Expeditionary Forces, North Africa.*

SIR: The writer is Pvt. Jeremiah L. O'Donovan-Rossa, A. S. N. 20250618, Battery D, Four Hundred and Fifty-sixth Field Artillery Battalion, Eighty-second Airborne Division, at present confined at this station, having been sentenced by general court-martial of June 14, found guilty of violation of Article of War 64, insubordination to a commissioned officer, and sentenced to be shot dead by musketry.

This offense was committed by the prisoner on June 3 while in confinement in his battalion guardhouse. The prisoner had been placed there without knowledge of his offense and asked several times to the officers and noncommissioned officers in charge of him what the nature of the offense was. He was not informed and when ordered to work refused to do so, as a form of protest. Later in the day the Officer of the Day gave the same order in the presence of witnesses and the prisoner again refused saying he did not know why he was in the guardhouse.

Sir, I am not a criminal. My anger at the treatment I was receiving blinded my vision and destroyed my judgment so that I ventured into deeper water than I realized. I never intended to do anything that would deprive my country of my services. It has always been my endeavor to lead an upright life and this object has not changed. I want to stay here and take part in the coming invasion of Europe. I am no coward. What I want is a chance to prove myself to my superiors, my countrymen, my family, and myself. I don't want to run away now. I'm not asking for my life but for something more precious, my good name. If you were to lower the sentence to a life sentence I would still be sent away from battle and to the penitentiary. This would be a terrible thing for my family and myself and a tremendous waste when you could use me as a soldier. I am a parachutist and machine gunner by qualification, and I beg of you to put my life to good use, not ruin me and disgrace my father and mother who bore me into this world.

I was in the Army for 2½ years without getting into trouble and I ask a chance to show you that I can still be a good soldier and fight for my country.

There are people at home who believe in me and there are the officers and men in my own battery who believe in me. Give me a chance to prove that I am worthy of that faith.

Respectfully,
Pvt. JEREMIAH O'DONOVAN-ROSSA.

---

## Charity Should Begin at Home

EXTENSION OF REMARKS
OF
## HON. CHARLES L. GERLACH
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, December 18, 1945*

Mr. Gerlach. Mr. Speaker, under leave to extend my remarks, I include the following letter:

CORNWELLS HEIGHTS,
BUCKS COUNTY, PA.,
*December 10, 1945.*

Hon. CHARLES L. GERLACH,
*Member of Congress, Washington, D. C.*

MR. GERLACH: Allow me to respectfully protest the continue draining of American resources, in an attempt to build up an ideal utopia for all the flea-bitten nations of Europe and Asia.

I believe that Congress will be asked to approve another so-called loan to England amounting to about $4,000,000,000. France and China also have their hand out for another billion or so. Russia has some kind of a claim in for another couple billion. And you are in a position to know about how

many more moochers are already lined up for a grab at American "sucker money."

I am a veteran of the First World War, having served every day of that war, including service in the Philippines, and in France and Germany as a member of the American Expeditionary Forces and army of occupation in Germany. My son is a veteran of this war, with service in France and Germany.

My contact with European and Asiatic countries has given me plenty of first-hand information regarding the habits, politics, economics, and general conditions of these countries. I do not rely on the propaganda and sob-sister stuff being so generously spread out for American consumption.

And I am absolutely opposed to the squandering of another cent of American money anywhere, anytime, and any place in Europe, Asia, Africa, or Australia.

It was disgusting in the recent Victory Loan campaign to see and hear the heart appeals of wounded veterans for bonds to help bring the boys home, pay for wounded vets, etc., while very little or nothing was said about the billions of dollars that would be poured out to European and Asiatic parasites. Even while these vets were appealing for bond sales the vultures of Europe and Asia were already planted in Washington with their hands out, waiting to get the money as it came in.

Frankly, after my experience in the First World War I have no sympathy with the rotten political and social systems in either Europe or Asia. With a history of almost 2,000 years of continuous wars, bickerings, and petty jealousies behind them it is almost laughable to hear some of our social experimenters and high-minded "nitwits" explain how we are going to change their line of thought.

We have been told that if we don't give to Europe there will be mass starvation and Europe will go Communist. Well, what's so bad about that—for Europe? Both things are about the best thing that could happen—for Europe.

If they were allowed to do some starving they wouldn't be so d—— quick to start another war.

And if the land that is cultivated to the growth of grain for beer and whisky, and for grapes for the high-hat vinegar that goes for wine in Europe—if this land was devoted to the growth of foodstuffs in Europe maybe they could begin to feed themselves. Hundreds of strong-back-and-weak-mind natives are weaned on a wine bottle, matured on alcohol, and never even use the word "water"—let alone use it, either for drinking or washing. Is it any wonder that these alcoholic clog-hoppers are easy pickings for a few of the bright boys who suddenly decide to become dictators, fuehrers, duces, kings, emperors, lords, dukes, counts, no accounts, and the many other titles which have cropped up in Europe during the last 2,000 years, and which all amount to the same thing—a boss for the "dumb guys."

About the best thing that could happen to Europe would be just what we are afraid will happen—communism. Somebody to boss them. They certainly are not capable of governing themselves; even in our own time since 1914 ample evidence has been given of this fact. And Russia is proof enough that communism is an ideal form of government for any bunch of "hunkies" who are too d—— dumb to think for themselves. England has given recent notice that she subscribes to this doctrine, and even has the gall to ask America to finance the scheme.

The U. S. A. is too good a country to be brought down to the level of European peasantry, and to have its wealth of manpower, resources, and culture dissipated, wasted, and squandered among swine who cannot and will not attempt to help themselves.

They start those wars in Europe, let them take the consequences of their own actions. The theory that we are in some remote and mystic way responsible for the welfare of a continent which has twice dragged us into their own jealous quarrels, is typical European dogma, loudly proclaimed by immigrants and their progeny of recent generations who have had nothing to do with the building of America, and care less about its future.

While billions of dollars of American money are being squandered over the world, we have the spectacle of thousands of Americans unemployed at home, appeals from various agencies for help for the sick, blind, and disabled.

If we have a superabundance of money, wealth, and national resources, let Congress see to it that home needs are met entirely before one cent is given abroad. And I mean "give," because experience has shown that every loan turns into a gift, to be repaid by abuse and vituperation compounded annually on foreign shores.

It is the duty of Congress to see that American needs are met first. And there is plenty of need in America right now. Robbing the pay envelopes of American workers to fatten foreign shirkers is not the answer to this problem.

Allow me to thank you for past work on behalf of us in Bucks County, and hope that you will give this letter your consideration.

JOHN F. THOMPSON.

## Tax Relief

EXTENSION OF REMARKS

OF

## HON. RAYMOND S. SPRINGER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, December 18, 1945*

Mr. SPRINGER. Mr. Speaker, much has been said respecting the tax relief extended to the people under the law recently passed. Many people have either misconstrued this law, or have been misinformed regarding its provisions. An article appeared recently, written by Alexander R. George, which was published throughout the country which, in a measure, clarifies the provisions of that tax relief extended to the people of this nation.

Mr. Speaker, that all may have the benefit of this clarifying article, I ask unanimous consent to revise and extend my own remarks in the Appendix of the RECORD, and to include therewith this clarifying article respecting the tax relief extended to the people of this Nation.

The article follows:

MILLIONS TO GET TAX RELIEF

(By Alexander R. George)

Wage earners all over the country soon will get their first sweet taste of new lower income taxes.

Tax cuts under the new law apply to 1946 income and, therefore, will go into effect January 1. That means smaller amounts will be withheld from pay received on and after that date, even if the pay is for work done before the new year.

About 12,000,000 low-income persons who have paid tax on 1945 income will pay no tax on 1946 income.

The remaining 35,000,000 will carry a lighter tax load. For many who support families of two or more dependents, the tax saving will mean additional money for food, clothing, and other necessities. The tax cut amounts to 52 percent for a married man with two dependent children and an income of $2,500. If he has four dependent children and an income of $4,980, the saving is 32 percent.

Take a man with a wife, two dependents, and a weekly wage of $45. The weekly withholding will be 50 cents, compared with $1.40 in 1945. For a married man with four children and a weekly salary of $65, the weekly withholding will be 20 cents, compared with $1.50. In the case of a single person with no dependents and a weekly wage of $25, the weekly withholding will be $2.50, compared with $3.10.

The amount of income tax withheld from wages depends upon the number of exemptions the taxpayer can claim as well as the wages he earns. A taxpayer gets an exemption of $500 each for himself, his wife, and his dependents. These exemptions are included in the Government tax table used by an employer in finding the amount to be taken from a worker's pay.

Exemptions are listed on certificates filed by employees with their employers. New exemption certificates are not required unless there has been a change in the number of an employee's exemptions. However, some business concerns which have had numerous changes in personnel are requesting all employees to make out new certificates to assure that all exemptions are listed.

Exemptions change when a taxpayer marries, when a child is born, when a divorce occurs, when someone for whom the taxpayer has claimed an exemption dies, or when the taxpayer begins or stops supporting a dependent.

An important thing to remember is that the reduced taxes have nothing to do with your 1945 income. They apply to income received in 1946.

For 1945 income, every civilian who received $500 or more in 1945 must file a return on it before midnight of March 15, 1946. That includes persons who do not owe any tax for 1945 and also those who pay up their tax in full during 1945. Some taxpayers will get refunds on 1945 tax. Others will still owe some tax.

The Government requires employers to furnish employees on or before January 31 with withholding receipts (Form W-2) for 1945. These receipts list your gross pay and the amount of tax withheld from that pay. Most wage earners are allowed to use their withholding receipts as 1945 income-tax returns.

The receipt is an "extra-simplified" return, so it will pay most taxpayers not to lose or mislay it. Otherwise they will have to get another receipt from their employer or make out a more complicated return on Form 1040.

If your wages in 1945 amount to $5,000 or more, or if your income other than wages totals more than $100, you can't use the withholding receipt as a return. You must use the long form 1040 if your income was $5,000 or more, or if you claim deductions, (taxes, interest, large medical expenses, etc.) amounting to more than 10 percent of your income.

You may use the short form 1040 if your income was less than $5,000, regardless of source. If the return is made on the short form 1040 or on a withholding receipt, the tax is figured from a table which automatically allows about 10 percent of the total income for deductions. Taxpayers with allowable amounting to more than 10 percent can save money using the long form 1040.

Man and woman veterans of the United States military and naval forces below the grade of a commissioned officer have no tax liability for services pay. The new law says they do not even have to file returns with respect to service pay.

The law also extends the time for paying taxes on the service pay of commissioned officers. The tax so deferred is payable over a period of 3 years in equal quarterly installments without interest. There is a similar

extension of time for payment of taxes on preservice earned income for 1940's or 1941 which became due after the taxpayer entered the service.

Commissioned officers get a special tax exemption of $1,500 of service pay. This is in addition to the regular $50 exemption each, allowed every person (civilian or military) for himself, wife and dependents.

## Demobilizing the Army

EXTENSION OF REMARKS
OF
### HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, December 18, 1945*

Mr. MILLER of Nebraska. Mr. Speaker, on October 23, 1945, I wrote the War and Navy Departments that, in my opinion, they would have more than 5,000,000 men under arms at Christmas time. These Departments vigorously defended their position and indicated that the figures were entirely too high.

On December 12, 1945, a letter from the Bureau of Naval Personnel to all Members of Congress contains the report, and I quote:

There remains about 900,000 American military personnel in Europe who are either eligible for discharge or will be by the time transportation is available for them. Nearly all of these are in the Army. In the same category, in the Pacific, there are about 1,000,000 Army men and slightly less than 1,200,000 Navy men; 135,000 Army men remain in India.

From these figures, it is easy to determine that there is something like 3,235,000 military personnel outside of the United States, in Europe and the Pacific area. This would undoubtedly be greatly increased, if we were to take into consideration the men now in the Aleutians, Alaska, Panama Canal Zone, South America, and northern Africa. I do not believe it includes the military personnel in the Far East. It is estimated that there are nearly 3,000,000 men in the military personnel, either in the United States or on the way to the United States. This would place some 6,000,000 men in the various units of the armed forces at Christmas time. These figures do not take into consideration the number of men who are voluntarily enlisting in the Army. They are reenlisting at the rate of seventy-five or more thousand each month. In addition to this, the selective service has been taking about 50,000 men a month.

The report of the Bureau of Naval Personnel indicates that—

By December 1, more than three and one-half million personnel of the various branches of the armed forces have been returned from overseas. Of this number, 2,300,000 have been brought across the Atlantic, 1,204,000 across the Pacific, and 173,000 from India. The report continues there are now available 920 troop and converted combatant ships, with a total simultaneous lift of 1,400,000 men.

It is interesting to note that under the prodding of this Congress, the various branches of the armed forces have been trying to speed up the return of men from the various theaters of war. I am convinced, however, that they can still do a better job. It will be remembered that the Navy saw fit to tie up hundreds of ships, capable of carrying soldiers, for the Navy Day parade. To me, this was inexcusable.

It seems to me that every man and woman who is now in the United States forces and for whom there is no useful employment, should be given an immediate furlough home and left there with his family, his community and his business, until it is time to effect and complete his discharge.

The armed forces are now getting sufficient men under the voluntary enlistment method to meet all of their needs. It should no longer be necessary to take 50,000 teen-age young men a month and place them in military service.

The Members of this Congress, as they go home for their Christmas recess, may well find some pointed questions being asked by their constituents on why their sons and daughters are not being brought home faster. This Congress has neglected to bring out bills or sign petitions which would make, in order, legislation designed to speed up the demobilization program. In my humble opinion, there are entirely too many generals who want to keep the Army large and intact. It is the duty of this Congress to act.

## Treatment of the Jewish People in Palestine

EXTENSION OF REMARKS
OF
### HON. GEORGE W. GILLIE
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, December 18, 1945*

Mr. GILLIE. Mr. Speaker, under leave to extend my remarks, I desire to call to the attention of the Members of Congress the following telegram concerning the treatment of the Jewish people in Palestine:

FORT WAYNE, IND., *December 13, 1945.*
Congressman GEORGE W. GILLIE,
*House of Representatives,*
*Washington, D. C.:*

The Fort Wayne Jewish community is shocked at British military action in killing and wounding scores of Jews in undefended Jewish settlements in Palestine. The reports relative to the treatment of displaced persons in British controlled Bergen Belsen camp in an effort to intimidate the few surviving victims of Nazi persecution to an acceptance of British policy in regard to Palestine is unthinkable. It is apparent that the British Labor Government is trying to force Jews into fear and silence in anticipation of the inquiry about to be made by the Anglo-American Committee of Inquiry. We urge and implore you to take note of the widespread anger such tactics have aroused in this country. We hope that you will insist that the hounded Jews of Europe find that peace and sanctity in Palestine to which they are entitled and that the British be requested to cease these activities.

THE FORT WAYNE JEWISH COMMUNITY.

## Grand Coulee Power for Railroads

EXTENSION OF REMARKS
OF
### HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, December 18, 1945*

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Richard L. Neuberger, from the Signalman's Journal for November 1945:

GRAND COULEE POWER FOR RAILROADS—GREATEST CONSTRUCTION PROJECT SINCE TRANSCONTINENTAL LINES WERE BUILT BEING CONSIDERED IN WESTERN STATES

(By Richard L. Neuberger)

The most spectacular railroading in America is that which conquers the lofty wall of the Continental Divide. Seven lines cross the great hump of the Rockies and roll down to the seaports of the Pacific Coast. These ascents of the country's highest mountain range require sharp switchbacks, twisting curves and grades that reach 3.3 percent. Locomotives cough and spit and bellow, as the commerce of the Nation is hauled over the granite and lava barrier that forms the spinal column of the United States.

Today, one of the principal postwar issues along the Pacific seaboard is how our mountain-going freight and passenger trains shall be pulled across the Rockies and the other two ranges which lie beyond, the Sierras of California and the Cascades of Oregon and Washington.

The Bonneville Power Administration believes that all the railroads in the 11 States of the far West should be electrified. This proposal is now being hotly discussed throughout those 11 States, the States of the vast American outdoors— Washington, Idaho, California, Oregon, Montana, Wyoming, Nevada, Colorado, Utah, New Mexico and Arizona.

Bonneville engineers, commissioned with the task of selling the huge power output of Bonneville and Grand Coulee Dams, base their proposal on three current problems:

1. The need to provide jobs for thousands of workers employed during the war in shipyards, airplane plants, and aluminum factories.

2. The need to conserve the dwindling oil reserves still left in the United States.

3. The importance of finding new markets for the immense hydroelectric production of Federal projects on the Sacramento, Columbia, and Colorado Rivers.

The Bonneville idea involves virtually all main-line track from the Rocky Mountains on westward. Eighty-five hundred miles of roadbed would be put under the trolley, making the project the most ambitious railway undertaking since the transcontinentals were originally thrust to the Pacific. It also would be the greatest electrification network anywhere in the world. Seven major systems would be involved—the Great Northern, Union Pacific, Southern Pacific, Santa Fe, Northern Pacific, Denver & Rio Grande, and Chicago, Milwaukee, St. Paul & Pacific.

Key structure in the project would be Grand Coulee Dam, which spans the upper Columbia River like a concrete fortress. This is the principal unit in the Government's river-control program. It also is the biggest power plant on earth. Energy from Grand Coulee would move trains on nearly all the lines of the West. Boulder Dam on the Colorado, Bonneville on the Columbia, the Big Thompson project in Colorado and other Federal generating centers would also put juice in the maize of trolley wires.

The cost of the scheme would be nearly half a billion dollars. This is big by peacetime standards, infinitesimal when compared to the toll for the war. The cost would be divided as follows:

| | |
|---|---|
| Trolley system | $160,000,000 |
| Wayside substations | 120,000,000 |
| Electric locomotives | 160,000,000 |
| Total | 440,000,000 |

Sharp division splits the West on the idea, Senator HUGH MITCHELL, of the State of Washington, a 38-year-old New Dealer, believes that electrification of western railroads is inevitable. "Electricity," says Senator MITCHELL, "secures greater traffic volume at higher speeds and lower costs. The advantages are so marked and the needs so great that railroad electrification in the Northwest is bound to come into its own, like it has in the mountainous countries of Europe. Future conservation of oil and coal will require moving trains with power from falling water."

On the other hand, a former Republican governor of the State of Oregon, Charles A. Sprague, believes that Diesel engines are far more practical than those coupled to trolley wires. He also contends that electrification would saddle the railroads of the West with so heavy a debt that funds would not be available for new cars, better ballast on roadbeds and other necessary improvements. Sprague maintains that centralized traffic control is more essential to the lines than electric locomotives.

Yet the issue remains a critical one all along the Pacific seaboard. Why?

The answer is found in the West's peculiar postwar problem. After Pearl Harbor great industries burgeoned beyond the Rockies—industries building ships, assembling planes, fabricating light metals. But these were new industries; they were not plants which had been making typewriters, sewing machines, stoves, and other products of peace. Now the war is over. The coast's factories have no peacetime production to which they can return. In the West, it is not reconversion, it is elimination. This means that employment must be found for thousands of workers.

The Bonneville electrification proposal is ready and waiting. In fact, Dr. Paul Raver, the Bonneville administrator, claims that the plan will help provide opportunities for the full employment of labor. Yet he puts another reason even ahead of this. He declares that during the war the United States seriously depleted its remaining petroleum reserves. All western railroads except the Northern Pacific rely on oil for fuel. Putting all trains west of the Rockies under trolley wires would save 200,000,000 gallons of oil annually, according to Raver and his associates.

Benjamin T. Brooks, noted petroleum technologist, warns that the United States is in danger of changing from an oil-exporting nation to an oil-importing nation. How can oil be saved? Bonneville engineers declare that trains are the only transportation units which can be coupled to hydroelectric plants. Obviously, automobiles cannot be put under trolley wires; it is even more impossible for ships and airplanes. Water power is inexhaustible, however. Its use depletes no resources. The late J. D. Ross, first Bonneville Administrator, once told Franklin D. Roosevelt that Grand Coulee Dam was "an oil well that will never run dry, a coal mine that will never thin out."

Electric locomotives perform best on mountainous lines. Practically all the railroads in Switzerland are electrified. Electricity accelerates swiftly; it leaves no smoke in long tunnels; it pulls smoothly on steep grades. T. M. C. Martin, the Bonneville Dam railroad expert insists that an electric engine can pull 47 loaded freight cars uphill at 23 miles an hour, whereas a steam locomotive with the same load will make 19 miles an hour and a Diesel only 16.

Perhaps these reasons have impelled the Denver & Rio Grande to be the Western railroad most seriously interested in the Bonneville idea. The Rio Grande has the steepest grades on the continent. Its Tennessee Pass ascent of the Continental Divide, at 10,239 feet, is the highest crossing of the Rocky Mountains. It has the six-mile-long Moffat Tunnel above Denver. Already, the Rio Grande has had its line from Denver to Salt Lake studied and analyzed by engineers of Westinghouse, General Electric, the United States Bureau of Reclamation and the Bonneville Power agency.

T. M. C. Martin believes that 10,000 workers could be kept busy for nearly five years stringing trolley wires above the 8,500 miles on main-line tracks in the West. He adds the important note that many of these men could be veterans of World War II. The United States Army Signal Corps string vast networks of line during the war. For example, several regiments erected a telephone system along the 1,600 frozen miles of the Alcan Highway. Men with this type of experience, points out Martin would be ideally qualified to construct the world's greatest trolley project. Employment might be stimulated in other industries, as well. More than 500,000 poles would be required, thus giving impetus to sawmill orders. These could be second-growth trees, so that virgin forests would not have to be invaded.

All in all, the railroad electrification undertaking will be a major issue on the Pacific slope during the years directly ahead. Manufacturers of Diesel engines are sure to resist the proposal. They claim that the Diesel locomotive is the most practical hauling power yet developed. It requires no costly trolley system. It is self-contained and does not depend upon wires. It generally operates in four units. If one unit breaks down the train still can reach the next station under its own power.

So the issue is joined. The time-honored steam locomotive even has its proponents. Union Pacific engineers claim the huge, new Big Boy 4–8–8–4 freight locomotives are unexcelled. Yet on the arid uplands steam runs into the problem of water. Rivers are far apart. Much of the moisture is unsuited even for locomotive boilers. This shortage is becoming increasingly acute in the desert of Arizona and New Mexico. Diesel engines burn much oil but they do not have massive boilers which lap up water like a herd of elephants.

Much American railroading is mundane and tame. The color has gone from it. Mechanization has pushed back the frontier. But in the mountains of the West, where the electrification issue will be decided, the drama and the color remain. This is the most spectacular rail transportation in the land.

In the Montana Rockies the long trains roll through canyons where crystal-clear rivers lap at the walls. Trout and salmon inhabit those icy reaches. Off to the south, on the gaunt uplands near the Mexican line, the freights and passengers thread across sagebrush plateaus where the only water is a mirage. Yet these dry uplands have beauty, too—the beauty of serried mesas and rocks as brightly hued as Joseph's coat.

In the tiny division points "helper" locomotives are coupled to the trains, and the roar of two engines echoes among the mountain walls. Passengers look from their coaches and diners on what is left of the American frontier. They see, too, where our frontiersmen suffered and died. Capt. J. W. Gunnison, of the Army engineers, and his survey party were massacred by Ute Indians while exploring the Sherman Hill Pass now followed by the Union Pacific. Great Northern travelers wind through Marias Pass, discovered by no less a frontiersman than Capt. Meriwether Lewis, of Lewis and Clark.

And so, in this vivid setting, the controversy over railroad electrification will be decided.

With Japan finally laid low, the question will confront Senate committees and boards of directors before many more barrels of bunker "C" fuel oil have been reduced to smoke. In the meanwhile, trains clatter down from the high summits and the sonorous sound of the locomotive whistle fills granite gorges. Across innumerable trestles the proud steams and lordly Diesels roll, and below the decks of the bridges the white water of the mountain rivers foams and surges.

These flecked streams in which trout lurk and salmon spawn may yet revolutionize transportation west of the Continental Divide. Where the rivers rush around the piers of railroad bridges, the glacial water lifts in snapping arcs—like the loops of a thousand question marks.

## Country Against Prohibition

EXTENSION OF REMARKS
OF
### HON. JOHN J. COCHRAN
OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, December 18, 1945*

Mr. COCHRAN. Mr. Speaker, under the permission granted me, I include as part of my remarks an article from the Washington Post. It follows:

PUBLIC 2 TO 1 AGAINST PROHIBITION DESPITE MANY LOCAL DRY LAWS

(By George Gallup, director, American Institute of Public Opinion)

Although a considerable portion of the United States has voted "dry" under local-option laws since national prohibition was repealed more than 10 years ago, public sentiment today remains 2 to 1 against return to Nation-wide prohibition.

Sentiment on the question has been periodically tested since 1936 by the Institute.

The question, asked of a cross section of voters:

"If the question of national prohibition should come up again, would you vote wet or dry?"

| | *Percent* |
|---|---|
| Wet | 67 |
| Dry | 33 |

About five in every hundred had no opinion.

In other words, if a Nation-wide referendum were to be held today on the issue, the vote would be approximately 2 to 1 against a return to national prohibition.

It will be remembered that in 1933 the official referenda showed 30 percent of all voters voting dry, 70 percent wet.

The table below charts the trend of public thinking on the question of national prohibition since 1936:

| | *Percent dry* | *Percent wet* |
|---|---|---|
| 1933 official referenda | 30 | 70 |
| 1936 | 33 | 67 |
| 1938 | 36 | 64 |
| 1940 | 32 | 68 |
| 1942 | 36 | 64 |
| 1943 | 34 | 66 |
| 1944 | 37 | 63 |
| Today | 33 | 67 |

People also were asked:

"Do you ever have occasion to use any alcoholic beverages such as liquor, wine, or beer, or are you a total abstainer?"

Highlights of results on this question reveal these facts:

One out of every three (33 percent) are total abstainers; 15 in every 100 (15 percent) drink only wine or beer; 51 percent—5 out of 10, on occasion drink any alcoholic beverage, including wine, beer, or liquor.

Drinking falls off sharply among men when they reach 50. Only 2 of 10 are nondrinkers up to 50. After that about 1 out of 3 is a total abstainer.

More women than men are nondrinkers, with 25 percent among men nondrinkers, compared to 41 percent among women. Fifty-seven percent among women over 50 are nondrinkers.

## Demobilization of the Armed Forces

EXTENSION OF REMARKS
OF
### HON. RAYMOND S. SPRINGER
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, December 18, 1945*

Mr. SPRINGER. Mr. Speaker, in a recent publication of the Adakian, published at Adak, Alaska, by United States troops, an article appears which exemplifies the feeling of our boys, still in the service, respecting their releases and discharges and their return to their homes. The use of our ships for transporting prisoners of war is severely condemned by our troops, and they are justified in their condemnation of that practice and policy. Since VE-day many Congressmen, of which I was one of that number, have tried to cause the speeding up of releases and discharges and the return home of our boys. Many of them are very disappointed and despondent over the slowness of the Army and Navy in doing its job. Especially do these boys, in the service, almost despair of ever reaching home when they learn that prisoners of war have a priority over our own soldiers—and many of them really wonder "who won this war." The article is very enlightening upon the subject of the general feeling of our troops upon this policy.

Mr. Speaker, under leave to revise and extend my own remarks, I include herewith the article published in the Adakian by our troops, which is as follows:

WHO GOES HOME FIRST?

Last week we picked up a report on a commercial news broadcast that about 500 Nazi prisoners of war were being returned to the United States, for return to Germany, on the steamship *William Thompson*.

Reluctant to believe that the War Department would use for such a purpose a ship which could take, as it has in the past, United States servicemen home from Alaska and the Aleutians, we wired a Seattle newspaper for confirmation. Last night we got our answer:

"Five hundred and forty-one of over 700 Nazis returned on steamship *William Thompson* with 57-man guard from United States engineers demolition project, Excursion Inlet. Ship capacity, 600."

(Excursion Inlet is on the Alaskan coast, on the inland waterway, about 1,000 miles above Seattle.)

GERMANS HOME BY MAY

Two other dispatches received in the past few days cast some illumination on this situation:

Headquarters, Alaskan Department Public Relations Office released this story last week:

"All German and Italian PW's will be shipped out of the country by the end of April 1946, Secretary of War Robert P. Patterson announced today.

"Mr. Patterson said that he made this statement after conferring with Members of Congress and representatives of agriculture interests, who asked for a War Department statement of policy in order that farmers might plan for their 1946 farm operations. * * *

"It is estimated that 326,000 Germans and 24,300 Italian prisoners of war will be returned to Europe during the period from December 1945 to April 1946."

Yesterday ANS carried this story, datelined Camp Shanks, N. Y.: "Three European-bound transports Saturday carried 1,975 German PW's as the War Department stepped up plans to return by early spring the 306,000 German captives still in the United States."

WHO'S GOT PRIORITY?

The story of the *Thompson* raises a couple of burning questions:

1. In view of the present need for ocean-going vessels to carry United States servicemen home, and in view of the present railroad jam on the Pacific coast, why weren't the Germans at Excursion Inlet taken down the Inland Waterway in smaller vessels and transferred to the Canadian Railway for shipment to New York?

2. If reasons unknown to us made this impossible, why weren't they left where they were until every United States serviceman who is eventually due for discharge is shipped home from the Pacific?

The men in the Alaskan department have a right to answers from the War Department to these questions.

We have no uncharitable desire to keep former members of the glorious Wehrmacht away from their homes any longer than is necessary. Our point is simply that United States soldiers and sailors have first call on ships. As long as men with 55 or more points, or men with 2 years in the Alaskan department, sit on Adak today, they have prior rights to ships like the *Thompson*.

## General Housing Bill

EXTENSION OF REMARKS
OF
### HON. ANDREW J. BIEMILLER
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, December 18, 1945*

Mr. BIEMILLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution of the Common Council of the City of Milwaukee:

Whereas there exists an extreme shortage of housing accommodations throughout the Nation, which will be intensified as additional of our veterans return to civil life; and

Whereas there has been introduced in the Senate of the United States bill S. 1592, known as the Wagner-Taft-Ellender general housing bill, which if passed will tend to provide ways and means by which the housing shortage can be alleviated: Now, therefore, be it

*Resolved by the Common Council of the City of Milwaukee*, That it hereby endorses and supports the general provisions of the Wagner-Taft-Ellender general housing bill, S. 1592; and be it further

*Resolved*, That the city clerk is hereby directed to send certified copies of this resolution to the chairmen of the appropriate Senate and House of Representatives committees, Senators LA FOLLETTE, WILEY, WAGNER, ELLENDER, and TAFT, and to Congressmen BIEMILLER and WASIELEWSKI.

WALTER A. KLEIN,
*City Clerk.*

## A Veteran and Surplus Property

EXTENSION OF REMARKS
OF
### HON. JOHN J. COCHRAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, December 18, 1945*

Mr. COCHRAN. Mr. Speaker, I am in full agreement with Hon. Stuart Symington, Administrator of Surplus Property, that the act should be given the attention of the Congress immediately with a view to enacting amendments that will make it more workable, especially in reference to the preference that was extended to veterans.

I have had considerable correspondence with veterans and also the disposal agencies that are handling surplus property in regard to the general subject. Even though I signed the conference report as one of the House conferees I stated at the time that the bill in its form was a monstrosity but that we were told it was absolutely necessary that some legislation be passed. I opposed the Board that set up and later I participated in having the amendment that provided for an administrator adopted.

Under this legislation the Administrator lays down the policy, promulgates the rules and regulations, and names the disposal agency that is to handle various types of surplus property. Originally, the Procurement Division of the Treasury Department was assigned as a disposal agency to handle consumers' goods. Later, this authority was granted to the Department of Commerce and finally placed in the Reconstruction Finance Corporation. Mr. Symington has nothing to do with the actual disposal of the property, and it is practically out of his hands as soon as he notifies the disposal agency what the various Government departments have declared surplus and where it is located.

Regional offices have been set up to handle consumers' goods. The regional office for my section is in Kansas City, Mo. They have a branch office in St. Louis, but, aside from giving information, the branch office in St. Louis has no authority to dispose of any surplus property of any kind. Veterans have complained bitterly that they have been pushed around. Although they have secured a priority to purchase a car or a truck, they cannot secure one.

I have an outstanding example of the experience of a veteran who is trying to purchase a car. He has the necessary priority. I received a letter from him the other day, and as a part of my remarks I quote from that letter. It follows:

ST. LOUIS, MO., *December 11, 1945.*

Hon. JOHN J. COCHRAN,
*House of Representatives.*

DEAR JACK: I want to let you know what has been done regarding my getting an auto.

First, I haven't got one yet, and as things stand now, I have no prospects of such. I just came from the St. Louis Office of Surplus Property, Mr. Jack Swink, and he informed me there is nothing more he can do as his hands are tied and the Kansas City office has all the say-so. Mr. Swink located a case and called me to go to Jefferson City to look at it and see if I wanted it. Well, I went to Jefferson City yesterday and after a lot of trouble I saw the car. It was a 1939 Chevrolet, no battery, no tires whatever, and in poor condition as it had been used by the Department of Agriculture for 6 years and was really worn down with 160,000 miles. Well, Jack, the price they wanted for it was ridiculous. They wanted $585.50. I saw the records on the car and the Government paid $581.93 for it in May 1939. If things weren't such as now, they would ordinarily sell this car for junk, yet they want $4 more for it than it cost 6 years ago after getting full value out of it for 6 years in the Agriculture Department. I don't understand that, Jack, and neither do a lot of other people.

While in Jefferson City I also located a 1940 Chevrolet which has been declared surplus by the Agriculture Department there. I asked Mr. Swink if he could get that car for me, and he says he doesn't know anything about it, that I would have to go to Kansas City to see Mr. H. Rope Bishop, who is in charge of this district, about getting this car. Well, Jack, here are the details about this car I located myself.

It is now stored in a private garage in Jefferson City, and has been sitting there since July of this year, which was told to me by an employee of the office of Animal Industry, room 202, United States post office, Jefferson City, Mo. I inspected this car and the tires are completely worn down, no good, and the motor is usable. It has 110,000 miles on it and was used by the Agriculture Department for 5½ years. The Government paid $604.68 for it as records show, which I saw on file. Here are complete details: 1940, passenger, 2-door sedan, Chevrolet Master 85, engine No. 3033148, declared surplus by Agriculture Department, Jefferson City Animal Industry Office, 202 United States Post Office Building.

Jack, I would like to have this car, as a car is a necessity, and not a luxury to me. I need one badly in my work as I have told them before. I have my priority veteran certificate and am sending it to Mr. H. Roper Bishop, Chief of Government Requirements Division, Consumer Goods Office of RFC, 2605 Walnut Street, Kansas City, Mo. But I am afraid I will get no action from Kansas City unless you get on them. Jack, this 1940 car is worth about $550, but I will give the Government $600 for it, as I need it in work. They will probably want about $700 for it, and that is an outrage as you can buy from a used-car dealer for that.

Trusting you will look into this, as I know you have always been fair about everything, and that you set up the surplus office to help veterans, and not make profits out of used cars which are of no value to the Government.

Thanking you a million times and waiting to hear from you and what to do.

Mr. Speaker, just as soon as Congress reconvenes I sincerely hope that the chairman of the Committee on Expenditures will call the committee to hold hearings with a view to enacting amendments that will clarify this situation. Why a city with a metropolitan area population of a million five hundred thousand people like the city of St. Louis should not have a representative of the agency disposing of consumers' goods to actually sell surplus property rather than only give information, I cannot understand.

## Hobbs Bill Presents Test for Liberals

EXTENSION OF REMARKS

OF

### HON. WILLIAM M. COLMER

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, December 18, 1945*

Mr. COLMER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Star:

HOBBS BILL PRESENTS TEST FOR "LIBERALS"—ATTEMPT TO KILL MEASURE IN COMMITTEE RAISES ISSUE

(By John H. Cline)

A few months ago American liberals—those of the genuine as well as the strictly synthetic variety—were striving mightily to braing the fair-employment practices bill to a vote in the House. The obstacle was the House Rules Committee, which had refused to clear the measure, and this was roundly condemned as a frustration of our democratic processes in that a small band of southern tories and kindred reactionaries were attempting to impose their prejudices on the membership of the House by an improper exercise of the peculiar power which they enjoyed as members of the Rules Committee.

So far as the principle involved was concerned, these complainants were right. But now the shoe is on the other foot, and it remains to be seen whether those who denounced the pigeonholing of the FEPC bill, which they wanted to see passed, will manifest the same concern for the proper functioning of our democratic processes in the case of a bill which many of them do not want to see passed.

This is the so-called Hobbs bill, which is really an amendment of the 1934 Antiracketeering Act—an amendment made necessary by the refusal of the Supreme Court in 1942 to apply the law to union racketeers. The Hobbs bill has passed the House and has been referred to the Senate Judiciary Committee, where an attempt will be made to kill it either openly or via the pigeonhole method.

The possibility that this attempt will succeed cannot be brushed aside, for the misguided "friends of labor" succeeded in bottling up a similar bill in 1943 in a Senate committee, just as they have succeeded in killing in Senate committees virtually all of the major labor legislation passed by overwhelming votes in the House in recent years. In none of these instances was there a protest from those who were so articulate in their complaints against the treatment accorded the FEPC bill, and it remains to be seen whether they will speak up now. Representative MARCANTONIO of New York, who was among the loudest in denouncing the Rules Committee for holding up the FEPC bill, has been quoted as saying of the Hobbs bill that "there isn't any question that we can stop it in the Senate," meaning, presumbably, the Senate committee. And the Daily Worker, Communist Party paper, with whose views Mr. MARCANTONIO generally is in accord, has called upon "the folks back home" to let their Senators know how they feel about this "vicious" bill which is described as a threat "to the very principle of organized labor." This sort of nonsense will not prevail if the Hobbs bill ever gets to a vote in the Senate. The danger is that it will be used as an excuse for letting the measure die in the Senate committee.

The Hobbs bill is neither vicious nor antilabor. On the contrary, it is designed to stamp out a vicious racket, flourishing in the guise of legitimate union activity, which is a real threat to labor in that it is capable of arousing public feeling to a point where legitimate as well as illegitimate union activities will be in serious jeopardy.

This particular racket is practiced by some elements in the AFL Teamsters' Union and is confined in its application to trucks moving into New York and other cities. Some of these trucks are owned and driven by farmers moving their produce to market. Others are driven by members of the union from other sections of the country. But no distinction is made on this score. In the case of New York City—and the technique is much the same in other places—members of Teamsters' Local 807 for years have been waylaying trucks coming into the Holland Tunnel. They stop the trucks, and by beating or threatening to beat the drivers extort payments from the drivers or owners of sums of money equivalent to the union scale for a day's work. In some instances the union racketeers, although their services were not needed, have helped or offered to help in driving or unloading the trucks; in others they have simply taken the money and disappeared. Some trucks have been overturned and burned. Sometimes farmer drivers have been compelled to pay a union "initiation fee" ranging from $30 to $56 without being given opportunity to join the union. Nor is this a matter of an occasional holdup here and there, testimony taken by the House committee which considered the bill indicating that approximately 1,000 truck drivers or operators are compelled to pay tribute to these union racketeers each day.

In 1942 a case involving the conviction of a group of these racketeers came before the Supreme Court, and that tribunal, on the fantastic theory that Congress had intended to sanction such activities by the holders of union cards, reversed the conviction. The Hobbs bill which died in 1943, and the bill now before the Senate committee, were designed to overcome the evil effects of that decision, and to squelch any notion that Congress looks with an approving eye on the teamsters' racket.

At the same time, however, the bill has been drawn with care to safeguard all legitimate union activities, and that this has been done successfully is well evidenced by the fact that among the supporters of the Hobbs bill are such individuals as Representative VOORHIS, of California, who is a proved "friend of labor" in the best meaning of that term.

All that this bill would do would be to wipe out a court-made distinction between union and nonunion racketeers. It makes an eminently desirable law apply equally to everyone, including extortionists who happen to hold union cards, and it should be approved without delay in the Senate. It will be so approved if the intelligent friends of labor, realizing that this racket is giving the whole labor movement a black eye, will get behind the bill and see that it is reported out by the Senate Judiciary Committee.

## Insidious Propaganda

EXTENSION OF REMARKS

OF

### HON. LEON H. GAVIN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, December 18, 1945*

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Daily Press of St. Marys, Pa.:

INSIDIOUS PROPAGANDA

Gullible Americans and they number into the millions, in the next few days will be fed high-powered propaganda that United

States should loan Great Britain $4,000,000,000 as a matter of economic gain for this country and bring into more harmonious relations trade dealings with the country and the British Empire.

It is hard to say at this time how far the proposed loan will go in Congress, although some observers at the Capital think it will pass.

If such a thing should happen that Congress approves this loan, we might as well kiss the $4,000,000,000 good-by.

England never made any attempt after the last war to repay her obligations to United States and financially she was better off then than now.

Not even one cent of interest was paid on her World War I obligations even after United States had "forgiven" her a considerable share of her debt.

How differently we treat our English allies and own men who fought the war.

A GI coming home from war has to wade through mountains of red tape to get a $2,000 loan to apply on the purchase of a home, or to go into business.

There is no interest waiving on this money. Interest must be paid at full legal rates.

But England will not be called upon to pay one penny interest on her contemplated loan for 5 years, and even then there are loopholes that will permit further extension of the interest-free agreement.

Such a loan is not even sound business. A banker who would make a loan in this country to an individual would be classified as "nuts" and the bank examiners would yank him out of his job quicker than you can read this editorial.

But to give England such easy terms is O. K. so it seems in Washington unless Congress rears up on its hind feet and tells Great Britain to paddle her own canoe as we have been doing in this country since the first white man set foot on American soil.

## Our Marines in China Speak

EXTENSION OF REMARKS
OF
### HON. HUGH DE LACY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, December 18, 1945*

Mr. DE LACY. Mr. Speaker, since I spoke to the House on the situation in China, I have received over 3,000 letters and petitions signed by more than 5,000 persons in my own congressional district, urging that our troops be withdrawn from that unhappy land.

Since then, too, the President of the United States has defined our policy toward China in a welcome announcement which assuredly is sound in its basic recognition of the need for achieving unity and democracy in China through a representative government that will encourage necessary economic and social progress.

I know the President's statement on China will be welcomed, too, by most of those who have taken the time to write me on the subject. Ordinarily, Mr. Speaker, I would not ask permission to include any of these communications in the RECORD. However, several of them come from our own marines in China.

The Members of this House will be as interested as I was in reading the opinions of the heroes of Guadalcanal, of Peleliu, and of Okinawa on their present mission in north China, where they feel themselves no longer the advance guard of liberty and freedom, but instead, the participants in a Chinese civil war.

It is for that reason, Mr. Speaker, that under the privilege granted me, I wish to include a letter sent me by 15 enlisted marines in China, and a leaflet which other marines inform me has been circulating among their buddies in north China.

In calling attention to the letter, I hope the House notes the fact that 25 transports which carried Chiang Kai-shek's forces to north China where they have come in direct military conflict with other Chinese troops, returned empty to the States. Not a single marine from the hundreds of high-point men in north China was brought home on those transports. I trust, too, that the Members note the reference to World War III in the leaflet which other marines have forwarded from north China. These heroes of this war do not look forward to a new war. They fought for peace and democracy and they want no part of any enterprise which now endangers the goal for which many of them gave their lives.

The letter follows:

TSINGTAO, CHINA, *November 30, 1945.*

DEAR SIR: The Army newspaper, Stars and Stripes, on November 28, 1945, published an article on yours and five other Congressmen's resolutions asking President Truman to order the immediate recall of all United States troops, transports, and supplies from China. We can assure you that you have the support of thousands of Marines here in this theater.

Not only are we reluctant to unwantonly be placed in circumstances that may well involve us in participation in a war between rival Chinese political forces and possibly eventually another World War, but we don't believe we are getting a fair break in demobilization.

On October 9, 1945, all men, except those enlisted as regulars having a critical discharge score of 60 or more, became eligible for discharge. That was almost 7 weeks ago, and still at least 90 percent of those men are here, waiting to be relieved of their duties and furnished transportation home. On November 1, 1945, all men with a critical discharge score of 50 or more became eligible for discharge and are also waiting to be sent home. The old excuse that there is no transportation available is not true here.

On November 14 approximately 25 United States transport ships unloaded troops of the Chinese Eighth Army here at Tsingtao. Those ships would have been more than enough to have taken the entire Sixth Marine Division back to the States. Last week we watched these ships weigh anchor and sail for home—empty.

Most of us here in the Sixth Marine Division served in the last great land battle of the war, Okinawa, and have also served overseas anywhere from 12 to 24 months. We're not asking any special favors but we do want to have the same privilege of being discharged when we become eligible, as those who were fortunate enough to not have had to do occupation duty. We have been hearing from time to time how many men the Army has discharged, which at the last report was expected to reach 55 percent, or over 4,000,000 men, by January 1, 1946. The Marine Corps is a small organization, never having had a total of more than 500,000 men enlisted at one time. A small organization such as this should have been able to discharge men as fast in proportion as the Army. Still we have heard no figures quoted and we are wondering if a percentage of men anywhere equal to that of the Army has been discharged.

When we see empty ships leaving for the States we feel that we're not getting a fair deal. During this war 90 percent of the men serving in the Marine Corps served overseas (this figure was taken from the October 29, 1945, issue of the Time magazine) and Marines participated in practically every major land and sea battle fought in the Pacific.

We're asking at this time if we have not earned the right to be sent home and discharged when we become eligible and transportation is available.

Mr. Speaker, the leaflet, which marines themselves are circulating in north China, calling attention to their own position there and urging that they return home, reads:

THE TIENTSIN ADDRESS—IN TRIBUTE TO THE MEN OF THE FIRST MARINE DIVISION

No score and well over 3 years ago our continent thrust us out into a great world war dedicated to the proposition that an American could call himself a human and free being.

Now we are actively engaged in an internal strife, testing whether our Nation or any other nation so conceived and so dedicated can continually meddle in foreign entanglements and come out whole.

We are met on a great battlefield of World War III. It is for us, the living, to here dedicate our spared lives and to retract our advance from that field or those who have perished will have done so in vain.

The survivors must stand and crush into submission the weaklings who remain only to prophecy that the birthright of freedom is death and destruction.

Guadalcanal! Finchaven! Cape Gloucester! Peleliu! Okinawa! North China?

## The Committee on Un-American Activities

REMARKS
OF
### HON. CHARLES R. SAVAGE
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, December 18, 1945*

Mr. SAVAGE. Mr. Speaker, the Committee on Un-American Activities has now committed its most outrageous blunder. It has begun an investigation of the Friends of Democracy and subpenaed or requested the books and records of this honorable and patriotic organization which for 10 years has been leading the fight against communism and fascism.

Up to this time the principal accomplishment of the committee as far as anyone could see was to furnish a forum for the Communist Party in the United States. Its leaders were brought down to Washington for a public hearing. From this vantage point they gained the opportunity to belittle the committee and Congress and to expound the doctrines of communism.

The newspapers have revealed that the American Military Government in Germany is in possession of a list of thousands of names of people in America whom the Nazis considered as their friends and supporters. Here is a matter of the gravest concern, but has the committee made any effort to obtain that list and to check upon those individuals?

The Scripps-Howard newspapers have been carrying a series of articles over the past few weeks exposing subversive and racketeering activities of a large number of individuals and organizations. The Philadelphia Record of December 16 carries on its front page a story exposing Fascist control of 12 new veterans' organizations. Why does not the committee call some of these to Washington?

There is nothing to indicate that the committee has shown the slightest interest in following up any of these important leads.

Since it was created almost a year ago this committee has failed to justify either its existence or the expenditure of the $75,000 appropriated to it. The protection of our internal security is the job of the Federal Bureau of Investigation, in the executive branch of our government, and not of a legislative committee. If we feel that the country is not being properly safeguarded from un-American elements then it is up to us to let the FBI know it, not to give free rein to a committee that is devoting its efforts to hounding, harassing, and smearing liberal groups and bringing contempt and ridicule upon this House which created it.

FASCISTS BACK 12 OF 47 GROUPS SET UP FOR VETS—MCWILLIAMS AND GERALD L. K. SMITH HEAD OWN ORGANIZATIONS

The peddlers of racial hatred, intolerance, and disunity are back in business again—this time in the guise of veterans' organizations.

Of the 47 new organizations bidding for the membership of 13,000,000 veterans of World War II, 12 are sponsored by native Fascists. They have the familiar odor of the American Firsters, the Christian Fronters, the Coughlinites, and the rest of the lunatic fringe attached to them.

LIST OF ORGANIZATIONS

1. The Christian Veterans of America, organized by Frederick Kister, former America Firster, and associate editor of the pro-Fascist Scribner's Commentator.

2. The Nationalist Veterans of World War II, promoted by the Reverend Gerald L. K. Smith, head of the America First Party.

3. The Protestant War Veterans, of which Edward J. Smythe, one of the defendants in the sedition trials of 1944, is organizer and chairman.

4. The St. Sebastian Brigade, headed by Father Charles E. Coughlin, of Royal Oak, Mich., former publisher of Social Justice.

5. The Servicemen's Reconstruction Plan, sponsored by Joseph McWilliams, another of the sedition trial defendants and self-styled pro-Nazi "fuehrer of Yorkville."

6. The United Sons of America, headed by Harvey Hanson and operated from the prewar Ku Klux Klan headquarters in Detroit.

7. The Christian War Veterans of America (not to be confused with the Christian Veterans of America), which subscribes to the beliefs of the Reverend Gerald L. K. Smith.

8. The George Washington Bodyguard, a Chicago "cultural" group which has been associated with George Deatherage's American Nationalist Confederation.

9. Military Order of the Liberty Bell, a national order for veterans of all wars, which is strongly anti-Negro and antiforeign and which operates out of Washington, D. C.

10. The Fight for Free Enterprise, Inc., led by William Walker, a trainee of pro-Nazi Joseph P. Kamp. The organization, while not a veterans' group, is much interested in controlling veterans' thought in its Free Enterprise News Bulletin.

11. The Nationalist Party, a political organization formed by ex-Senator Robert Rice Reynolds.

12. The United Veterans Political Party, organized by ex-Congressman John H. Hoeppel, of California, who was impeached for selling appointments to West Point. This organization, through its publication, is disseminating anti-Semitic propaganda.

START DRIVE HERE

Thus far, only one of these groups—Kister's Christian Veterans of America—is known to have launched openly an organization drive in Philadelphia.

During the last 8 weeks the Christian Veterans has distributed reams of printed propaganda beseeching Philadelphia's "Christian veterans to awake." Much of this material is filled with anti-Semitic tirades and is put out under Kister's name. In it Kister frankly admits his former ties with America First. He asks veterans to respond to his "call for action" by sending in membership applications and contributions to the organization's headquarters in Chicago.

He also urges "Christian veterans to develop leadership in the affairs of government" and to oppose all "subversive forces which seek to destroy Christianity."

PLEDGES $2,500 BONUS

Kister promises the veterans a $2,500 bonus and full employment. He expresses himself wholeheartedly in favor of free enterprise, labor unions, and agriculture. In addition, he advocates the stopping of immigration for 10 years and the deportation of aliens who apparently do not agree with his personal concept of liberty.

Associated with Kister in the Christian Veterans of America is at least one other known America First sympathizer—George Vose. Vose is national secretary.

The literature names Paul Meinhart, of Lester, Delaware County, as assistant national secretary.

It is less difficult to understand Vose's connection with the organization than that of Meinhart.

PRAISED BY SMITH

Rev. Gerald L. K. Smith, for whom Vose also works (as does Kister) through the Nationalist Veterans of World War II, recently said of him: "He has always been an America Firster and now he is mad at the Army, and that's the way I like my people to be—angry."

Perhaps Vose is "mad at the Army" because of the following facts:

On April 27, 1943, Vose was court-martialed at Fort Sheridan, Ill. He was charged with having sold Army matériel and with having sold passes to enlisted men for $5 and $10 each. He was found guilty on March 3, 1943, and sentenced to 6 months at hard labor. He was permitted to rejoin his company after serving his sentence, but shortly afterward suffered a leg injury and was given a medical discharge.

DISCHARGED BY ARMY

Meinhart is a 22-year-old discharged veteran who lives with his parents in a modest, neatly furnished bungalow at 312 Seneca Avenue, Lester. He was discharged from the Army last December after having been shot accidentally through the jaw while on maneuvers in the South.

Under what circumstances he joined the Christian Veterans of America, or when, is not known. However, some time earlier this year he went to Chicago to go to work. It is presumed that while he was there he became affiliated with Kister and Vose, who selected him as their stooge for the organizing job in the Philadelphia area and elsewhere in Pennsylvania.

SURPRISED BY ACTION

In Lester, Meinhart is known generally as a "nice, mild-mannered boy—not the kind that is arrogant or belligerent."

"I was frankly surprised to hear he had tied up with an organization of that type," said a member of the Veterans of Foreign Wars there. "I doubt if he knows the kind of people he is affiliated with."

In any event, Meinhart now regularly attends meetings of the Philadelphia Chapter of the Blue Star Mothers, a prewar extremist group, which is assisting him in his organization drive. It is from members of the Blue Star Mothers that he obtains his leads on possible members. And it was the Blue Star Mothers who recently contributed the funds to pay for a newspaper advertisement to promote the Christian Veterans of America membership drive—an advertisement no newspaper in Philadelphia has seen fit to print.

RESULTS UNKNOWN

How many members the organization drive has produced in Philadelphia is not known.

But Meinhart has been heard to say the drive is not progressing favorably.

At least one other of these organizations is believed to have some Philadelphians on its rolls. That is Father Coughlin's St. Sebastian Brigade, which in the strict sense of the word is not a veterans' organization. The brigade was organized early in 1942. By November of last year it is said to have had the names of 400,000 veterans on its lists. They were enrolled by their wives, mothers, and sweethearts.

PLANS 100 ORGANIZERS

A novel plan for extending the influence of the National Veterans of World War II has been conceived by Rev. Gerald L. K. Smith. It is fashioned after the plan followed by Hitler before his ascension to power.

Smith promises each veteran a bonus of $1,000 to involve them in his hate campaign against organized labor, Jews, Negroes, and other minorities. He plans to train 100 organizers. Each of these organizers will go to one of the 100 principal cities. There they will organize a group of 10 veterans, who in turn will organize 10 more, and so on, until the organization's desired strength is gained.

Smythe describes his Protestant War Veterans as a voluntary association of white gentiles of the Protestant faith who served in any war of the Republic. He has set his membership goal at 25,000,000 veterans and members of their families. He is still far from that goal.

M'WILLIAMS OFFERS MORE

Joseph McWilliams, the man who would be fuehrer, and who has a special technique for dodging draft boards and prisons, is more ambitious in what he offers the veterans. He proposes a $7,800 bonus. He adds that veterans, "thus fairly treated, will smash all efforts to a dictatorship (presumably by anyone but McWilliams), and will devotedly protect the Christian culture which nurtured them."

How far the peddlers of hate will get with their scheme to indoctrinate American servicemen with the principles of fascism remains to be seen.

ONE MILLION FIVE HUNDRED THOUSAND JOIN UP

Thus far the 6,000,000 men who have already returned from World War II have shown no haste to join any organization. Only about 1,500,000 have joined any veterans' organization. Most have selected the old-line conservative groups—the American Legion, the Veterans of Foreign Wars, and the Disabled War Veterans.

Another 30,000 are claimed as members in the recently organized American Veterans of World War II, better known as the AMVETS. Another 11,000 have affiliated themselves with the liberal-minded American Veterans' Committee, organized by Charles Bolte, New York writer. This organization boasts as members Franklin D. Roosevelt, Jr.; Philip Willkie,

son of the late Wendell Willkie; and Owen Root, youthful organizer of the Willkie clubs; and Col. Evans F. Carlson, of the famous marine battalion, Carlson's Raiders.

LOOK FOR MALCONTENTS

But the peddlers of hate, by their own confession, are not interested in the type of veterans who join the Legion, the VFW, DAV, AMVETS, or AVC.

They are looking for the men who, coming back from the wars, are unable to bridge the gap from military to civilian life with ease. They are seeking the malcontents, the jobless, the homeless, and those who figure the Government owes them more than it is giving.

They do not need many members to serve their purposes—neither a majority or a large minority.

They believe that 50,000 or 100,000 men, organized in well-knit units across the country, would give them an effective organization of storm troopers to fight for fascism.

## Saboteurs in Two Wars

EXTENSION OF REMARKS

OF

### HON. KARL STEFAN

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, December 18, 1945*

Mr. STEFAN. Mr. Speaker, insufficient recognition for outstanding service rendered has been given to J. Edgar Hoover and his fine staff of men of the Federal Bureau of Investigation. I especially call attention to records of our committee which disclose the important fact that during World War II the United States experienced not one successful foreign-directed act of sabotage. This is the result of the great work of the Federal Bureau of Investigation and to the great directorship of J. Edgar Hoover. Recognition of this great service to our country in time of war is given in a timely editorial by Ben McKelway, associate editor of the Washington Evening Star. By leave granted me, I am happy to include this editorial with my remarks:

In reporting to the International Association of Chiefs of Police that not one foreign-directed act of sabotage was completed successfully in this country during World War II, Director J. Edgar Hoover of the Federal Bureau of Investigation has stated a fact that contrasts sharply with the sabotage record of the First World War. Prior to America's entry in the other war and for some time subsequent thereto, German agents had a veritable field day. With no American counterespionage service worthy of the name in operation prior to 1917, German and Austrian spies and saboteurs ranged far and wide almost unmolested, leaving a wake of fires, explosions, and damaged war machines that seriously impaired this country's preparations for war. Best remembered of these acts of sabotage were the Black Tom and Kingsland disasters, which destroyed millions of dollars' worth of munitions and other supplies and cost the lives of a number of workers. Investigation of the Black Tom and Kingsland cases revealed that these and many similar fires and explosions were the work of trained saboteurs and spies, operating under a system directed by the German and Austrian Embassies prior to the outbreak of hostilities and thereafter by German diplomats in Mexico.

All of this occurred in the days when there was no FBI and when counterespionage in any form, even by military and naval intelligence agencies, was frowned upon in official quarters. It is significant that the total appropriation for G–2, the Army's intelligence service, in 1916, was $11,000. After April 1917, G–2 was permitted to expand rapidly, but its counterespionage agents were for the most part lacking in experience and training, whereas Germany's spies were veterans at the game.

Fortunately, the United States benefited from the lessons of the dark days of 1916–17. Long before war came again to America, a well-organized, efficient spy-catching campaign had been launched, with the FBI as the nucleus and coordinator of counterespionage activities. As early as 1936 and 1939, the FBI began unearthing and breaking up German and Japanese spy rings. The Bureau's staff grew from a prewar strength of 2,000 special agents to more than 15,000 as the war reached its height. Every suspicious person was placed under surveillance, every suspicious act, message or document investigated. Hundreds of known and suspected agents were arrested and many were tried and convicted. Yet all of this was done without "witch hunts," without transgressing the rights of loyal citizens. It is a record of which the FBI and its many cooperating groups, from Army and Navy intelligence to local sheriffs, may well be proud.

## Resolution of Schenectady Veterans of World War II

EXTENSION OF REMARKS

OF

### HON. B. W. (PAT) KEARNEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, December 18, 1945*

Mr. KEARNEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution adopted by the board of governors of Schenectady Veterans of World War II, Inc., Schenectady, N. Y.:

Whereas the United States Government has proposed a loan to England in the amount of $4,400,000,000 without interest for the first 5 years and at a rate of interest of 2 percent thereafter; and

Whereas any returning veteran of the United States armed forces who borrows money from his Government, under the provision of Public Law 346, commonly known as the GI bill of rights, is compelled to pay interest of 4 percent on the Government-guaranteed portion of said loan, with only a 1-year moratorium granted on the interest charge on said portion; and

Whereas the tangible and intangible collateral offered by the veteran to guarantee the repayment of any loan made to him by his Government is equal to or greater than that which may be offered by foreign countries as history has proven; and

Whereas it appears that the Federal Government is discriminating against the veteran by charging him double the amount of interest charged foreign countries for money borrowed from the same source: Now, therefore, be it

*Resolved*, That the board of governors of this organization respectfully ask that immediate steps be taken to amend that portion of Public Law 346 covering loans to veterans by increasing the moratorium period on interest charges as now prescribed and by lowering the rate of interest charged on said loans to a figure which will be comparable to that charged foreign countries for borrowing; and be it further

*Resolved*, That the secretary of this board is instructed to forward a copy of this resolution to the Honorable United States Senators from New York State and to the Honorable B. W. KEARNEY, Member of Congress, Representative of the Thirty-first Congressional District of this State.

## Seventh Louisiana District Has National 4–H Club Health Champion

EXTENSION OF REMARKS

OF

### HON. HENRY D. LARCADE, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, December 18, 1945*

Mr. LARCADE. Mr. Speaker, the Seventh Congressional District of Louisiana, which I have the honor to represent, has furnished from the Parish of Cameron, bordering on the Gulf of Mexico, John Harold Savoy, the Nation's healthiest 4–H member, chosen at the national congress held in Chicago, Ill., recently, and I am proud of this distinction for my district. Mr. Speaker, with your permission I should like to include with these remarks a newspaper account of this event, to wit:

[From the Eunice (La.) New Era of December 12, 1945]

J. H. SAVOY, OF CAMERON, IS NAMED NATIONAL 4–H CLUB HEALTH CHAMPION—ACHIEVES HIGHEST DISTINCTION POSSIBLE AS CLUBSTER AT CHICAGO CONFERENCE

A 17-year-old boy from Cameron Parish achieved one of the highest distinctions possible in 4–H activities when he was named the Nation's healthiest 4–H member at the national congress in Chicago. He is John Harold Savoy, a student at Creole High School in his native parish. He attended the congress following his selection as the healthiest 4–H boy in Louisiana at final tests in the State contest held on the university campus last November. He shared honors in the latter event with Georgia Faye, Middleton, of Natchitoches Parish, Louisiana's healthiest 4–H girl, who received honorable mention in the contest at Chicago.

The choice of John Harold Savoy as the Nation's healthiest 4–H boy is especially noteworthy, since he is a product of a definitely rural section of the State, where coastal marshlands abound and 4–H activities are limited. He has been a club member for 7 years, and has followed good health practices from the beginning of his membership. The honors accorded him, both in the State and in the national competition, reflect the highest credit of his zeal and devotion in a project highly important in its implications of the worthiness of the 4–H program.

Significance of the achievement lies in the fact that a boy from an isolated rural section of this State was able to develop practices and procedures permitting him to enter competition with other boys and girls from every State of the Nation. The health championship is one of the most coveted honors awarded at the national congress. Young Savoy was one of 1,298 Louisiana 4–H'ers who took part in the State health contest this year. There were others, of course, who followed the health program as a project. In all, 10,137 club members enrolled in health study during the year. It is impossible to exaggerate the importance of a program which enlists the interest and activity of so many young people in the rural

areas of the State—especially a program involving the physical well-being of boys and girls who are to be citizens and leaders of the future.

Warmest congratulations are due Miss Hazel Bratley, extension nutritionist of L. S. U., who has direct supervision of the 4-H health program, and the county and home demonstration agents of Cameron Parish, who had immediate direction of the work in which the new national champion excelled, for the signal demonstration of success which has marked their efforts.

## Marriage Data by the Bureau of the Census

EXTENSION OF REMARKS
OF
### HON. CLARENCE CANNON
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

*Tuesday, December 18, 1945*

Mr. CANNON of Missouri. Mr. Speaker, under leave to print, I include a letter from J. C. Capt, Director of the Bureau of the Census, which is self-explanatory:

DEPARTMENT OF COMMERCE,
BUREAU OF THE CENSUS,
*December 5, 1945.*

MY DEAR CONGRESSMAN: I have read with some concern comments in the CONGRESSIONAL RECORD of Thursday, November 29, on the recent release by the Bureau of the Census of data on the marriage prospects of men and women, by age. In particular, I was concerned by the evident misunderstanding of the value and the uses made of the information on marriages and marital trends related to age of individuals.

The basic information on marriages and marriage rates is used by the Census Bureau in compiling estimates on the number of new family units annually. This information is important to the manufacturer and the retailer who are concerned with the number of family units as potential customers for their goods. It is important to the construction industry as a measure of the future demand for building. It is important to school authorities in weighing the factors which provide estimates for future school needs as the new family units become parents and their growing children enter the school system.

Often the Census Bureau receives requests for information on the number of each sex who marry at given ages, other correspondents request information on the age or ages at which the largest number of the population marry, and still other requests are variations of the theme. Manufacturers of jewelry have written in to request the data to measure the future market for engagement and wedding rings, and the data have even entered into studies upon which future legislation is based.

An immediate concrete example of the usefulness of the marriage data is a request early this month from the research and drafting committee of the Kentucky State Bar Association engaged in preparing a revision of the Kentucky Statutes of Descent and Distribution. One of the inquiries from this committee was for data on the average age of marriage for males in the United States. By means of the tabulations which were included in the release you discussed the Census Bureau was able to supply the answer.

Another recent request came from the New England Council for Economic Development and Regional Cooperation. This request was for "the ratio of marriages to the construction of new dwelling units." A letter from the department of economics and sociology of Colorado College requesting the marriage and marriage rates data states that this information is useful in courses in sociology. From the editor of the National Almanac, published at Northwestern University, came a request for the number of marriages per 1,000 women (15–44 years of age) each year. Similar requests have been received from the Interstate Department Stores, Inc., of New York; the department of economics and sociology of Connecticut College; the Circuit Court, Third Judicial Circuit of Michigan; the research department, Esquire Magazine; the National Conference on Family Relations, Chicago, Ill.; the department of sociology, University of Kansas; the Woman's College of the University of North Carolina; and the department of rural sociology, University of Missouri.

The release discussed was prepared primarily for the information of newspaper correspondents in Washington from whom the Census Bureau has received numerous requests for this type of information. Stories based upon this particular report were distributed by all three of the national press wire services and "made the front page" of newspapers throughout the country, which is evidence of the universal interest in the subject.

Sincerely,

J. C. CAPT, *Director.*

## China Policy

EXTENSION OF REMARKS
OF
### HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

*Tuesday, December 18, 1945*

Mr. JUDD. Mr. Speaker, among the American columnists, who attempt frequently to analyze and interpret events and conditions in China, their significance for our own country and policy with relation to them, none has to my knowledge more consistently shown good understanding and balanced judgment than Mr. Barnet Nover. Under permission to extend my remarks, I include his column from the Washington Post of December 18, 1945, which gives a penetrating and, I think, accurate evaluation of the new restatement by President Truman of our historic policy of working for a strong, independent, and friendly China, under the domination of no outside power as the best guaranty of America's long-term security in the Pacific:

CHINA POLICY
(By Barnet Nover)
GENERAL MARSHALL'S MISSION

It is not surprising that President Truman's statement on China has, on the whole, aroused much more enthusiasm in Chungking than it has in Yenan.

It is true that the Chinese Communists find some passages in that statement very much to their liking.

They are delighted, for instance, with the President's critical reference to "one-party government" in China, meaning the government headed by Generalissimo Chiang Kai-shek and controlled by the Kuomintang, the only party that has legal status in the area under Chungking's control.

The Communists are wholly in favor of the proposal that the Chinese Government be "broadened to include other political elements in the country." And they applaud Mr. Truman's pledge that there will be no "United States military intervention to influence the course of any internal Chinese strife."

All this, from the Chinese Communist point of view, belongs on the credit side of the ledger. But their joy over the Truman statement is very much tempered by the President's recommendation that once a broadly representative government has been established in China "autonomous armies should be eliminated as such and all armed forces in China integrated effectively into the Chinese National Army."

In taking this position President Truman was, of course, expounding no new policy. All previous efforts made by the United States to get the rival elements in China to unite have had as their corollary the unification of all Chinese armed forces. But each time a prime reason for the failure to achieve political unity was the inability to reach a satisfactory agreement regarding the integration of the Chinese Communist armies in the military forces under the control of the Central Government.

We Americans think of an army purely as a military instrument. In China during these last decades the principal role played by armies has not been as much military as political.

That was true when more or less independent war lords controlled most of China's provinces. It is still true today.

The number of men a war lord had under arms determined how much "face" he had. It determined the amount of revenues and supplies he received from the Central Government in return for fealty to that regime. Last, but not least, the size of the army a war lord had under his command determined whether he was to remain in power or be overthrown by somebody more powerful than he.

To the extent that the Chinese Communists fear that by disbanding their armies or allowing them to be incorporated in the national forces they will lose political power, to that extent are they certain to resist the President's proposal.

Nor are they likely to regard as an adequate quid pro quo the inclusion of individual Communists in the government. Such an offer has been made to them repeatedly. But they have never been satisfied that they stand to gain as much by going inside the government and giving up their arms as by remaining outside and keeping them.

By the same token it is not difficult to see why the Chinese Nationalists are very much pleased with the President's proposals.

The fact is that every one of these proposals is and for a long time has been on Chiang Kai-shek's own agenda. He favors a cessation of hostilities between the rival elements. All Chinese do. They have had more than enough of strife. He is not opposed to "a national conference of representatives of major political elements" as Mr. Truman recommends. Precisely that kind of a conference was called by the Chungking government some time ago. Bearing the name of the People's Consultative Conference, it is to convene at Chungking in a few days and will include delegates from the Kuomintang, the Communist Party, the Democratic League, the Young China Party, and Independents.

As for the democratization of the Chinese Government, Chiang Kai-shek could not oppose such a move without going contrary to the program laid down by the late Dr. Sun Yat-sen, father of the Chinese Republic and founder of the Kuomintang. Actually, Chiang is on record not once but many times in favor of doing away with the one-party political tutelage system once the war had ended.

President Truman's statement of policy should help bring about that strong, united, democratic China which this Nation has always wanted to see come into being.

The fact must be recognized, however, that this goal will not be easy of achievement.

The Chinese people certainly want it. The world situation and China's own desperate plight demand it. But the obstacles are great and are deeply imbedded in China's political soil and her economic situation.

So in carrying out the President's directive, Gen. George C. Marshall will have no easy time of it. Yet no task needs doing more than the one with which he has been entrusted. It is not too much to say, in fact, that not only the future of China but the peace of the world may depend on the success or failure of his mission.

## Release of Doctors From the Armed Services

EXTENSION OF REMARKS
OF
### HON. RAYMOND S. SPRINGER
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, December 18, 1945*

Mr. SPRINGER. Mr. Speaker, much has been said in this country regarding the early discharge of doctors who are still in the service in order that they may take their places in their respective communities where they are badly needed. And, may I say, that the doctors are greatly disturbed over the slowness in granting releases and discharges to them. Many of them are sitting on foreign soil, doing nothing, yet they are not released and discharged. This is a most glaring example of the bungling of the discharge system following the close of this war, and this must be corrected and the discharge of all doctors available for discharge accomplished at the very earliest moment. They are needed in their home communities, and the people are demanding that these doctors be released and discharged as quickly as possible.

Mr. Speaker, under leave to revise and extend my remarks in the Appendix of the RECORD, I include herewith an article appearing in the Stars and Stripes, which follows :

The waste of Army doctors has been freely discussed in the States in various articles appearing in the press. Senator REED has charged that the Army was holding 10,000 unneeded doctors and dentists in what he termed a "disgraceful situation." Apparently nothing is being done with regard to the hoarding of surplus doctors and dentists in the ETO.

Since VE-day thousands of doctors have been idle in this theater. General hospitals with bed capacities up to 1,500 have been kept fully staffed, with a daily patient census of only 300. One general hospital now has 20 patients and still has not been authorized to close. Many doctors have been detailed to nonmedical duties.

An alarming situation faces those of us who seem to be stuck indefinitely in the ETO. The only vehicle at present for sending doctors home is on the basis of pre-Pearl Harbor service, 80 points, or being over 48 years of age.

We note War Department policy that medical officers in the States having 30 months' service will not be sent overseas. We find no provisions for those of us in the ETO with many more months of service, much of it overseas, to be returned to the States. Morale among doctors is very low, and this precludes the keeping of medical care on a high professional level.

We are told there is a shortage of doctors and no relief is forthcoming until replacements are available. Doctors were trained at the Government's expense under ASTP. Now, we are told that they lack sufficient training to assume responsibility of overseas duty. And yet, most of the ETO patients have minor complaints and disorders not requiring the attention of highly trained specialists.

We request an immediate investigation into the problem of redeployment of medical officers in the ETO and a definite answer to the following questions:

"How many doctors will be needed in Europe for the Army after January 1, 1946? Does the Army plan to use the same ratio of doctors to men in the service as was needed under actual combat conditions? How many patients are there in the ETO and what percentage of these require skilled specialists for their treatment? How many doctors and specialists are now in the ETO? Why are not replacements of low-point officers made available from the States on a just rotation basis immediately?

"What is the status of the thousands of doctors educated at the Government's expense during the last 2 years? How many doctors have been sent home under the redeployment program during the last 60 days? How many will be sent home in the next 60 days? Why has not a definite policy been forthcoming with regard to medical officers?" (Signed by 165 medical officers from 23 medical units.)

## Construction or Confusion

EXTENSION OF REMARKS
OF
### HON. JACK Z. ANDERSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, December 18, 1945*

Mr. ANDERSON of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following self-explanatory communication from one of my valued constituents in California. Is it not about time we changed some of the rules and regulations to which he refers?

LOS ALTOS, CALIF., *December 13, 1945.*
Hon. JACK Z. ANDERSON,
*Washington, D. C.*

DEAR SIR: I see controls are going back on building materials. Did I ever tell you of my experience?

I got most of the materials to build a house before Pearl Harbor. Then 2 years ago I was discharged from the Army. I asked in New York, Philadelphia, and Washington (where it's hard to crash the doors of the bureaucrats) about building and filled out forms and got the run-around, generally things like this:

Bureaucrat. "And even if we gave you material to build you couldn't use the bathtub you have in your back yard."

Me. "Why not?"

Bureaucrat: "Because rule number so and so prohibits bathtubs in new houses."

Me: "Then what am I supposed to do?"

Bureaucrat: "Go out and buy a stall shower."

Me: "And what is the reason for the rule?"

Bureaucrat: "To save material."

Mine.

Even asked in San Francisco when I returned home and was told that that was the rule of the Medes and Persians.

So I still have the material.

I have been digging a nice hole.

I have lined up some lumber. I might have to help cut it.

If fool rules would hold off I'd have a nice house to live in, or for someone else to live in, in 6 or 8 months. Then as I have two 40,000-B. t. u. floor furnaces (one is more than enough in California), 1,400 pounds of nails (600 to 800 equals 1 house), several hundred feet of copper pipe, plenty of copper screen, down spouts, bronze door knobs, and so forth, I could build a second house if the bureaucrats would let me.

Of course, if we must have regulations to send bathtubs to Britain I can fill out forms until I am fed up.

But if we want housing for veterans, then America should come first. Russia could send us some of her surplus lumber (and pulpwood) if she really wanted to pay off a little lend-lease (I doubt if she does).

Sincerely,

MARVIN O. ADAMS.

## Stop This Thievery

EXTENSION OF REMARKS
OF
### HON. GEORGE W. GILLIE
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, December 18, 1945*

Mr. GILLIE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Fort Wayne (Ind.) News-Sentinel concerning the so-called loan of $4,400,000,000 to the British:

STOP THIS THIEVERY

In addition to several other things, the Christmas season is an occasion for Senators and Representatives to run back to their home bailiwicks for a little combination recreation and fence repairing.

This makes them fairly accessible to their constituents, and makes the Christmas season this year an excellent time for the people at home to let their Congressmen know we are tired of playing Santa Claus to the whole cock-eyed world.

It is a good time to let them know that particularly we are turning thumbs down on the proposed gift of $4,400,000,000 to Great Britain.

After all, this is the American people's money. It is the American people's right to say for what it shall be spent, and to whom it will go. Neither the Congress nor the President has any legal or moral right to throw billions of dollars of our tax money around unless we say it's all right.

Not very many American people think it's all right to put another $4,400,000,000 in John Bull's stocking.

And please let us not fool ourselves into thinking that this money is a loan. It is not a loan. The British have said they didn't want a loan, because they couldn't pay back a loan.

The London Daily Mail said editorially, the other day:

"There is a limit beyond which Britain will not go. The British people are determined not to enter the postwar world with a millstone of foreign debt around their necks.

"That could mean only one of two things. Either we should become a dependency of the United States, or we should have to incur the odium of repudiating a debt which we should be unable to carry."

That is plain, blunt language. It says they don't want to borrow money because they don't want to incur a debt which they would have to repudiate. (Of course, we might say here, parenthetically, that we didn't know the British had any scruples against repudiating a debt.)

But anyhow, the Daily Mail went on to say, in a very impatient and scolding tone: "The United States should propose some means of assisting Britain which would not confront us with such a dilemma."

Such as what, for instance? Well, if they can't and won't borrow from us, and still insist they have to have nearly five billion, what else can be done except to give it to them?

Meanwhile, our own Government has been spending our money to finance one of the most extensive propaganda campaigns in history to sell us on the idea that we should hand this gratuity to Great Britain.

The propaganda has run the gamut of all the Keynes-Attlee nonsense, and it has been disseminated over the radio and through the signed columns of the syndicated globalists in newspapers, and through every other means imaginable.

If the people swallow the bait, the average American is a great deal more stupid than we think. But thinking about it won't help. The pressure on Congressmen is terrific, to put the scheme over.

The legislative action to steal nearly $5,000,000,000 from American taxpayers is due to come up in January.

Between now and that time, let your Congressman know that you expect him to vote against this thievery.

## Scrapping of War Tools at Tank Plant Explained

EXTENSION OF REMARKS

OF

### HON. WILLIAM W. BLACKNEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, December 18, 1945*

Mr. BLACKNEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I am including an article appearing in the Flint News-Advertiser of November 23, 1945, entitled "Scrapping of War Tools at Tank Plant Explained," written by George H. Maines, News-Advertiser staff writer. This article contains information of interest to the general public.

SCRAPPING OF WAR TOOLS AT TANK PLANT EXPLAINED—PROCESSES OF RECONVERSION PUZZLE THE PUBLIC, RUMORS FLY—SO HERE'S THE DOPE

(By George H. Maines)

War tools are being disposed of here by Army ordnance men and Fisher tank officials, but, they have served their purpose in the war effort. They have no further useful value, according to an investigation made by the Flint News-Advertiser.

Industry, as one official stated, probably takes into consideration also the souvenirs taken home to help build a Christmas present for GI Joe's new brother, and industry takes it in stride.

But no useful tool, jig, die, small or large part, or material in any form of assembly is ever scrapped until the Government or the contracting industrial firm has had an opportunity to purchase.

PUBLIC GETS WHAT'S LEFT

When the requirements of Government and industry are fulfilled with regard to the purchase or storage for future use of any material used on war contracts, the public is offered what is left, a Government official stated. And this could include everything from a bolt and nut, screws, pliers, drills, lumber, storage batteries, gears, files, to assembled machines.

Reconversion proceeds in this order:

1. Termination, or the time when a tool, part, assembly, or machine can no longer be gainfully used due to completion or cancellation of a Government contract.

2. Disposition, which is the order to keep or salvage something.

3. Salvage, which is the step to sell or scrap something.

DISPOSAL FOLLOWS A PLAN

The process of disposing of material, when the useful life has been terminated, consists of the following steps:

1. The Government has first choice to take back parts usable now or later in a Federal arsenal or replacement depot.

2. Industry has next priority to distribute its own useful durable tools to its subsidiaries or branch factories.

3. Prime salvage bidders take the bulk of what's left for resale to smaller industries or through used-tool supply houses.

4. The general public has access to the balance, after which the unsold materials are scrapped as junk and sold to dealers for disassembly and shipping only as remelted metal.

UNCLE SAM COMES FIRST

On war contracts, the Government has priority on anything it can use or might use later. These parts, tools, or assemblies which Government keeps are packed and shipped to arsenals, storage warehouse, or lot after being properly covered or packed. Some machines are painted with a heavy protective substance that will withstand years of storage.

Property owned by the corporation or contractor is disposed of by its own officials. Any of their units have first choice of any salvage.

Material on hand is listed and the lists are sent to dealers and firms known to be in the market for such items. Bids are asked for. Generally speaking these are buyers who make a business of watching for sales to the public, and have early knowledge of where the salvage is; just like specialists in the real estate business watch for tax title sales when the State or county offers real estate. Salvage specialists follow all of these industrial salvage sales. The high bidder obtains the listed lot.

ANYBODY CAN BUY IT

Now that the Government and the industrial contractor and salvage specialist have bought everything considered to be of value, or usable, the balance is offered as scrap to go to the highest bidder. Again the bids are, in general, watched for by those in the business of buying scrap. But anybody has the right to bid for and buy it.

This scrap may be in the form of cutting tools, jigs, special tools, patterns, dies, and equipment that originally might have cost thousands of dollars. But it has no further useful purpose except as metal to be remelted. It already has been paid for in the cost of production.

In this scrap there could be storage batteries, durable tools, gears, wrenches, saws, files, pipe—anything. It is here, often, that confusion occurs in the mind of the public when a good part or piece of material is scrapped.

CANNOT BE SOLD AS TOOLS

Occasionally tools, small parts, and accessories do get into the scrap pile and find their way to the junk yards. These unmutilated pieces may have value, but they cannot be sold as parts or tools in the ordinary sense. The junk dealer in whose yard the scrap eventually lands has the laborious task of sorting all pieces and shipping separately the copper, brass, zinc, cast iron, wrought iron, different kinds of steel, and other metals.

This scrap must be mutilated and shipped as such for remelting, as the Interstate Commerce Commission sets the freight rate for scrap which is much lower than for a similar part not mutilated.

Now and then a good piece or a new or usable part gets into the scrap pile or junk yard. With millions of pieces being scrapped and mutilated the human element enters. One official pointed out that hotels daily lose towels, linens, silverware, and supplies; and merchants and shopkeepers charge off annually a percentage of what they know will disappear from their counters. But very few whole parts reach the scrap pile.

PERISHABLE VERSUS DURABLE

It might be of interest to the reader to know the difference of types of tools so often referred to by the layman.

Tools in industry, called durable tools, are not the ordinary variety of the household type such as hammers, saws, files, chisels, and pliers which are perishable tools. Durable tools are especially made for forming the shape of a part or a complete product. Such a product could be a tank hull, an automobile body, a washing machine, or dish washer. This tool is a special piece of equipment, has little or no value any more, United States officials say, and cannot be converted to any other use.

The word "tool," as ordinarily used by the housewife, describes a hammer or saw, socket wrench, or commonly known pieces that are perishable. Industry distinguishes the difference between classifications of tools, one durable and one perishable. The industrial tool is built by a skilled toolmaker for a specific job and is worthless outside of that job.

The perishable tool is an article that can be used on several jobs or until broken or worn out.

RUMORS SET AT REST

Durable tools at Fisher tank plant today have no value. They are being scrapped. Perishable tools are salvaged and used by industry or sold.

The tarpaulins are en route to the Rock Island Arsenal for storage, a Government official reported. They were not burned nor destroyed.

Many high-priced gears were shipped to the Chrysler plant, and were not destroyed nor mutilated.

Prestone was poured in the ground in storage tanks, not on the ground, as rumored.

There were no rubber boots burned, but some synthetic material that looked like rubber that nobody would even cart away for nothing was burned under supervision.

The officials at Army Ordnance here and the General Motors men in charge of reconversion, termination, and salvage are without question doing a splendid job.

## Naval Commander, With 17 Years of Service, Advocates Single Department of Defense

EXTENSION OF REMARKS

OF

### HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, December 18, 1945*

Mr. RANDOLPH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article favoring a single department of defense. It was written by a naval commander, with 17 years of service and sent to his mother early in 1943. I trust my colleagues will

read the 1-minute speech I have made in today's RECORD. In those remarks I quoted from the letter from this Navy commander. His words are challenging. The article he wrote, from the Pacific theaters of war, follows:

LET'S START A SINGLE DEFENSE DEPARTMENT

Late in October 1941, I was walking through the tunnels and over the cliffs of Corrigedor. An Army officer was describing to a group of us naval officers the points of interest, the keys to the defense system, the strong and weak points. The language was English and the discourse professional, but time and again our guide had to be interrupted to explain what he meant by a certain term, phrase, or abbreviation. The United States Army and Navy have different languages, and the need for an interpreter is sometimes nearly as great as between a Russian and an Italian.

Herein lies the real reason behind Pearl Harbor. Short and Kimmel were but the names that represented two systems of thought that have little or nothing in common with each other. From the day a boy enters the Naval Academy he is taught to compete against the Army and not one single word about cooperation with that Army. The same is true at West Point. Consequently, ever since that day in July, 1926, when I entered Annapolis, I have looked mentally down my nose at anything Army. I even pitied the Army. I was not alone. There were many thousand others. There still are.

In 1938 I attended the Army's Chemical Warfare School at Edgewood Arsenal. Here was my first real professional contact with the Army. I learned little except that the Army had no money, so could actually do little training. My antipathy for the Army increased. So did that of my Navy contemporaries who attended the same school.

For nearly 3 years preceeding Pearl Harbor I was stationed on a ship in the Orient. Here were Americans away from home and here, for the first time, the Army and the Navy seemed to meet on somewhat even terms. There was some discussion of mutual affairs, some interest in the problems of the other service. This may have been caused mostly by the evident nearness of approaching calamity. Once in a while an Army officer would come on board ship and, mostly out of curiosity, take a ride. Once in a blue moon a naval officer would go on Army maneuvers. But these few contacts were personal, arranged by the individual for his own information. Even out there, where we were a few Americans in a sea of orientals, not once was there, to my knowledge, an official coordinated activity involving the Army and the Navy that was not social. Certainly there were meetings between the heads of the services, but here, as at Pearl Harbor, there was no head of the combined services who had the authority to initiate combined activity. If there is no boss, there is no one to start any joint training of the two services and no one to delineate where the activities of one service starts and the other stops.

In 1942, I attended the Naval War College at Newport, R. I.; there were several Army officers in the class. This is the one attempt by the armed forces to coordinate thought. Army officers attended the Naval War College and naval officers attended the Army War College. But even here there is no attempt to coordinate the activity and thought of the two branches. An Army officer at the Naval War College learns only how the Navy will do it. A naval officer at the Army War College learns only how the Army will do it. Where are they to learn how they are both to do it together? The entire education system of our armed forces presupposes that either the Army or the Navy will fight the war, never both. How can this system be corrected without too greatly upsetting the present organization?

First the enmity that exists between the Army and the Navy must be eliminated. This can best be done by destroying the competitive traditions between West Point and Annapolis. The courses at the two schools for the first two and a half years are practically the same. Let's combine the schools for this period. Let the boy who is going in the Army room with the boy who is going into the Navy or Air Force. (For a separate Air Force is later proposed, aside from the Army and Navy Air Forces.) Then let them specialize during the summers and the last year and a half as they do now, but keep them rooming together. Great friendships will be fostered. The basis of thinking and training will be the same. Tradition will become our tradition, American tradition, rather than Army versus Navy tradition.

The Naval War College is at Newport. The Army War College is in Washington. Where is the War College? There isn't any. These two colleges should be combined under one command. Somewhere we must learn how to fight together before a war starts.

Coordinated commands? In peacetime there aren't any. When war comes there is a great hustle and bustle to appoint supreme commanders that have to direct and coordinate Army and Navy and Air activity, who have never had one day of practice at it in time of peace. Why shouldn't it have been Short or Kimmel rather than Short and Kimmel? Had it been either, instead of both, Pearl Harbor may well have resulted in a Jap fiasco. If we have to have supreme commanders in war, we should have them in peace, schooled at an Army and Navy Academy and a combined War College that have given them a background for the job of directing combined military functions.

To carry the plan of coordination directly to the top, would it not certainly be best to have but one department in the Government charged with the defense of the country? This we will call the War Department. Under Secretaries would be Army, Navy, and Air. It is that simple.

What benefit will accrue besides the elimination of possible future Pearl Harbors and a more intelligent conduct of future wars? A great saving of public funds. Army and Navy men wear the same underwear, eat the same food, have the same bodies, similar teeth; in many cases fly the same kinds of planes, fire the same guns, and require similar construction projects. Thus War Department contracts could, in many cases, be let for equipment required for the entire armed force of the country, rather than separate Army and Navy contracts. The Supply, Medical, Construction, and Dental Corps could do for both services, making another link between the two services to bind them together.

Sooner or later the Army and the Navy must learn and put into use an efficient communication system, for now the Army cannot communicate with the Navy except through an interpreter. The system of neither is used by the other service. The time lost due to this calamitous situation is probably the greatest weakness in our defense system. And it is easy to correct. Again—one system.

It is believed that most interested people are now convinced that Army and Navy Air Forces are what we want, each with the function of cooperating with its own forces. But it is also felt that, when the big bombardment missions come, such as the RAF raids on Germany, that these are best carried out by a separate air arm. It is proposed, therefore, to have an Under Secretary for Air, charged with directing the functions of this separate Air Force, but who will have no hand in the Army and Navy air arms. The functions of the Army and Navy air arms will continue to be to work with ground forces and ships at sea, respectively.

When should we make the change? Why not now? We are trying to make the same changes in a much more difficult manner anyhow. Certainly the next classes to enter West Point and Annapolis could be combined only too easily. Nothing in this plan changes the interior organization of any department as now set up, except the coordination of supply, medical, construction, and communications. Those could be left until after the war. But it must be done before the next war, or Pearl Harbor may become a pleasant memory compared to what might happen should our armed forces grow too far apart in the next interval of peace.

Or do we prefer to retain the dash and color of the Army-Navy game?

AUTHOR'S NOTE.—Nothing in this article is intended to cast a reflection on either the Army or the Navy, each of which is an efficient, hard-fighting outfit within itself. It is not within the power of either the Army or the Navy to correct the inherent weakness indicated in this article. Rather, it is political, and can only be corrected by congressional action."

The opinions and assertions contained therein are the private ones of the writer and are not to be construed as official or reflecting the views of the Navy Department or the naval service at large.

## Loans to Foreign Governments

EXTENSION OF REMARKS

OF

### HON. B. CARROLL REECE

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, December 18, 1945*

Mr. REECE of Tennessee. Mr. Speaker, as a member of the Special House Committee on Postwar Economic Policy and Planning, I addressed a letter to its chairman, Hon. WILLIAM M. COLMER, on some phases of the committee's work which I now wish to give the House for the information of the Members:

HOUSE OF REPRESENTATIVES,
SPECIAL COMMITTEE ON POSTWAR
ECONOMIC POLICY AND PLANNING,
*Washington, D. C., November 28, 1945.*

Hon. WILLIAM M. COLMER,
*Chairman, Special House Commmittee on Postwar Economic Policy and Planning, Washington, D. C.*

DEAR BILL: Since such a large part of the discussions, suggestions, and criticisms of the reports, especially Report 7, of the Committee on Postwar Economic Policy and Planning have taken place in executive sessions where no record of them was made, I felt it my duty to write you relative to some of my suggestions and impressions.

Report seven recommends various conditions which should be met by foreign nations, particularly Britain and Russia, before the United States should extend loans to them, and impliedly recommends such loans be made when such conditions have been fulfilled.

I was in accord with the background discussions and conditions outlined but, as you recall, I repeatedly and with force advanced the view that before we recommended any loans for foreign nations that our committee should make a study of the economic and financial condition of our own Nation and

its various levels of government for the purpose of ascertaining, insofar as possible, how far we could go in advancing extensive loans to other nations without impairing or endangering our own financial structure or imposing an undue burden upon our own people. There is some point beyond which this Nation cannot go with impunity in creating a national debt which we must remember is always underlaid by the public debts of our various States, counties, and municipalities in addition to the indebtedness of public utility districts and quasi-Government corporations. It is manifest there is an astonishingly large per capita public debt of all types here. It might well be the responsibility of our committee with its able director of studies to try to find this point.

It has been my view that, in addition to making such a study of our own country, we should make, insofar as possible, a comparable study of other nations which have requested loans or contemplate doing so, for the purpose of determining relative strength and needs before asking our own people to extend such loans.

Likewise, before our committee assumes the responsibility of recommending such loans to Congress we should ascertain, insofar as possible, the purposes to which our money so loaned is to be put by the different borrowing nations. No doubt, there are many purposes for which our people would not wish us to loan their money to other nations, even if the financial position of our country was found to justify it.

If our committee assumes responsibility for recommending that foreign loans be made, it would seem that we also should accept the responsibility of seeing if any acceptable plans for repayment are possible. If we should feel our national interests require us to extend financial assistance to a nation which holds no reasonable hope of repayment, or if we feel such assistance should be granted for world humanitarian reasons, I should think we should consider making grants rather than loans in such cases and thus avoid complications resulting from failure to repay.

I had hoped such studies might have been made before our report dealing with these questions was presented, but since it was not feasible I want to urge that our committee undertake the study as early as practicable, that it might be in a position to furnish the House with this information before such matters come on the floor for consideration, and I feel we will be remiss in our duty if we should fail to do so. I hope it may be convenient to call a meeting of the committee without too much delay to consider these matters.

With kind regards.

Sincerely yours,

CARROLL REECE.

## Sussex County (Del.) Farm Income

EXTENSION OF REMARKS

OF

### HON. PHILIP A. TRAYNOR

OF DELAWARE

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, December 18, 1945*

Mr. TRAYNOR. Mr. Speaker, under leave to extend my remarks I include the following article from Wilmington Morning News, Wilmington, Del., of December 17, 1945:

SUSSEX FARM INCOME THIRD HIGHEST IN EAST—$60,000,000 REPRESENTS 75 PERCENT OF TOTAL FOR DELAWARE

Sussex County's 1944 farm income of $60,000,000 is believed to be the third highest county farm income east of the Mississippi, according to Dr. R. O. Bausman, professor of Agricultural Economics at the University of Delaware.

About 76 percent of Delaware's entire farm income of the State was from Sussex County. And of the $60,000,000 Sussex income, nearly $46,000,000 or 77 percent came from the sale of commercial broilers. Other farm income in the county included $4,000,000 from truck crops, $2,000,000 from poultry and eggs, and $1,000,000 for the dairy industry.

The eastern counties having a higher farm income for the year than Sussex are Aroostook County, Maine, and Lancaster County, Pa. There are also 11 counties in the west with higher incomes.

## Portland a Major Lumber Port

EXTENSION OF REMARKS

OF

### HON. HARRIS ELLSWORTH

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 17, 1945*

Mr. ELLSWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article by Mr. H. J. Cox on the subject of lumber production and lumber freight rates which appeared in a recent issue of Random Lengths, a publication of the Willamette Valley Lumbermen's Association. The article follows:

Leading businessmen of Portland are advocating port terminal facilities to accommodate a current lumber storage of at least 50,000,000 feet, board measure, the bulk of which will move by rail from inland points of origin in Washington and Oregon.

Portland can maintain its prestige and importance as a leading lumber port, regardless of the fact that most of its local sawmills are, of necessity, approaching the end of a useful and well-spent life.

There is ample timber resources and production capacity in the Willamette Valley to maintain past volume of lumber tonnage through the port of Portland, but, to reach such objective, transportation costs must be provided which will enable lumber tonnage to move from Willamette Valley points to Portland, for transshipment by water to our coastwise, intercoastal, and offshore markets in competition with cargo mills.

In the eight counties comprising the Willamette River Basin the annual lumber production is running around 2,000,000,000 feet annually. Around 38 percent of this 2,000,000,000 feet is produced in five counties—Clackamas, Washington, Yamhill, Polk, Marion—with a railroad-transportation rate to Portland of 5½ cents per hundredweight for water reshipment, or around $1.65 per thousand feet.

Around 20 percent of this 2,000,000,000 feet is produced in two counties (Benton, Linn) with a railroad transportation rate to Portland of 7½ cents per hundredweight for water shipment; or around $2.15 per thousand feet.

Around 42 percent of this 2,000,000,000 feet is produced in Lane County, with a railroad transportation rate to Portland of 9 and 10 cents per hundredweight for water reshipment; or around $2.70 per thousand feet.

In addition, Lincoln County produces around 200,000,000 feet annually with a railroad transportation rate to Portland of 9 and 10 cents per hundredweight for water reshipment; or around $2.70 per thousand feet. Douglas County is producing around 500,000,000 feet annually, with a railroad transportation rate to Portland of 16 cents per hundredweight for water reshipment; or around $4.50 per thousand feet.

In the above-mentioned group of five northern Willamette Valley counties, as well as Benton and Linn, the timber resources are limited and lumber production is not only headed for the decline, but already decreasing in the 5-county group. The port of Portland will be largely dependent on Lane and Douglas Counties where timber resources will permanently maintain a total annual lumber production of around 1¼ billion feet.

Civic, commercial, and public agency bodies throughout the Willamette Valley are vitally concerned over such management of our timber resources as will insure a permanent timber supply, thereby contributing to the protection of local communities, industries, and employment. This cannot be accomplished if our timber is logged for manufacture outside the local area or outside our State. Some timber owners do not appreciate or heed this fact. On the other hand, the owners whose timber is intermingled with O. & C. (Government ownership) will, under the law, so operate. Likewise, it is evident the policy of the United States Forest Service will not only require a sustained-yield operation but the manufacture of such timber in the local community.

The railroad is now hauling logs from points in Polk and Marion Counties to Oswego and Menefee at a rate of around 3 cents per hundredweight, as compared with a rate of 5½ cents for lumber to Portland. From points in Linn County for around 5 cents per hundredweight, as compared to 7½ cents for lumber. From points in Lane County at around 5 cents per hundredweight for logs, as compared with 9 to 10 cents for lumber.

For years the railroads have "land-locked" the upper Willamette Valley, particularly Douglas County, and have forced our original California markets far inland—due to rail shippers being unable to compete with cargo shippers at California ports of delivery, or the cargo shippers combination water shipment and rail and/or truck backhaul to inland California markets.

If Portland is to be a leading lumber port it will require a blanket of not to exceed a maximum rate of around 5 cents per hundredweight south of Portland to Myrtle Creek, Oreg. On the other hand, if the railroad company wants to increase its rail lumber tonnage to California it will have to decrease its present rate from Willamette Valley points to at least on par with the cargo rate to port of delivery and on par with the combination cargo and rail-truck backhaul to market destinations. This statement is predicated on what our future competitive rate will be, not on the rate existing during the war period. In the prewar days, the water rate, or the combination water and backhaul rate to California points was less than the all-rail rate from Willamette Valley points. Seemingly, it is safe to assume that in the days to come this situation will again exist. On the other hand we have reasonable rail-freight rates to California provided such rates remain competitive with future water, and water-backhaul rates to California points.

## Housing Conditions in Los Angeles

EXTENSION OF REMARKS

OF

### HON. ELLIS E. PATTERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, December 18, 1945*

Mr. PATTERSON. Mr. Speaker, I want to bring to the attention of this

House the intolerable housing situation facing the returning veterans and the population in Los Angeles. We need immediate relief now, and it can only be gained by the fastest possible demounting of all unused barracks and Government housing from every section of the Nation, and transporting it to emergency areas such as Los Angeles.

People are literally sleeping in the streets in this western city. Veterans there are asking us, "Is this what we have been fighting for?" We here cannot wait another minute. The Congress will adjourn before Christmas, and it is imperative that we take care of this desperate problem before we leave.

Contractors have already given testimony that it is impossible for normal construction facilities to meet the immediate requirements. They say it would take 6 years at a normal rate of progress to met present-day needs in Los Angeles alone.

We must stop all lumber from being shipped to any part of the world today. We must see that a high minimum wage is set, on a national basis, so that workers who have shunned the lumber and construction industries will find these jobs attractive, and thus create an adequate labor supply in that industry. We must give every encouragement to the industry to develop new methods of building, such as those which have been produced through the exigencies of war.

This legislative body must act to help the people of this Nation. The returning war veteran, the displaced war worker, and Mr. Average Home Owner must be assisted in finding even temporary homes for the winter. Then we must go on to enact legislation for a long-range, truly American high-level home-building program, such as outlined in the Wagner-Ellender measure, which I have had the honor to introduce in the House.

Only through such careful planning for the future of our homes, may we hope to avoid such emergencies as presently beset us in the major industrial areas of our Nation.

## Gas Rebates, Detroit Area

EXTENSION OF REMARKS

OF

### HON. JOHN LESINSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, December 18, 1945*

Mr. LESINSKI. Mr. Speaker, under permission granted me to extend my remarks in the RECORD, I include a copy of a letter I addressed to Hon. Thomas C. Clark, the Attorney General, on December 10 relative to the gas rebates in the Detroit area, and his reply thereto dated December 14, 1945, with exhibits:

HOUSE OF REPRESENTATIVES,
*Washington, D. C., December 10, 1945.*

Hon. TOM C. CLARK,
*Attorney General of the United States, Department of Justice.*

MY DEAR MR. ATTORNEY GENERAL: An unfortunate situation is arising in Detroit, in which a member of the corporation counsel's staff, acting as utility rate adviser to the city of Detroit, is opposing effort by the United States Government to assure equitable participation by local manufacturers in a pending rebate of approximately $10,000,000 of impounded funds, accumulated by order of a Federal court as overcharges for natural gas used by customers of the Michigan Consolidated Gas Co. in the Detroit area since November 1, 1942. This opposition has been expressly based upon a contention that local industrial consumers of gas have passed on such overcharges in the sale of their product, and thus have recouped their excess rates.

Whether such opposition is by direction of the mayor and common council I cannot say, but when this discrimination against Detroit industries was first advocated by the municipal representative at a hearing before the Michigan Public Service Commission last May, I addressed an inquiry to the Secretary of the Treasury, under date of last June 6. It is worth observing that the $10,000,000 fund has accumulated principally due to the increased use of natural gas by local industries during the war, and that the national taxpayers were the buyers of their products. Accordingly, the Treasury Department referred my letter to Mr. Rawlings Ragland, Acting Head, Claims Division, Department of Justice, who notified me under date of August 7 that the Government's interest would be clarified and asserted.

With the above as background, I transmit herewith an excerpt of the transcript of proceedings before the Michigan Public Service Commission, session of Tuesday, November 20, 1945, evidencing the direct conflict of views on the rebate question which persists between the Federal Government and the spokesman of the city of Detroit. I quote from the statement of Mr. J. Francis Hayden, representing the Department of Justice:

"Mr. J. FRANCIS HAYDEN. May I be heard at this time?

"Chairman MCBREARTY. Yes; we would like to hear from anyone who has any thought on the subject. We have heard from Mr. Lee and Mr. Goodman that the domestic customer is the only one entitled to the refund.

"Mr. HAYDEN. I am appearing here, specially and not generally, on behalf of the United States of America, for the purpose of bringing to the attention of this Commission the interest which the United States has in the refund to be made on account of purchases made in the Detroit area * * * the United States has become one of the largest direct and indirect consumers of natural gas * * *. The Government has been running a lot of these plants around here, paying the bills for them, and these plants have been buying, I presume, at industrial or commercial rates. Now, to the extent that the Government has paid the bill on that type of a rate, you cannot exactly say that the Government has passed it along, because we do not have customers, we only have taxpayers and investors, and that involves practically all of us, I am sure everybody in this room, all the people in Michigan and every other State in the country * * *.

"Another peculiar type of interest which the United States has in the refund will arise in connection with the national housing program. As you all know, there are certain Government-owned housing projects in and around Detroit, and there are also a number of locally owned but federally subsidized housing projects. In general, the Federal Government has been paying the bill for the national-housing program and to the extent that any moneys may be recovered by way of refund, it is felt to be equitable and proper that the refund should be returned to the appropriations allocated to the entire program. * * * I feel that this Commission cannot be lauded too highly for its prompt action in seeking the views of all classes of consumers, and for its apparent intention to see that a prompt and proper refund is made to whatever extent is proper through proceedings of this Commission * * * we feel that the United States is ultimately entitled to receive its full pro rata share of the refund based on its purchases in all appropriate classes."

In a further statement, Mr. HAYDEN informed the Commission that "It is difficult to gather together all our claims. They are widespread. We are working to gather them together, and we expect to present them in complete form as soon as possible."

With respect to the Government's collection of its claims for rebate, I submit the following queries on behalf of manufacturers of the Detroit area:

1. Is the Government's method of computing claims so simplified that the requisite information can be obtained from the gas company, without causing loss of time and expense to local manufacturers?

2. Is it necessary to compute the amount of natural-gas overcharge accruing to each separate contract?

3. Cannot the proportionate rebate due any manufacturer be computed simply on the basis of the degree to which his total output was dedicated to war manufacture, starting with November 1, 1942?

4. Will the Department of Justice also assist the manufacturers to obtain their equitable share of the impounded funds for such gas used in manufacture not under Government contract?

5. In seeking its equitable share of refunds, based on gas purchased for public-housing programs, will the Government assist other consumers of gas for like purposes obtain also their fair portion of such refunds?

For reasons which I shall bring shortly to the Department's attention, the manufacturers of the Detroit area are without effective representation in the proceedings before the Michigan Public Service Commission and before the United States Circuit Court of Appeals for the Eighth District. Accordingly, may I request an early decision on the questions submitted above, so that manufacturers in my district may be kept fully informed?

In sincere appreciation of the effective manner in which the Department of Justice is safeguarding the rights of the Nation's taxpayers in this proceeding, as well as those of the industries of the Detroit area, I am

Very cordially yours,

JOHN LESINSKI,
*Member of Congress.*

DEPARTMENT OF JUSTICE,
*Washington, D. C., December 14, 1945.*

Hon. JOHN LESINSKI,
*House of Representatives,*
*Washington, D. C.*

MY DEAR CONGRESSMAN: Your letter to the Attorney General, dated December 10, 1945, in reference to the Detroit developments in the Panhandle Eastern Pipe Line Co. refund proceedings, has been referred to me for reply.

In accordance with previous correspondence, the Claims Division, Department of Justice, has been taking active steps to ascertain and protect the Government's interest in the impounded excess charges as a direct and indirect consumer of Panhandle gas during the period of litigation, in connection with which the funds were impounded.

In that connection it was necessary to take action in the Colorado Interstate Gas Co. case, a similar case, in the tenth circuit, which came to a hearing on November 8 and 9, 1945. In that case the court made a decision in principle directing a distribution to domestic and commercial consumers (excluding special and industrial consumers) in proportion to their payments. The decision is subject to clearing the distributing companies of tax liability, and is without prejudice to the claims of the United States as a

direct and indirect consumer. The decision is part of exhibit III of the enclosure hereinafter mentioned.

On November 20, 1945, this office noted a special appearance in the Michigan Public Service Commission hearing in order to point out the Government's interest, and our claim that the commission had no jurisdiction to make any adjudication affecting that claim. This office had no standing to speak at that hearing on the merits of the claims of any class of private consumers. It is interesting to note that while two spokesmen appeared for local commercial consumers, none appeared to assert the private claims of any industrial purchasers. The hearing was concerned only with the Detroit area.

I have just learned that another hearing is scheduled before the commission at Lansing, Mich., on December 20, 1945, to take up the same problem with regard to the balance of the State of Michigan. It has been agreed that the Government's statement of special appearance and objection as made at Detroit will be spread on the record of the Lansing hearing.

After investigation at Detroit, it was learned that the tax problems arising from the refund was delaying distribution of the money because the distributing companies were reluctant to disclaim an interest in the fund unless assured that they were not incurring tax liability. This problem is now removed by a blanket tax ruling obtained by this office on December 6, 1945. That ruling and our request for it are exhibits III and IV of the enclosure.

On December 11, 1945, I applied for, and obtained an order to show cause bringing up the whole matter of rights and distribution before a special session of the United States Circuit Court of Appeals, Eighth Circuit, at Kansas City, Mo., on December 28, 1945. A copy of the order and the supporting papers is enclosed for your information.

If any of your constituents desire to assert personal claims to a refund, that is, refunds to a particular class of consumers, they would do well to appear at Kansas City on December 28, 1945, and obtain leave to be heard. The same observation may be made with respect to the hearing at Lansing insofar as that hearing may be held to be binding upon particular Michigan consumers.

The Attorney General cannot speak for the interest of particular consumers but only for the Government's interest as a consumer.

Answering your specific queries numbered 1 to 5:

1. The Government is now trying to ascertain from gas company records all billings to Government contractors in the refunding period. When this is completed each contractor will be asked to execute an assignment to the Government.

2. It will not be necessary to segregate the charges between contracts unless the contractor claims a right to some part of the refund.

3. If a proportionate share of the refund allocable to a contractor based on proportion of war effort can be agreed upon, a partial assignment should be acceptable.

4. The Department of Justice has no authority to assist in the collection of private claims. Private manufacturers will, therefore, have to assert their own interests.

5. In asserting a claim to a refund for Federal housing projects and for federally subsidized housing projects, the Attorney General is asserting the Government's interest. While this activity may coincide with some private interest, he cannot speak for the private interest.

Your interest in these matters is appreciated.

Respectfully,

JOHN F. SONNETT,
*Acting Attorney General.*

UNITED STATES CIRCUIT COURT OF APPEALS FOR THE EIGHTH CIRCUIT—"PANHANDLE EASTERN PIPE LINE COMPANY, ILLINOIS NATURAL GAS COMPANY, AND MICHIGAN GAS TRANSMISSION CORPORATION, PETITIONERS, V. FEDERAL POWER COMMISSION, CITY OF DETROIT, COUNTY OF WAYNE, MICH., ET AL., RESPONDENTS"—NO. 12,466—ORDER TO SHOW CAUSE

Upon the annexed petition of the United States of America verified the 11th day of December 1945, and upon all the proceedings heretofore had herein, and sufficient reason appearing therefore, it is

*Ordered*, That the original parties to this cause, the intervenors and the distributing companies named in exhibit II of said petition show cause before this court at a session to be held in the courtroom of the circuit court of appeals, United States Courthouse in Kansas City, Mo., on December 28, 1945, at 10 o'clock in the forenoon of that day or as soon thereafter as counsel can be heard, why an order should not be made distributing the impounded funds in this cause and any additional amounts deposited with the court to the ultimate consumers of said distributing companies, and why the original petitioners herein should not be directed to make final and complete compliance with the provisions of the stay order entered herein on December 7, 1942, by making additional deposits as may be directed by the court, and why the court should not adjudge the rights of the original petitioners, the intervenors, the distributors, and the ultimate consumers in the impounded funds and any additional deposits, and why a method of distribution should not be determined and directed, and why provision should not be made for the protection and determination of the interest of the United States of America in the impounded fund and any additional deposits, and why the court should not grant such other and further relief as should be just and proper; and it is further

*Ordered*, That said distributing companies file with the court at that place on or before the time of the hearing on this order to show cause, separate verified statements setting forth the claim, if any, which each company filing it asserts to a distributive share in the impounded funds and any additional deposits which may be required by the court, or declaring, if that be the case, that such company has not and does not claim any interest in said fund and any additional deposits; and it is further

*Ordered*, That service of a copy of this order to show cause and of the papers upon which it is granted, if made personally, or by mail on counsel for the parties who have appeared in this cause and upon the distributing companies on or before December 17, 1945, shall be sufficient.

By the court:

JOHN B. SANBORN,
*United States Circuit Judge, Presiding.*
DECEMBER 12, 1945.

---

UNITED STATES CIRCUIT COURT OF APPEALS FOR THE EIGHTH CIRCUIT—"PANHANDLE EASTERN PIPE LINE COMPANY, ILLINOIS NATURAL GAS COMPANY, AND MICHIGAN GAS TRANSMISSION CORPORATION, PETITIONERS, V. FEDERAL POWER COMMISSION, CITY OF DETROIT, COUNTY OF WAYNE, MICHIGAN, ET AL., RESPONDENTS"—NO. 12,466—PETITION

*To the Honorable the Judges of the United States Circuit Court of Appeals for the Eighth Circuit:*

The United States of America for its petition respectfully shows:

1. Under date of September 23, 1942, Federal Power Commission duly made an order requiring the original petitioners abovenamed to reduce their rates and charges for or in connection with their transportation and sale of natural gas in interstate commerce for resale for ultimate public consumption effective as to all bills regularly rendered on or after November 1, 1942. On December 7, 1942, on application of said petitioners this court duly made and entered an order staying the aforementioned order of Federal Power Commission upon the condition among others that said petitioners deposit in the custody of the court amounts equal to the ordered reduction of rates pending a review of the order of the Federal Power Commission. A copy of said order is annexed hereto and marked "Exhibit I" of this petition.

2. On June 6, 1944, this court affirmed said order of Federal Power Commission. Thereafter the original petitioners sought and obtained a review of this court's judgment by certiorari in the United States Supreme Court. On April 2, 1945, the Supreme Court affirmed the judgment of this court, and the mandate of the Supreme Court has been duly filed in this court. The original litigation has thus been finally determined.

3. On November 2, 1945, Federal Power Commission duly approved a new schedule of rates filed by Panhandle Eastern Pipe Line Co. pursuant to the original rate reduction order. Between November 8 and 10, 1945, said order was duly served upon all parties to the proceeding before Federal Power Commission. No petition for a rehearing has been filed with Federal Power Commission, and the time to do so expired on December 10, 1945. The order approving the new rates is now final and not subject to review.

4. Panhandle Eastern Pipe Line Co. has filed statements with Federal Power Commission indicating (subject to verification) that its excess charges for gas during the effective period of the court's stay order and down to the effective date to the new rates amounts to approximately $24,857,363.42. The payments made into court pursuant to the stay order amount to $24,307,476.49 (subject to verification by the clerk) leaving a difference of $549,886.93 to be deposited by the original petitioners in order fully to comply with the terms of the stay order with respect to deposits on account of gas charges.

5. The fund now in the custody of the court together with such additional amounts as the court may require to be deposited by the original petitioners was intended either to be returned to the original petitioners in the event that they were successful in the litigation, or to be distributed for the benefit of the ultimate consumers of the original petitioners' distributors in the event the petitioners were unsuccessful.

6. A list of the original petitioners' distributors and a tabulation of the approximate excessive rates allocable to their purchases as recently reported to Federal Power Commission by Panhandle Eastern Pipe Line Co. is annexed hereto and marked "Exhibit II." The interest of such distributors, if any be claimed, is nominal only in that any distribution made to them would be impressed with a trust for the payment of appropriate refunds to their customers, the ultimate consumers whose rates would have been correspondingly reduced but for the stay order granted by this court.

7. The United States of America has a substantial interest in the impounded fund and any additional deposits both as a direct consumer of natural gas sold by the original petitioners, and also as an indirect consumer through its war contracts. During the period involved and throughout the area concerned, various Federal agencies have purchased and used petitioners' gas for cooking, heating and other uses for institutions and installations. War contractors have likewise used such gas for contract purposes, and have obtained payment of charges therefor from the United States. Many of the contracts contain provisions that refunds, rebates and returns on original

cost shall be pursued and accounted for to the United States in reduction of its original cost. In cases of contracts containing no such provision, the United States is nevertheless equitably entitled to the benefit of any refund allocable to the performance of its contract.

8. The complete details of the interest of the United States in the fund cannot be accurately and completely stated at this time because of complexity of war activities during the period involved but investigations are now being made so that the full extent of such interest may be brought to the attention of this Court in appropriate form at the earliest opportunity.

9. The afore-mentioned distributing companies have not yet been called upon to indicate formally whether they claim or disclaim any interest in the impounded fund in this case. Upon information and belief, some of the distributing companies are willing to make formal disclaimers of any interest in the fund provided that they obtain the execution of formal tax closing agreements clearing them of all income and excess-profits-tax liability in connection with the impounded fund.

10. On November 28, 1945 a formal request was made by the Attorney General to the Treasury Department for a ruling which would apply to the present case and all similar cases on the question whether a distributing company which makes a formal disclaimer permitting this Court to make a direct distribution of the fund to ultimate consumers would be subect to any tax liability. A ruling that a distributing company would not be subject to tax in such case was made on December 6, 1945. A copy of the Attorney General's request to the Treasury Department to which is attached as an enclosure a copy of the findings and decree of the United States Circuit Court of Appeals for the Tenth Circuit in a similar case, and the reply of the Treasury Department are annexed hereto and marked "Exhibits III and IV," respectively.

11. In order to protect the rights and financial interest of the ultimate consumers in this case, including the United States, and to give the distributing companies a timely opportunity to have the benefit of the aforesaid tax ruling during the calendar year 1945 the distributing companies should be required to assert their claim, if any, in the impounded funds forthwith or immediately to note their disclaimer in the records of this court.

12. No previous application has been made for the relief requested herein or any similar relief. Application for order to show cause is made because of the shortness of time remaining before the end of the present calendar year and the impossibility of obtaining a hearing on this application by regular notice of motion.

Wherefore petitioner prays:

1. That an order be issued directing the distributing companies to show cause in open court why the impounded funds in this cause and any additional amounts deposited with the court should not be distributed to the ultimate consumers of said distributing companies, and directing that said companies file on or before the hearing on the order to show cause verified statements setting forth either their claims to a distributed share of the impounded fund and any additional deposit, or their disclaimer of any interest in the fund.

2. That the original petitioners be directed to make final and complete compliance with the provisions of the stay order entered on December 7, 1942, including the deposit of the entire expense of impounding, protecting, investing, and distributing the entire fund and any interest which may be charged by the court.

3. That the Court adjudge the rights of the original petitioners, the intervenors, the distributors and the ultimate consumers in the impounded fund and any additional deposits.

4. That a method of distribution be determined and directed.

5. That provision be made for the protection and determination of the interest of the United States of America in the fund as a direct and indirect consumer of gas sold by the original petitioners and their distributors.

6. That the Court grant such other and different relief in the premises as may be just and proper.

JOHN F. SONNETT,
*Assistant Attorney General.*
VICTOR E. ANDERSON,
*United States Attorney for the District of Minnesota,*
*Attorneys for the Petitioner.*

Of counsel:

J. FRANCIS HAYDEN,
*Special Assistant to the Attorney General.*

*District of Columbia,*
*City of Washington, ss:*

John F. Sonnett, being duly sworn deposes and says that he is Assistant Attorney General of the United States of America in charge of the Claims Division, Department of Justice; that he has read the foregoing petition and knows the contents thereof; that the same is true of his own knowledge except as to the matters therein stated on information and belief, and as to those matters he believes it to be true; that the source of his information and the grounds of his belief are communications received by the Claims Division, Department of Justice from various Government agencies and investigations being made under his direction.

JOHN F. SONNETT.

Sworn before me this 11th day of December 1945.

[SEAL] GLADYS E. MCGAFFEY,
*Notary Public.*

EXHIBIT I

UNITED STATES CIRCUIT COURT OF APPEALS, EIGHTH CIRCUIT — NO. 12,466 — NOVEMBER TERM, 1942—PANHANDLE EASTERN PIPE LINE COMPANY, A CORPORATION, ET AL., PETITIONERS, V. FEDERAL POWER COMMISSION ET AL., RESPONDENTS—STAY ORDER

This matter comes before the court upon the petition of petitioners for an order of stay of the order of the Federal Power Commission, dated September 23, 1942, requiring reduction in rates and charges for gas furnished by petitioners; the pleadings filed thereto; the reply of the petitioners; various memoranda presented by the parties; and oral presentation by Mr. Glenn W. Clark and Mr. D. H. Culton for petitioners, Mr. Harry S. Littman for the Commission, Mr. Harold Goodman for Wayne County, Mr. James H. Lee for the city of Detroit, and Mr. Park Chamberlain for Michigan Consolidated Gas Company.

Until further order of this court, the above order of the Federal Power Commission is stayed upon the conditions following.

1. The monthly difference between payments to petitioners under existing rates or arrangements and those required under the order of the Commission shall be promptly paid over to John C. Hughes, of Kansas City, Mo., as the custodian of this court, not later than the twenty-fifth of the succeeding month, to be held by him for the benefit of the ultimate consumers or of petitioners as in this litigation may be determined entitled thereto. Such payments for months prior to this order shall be made by December 15, 1942. Triplicate receipts for each of such payments shall be given petitioners by the custodian, one of which shall be promptly filed, by petitioners, with the clerk of this court and one with the Federal Power Commission.

2. The entire expenses of impounding (including, among other things, protecting, investing and distributing to petitioners or to ultimate consumers) of these funds shall be borne by petitioners. Whether any earnings on such funds (while so impounded) may be applied upon such expenses is reserved for future determination. When and as required by orders of this court, petitioners shall pay to the custodian such expense money, upon triplicate receipts, which shall be filed as above.

3. No interest shall be charged petitioners upon such impounded funds unless allowed upon application hereafter made by respondents or any of them. Such future applications may be made only (a) if and when petitioners fail to be ready to present this review upon the merits on May 14, 1943 (as set for hearing by a separate order entered as of this date), or (b) if and when this court shall enter its decree or order sustaining the above order of the commission and shall deny any petition for rehearing which may be filed thereto. Any interest allowed hereafter shall be at the rate of four percentum annually from the date of such allowance or thereafter as required by any orders of allowance.

4. Full power and jurisdiction is reserved to cancel or modify this order and to enter any other orders (with or without application of the parties) to protect or to promote the rights and interests of the parties to this litigation and of the ultimate consumers financially interested in the impounded funds.

It is further ordered that the clerk of this court is directed to transmit a copy of this order to each of the parties to this proceeding or to their above counsel.

Approved for the court: December 7, 1942.

JOHN B. SANBORN,
*Presiding Judge.*

EXHIBIT II

DOCKET G-200 AND G-207— PANHANDLE EASTERN PIPE LINE CO.

*Summary of company's calculated reduction resulting from application of reduced rates filed Oct. 22, 1945, and accepted by order dated Nov. 2, 1945*

EXHIBIT III

DEPARTMENT OF JUSTICE,
*Washington, D. C., November 28, 1945.*

JOSEPH D. NUNAN, Jr., Esq.,
*Commissioner of Internal Revenue,*
*Washington, D. C.*

Attention: Frank T. Eddingfield, Esq.

SIR: This office is taking steps to protect the rights of the United States as a direct and indirect consumer of natural gas to obtain refunds on account of payments from 1942 to 1945 at rates finally held to have been excessive in decisions handed down by the United States Supreme Court on April 2, 1945, in the Colorado Interstate Gas Co. case and in the Panhandle Eastern Pipeline Co. case.

In a recent proceeding before the United States Circuit Court of Appeals for the Tenth Circuit, the court took up the matter of the distribution of an impounded fund representing excess charges of $8,524,143.08 in the Colorado Interstate Gas Co. case, and after a hearing the court made findings and an order, a true copy of which is enclosed.

As appears from the enclosure, some of the distributing utility companies disclamed any interest in the fund, and the court thereupon assumed jurisdiction to direct distribution to certain classes of ultimate consumers of such companies on the basis of the ratio that their dollar payments bear to the aggregate of the total payments of all eligible customers of their respective utility company during the refunding period. You will note, however, that no distribution is to be made unless and until closing agreements are executed with Federal and State tax authorities clearing the companies of tax claims in connection with the fund.

We are informed that no closing agreements have yet been executed with the Colorado companies although negotiations therefor are pending.

A similar situation is expected to arise with regard to a much larger fund impounded in the Panhandle case where no hearing has yet been called by the court. Various parties are desirous of moving that case for a hearing and early action but it is anticipated that the same tax question will arise and have a bearing on both the position taken by the utility companies and the action of the court.

It is requested that you advise this office of your opinion on the following question:

If the distributing companies in the Panhandle case, or any similar case, take an identical position as that of the disclaiming companies in the Colorado case, as set forth in paragraphs 9 and 10 of the enclosure, and the court makes findings similar to those contained in paragraphs 1 to 12, inclusive, and an order similar to the one enclosed (pars. 1 to 4, 6, 7, and 9 to 11), and such order becomes final and is performed, will any part of the fund be taxable to the distributing companies under the Federal tax laws?

If your answer is in the negative, it is contemplated that it may be used in seeking early disclaimers from the distributing companies, and in asking the courts to take early action in proceeding with a distribution to ultimate consumers, including the Government. It is understood that your opinion will have no bearing on the case of any company which refuses to make a disclaimer. It is further understood that any company proceeding to make a disclaimer will have to apply to your office for an individual closing agreement clearing it of all tax claims in connection with a refund ordered by the court on the basis of such disclaimer.

Respectfully,

JOHN F. SONNETT,
*Assistant Attorney General.*

ENCLOSURE OF EXHIBIT III

IN THE UNITED STATES CIRCUIT COURT OF APPEALS FOR THE TENTH JUDICIAL CIRCUIT, SITTING AT WICHITA, KANS.—FIFTH DAY, NOVEMBER TERM, FRIDAY, NOVEMBER 9, 1945

Present: Hon. Sam G. Bratton, circuit judge; Hon. Walter A. Huxman, circuit judge; Hon. Alfred P. Murrah, circuit judge; and other officers as noted on the 5th day of November 1945.

Before Hon. Sam G. Bratton, Hon. Walter A. Huxman, and Hon. Alfred P. Murrah, circuit judges.

COLORADO INTERSTATE GAS COMPANY, A CORPORATION, PETITIONER, V. FEDERAL POWER COMMISSION ET AL., RESPONDENTS—ON PETITION TO REVIEW AN ORDER OF THE FEDERAL POWER COMMISSION

This matter coming on for further hearing, pursuant to notice to all parties of record, and all interested parties now being before the court, and the court having examined the record and files herein, including the written statements and evidence submitted to this court, and having heard the argument of counsel, and being now sufficiently advised in the premises, the court does now hereby find:

1. Colorado Interstate Gas Co., pursuant to the Federal Power Commission's Opinion No. 73 and orders, which opinion and orders were heretofore affirmed by this court and by the Supreme Court of the United States, did file, on or about October 1, 1945, new schedules of rates and charges with the Federal Power Commission which are made effective as to all bills regularly rendered on and after May 20, 1942; and on October 3, 1945, the Federal Power Commission by its order, a certified copy of which has been filed herein, accepted said schedules for filing in compliance with the Commission's said opinion and orders and allowed said rate schedules to take effect.

2. The total amount collected from the purchasers of natural gas by the Colorado Interstate Gas Co. under bills rendered on and after May 20, 1942, and prior to the 20th day of October 1945, in excess of the lawful rates provided in the new schedules of rates and charges referred to above, is the sum of $8,524,143.08 (subject to verification or correction).

3. Pursuant to the stay order of this court, entered herein on May 16, 1942, Colorado Interstate Gas Co. has heretofore deposited with the First National Bank of Denver, Colo., the aggregate sum of $7,001,280.07, and Colorado Interstate Gas Co. has in open court offered to deposit in said fund the amount additionally due, totaling $1,512,863.01 (subject to verification or correction), in full payment and satisfaction of all of its obligations under said opinion and orders of the Federal Power Commission and said stay order of May 16, 1942, of this court relating thereto.

4. Colorado Interstate Gas Co. should now be required to deposit with said First National Bank of Denver the further sum of money equal to the difference between the amount heretofore deposited by it with said bank, as stated in paragraph 3 of these findings, and the total excess collections made by said Colorado Interstate Gas Co., as stated in paragraph 2 of these findings, which said additional sum of $1,512,863.01, when so deposited, shall be held by said bank along with the sums heretofore deposited therein by said Colorado Interstate Gas Co., subject to the further orders of this court.

5. The court should take control of said sum heretofore deposited and the sum hereafter to be deposited, for the purpose of distribution thereof to the persons lawfully entitled thereto.

6. The deposits of the sums heretofore made together with the deposit of the said additional sum with said First National Bank of Denver will constitute full payment of all

sums due from Colorado Interstate Gas Co. and full compliance with all of its obligations under said orders of the Federal Power Commission and orders of this court in relation thereto, in respect of all natural gas billed prior to October 20, 1945, and by making said additional deposit Colorado Interstate Gas Co. will have fully satisfied and discharged all obligations on account of said excess charges for natural gas billed prior to October 20, 1945.

7. It further appears to the court, and the court therefore finds that with respect to natural gas sold during the refunding period herein involved at the Pueblo, Colorado Springs, Denver, and Arapahoe gates, the court now should enter orders defining the refund rights and general methods and procedures of distribution of the impounded funds as they relate to such sales at the gates specified above only.

8. That the moneys impounded in connection with said gate sales belong to the eligible consumers (as hereinafter defined) of Public Service Co. of Colorado, and its said subsidiaries, the Pueblo Gas & Fuel Co., and Cheyenne Light, Fuel & Power Co., as well as the city of Colorado Springs, and should be so distributed, subject to any charges thereon imposed by the court; that neither the said Public Service Co. of Colorado, nor its said subsidiaries, nor said city of Colorado Springs except as a consumer, is entitled to such refunds or any part thereof.

9. No part of said impounded fund has been paid or delivered to said Public Service Co. of Colorado or its said subsidiaries, and said fund and no part thereof has been in the possession of said Public Service Co. of Colorado or its said subsidiaries.

10. Said Public Service Co. of Colorado and its said subsidiaries do not claim and never have claimed any part of said fund. It has been and now is the position of said companies that said fund belongs, subject to any charges thereon imposed by the court, to and is the property of their eligible gas consumers, who during the period covered by the accumulation of the fund, have paid their bills upon the schedules of rates then in effect.

11. The basis upon which the said impounded funds should be paid to the eligible consumers served through said Pueblo, Colorado Springs, Denver, and Arapahoe gates is as follows: All regular domestic and commercial customers (excluding special and industrial customers) of each of the foregoing utilities, who received gas service during all or any portion of the billing period of Colorado Interstate Gas Co. from May 20, 1942, to September 25, 1945, inclusive, hereinafter referred to as the "refund period," shall be eligible for refunds. Every such customer is hereinafter designated as the "eligible customer." A refund shall be payable to every "eligible customer" on the basis of the total amount paid by such customer for the "refund period." The foregoing total amount of payments is the customer's "refund base." The aggregate of the refund bases of all eligible customers of each of the utilities above referred to shall be divided into the net aggregate amount available to said eligible customers of such utility; and the refund payable to each such customer thereupon shall be ascertained by multiplying the "refund base" of each customer by the quotient so above obtained.

12. The master hereafter to be appointed by order of this court to make distribution of said impounded fund shall be permitted and authorized to receive for distribution State of Colorado and State of Wyoming sales taxes on such excess collections aforesaid.

13. It further appears that no finding or order should be made at this time as to who is or who shall be entitled to receive, or the disposition that is to be made of that part of said impounded fund derived from or accumulated by virtue of sales by Colorado Interstate Gas Co. of natural gas at the gates of sale to Natural Gas Pipeline Co. of America and Citizens Utilities Co.

It is now, therefore, hereby ordered, adjudged, and decreed:

1. That within 5 days from the date hereof the petitioner, Colorado Interstate Gas Co., shall deposit with the First National Bank of Denver, Colo., the additional sum of $1,512,863.01, and file with the clerk of this court the receipt of said bank showing such additional deposit.

2. That the court always has had, and hereby continues to retain, control of all sums heretofore deposited, all interest or other earnings thereon, and all securities purchased from said deposits and hereby continues in control thereof, together with the additional sum of $1,512,863.01 now ordered to be deposited, for the purpose of distribution thereof to the persons lawfully entitled thereto, pursuant to the further orders of this court.

3. That the deposits of the sums heretofore and herein ordered to be made do constitute full payment of all sums due from Colorado Interstate Gas Co. and full compliance with all of its obligations under said orders of the Federal Power Commission and the orders of this Court relating thereto in respect of all natural gas billed prior to October 20, 1945, subject to verification or correction, and do constitute full satisfaction and discharge of all liabilities and obligations arising out of the collection of said excess charges for natural gas billed prior to October 20, 1945.

4. That that part of the impounded fund to be allocated to the customers of Public Service Co. of Colorado and its said subsidiaries as well as the city of Colorado Springs, belongs to and is the property of the eligible customers of Public Service Co. of Colorado, the Pueblo Gas & Fuel Co. and the Cheyenne Light, Fuel & Power Co. and of the city of Colorado Springs, subject to any charges thereon imposed by the Court.

5. It is further ordered that there shall be no distribution of said impounded fund or any part thereof to the eligible consumers of the Public Service Co. of Colorado and its said subsidiaries, unless and until appropriate closing agreements shall have been made and entered into by and between said companies and the Treasury Department of the United States and the department of revenue of the State of Colorado.

6. The said master shall be permitted and he is hereby authorized to receive for distribution as a part of said impounded fund, State of Colorado and State of Wyoming sales taxes on such excess collections aforesaid.

7. The refunds to be made to eligible customers upon excess charges paid and collected as aforesaid at the Pueblo, Colorado Springs, Denver, and Arapahoe gates, shall be made under the direction of a master, hereafter to be appointed by this Court, upon the basis and in conformity with the method and formula of distribution set forth in finding No. 11 of this order.

8. It is further ordered that no determination is herein made of who is or who shall be entitled to receive, or of the disposition that is to be made of that part of said impounded fund derived from or accumulated by virtue of sales by Colorado Interstate Gas Co. of natural gas at the gates of sale to Natural Gas Pipeline Co. of America and Citizens Utilities Co.

9. This order is made without prejudice to the rights of the United States as a direct or indirect consumer of natural gas.

10. This order shall not be construed to cover or relate to any matter or thing not expressly disposed of herein.

11. The questions of liability for costs of distribution of the impounded funds and the liabilities, if any, for interest thereon, are reserved for future determination of the court.

12. The court reserves and retains jurisdiction of this cause, the parties hereto, and the impounded funds for the purpose of such other and further orders and decrees herein as may be necessary, suitable, or appropriate in the premises.

Made and entered in open court this 9th day of November 1945.

A true copy as of record.

Teste:

[SEAL] ROBERT B. CARTWRIGHT,
*Clerk.*

---

EXHIBIT IV

TREASURY DEPARTMENT,
*Washington, December 6, 1945.*

Hon. JOHN F. SONNETT,
*Assistant Attorney General,*
*Department of Justice,*
*Washington, D. C.*

MY DEAR MR. SONNETT: Reference is made to your letter dated November 28, 1945, with enclosure, requesting an opinion as to the tax consequences arising out of the disposition of impounded funds in certain cases where the wholesale rates for natural gas charged distributing companies have been ordered reduced by the Federal Power Commission, or other regulatory bodies having jurisdiction, and the reductions ordered are subsequently upheld by the courts; and which impounded funds, based upon disclaimers filed by the distributing companies, are found by the court to belong to the ultimate consumers of natural gas and are ordered paid under the court's direction direct to such ultimate consumers, the customers of the distributing gas companies.

You cite two recent cases, the *Colorado Interstate Gas Co.* v. *Federal Power Commission* (65 S. Ct. 829) and the *Panhandle Eastern Pipe Line Co.* v. *Federal Power Commission* (65 S. Ct. 821), both decided by the Supreme Court on April 2, 1945, upholding reductions in wholesale gas rates charged distributing companies, which rate reductions had been ordered by the Federal Power Commission in 1942. You call attention to the fact that in the Colorado Interstate Gas Co. case an impounded fund of $8,524,143.08, representing the disputed rate reduction accumulated during the litigation period, was, upon petition being filed by the distributing companies with the United States Circuit Court of Appeals for the Tenth Circuit disclaiming any right to the impounded fund, found by the court to belong to the customers of the distributing companies and was ordered by the court to be paid, under the direction of the court, direct to the eligible customers of the distributing companies. (A copy of the court's order entered November 9, 1945, is enclosed with your letter.)

You state that a similar situation is expected to arise with regard to the distribution of a much larger fund impounded in the Panhandle Eastern Pipe Line case, and with the view to protecting the interest of the Government in that case as a direct and indirect consumer of natural gas, you request an opinion on the following question:

"If the distributing companies in the Panhandle case, or any similar case, take an identical position as that of the disclaiming companies in the Colorado case as set forth in paragraphs 9 and 10 of the enclosure and the Court makes findings similar to those contained in paragraphs 1 to 12, inclusive, and an order similar to the one enclosed (pars. 1 to 4, 6, 7, and 9 to 11), and such order becomes final and is performed, will any part of the fund be taxable to the distributing companies under the Federal tax laws?"

While rulings in specific cases are made by the Bureau only at the request of the taxpayer, or its authorized representative, it

may be stated for your information that in cases of this kind where the distributing company disclaims any right in the impounded fund representing the reduction in rates and the court, or State regulatory body, having jurisdiction in the matter finds that such impounded fund belongs to the customers of the distributing company, the ultimate consumers of the natural gas, and orders the fund paid to them, and such order becomes final and is performed, the Bureau has taken the position that the impounded fund does not constitute taxable income to the distributing company and that no Federal income and excess-profits tax liability wil be incurred by the distributing company with respect to the distribution of the impounded fund to its customers. Further, the full amounts paid for natural gas by the distributing company, including the excessive charges impounded and paid to its customers, will constitute allowable deductions in computing the distributing company's taxable net income during the period involved, provided such excessive charges have been included in gross income of the distributing company.

Very truly yours,

WM. T. SHERWOOD,
*Acting Commissioner.*

## Primitive Mining in Idaho

EXTENSION OF REMARKS
OF
### HON. COMPTON I. WHITE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, December 19, 1945*

Mr. WHITE. Mr. Speaker, Chinese geologists played an important part in the early mining of Idaho with their crude "hard-rock" mining in the extraction of gold and silver from the ores of mines near the headwaters of the west fork of Jack Creek about 20 miles east of Silver City, then a flourishing mining town in Owyhee County in the late sixties and early seventies, but now one of the many old ghost towns of the Gem State. This was one of the recent statements of Gov. Arnold Williams in reviewing some of the early history of Idaho. He based his observation upon the report that recently came to his attention concerning the discovery of the old rustic retorts found a few years ago in the Owyhee mountains.

Four of the old retorts, or furnaces, were constructed by the miners, from the celestial kingdom, who came to the United States and helped in the early mining and railroad building. These furnaces were about 5 feet high and 6 feet wide. An opening at the top held about 1,500 pounds of rock from nearby quartz-bearing ledges. This ore was piled on top of the fire and hot ashes made from the roots and limbs of the mountain mahogany. Then the ashes of the silver sulfide and oxidized gold ores were panned for values. The heat of the ashes was fanned with a huge bellows made with deer hides. With this forced draft the crushed rock yielded the ores for melting. The gold and silver was sent to San Francisco.

It was from Silver City that Idaho's first telegraph line to the San Francisco stock market was constructed in the year 1865. Much of the wealth from the mines in Owyhee County was shipped by stages to the west coast. The road to Winnemucca joined the original overland trail to the coast and was one of the outlets from southwestern Idaho to the coast and was the foundation of the present transcontinental highways.

## Hospitalization Facilities for Veterans

EXTENSION OF REMARKS
OF
### HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, December 19, 1945*

Mr. MADDEN. Mr. Speaker, when General Hines was Administrator of Veterans' Affairs I conferred with him on several occasions regarding the lack of hospitalization facilities for the thousands of veterans in the thickly populated industrial Calumet region, and other areas of northern Indiana.

General Hines, before his departure, recommended a veterans' hospital for this section of our State.

I have taken this matter up with General Bradley several times since he has assumed his responsible office as Administrator of Veterans' Affairs. This morning I received a letter from General Bradley stating that the Hines Hospital, adjacent to Chicago, should be able to take care of the thickly populated Gary area in addition to the thickly populated Chicago and northern Illinois area which it now serves.

In the last 2 years I have received hundreds of complaints from my district stating that disabled veterans had been turned down at Hines Hospital on account of the overcrowded condition.

The number of critical cases in the Calumet area have vastly increased on account of the hundreds of casualties returning from World War II, and this number will further increase as the years pass.

Hines Hospital is now, and will continue to be, overburdened serving the millions of people in Chicago and surrounding Illinois territory.

Unless a hospital is provideed in this area for northwestern Indiana, we will continue to be the victim of our close proximity to Hines Veterans' Hospital, already overcrowded and without adequate room space for the disabled war heroes from northwest Indiana.

I am herewith submitting an item from the Gary Post-Tribune of December 15, which further elaborates on this critical hospital situation:

ASK HOSPITAL AID HERE FOR ILL VETERANS

Recommendations that the Government contact with Gary hospitals for emergency care of local veterans will be made to the United States Veterans' Administration by the executive board of the Community Information and Counseling Center, it was announced today by Willard A. Pipher, chairman.

A number of cases of discharged servicemen who are suffering from service-connected disabilities were cited to the board of the counseling center last night by Daniel J. Redding, counselor-manager.

SERVICES NEEDED

Several men, who served in the Pacific where they contracted malaria have suffered attacks since their return home and needed hospital treatment, Redding said. The Government hospital at Hines, Ill., was full to overflowing and unable to receive them and local hospitals could not accept them except at their own expense.

When a person goes into the armed services he is presumed to be physically fit, Redding said. Therefore, if he comes out with any disability, the Government says he is entitled to hospital treatment.

Somebody has been asleep on the need for hospital facilities, Redding declared. All over the country a similar condition exists because the Army and Navy hospitals are inadequate, he pointed out. What is true of medical care is also true of dental care, he said.

NEED DENTAL CENTER

Men have been discharged from the Army with defective teeth who were told to have them treated by their home-town dentists, Redding told the board, but local dentists already too busy with their own patients have been hesitant to undertake work for veterans at Government expense when they are not acquainted with the procedure for getting paid for it. He proposed the establishment of a center for dental care of veterans.

There have been a number of cases of veterans with nervous conditions caused by the war who have "cracked" since they came home. Difficulty has been experienced in getting them hospitalized, Redding said, and a great need exists for local arrangements to give them temporary care.

When the Veterans' Administration establishes a regional office in Gary, there will be medical men on the staff who will facilitate the entrance of men from this area into hospitals, Redding believes. Meanwhile, it is imperative to make temporary provisions, he said.

## St. Louis Newspaper Demands Action in the Housing Emergency—Charges Hugh Potter Was Tool of Real Estate Lobby—Endorses Housing Bill

EXTENSION OF REMARKS
OF
### HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, December 18, 1945*

Mr. PATMAN. Mr. Speaker, for weeks the leading newspapers of our country have been echoing the pleading of the people for relief from skyrocketing home prices and their demand that the Government cease its puttering and take swift and drastic action to meet the housing crisis.

On December 13 the St. Louis Post-Dispatch, one of the very best newspapers in America, devoted three-fourths of its editorial page to a statement of the housing problem in a demand for action by the Government. The clear-thinking editors of the Post-Dispatch have put an unerring finger on the propaganda efforts of the speculative real estate lobby to lull the Nation into a sense of false security regarding the danger of the housing shortage.

Under leave to extend my remarks in the CONGRESSIONAL RECORD, I should like

to include that fine message for the benefit of the Members:

FOR CONTROL OF HOME PRICES

In asking Congress for price controls on all residential property, President Truman moves to correct a tragic omission antedating his own Presidency. Realty price controls, as we argued in support of a proposal by Chester Bowles many months ago, should have come with rent controls. Because they didn't, prices have soared fantastically; many dwellings even stand vacant in wait of buyers, while the homeless sink to new depths of indignity and despair. And the end, unless the Government acts, is far from yet.

But for the one circumstance that Congress has still to act, there would be no useful end in reciting the record of delay on this measure up to now. That circumstance is important. The same realty-builders' lobby that delayed Administration decision will undoubtedly wheel up its heaviest artillery to kill or delay action in Congress.

The lobby was smart enough to get Hugh Potter, past president of the National Association of Real Estate Boards, appointed for a time as construction co-ordinator under Reconversion Director John W. Snyder. So priorities on building materials were dropped prematurely—an error now happily corrected—and Mr. Snyder spoke coolly of finished-dwelling price controls so recently as last month. Unless the American people now outdo the lobby with a stronger chorus of superior arguments, it may win once again. A foretaste of the opposition is found in objections by St. Louis real estate men; builders and speculators reported elsewhere in this newspaper.

The lobby says soothingly that the industry will restrain prices voluntarily. That's silly. No agent can keep the owner from charging all he can get, and few agents, since their commissions increase with the price, would dream of trying. The industry is not restraining prices. What the lobby means by voluntary restraint is what Herbert U. Nelson, NAREB vice president, means when he says there has been no realty inflation.

Furthermore, so the propaganda runs, no operative builder would dare erect new houses if prices were controlled. This threat of a sit-down strike, and also the voluntary-restraint plea, has been exposed within the industry itself. For instance, Lewis & Lamberth, a large home-building firm in Dallas that can see its own long-run interest, says this:

"The claim that the building industry will police its own members to keep prices in line, and that competition among builders will keep prices down, is sheer nonsense. The argument that ceilings and controls will prevent construction can be quickly exploded by examining the title VI housing program, in which private builders constructed a record number of housing units under most rigid controls.

"With adequate materials and labor and an unprecedented demand, the houses will be built. The only question is whether they will be sold at reasonable prices with fair profit or at inflationary and profiteering prices. We plan to start 50 houses in the next few weeks and to build 300 next year, and we will welcome the placing of ceiling prices thereon. We are members of the National Home Builders' Association."

A third contention is that controls of home prices would be class legislation. That's silly, too. The exact opposite is the truth. When nearly every other important cost of living is controlled, it is gross favoritism to exempt the price of houses—and it has been going on more than 3 years. A control imposed now would diminish discrimination, not begin it.

Unfortunately, no control imposed now could entirely eliminate such disparity; no control could roll back the already-inflated price level. In fact, the formula of the Patman bill would allow one more uncontrolled-price sale of an old house. But it would prevent increases after that. The proposed cost-plus formula for new construction presents administrative difficulties. But they are not insuperable. Granting their imperfection, these rules should go into effect unless OPA is all ready with better ones.

Meanwhile, prices fly upward, causing still greater unhappiness among the homeless now and building up to a tidal wave of owners' losses when the boom busts, stagnation in a construction industry that has skimmed the cream and priced itself out of the market and, yes, another spell of doldrums for the same realty agents who so doggedly work today against their own interests in the tomorrows.

Before this tragedy runs still further, let the administration exert the greatest pressure it can for immediate legislation, and above all, let Congress bow to the realities of the situation. Against those realities, Congress feels all the force of a pressure group whose deadly efficiency is amply proved. It would seem to be a moment when Members of Congress should also be hearing in no uncertain terms from someone beside real estate agents, get-rich-quick builders and people with houses to unload on the people's ill-fortune.

## Letter From Constituent

EXTENSION OF REMARKS
OF
## HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, December 19, 1945*

Mr. JUDD. Mr. Speaker, under leave to extend my remarks, I include the following letter from a resident of my district:

MINNEAPOLIS, MINN., *December 12, 1945.*
HON. WALTER H. JUDD,
*House of Representatives,*
*Washington, D. C.*

MY DEAR DR. JUDD: As I'm not sure of "Uncle's" correct address, would you be kind enough to forward the enclosed letter in my behalf?

"DEAR UNCLE SAM: I am writing to ask you for the loan of $1,000,000. It's a very small matter compared with other calls on your generosity, but there are several reasons why this request deserves immediate and favorable attention.

"In the first place, I'm one of your own family—or should I say 'our' family. I have been doing my small part in business for over 25 years to help our family run more smoothly. You call on me each year for my financial contribution (and lately it's been a substantial one). In the last 5 years of peril you have even called on my three sons to help prevent our enemies from mowing us all down in cold blood. Through this period your various emergency agencies have thrown every conceivable obstacle in my way to prevent me making my best contribution to our mutual welfare. Don't you think a little loan now might be in order?

"Furthermore, Uncle, my credit is good. Your annual assessments have been met on time. I have never defaulted on any contract with you. In our daily paper I have just seen a picture of a Mr. Byrnes (he must be one of our family, probably a fifth cousin twice removed) purportedly signing away $4,400,000,000 of our family fortune in the form of a loan to one who not only isn't in the family but whose credit is questionable. Have you or he asked the family about this? I just want a million.

"Finally, Uncle, I'll use this money to start a business and create jobs. If you let me have this I'll be glad to pay you 3 or 4 or 5 percent every year—not just 2 percent after 5 years if I feel like it. And I'll let your privately owned airplanes land in my backyard even though they do reduce the fares so everybody can ride.

"So, you see, I'm one of the family, my credit is good, I'll use the money constructively right here, I'll pay (and you'll get it) better interest, and I'll even be friendly after I get it. How about a million, Uncle? What do you say?

"Hopefully,

"N. S. MITCHELL."

## Is Congress Itself on a Sit-Down Strike?

EXTENSION OF REMARKS
OF
## HON. HUGH DE LACY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, December 19, 1945*

Mr. DE LACY. Mr. Speaker, under permission granted me, I wish to call to the attention of Members the interesting findings about congressional attendance printed by that gadfly of the press, George Seldes, editor of In Fact.

I hope the figures he reveals will help us all next year to be in our seats and push forward action on the great issues which receive our attention:

On September 5 Congress reconvened at the request of President Truman to enact reconversion legislation. In the 2 months that followed the official roll calls reveal that absenteeism has ranged from 16 to 42 percent in the House and from 9 to 35 percent in the Senate.

SENATE LOW: 38 PERCENT ABSENT

The House has never convened with less than 70 Members absent, while in the Senate daily absentees have totaled at least 9.

The official roll calls—of which there have been 65 in the Senate and 47 in the House in the 2 months after Congress returned—indicate that the Senate reconvened on September 5 with more than 33 percent of its Members absent. In the House better than 38 percent were not in their seats when the first gavel fell.

The low point in House attendance was reached on September 24 when 181 or 42 percent of the 431 members were absent. The House has 4 vacancies.

The Senate's worst attendance was reached November 2 when 34 or 38 percent of the 95 Senators (there was one vacant seat at the time) were absent.

The best attendance of the House was on October 18 when 360 or 84 percent of the 431 Members were recorded. In the Senate, the highest attendance was noted on September 27 when 87 or 91 percent of the 96 Senators were present.

LARGE NUMBER SKIP IMPORTANT BILLS

A high degree of absenteeism was also recorded in votes on important legislation in both Houses. Thus, when the vote was taken after the spirited fight over the confirmation of Dean Acheson as Under Secretary of State on September 24, better than 27 percent of the Senators were recorded as not having voted.

In the House September 11 on the vote to authorize a Pearl Harbor investigation by Congress, 28 percent of the members were recorded as not having voted.

Here is the absenteeism (as shown by the official roll calls of the House and Senate) on other important votes on legislation:

Senate—to return the United States Employment Service to the States, 17 percent; full employment bill, 15 percent; confirmation of Raymond S. McKeough, former CIO-PAC official, as a member of the United States Maritime Commission, 20 percent.

House—new Army recruitment bill, 20 percent; reorganization of executive departments, 16 percent; naturalization and immigration of India natives, 32 percent; $5,000,000,000, tax reduction bill, 18 percent; Federal airport construction bill, 16 percent; size of the postwar Navy, 19 percent; "free press" rider on UNRRA appropriation, 17 percent; and $550,000,000 for United Nations Relief and Rehabilitation Administration, 17 percent.

A corporation which attempted to conduct its affairs on such a basis would quickly be forced out of business, unable to operate.

Many Congressmen cry that labor is hampering reconversion, but there is precious little that Congress itself has done on the President's reconversion program.

## Iran's Rights Plain—Fait Accompli in Iran

EXTENSION OF REMARKS

OF

### HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, December 19, 1945*

Mr. JUDD. Mr. Speaker, under leave to extend my remarks, I include for the RECORD an editorial and an article from the Washington Star of December 18, 1945:

IRAN'S RIGHTS PLAN

(By Maj. George Fielding Eliot)

Small countries—such as Iran—maintain armed forces largely for the preservation of domestic order. They do not expect to be able to resist invasion by a powerful neighbor. For security against such a danger, should it occur, their reliance must be on the United Nations Organization and on the general conscience of the world. Their hope must be that the world will remember Ethiopia, Manchuria, and Czechoslovakia—and the consequences of permitting these nations to be violated.

But the world, and the neighbors of such small countries in particular, may properly expect they will maintain within their borders decent order, conditions in which there shall be in all parts of the country a responsible authority to which travelers, merchants and resident aliens can look for the protection of their legal rights.

In ordinary circumstances, such conditions can be assured by the normal agencies of Government—that is, local civil officials, courts, and police.

Where circumstances are not normal—as, for example, under the conditions of war or war's immediate aftermath—it may be necessary for a great power to maintain forces in the territory of a weaker neighbor, with which it is at peace, to prevent an enemy from gaining a dangerous advantage there. But the law of nations as well as long custom alike dictate that these conditions must be regarded as extraordinary, and must be brought to an end as soon as the justification ceases to exist.

There can be no justification whatever for a policy which, while offering disorderly conditions as a pretext for occupation or continuance of occupation, forcibly prevents a legally constituted government from using its forces to abate the disorderly conditions complained of. To say—as the Soviet Government has said of conditions in the Iranian province of Azerbaijan—that the reinforcement of the Iranian garrison in that province would only make conditions worse, is to assume a right of sovereign judgment as to Iranian affairs which is wholly outside the proper sphere of Soviet considerations.

All discussion of the political nature of the uprising in the province of Azerbaijan is beside the point. The facts are that there has been an uprising of some sort, that the legally appointed Iranian Governor has been expelled from the province, that the Iranian Government desires to restore its authority, that to this end it desires to send additional military and police forces into the province, and that it has been prevented forcibly from doing so by Soviet forces.

It is also beside the point for David Zaslavsky to ask in Pravda why the presence of Soviet troops in Iran is being "challenged" by American and Britain when American and/or British troops are in Java, Egypt, Greece, Palestine, and China, Mr. Zaslavsky should know, or should be informed, that neither the American nor the British Government have "questioned" the presence of Soviet troops in Iran. It is well understood that these troops are on Iranian territory pursuant to treaty arrangements and collateral understandings to which all three nations, and Iran, are parties.

The Soviet Government has a legal right to keep its troops in Iran until March 2, 1946, though mutual withdrawal at an earlier date has been proposed by the United States, urged by Iran, and would have been accepted by Britain if it had been possible to obtain Soviet agreement, which it was not.

There is a feeling in Washington and London that the Soviet purpose may be to leave behind its withdrawing forces in March, these Azerbaijan rebels so firmly entrenched in power that they cannot be overthrown—as they might have been had the Iranian Government been enabled to take timely action. There is the further feeling that this condition of affairs may be subject to further political exploitation by Moscow along lines which are becoming painfully familiar.

It is to be hoped that Secretary of State Byrnes and Britain's Foreign Minister Ernest Bevin may find means to convince the Soviet's Foreign Minister V. M. Molotov that this sort of shenanigan cannot serve in the long run either the legitimate interests of the Soviet Union or the cause of world peace, to which the Soviet Union is devoted and upon which its future security depends.

FAIT ACCOMPLI IN IRAN

The diplomatic crisis over Iran seems to have about reached the showdown stage. Radio Moscow's announcement that a new "national government" had been established in Iranian Azerbaijan, timed as it was to coincide with the arrivals of Secretary Byrnes and Foreign Minister Bevin in the Russian capital, is generally interpreted as a virtual shutout move by Soviet diplomacy to present American and Britain with what the French call a "fait accompli"—in plain English, an accomplished fact which is not to be undone or interfered with.

This uncompromising Russian gesture is the logical culmination of an aggressively unilateral policy by which, under cover of pretexts which were obviously specious, Moscow has fomented a separatist movement in Azerbaijan, the Iranian border province adjacent to Russian Transcaucasia, forbidding the central government of Iran to do anything to restore its authority. The character of the new "national government" of Azerbaijan is revealed by the fact that it is headed by a veteran Russian agent who fled his native Iran a quarter century ago for pro-Russian intrigues and has lived ever since in the Soviet Union. The new regime is obviously a mere front for the Russian military occupational authorities and will do whatever Moscow dictates.

All this has occurred despite strong and repeated diplomatic protests from both Washington and London. It is not a happy sign that the Foreign Ministers' Conference in Moscow opens on so inauspicious a note as a virtual Soviet defiance of its western associates and a flagrant violation of the sovereign rights of Iran, a charter member of the United Nations, to say nothing of an equally flagrant violation of pledges to respect Iran's independence and integrity made jointly by the executive heads of America, Britain, and the Soviet Union at their conference 2 years ago in Tehran, the Iranian capital.

The gravity of the situation is enhanced by its wider implications. Moscow has been putting Turkey under similar aggressive diplomatic pressure, demanding, among other things, the cession of border districts of Asiatic Turkey just west of Azerbaijan. Iran is militarily helpless, but Turkey is not, and avows an intention to resist any Russian aggression by force. The consequences of an unprovoked Russian aggression on Turkey, likewise a charter member of the United Nations, might be catastrophic. Lastly, Azerbaijan flanks northern Iraq, with its immensely rich Mosul-Kirkuk oil fields, which lie near the Azerbaijan border.

In the light of all this, Washington and London may well consider whether it is not better to make a determined stand on this first test of basic principles rather than compromise them as part of an appeasement policy which would have no moral foundation and no limits save those imposed by naked force.

## A Message to Congress From Okinawa

EXTENSION OF REMARKS

OF

### HON. AUGUST H. ANDRESEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, December 18, 1945*

Mr. AUGUST H. ANDRESEN. Mr. Speaker, during the past 3 months I have received hundreds of letters from men in the armed forces stationed in all parts of the world. I am quoting below extracts from a letter received from a friend of mine who is now "sweating it out" in Okinawa, waiting for a ship to take him home. I am not giving his name, as I do not want to subject him to court-martial proceedings. He tells the story which is typical of justified complaints made by thousands of GI's who have done their part to win the war. I insist that every available ship should be used to bring these men back to the United States.

Congress should not adjourn for the holidays until we have passed legislation to expedite the release of men from the service and to force the use of every possible ship to bring them back home. I urge the Democratic leadership, which is in control of legislation, to permit a vote of my bill, H. R. 4467, or other similar bills to discharge men from the service.

In addition to the message from my friend in Okinawa, I am also inserting as a part of my remarks an Associated Press news item which appeared in the newspapers of the country on November 28, 1945:

A SOLDIER WRITES FROM OKINAWA

To say the least is putting it mildly. The situation seems more hopeless each day. I never dreamed the United States would let us down as it has. The people could do us a lot of good if they would only wake up. But now that the war is over, they have just turned their backs to us. They don't need us anymore so to h— with us. Everyone here just don't give a damn for anything any more. The big shots realize the situation is getting pretty desperate for they have put out orders that no one except guards and MP's are to have any arms or ammunition and no one is to have a knife with a blade longer than 3 inches. They're not kidding any more.

Those men in the States who are so damn comfortable where they are and are responsible for these circumstances would soon give us consideration if they were here only a short time under our circumstances.

They keep kidding you people, telling you they are going to do this and they are going to do that. Figure it out yourself. We still have 80-point men here. Still back in the States you can get out on 50 points or 2 years' service. Twenty-six-year old men are too old for the Army now if they are not in already. However, if they are already in, that's different. Our unit is about to break up near the first of next month. The way things are going now the low-point men below 55 are to be transferred to other units for God only knows how much more service. This whole outfit has been out here 17 months. That's an awful long time out here where there is no civilization. No comforts, poor food, no recreation other than shows, which are damn poor, and it ain't much fun to sit in a rain and see one. The only thing that is plentiful is work. In my estimation every man in this unit has earned his right to freedom and happiness as a civilian. I'll never forget the time that we heard Tokyo Rose on the radio while we were on Anguar. She said that the Americans who had landed there had been counterattacked and were wiped out. We got a laugh out of it. The people of Japan believed it. Now Uncle Sam is trying the same stunt. I wonder how long the people are going to go on believing these stories.

---

ANDRESEN URGES ARMY TO SPEED UP DISCHARGES

(By Richard Powers)

WASHINGTON.—Representative AUGUST H. ANDRESEN (Republican, of Minnesota) said today he believed the Army and Navy are "falling down on the job" of getting servicemen home quickly.

"There are untold thousands of men waiting at stations all over the world—and with the required points for discharge," ANDRESEN told a reporter.

"High Army and Navy officials tell me that they are bringing them home as fast as they can. Actually, they are not."

ANDRESEN said "they used every type of ship, including Liberty ships and other slow vessels, to send the boys to the war zones" and "it seems to me they can use the same kind of ships to bring them back home."

MORE SPEED URGED

The Minnesotan said Army and Navy officials say Liberty ships and some cargo ships are too slow, only making 9 to 10 knots an hour, and faster ships must be used for demobilization purposes.

"It seems to me that it would be better to be on the way home at 9 or 10 knots an hour than to sit on some island in an obscure part of the world—maybe months—waiting for slightly faster transportation," ANDRESEN said.

"It also appears that the Army and Navy have absolutely no regard for the cost of keeping men in the service. From that angle alone they should hurry the discharges."

ANDRESEN has a bill before the House Military Affairs Committee which would speed discharges, including a provision for discharge after 18 months' duty.

ANDRESEN produced letters from servicemen which, he said, supported his assertion that ships are not being fully utilized.

One sailor on Saipan sent ANDRESEN a list of the names of 100 ships of all types which he said were tied up there.

A soldier in the Philippines wrote the Congressman saying he had counted more than 100 ships tied up there "doing nothing."

Another in Korea wrote that more than 2,000 servicemen with more than 75 points "have been waiting a long time to go home, while men with a lot less points in other places are being shipped home."

---

## A Plea for UNRRA Help for Hungary

EXTENSION OF REMARKS

OF

### HON. JAMES M. TUNNELL

OF DELAWARE

IN THE SENATE OF THE UNITED STATES

*Wednesday, December 19, 1945*

Mr. TUNNELL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a memorandum entitled "A Plea for UNRRA Help for Hungary."

There being no objection, the memorandum was ordered to be printed in the RECORD, as follows:

A PLEA FOR UNRRA HELP FOR HUNGARY

The members of the undersigned organizations respectfully urge that the assistance of the United Nations Relief and Rehabilitation Administration be extended to the people of Hungary.

We urge this, first, as a matter of humanity.

The retreating Nazi armies destroyed a large part of Hungary; left Budapest, its once beautiful capital, a mass of ruins; and robbed the people of as much of the grain, livestock, clothing, and medical supplies as they could carry away. The results of the Nazi domination of the country are appalling. There are 200,000 orphans to be cared for; as a result of malnutrition, 400,000 children are suffering from rickets; 17,000 of the children suffering from tuberculosis are without hospitalization or convalescent care, without medical supplies, and without proper nourishment, clothes, or bedding; there is not adequate food for nursing mothers, and no food or clothing for newborn babies; surgeons are operating without anesthetics—because there are no anesthetics; thousands of persons are dying as a result of the lack of insulin, penicillin, digitalis, sulfa drugs, and other medicines; there are no surgical dressings, iodine, X-ray films, nor plaster of paris for those with broken bones; with no supplies to repair the damaged homes, there are no warm clothes for the winter, and not enough fuel.

Americans of Hungarian descent, through American Hungarian Relief, Inc., have contributed several hundred thousand dollars in cash and in clothing, but the quantities of medical supplies needed, as reported from Hungary through official channels to the President's War Relief Control Board, clearly indicate that any substantial improvement in conditions is beyond the financial ability of Hungarian-Americans. The United Nations Relief and Rehabilitation Administration is the only hope.

Secondly, we urge assistance to Hungary through UNRRA as a step toward the preservation of peace in a democratic world.

The people of Hungary greeted with joy the liberating Russian armies, and immediately set out to establish a stable and democratic government. The last of Germany's former satellites to be liberated, Hungary was the first to earn diplomatic recognition by both the United States and the Russian Governments. And the people of Hungary were the first to hold a free and democratic election, on November 4. The reaction of public opinion in the United States and in other democratic countries was expressed in an editorial of the New York Times of November 7, which, after giving due credit to the Russian Army and to the Provisional Hungarian Government for making these elections possible, continued:

"But the main credit must go to the Hungarian people themselves, who displayed both courage and love of liberty under the most trying circumstances. They not only demonstrated that their government is entitled to recognition by the United Nations but also set a fine example for all their neighbors who must still hold elections to decide their future course and government."

And as to the policy of the Small Landholders Party which obtained a clear majority at that election, the same editorial said:

"And that policy can be endorsed by all democracies. It calls for close relations with Hungary's mighty neighbor, Russia, but not to the exclusion of free economic, diplomatic and cultural relations with the western world.

"Finally, the policy pledges the punishment of war criminals and collaborators, but it also demands a chance for all true Hungarians, including Jews, to return home under guaranties of safety and liberty. If the small landholders are allowed to put these policies into practice, they will erect in Europe's most troubled area a citadel of democracy which should be an inspiration to all those who are fighting for democracy in adjacent lands."

We are convinced that nothing can shake that citadel of democracy—except cold, hunger, and disease. We, both as sons and daughters of Hungary and as loyal Americans, are anxious to see that the faith of the Hungarian people in their new and democratic way of life will not be undermined by extreme suffering. We are convinced that this is to the best interest of the one world, the happier world, which we are trying to make a reality.

This memorandum is presented by the following organizations of American citizens:

New York Council of Hungarian-Americans for Victory, chairman, Louis Toth, certified public accountant, member of the faculty of Cornell University, New York City.

American Federation of Democratic Hungarians, chairman, Dr. Oscar Jaszi, Cabinet Minister in the Government of Hungarian Republic of 1918–19, member of the faculty of Clark University, Worcester, Mass.

Hungarian American Council for Democracy, chairman, Bela Lugosi, New York City.

National Committee for Hungarian-American Trade Unionists, chairman, James Lustig, trade union official, and by the following organization of Hungarian citizens living in the United States: Committee for a New Democratic Hungary, chairman, Prof. Rustem Vambery, member of the new National Assembly of Hungary.

## FHA Loans for Veterans

EXTENSION OF REMARKS
OF
### HON. JOHN LESINSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, December 19, 1945*

Mr. LESINSKI. Mr. Speaker, under permission granted me to extend my remarks in the RECORD, I include a news release under today's date relative to FHA loans for veterans:

Congressman JOHN LESINSKI, Democrat, of Michigan, chairman of the Michigan Democratic delegation, announced today that there had been a meeting of his State delegation at which were present Congressmen RABAUT, SADOWSKI, O'BRIEN, DINGELL, AND HOOK.

The purpose of the meeting was to discuss the unfortunate situation which has arisen in Michigan, and particularly in the Detroit area, in securing FHA loans for veterans. The Federal Housing Administration has very stringent regulations with reference to approving loans where a veteran cannot establish credit antecedents.

Many of the veterans applying for these loans were not employed prior to their entry into the service and while in the service were married or have married since their discharge, and as a result cannot get FHA approval to purchase homes. The recent strikes in Michigan are also a bar to veterans securing FHA approval, because the FHA will not approve loans for the purchase of homes where the veterans are now on strike, even though the condition is temporary and one over which they have no control.

Immediately after the meeting of the delegation Congressman LESINSKI contacted Hon. Raymond M. Foley, Commissioner of the Federal Housing Administration, and Director Foley informed him that he was now engaged in the processing of new regulations to be issued to all field offices which will eliminate the difficulty veterans are now having in securing approval of FHA loans for the purchase of homes.

## Capital of the World?

EXTENSION OF REMARKS
OF
### HON. RALPH A. GAMBLE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, December 19, 1945*

Mr. GAMBLE. Mr. Speaker, under unanimous consent, I insert in the CONGRESSIONAL RECORD an editorial which appeared in the December 13, 1945, edition of the Larchmont (N. Y.) Times entitled "Capital of the World."

"CAPITAL OF THE WORLD"

Supervisor Francis T. Leonard, of New Rochelle, a Democrat, has suggested that Westchester interest the United Nations Organization headquarters site committee in Westchester as an ideal location for what might be called "the capital of the world."

We do not know how seriously the UNO headquarters site selection committee would consider this offer. After all, larger communities have sent representatives to London with motion picture films, with financial pledges, and with Chamber of Commerce boosts. It may be that the suggestion of Westchester has been advanced too late. We do not know and we have no means of finding out what would be the committee's attitude.

But we do know that Mr. Leonard is absolutely right when he points to the unequaled advantages of location which Westchester offers.

A large percentage of the delegates to UNO must, of travel necessity, utilize New York harbor or airports in vicinity of the metropolis, since they will come either from Europe or South America. Westchester is close enough to New York City for travel convenience and yet sufficiently distant from the noise and excitement of a large city to allow quietude and serenity for the delegates' deliberations. Our own airport, which can be reached from almost any section of the county in 20 minutes, is adequate for any air-borne passenger or commodity transportation. And our fine system of parkways would provide quick transit to the metropolis for those desiring cultural or entertainment facilities.

We question seriously the advisability of locating UNO headquarters in any large city, such as New York or San Francisco. It seems to us that better results and less envy will be reached through selection of a site where the UNO will not be overshadowed. While the failure of the League of Nations does not strengthen the attitude, it should be noted that the capital of that organization was wisely placed in Geneva, relatively a small city.

The UNO quite likely will desire privacy for its deliberations and the opportunity to work without outside interference. That could be attained much more easily in some such suburban area as Westchester than in the hurly burly of a large American city. And yet Westchester is in sufficiently close proximity to New York City to give all its advantages of travel and entertainment.

So, Mr. Leonard's idea is not at all fantastic. It is, in our opinion, well worth the consideration of county officials, who should not too carelessly assume that it is too late to obtain favorable action. Indeed, the very circumstance of lateness in making the offer might be an advantage in a highly competitive situation.

## Pledge of Allegiance to the Flag of the United States—Information Concerning Authorship

EXTENSION OF REMARKS
OF
### HON. LEVERETT SALTONSTALL
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
*Wednesday, December 19, 1945*

Mr. SALTONSTALL. Mr. President, in connection with House Joint Resolution 180, giving official recognition to the pledge of allegiance to the flag of the United States, I ask unanimous consent to have printed in the Appendix of the RECORD certain interesting information which I have received from Dennis A. Dooley, librarian of the State library at Boston, Mass. This information was collected at my request in order to determine whether the author of the pledge of allegiance to the flag was a Massachusetts resident. I find that there was a difference of opinion as to whether one Francis M. Bellamy or James Upham was the author. The material to which I refer seems to affirm the fact that James Upham was the real author.

I may also say that the first recorded raising of the flag over a school took place on Catamount Hill, Colrain, Mass., in May 1812.

There being no objection, the matter referred to was ordered to be printed in the RECORD, as follows:

THE YOUTH'S COMPANION,
*Boston, Mass., May 7, 1923.*

LIBRARIAN,
*State Library, Statehouse,*
*Boston, Mass.*

DEAR SIR: Perhaps you will be interested to place on file a copy of the enclosed leaflet which we have prepared in response to the demand for information concerning the origin and history of the well-known pledge of allegiance to the flag.

This demand has been very urgent of late on account of the fact that we broadcast from radio-telephone station WGI, at Medford Hillside, an offer of a prize to all who were able to answer this question correctly: Who wrote the pledge of allegiance: "I pledge allegiance to my flag and to the Republic for which it stands: one Nation, indivisible, with liberty and justice for all," or with whom did it originate?

The activity of the Boston Traveler in urging people to learn this pledge and to repeat it at noon on Memorial Day has also served to increase popular interest in the subject at the present time.

Should you care for additional copies of the leaflet, I shall be glad to supply them to you without charge.

Very truly yours,
THE DEPARTMENT EDITOR.

THE YOUTH'S COMPANION FLAG PLEDGE

"I pledge allegiance to my flag and to the Republic for which it stands: one nation, indivisible, with liberty and justice for all."

The above pledge of allegiance to the Stars and Stripes, which is variously known as the pledge of allegiance, the pledge to the flag, the salute to the flag, the national salute, and the Youth's Companion flag pledge, was written in tentative form by the late James B. Upham, of Malden, Mass., a member of the Perry Mason Co., then and now the publishers of the Youth's Companion. It was molded into its present and final form by the members of the firm and the editorial staff of the Youth's Companion. The pledge is, therefore, correctly known as the Youth's Companion flag pledge.

It was first given wide publicity through the official program of the national public school celebration of Columbus Day, which was printed in the Youth's Companion of September 8, 1892, and about the same time sent out in leaflet form to schools throughout the country by the executive committee appointed in February 1892, by a national convention of the State Superintendents of Education, held in Brooklyn, N. Y. It was first used officially during the national public school celebration of October 21, 1892, which took place simultaneously with the opening of the World's Columbian Exposition in Chicago. On that occasion it was repeated by more than 12,000,000 public school pupils throughout the country. The whole movement of the national public school celebration was instituted by the Youth's Companion as a part of the broader program that, under the direction of Mr. Upham, the Companion had been pursuing since 1888, a program for advancing patriotism by improving school grounds and putting the Stars and Stripes over every schoolhouse. The executive committee that prepared the program for the celebration at which the Youth's Companion flag pledge was to be used made the Youth's Companion office its headquarters. On that committee the Youth's Companion had one representative, and he was appointed chairman.

When the flag pledge first appeared the second "to"—the one immediately preceding "the Republic"—was accidentally left out. The error, which of course was immaterial,

was soon corrected. From time to time since then versions of the pledge have appeared with the word "country" substituted for "Republic" or with the word "American" inserted before "flag," but the alterations never have gained widespread popularity or have long survived. Neither change substantially alters the form of the Youth's Companion flag pledge.

A few facts will be found of interest in clearing up some of the popular misconceptions about the flag pledge. The Stars and Stripes was first saluted by a foreign naval power on February 14, 1778, when the French Admiral La Motte-Picquet returned the salute of John Paul Jones, of the U. S. S. *Ranger*, with an admiral's salute of nine guns. Charles Sumner uttered two widely known sentiments about the flag that are sometimes mistaken for the pledge, but that on examination will be found to be entirely dissimilar. One, which begins "There is the national flag!" which ends "Upheld by all our hands," and which gives Sumner's own idea of the symbolism of the colors of the flag, is found in his address, Are We a Nation? that he delivered on November 19, 1867; the other beginning "Our national flag" and ending "had its origin!" was proposed in a letter dated July 2, 1852. Daniel Webster, Henry Ward Beecher, Abraham Lincoln, Edward Everett, and Oliver Wendell Holmes all uttered widely quoted thoughts about the flag, but none of them in any way parallels the pledge. The American's Creed, first made public on May 30, 1918, which begins "I believe in the United States of America" and ends "against all enemies," was written by Mr. William Tyler Page, of Maryland, in 1917. Its phraseology in no way resembles that of the pledge.

The name of Mr. Francis Bellamy, of Massachusetts, is sometimes associated with the pledge by reason of the fact that Mr. Bellamy, then a member of the Youth's Companion staff, represented the Youth's Companion on the executive committee that had charge of the preparations for the National Public School Celebration. Mr. Bellamy, however, was not the author of the pledge. The name of the late Frank E. Bellamy, a Kansas schoolboy, has also occasionally been connected with the pledge, for the reason that in the school year of 1895–96—4 years after the pledge first appeared—he submitted it as his own in a school contest. As the pledge was apparently not well known in his community at that time its appearance made a considerable stir, but since the facts concerning its origin have become widely known Bellamy's claim to being the author of it has been dropped. Complete and trustworthy surveys of the entire Frank E. Bellamy controversy have been prepared by both the Kansas State Historical Society and the Woman's Relief Corps and are on file at the respective headquarters of those organizations.

Various patriotic men with whom Mr. Upham talked over the pledge—especially a group identified with the New York schools—have been mentioned as the authors but there is no evidence to show that they did more than discuss and approve a rough draft, prepared by Mr. Upham and afterwards condensed and perfected by him and his associates of the Companion force.

The Woman's Relief Corps, which is the woman's auxiliary to the Grand Army of the Republic, the American Flag Association, which was organized in 1898—6 years after the pledge first appeared—and many other patriotic organizations have done much in disseminating the pledge to every quarter of the land.

The patriotic salute "We give our heads! and our hearts! to our country! one country! one language! one flag!" which is often used in the primary grade of schools, was written by Mr. George T. Balch. It does not replace the flag pledge, and the flag pledge does not replace it. The two are not related except through the ties of a common purpose, the purpose of keeping alive the spirit of patriotism and devotion to our country.

---

[From the Boston Herald of November 27, 1905]

JAMES B. UPHAM

He was born December 27, 1845, in New Hampton, N. H. He was a son of the Reverend James Upham, D. D. He was educated in New Hampton Literary Institute at Fairfax, Vt., and went to Detroit in 1866, where he was employed in the book and publishing company of E. B. Smith & Co. He came to Boston in 1872 and entered the employ of Perry Mason & Co., publishers of the Youth's Companion, becoming a member of the firm in 1886. He was a deacon in the First Baptist Church, of Malden, member of the Converse Lodge of Masons, Tabernacle Chapter and Beauseant Commandery, K. T.

He was a stanch Republican, although he never held any public office.

He removed to Malden 24 years ago. He was married in 1876 to Mary A. Hartshorne, of Milford, N. H., who survives him, besides one son and one daughter. The funeral will take place on Tuesday afternoon.

Died November 25, 1905.

## Suggestions of Enlisted Men for Improvement of the Army

EXTENSION OF REMARKS

OF

## HON. J. WILLIAM FULBRIGHT

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

*Wednesday, December 19, 1945*

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a brief editorial from Yank, the Army weekly, giving the views of some of the Army enlisted men regarding certain matters which now are before the Senate.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

YANK RECOMMENDS

AN ATTEMPT TO PUT TOGETHER SOME OF THE BASIC SUGGESTIONS ENLISTED MEN HAVE FOR THE IMPROVEMENT OF THE UNITED STATES ARMY

There is a sharpening of ears and a stirring of activity in the advertising business these days, and the reason is a strong rumor that the United States Army is getting ready to spend $3,000,000 a year on advertising and publicity. Naturally, the various advertising agencies are interested in securing the Army account. Fifteen percent, the usual advertising agency fee, of $3,000,000 comes to almost half a million bucks.

The purpose of the proposed advertising campaign, as we understand it, would be twofold—it would help boom recruiting for the peacetime Army we need by making service in that Army look attractive, and it would keep the general, taxpaying public informed as to the desirability of having an Army and as to what improvements were being made in training that Army.

Yank has been serving as the magazine of the enlisted man for some 3½ years now, and we feel that we know pretty much about the Army. We are even willing to give the Army—for free, without even a 15 percent commission—some advice on how to make itself more appealing to recruits, how to keep the voting public happy about it, and how to save a few millions of dollars in advertising. You see, this peacetime Army will, fortunately or unfortunately, have to be made up of a great many more enlisted men than officers. Our idea is to make it more attractive to these enlisted men—and, incidentally, a better Army all around.

The ideas we suggest are offered sincerely. They are a composite of what the enlisted man has been thinking about all along, a gathering of material which has been piling up in Yank's mail bag and of observations made by Yank enlisted-men correspondents in all theaters of the war and at home.

First, let's have more promotion from the ranks. By this we mean that every possible position requiring a commissioned officer should be filled by a man who has had some service as a GI. Let every West Pointer, either just before entering or just after leaving the Academy, put in a year as a noncommissioned soldier. Knock out political appointments of officers, and, in those cases where some officers have to be directly commissioned to do a certain job, make public their qualifications for the job and let them be passed upon by a board of officers who have had experience in the ranks before granting their commissions.

Such a system would give enlisted men an incentive to work toward eventual officership and would attract a smarter type of soldier to recruiting offices. It would also deal a blow to the "officer-caste" type of thinking which is already in danger of permeating our entire Army. Something like this "officer-caste" came into power in Germany and the German General Staff, and a 130-year cycle of wars—two of them world wars—was the result.

Yank believes that a man should not be eligible for officership because of an accident of birth or education or political connection. An officer should be given the opportunity to prove himself first in the ranks. Perhaps there should be no dividing line between commissioned and noncommissioned—just a promotion ladder going straight on up from private to general.

For our second improvement, let's have all promotions—both noncommissioned and commissioned—on a basis of competitive examination without overdue attention to seniority. Between two equally qualified candidates, personal preference of the officer in charge will necessarily be the deciding factor. But let's have a few less sergeants made sergeants simply because they're good guys, and let's put an end to the ridiculous sight of capable young junior officers prancing around their CO like so many newly rich women around a reigning dowager, trying by this favor and that attention to buck their way a grade higher. As to seniority, there is no evidence that hardening of the arteries, even in colonels, is an infallible index of brain power.

And let's do something about making officers as liable under military law for their errors and faults as GI's already are. Every enlisted man knows that an officer can, and sometimes does, get away with a hell of a lot without any more serious bother than a reprimand and a change of station. If an officer is unfit, don't just ease him into a clerical job or hold up his next promotion a month or two. Bust him, as you'd bust a corporal in the same position. If the officer's good, he can climb up again. That seems to be Army reasoning in the case of GI malfeasances; why not apply it to officers?

Let's also do something about keeping distinctions of rank in their proper place. Rank, and the respect due to it, are necessary for the organization of the Army. There must be men to give orders and other men to obey them, but there is no need to differentiate between officers and men off post or off duty. This differentiation has been made in this war, and it has had uniformly bad results. Let's get rid of it.

As a first step here, let's abolish differences in uniform (except for insignia), in messing

facilities, in equipment, in quarters. Perhaps in this last instance there might be fewer men assigned to a room as rank increased, but there should be no difference in type or quality of housing.

All ranks should have the same type of quarters for the same reason that they have the same type of food. And for the additional reason that there has been no single cause of GI hatred for officers—and we use the word "hatred" advisedly—greater than the hatred stirred by looking out of a match-box barracks or a dust-ridden tent to see your platoon commander breezing off to a soft bed in officers' quarters or a quick one before dinner at the chrome and plastic bar of a movie-type officers' club.

There should be no social difference because of rank, because there are no social differences in the human beings involved, except as individuals. You'll find many a bore, and even a boor or three, with stars on his collar, and there are some charming and amusing people with only one stripe or less on their sleeves. There is no reason why the captain can't come to the movie early enough to get a good seat and no reason why a GI can't cut in for a dance with the prettiest girl in town—she being willing, of course.

The most depressing spectacle of this war, and the most disgusting for some soldiers who had a slight pride in the fact that they were said to belong to a "democratic" Army, was the sign "Off limits to EM." The idea that the technical artificiality of rank, a label useful only to clarify the chain of command, could entitle one man to eat in a good hotel and banish another to a fly-specked zinc counter has no part in any Army that represents the United States.

We on Yank believe the Army can benefit by studying these suggestions. We believe that improvement within the Army is just 3,000,000 times as important as publicity outside the Army. We believe that ours can be as fine an Army as its potentials promise, only by hard work from within on the part of every GI and every officer, and by sharp observation from without by every civilian.

## The Challenge to America

EXTENSION OF REMARKS

OF

### HON. RAYMOND E. WILLIS

OF INDIANA

IN THE SENATE OF THE UNITED STATES

*Wednesday, December 19, 1945*

Mr. WILLIS. Mr. President, I ask to have inserted in the Appendix of the RECORD an address delivered by Charles A. Lindbergh at the forty-second aviation anniversary dinner of the Aero Club of Washington at the Hotel Statler, Washington, D. C., on December 17, 1945.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

We meet on this 17th day of December in honor of Orville and Wilbur Wright. Most of us here tonight have followed aviation as a profession for many years, and yet it is difficult even for us to realize the advance our art has made since that first power-driven flight.

It is only 42 years since they catapulted their plane into the air at Kitty Hawk. It has often seemed to me that it must have been centuries ago. Watching bombs falling on some South Pacific jungle or standing amid the ruined walls of a European city, I have had to tell myself over and over again that all this has happened within a lifetime. There is something incongruous in picturing that fragile and harmless craft in the same frame with the terrific detonation of bombs and millions of tons of rubble.

Why picture the Wright brothers with war and ruined cities? The very question emphasizes the difference between the inheritance they gave us and the use to which it has been put. It shows the road that mankind might have taken. That plane at Kitty Hawk, like the Chinese firecracker, held the magic of great construction in peace or great destruction in war. That we have used this inheritance primarily for war is a responsibility which rests squarely on our own shoulders. When I say our own shoulders, I speak of civilized man. The greatest tribute we can pay to the Wright brothers is to consecrate our effort to the end that aircraft will be used to build civilization in the future, and not to destroy that part which still remains.

The technical aspects of aviation appear unlimited. Certainly there was never a time when it was more interesting to speculate on the future of aircraft. When I received your invitation to address this meeting, my mind first turned to such subjects as turbo jet transports and high altitude rocket flights. How soon will we be crossing oceans at greater speed than the sun? Why can't we land on a planet now that the atom has been split? What speed might an atomic rocket attain in interstellar space? But as I sat down to write this paper, such questions became dwarfed by the basic problem of how to keep aircraft from destroying the civilization which creates them.

There is little satisfaction in spending one's life developing machines which are likely to bring ruin to one's own people. Our minds are harassed by the damage that has already been done; by the realization that western man has not justified his trust; that he has misused his inheritance from the early pioneers.

The ghost of Lilienthal must glide uneasily over German cities. The devastation that the Nazis brought to Europe, carried on the wings he loved, is a warning to us all. The developments of science, improperly guided, can result in more evil than they bring good. What peaceful men take a thousand years to build, fools can now destroy in fewer seconds. Experience has shown that we cannot depend on political specialists to turn the inventions of science to the benefit of mankind. We can no longer blind ourselves to the future uses of aircraft while we concentrate on their mechanical perfection. It has become more important to control our products than to produce them.

Let us survey our present position. It is obvious that all of our ideas must be reconsidered in the revolutionary light of an atomic era. This applies especially to aviation since it provides the carrier for the latest and most deadly of all man's weapons. We know that one airplane, carrying one atomic bomb, can wipe out a city. We know that transoceanic rockets, using fuels already developed, can be built in the near future. The cost of a transoceanic rocket carrying an atomic bomb would be a small franction of the value of a city. The oceans, therefore, which proved effective barriers to bombing aircraft of World War II, will not protect this country from atomic rockets of World War III, if such a war begins.

In the past, we have developed methods of defense against attacking aircraft. The fighter and the proximity fused antiaircraft projectile have made the sky a dangerous place for bombers. The guided missile may rid it entirely of military aircraft of our present types. But against rockets carrying atomic bombs, traveling faster than a cannon's shell, we see no adequate defense. Counter attack might win an atomic war; but it could not replace our cities or bring back our dead.

Life would be intolerable here in America if we knew that an irresponsible foreign government could, without warning, send an atomic rocket hurtling toward every city in our country. If we permit the world to continue uncontrolled, an enemy could have such rockets aimed at our vital areas waiting only for the pressure of a button to send them off. Then, our institutions, our homes, our families, would be at the mercy of some fanatic's finger thousands of miles away. It would be like living with a rifle pointed always at your head. And it would be only a matter of time before the trigger would be pulled, for where man has had power at his fingertips, sooner or later he has found causes for its trial. From primeval club to atomic bomb, he never invented a weapon so terrible that he failed to use it in war.

If we are able to prevent the misuse of power based on aircraft and atomic energy in the future, that will mark a greater epoch in human relationships than their invention marked in science. Yet if we fail, the penalty is staggering. We can succeed only by organizing all nations toward this end. For we must face the fact that aircraft and the atomic bomb have brought us to a time when we will either live in an organized world or in constant insecurity.

To me, it is no longer a question of whether or not we should have world organization, but of what form it should take. Now that such an organization is in its infancy—now is the time to consider seriously its implications. Too few people stop to realize that a world organization may vary between the arbitrary power of a Roman state and government based on the complete equality of man.

I do not believe it would be wise even if it were possible for this country to dominate the world by force. Certainly such a policy would be contrary to the ideals we have held. On the other hand, it is obvious that a world state based on the complete equality of man would be controlled by the nations of largest population. In such a state, our country would have less than half the influence of either India or China. We would have less influence than Russia. There is not much indication, either in our wars or our peace conferences, that the nations which have controlled on the basis of ability are willing to turn over their leadership to the nations which would control on the basis of counting heads. That would be contrary to the record of our forefathers and to the history of human progress.

Whatever compromise is made between these extremes of Roman state and mass control, it must contain an element of power to be effective—power to prevent the preparation for an atomic war, power which cannot be blocked by the veto of any single nation. Power, because experience has shown only too clearly that we cannot depend on promises alone. In this age of split seconds and splitting atoms, a world organization must have immediate and overwhelming strength at its disposal. To disarm too quickly, to fail to maintain the quality of our weapons, to underestimate the revolutionary changes the atomic age has brought, would be fatal. A successful military movement must prevent rather than win an atomic war, for one can hardly call a victory in war successful when it is won at the price of a destroyed civilization.

I have advocated tonight a world organization backed by military power, an organization led by the western peoples who developed modern science with its aviation and its atomic bomb. But I must confess to you that I am fearful of the use of power. I plead for strong military forces only because I believe the alternative is worse. We have seen what happens to a people too weak to maintain its rights. We need only think of France in 1940, of Poland, of the Baltic countries, of the Mayan civilization here in America, the Hindu in India, the late Roman. Power is essential to survival; it is essential to freedom; it is essential even to justice.

But power alone has limited life. History is full of its misuse. There is no better example than Nazi Germany. Power without a moral force to guide it invariably ends in the destruction of the people who wield it. Power, to be ultimately successful, must be backed by morality, just as morality must be backed by power. A world organization, to have permanent influence, must wield a power that is guided not by the desire for revenge, not by the intent to exploit or enslave, but by the qualities represented in Christian ideals. To those who say that such ideals are impractical, let us point out the failure of the Hitlerian regime. The philosophy of Christ may have been too intangible for the Nazi government to understand, but the rubble of Berlin is a sufficiently tangible result of their failure.

Can we learn from that failure? I believe we can maintain the necessary power. But can we do what no people has ever done before; can we pass the test of the Christian code? That requires integrity, humility, and compassion that are lacking all over this postwar world. One finds no trace of these qualities in the complacency with which we greeted the inverted hanging of Mussolini's body. There is little indication of them in the court trials of our conquered enemies. There is an appalling lack of them in our attitude toward the famine-stricken peoples we have defeated. But without these qualities, there can be no security, as the Germans learned. Without them, we simply sow the wind with our aircraft and our bombs.

Christian ideals may in one sense seem a far cry from the subject of aviation on which you invited me to speak. But in a deeper sense, they affect every industry and every action. They cannot be left alone to church and clergy. They must live in the philosophy of a nation, in the policies of a world organization, in the use of science and its great inventions. They enter into the pressure of the red button that drops a bomb. They are as essential to the foundations of New York and Washington as they were to those of Berlin and Nuremberg.

We in America already have the most powerful air force in the world. We have the greatest Navy and the best equipped Army. We have demonstrated that we can outbuild any other nation. We have the atomic bomb. We are a Christian people. The ideals we profess are high. We have all the necessary elements to lead the world through this period of crisis. But can we combine these elements in our daily policies and lives? Whether our western civilization is facing new heights of human accomplishment or whether it is doomed to extinction depends not as much on technical progress as on the answer we make to this question.

## Trucks for Canadians

EXTENSION OF REMARKS
OF
### HON. ALVIN F. WEICHEL
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, December 19, 1945*

Mr. WEICHEL. Mr. Speaker, our newspapers have recited the difficulties and failures of war veterans in getting trucks.

Yet, thousands stand outside in New York and other places, while additional thousands are sold cheaply to foreigners all over the world. In the South Pacific we are selling motor equipment for junk at $10 a ton and hauling it halfway around the world for the Dutch and others.

Here is a picture in a Canadian newspaper showing a field of trucks, and the advertisement recites:

UNITED STATES ARMY TRUCKS FOR SALE—SMALL DEALER CLOSES BIG DEAL—ALL LATE MODELS IN GMC, DODGE, MACK, CHEVROLET, AND DIAMOND T

Sixty percent of these vehicles are in excellent all-around condition having been reconditioned by the Army. There is surprisingly low mileage on the majority of them. A few select units have been stored for almost 2 years.

The above trucks purchased from the United States Army. The cost of these units to the United States Army duty free amounted to approximately seventy-five thousand dollars.

Yet, the poor GI who fought and who must give taxes to pay for them finds it very difficult to get a truck at home.

## Lithuania in Eclipse

EXTENSION OF REMARKS
OF
### HON. DAVID I. WALSH
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
*Wednesday, December 19, 1945*

Mr. WALSH. Mr. President, I ask to have inserted in the Appendix of the CONGRESSIONAL RECORD an article which appeared in the Worcester Telegram on Monday, December 10, 1945, dealing with the Lithuanian situation.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LITHUANIA IN ECLIPSE

(By Dr. W. Elmer Ekblaw, Clark University)

There will always be a Lithuania. Though at present in eclipse, like Estonia and Latvia, Lithuania cannot be, and will not be, destroyed. The glory that has been Lithuania's throughout the centuries cannot be darkened, nor for long even dimmed. It will shine again, the sunlight of a people who have in the past played a prominent role in the progress of Europe toward culture and a higher level of art and science and philosophy. It will shine again, when justice and peace and brotherhood shall prevail among men, a jewel in the constellation of peoples who contribute toward that glorious day.

The travail in which Lithuania has endured throughout the whole written history of Europe so many vicissitudes of conquest, oppression, and tyrannical despotism, has never been so desperate, so painful as now, under the ruthless domination of Russian imperialism and territorial aggrandizement. Her leaders, whatever their virtues or their powers, have been liquidated or exiled. Her farmers have one and all been snatched from their lands and deported for labor unto death in the wastes of Siberia. Her folk have been cruelly wrested from their homes, broken in body and spirit, and reduced to vassalage worse than bondage. No apologist for Russia can justify or condone her treatment of Lithuania and the Lithuanian peoples. No darker drama of tyranny, treachery, and lust has ever been shown upon the screen of civilization than the present tragedy of Lithuania.

In that isthmian fracture-zone of states and peoples that stretches from the Baltic Sea to the Black, between the peninsula that nourished the civilization of western Europe and the Asiatic mainland that harbored throughout the centuries the barbarism and despotism of Muscovy and its Mongoloid coherents, the Baltic States, particularly Lithuania, have formed the most vulnerable bloc. Sharing with Poland and Czechoslovakia and the nations southward, the precarious position of buffer zone between two widely separated stages of human progress, between two equally widely separated economies and systems of government, between two just as widely separated philosophies of life and social institutions, Lithuania has always faced the problems of retaining her autonomy, preserving her distinctive cultural institutions, and maintaining her right to independence, and existence as a free and equal member of the family of nations.

The sympathy of the American people goes out to the Lithuanians, as it does to the Finns, the Esths, and the Letts, and the other persecuted peoples of that fracture-zone, that buffer belt, in this terrible time of trial and test. Had the Atlantic Charter but been established and its principles defended, the tragedy of those peoples and states between the Baltic and the Black might have been averted, and the freedom won for them by the Treaty of Versailles might have been preserved in this crucial and critical period of history. The only consolation the freedom-loving, freedom-seeking peoples of the world who view with such profound dread and pain the sordid subjugation of all the peoples of central Europe so freed, is that the day of reckoning will surely come.

There will always be a Lithuania; and the glory that was Lithuania will certainly shine again.

## That Loan to Britain

EXTENSION OF REMARKS
OF
### HON. J. WILLIAM FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
*Wednesday, December 19, 1945*

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "That Loan to Britain," published in the Arkansas Democrat, of Little Rock, Ark., on December 16, 1945. The editorial is one of the best on the subject which I have seen.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THAT LOAN TO BRITAIN

You'll be hearing agonized yelps about our $4,400,000,000 loan to Britain. It must be approved by Congress and all the vote-seeking foes of the administration will have a noble chance to sound off.

You know the tune they'll hit. The administration is squandering our substance. It's flinging the taxpayers' hard-earned money to a foreign nation. We'll never get it back. The unpaid loans of World War I will be reviewed with tremolo vocal effects and oratorical antics. There'll be touching references to the needs of our own people. The flag will be waved and resounding statements made about home and mother and the iniquity of plastering a mortgage on tots in the cradles.

Well, that's politics. Free government everywhere has its circusy aspects, and most healthy people like it. Life must be a dreary business in countries where government is just a dull routine of power doing as it likes, with no political plays and counter-plays, no rousing appeals to the people.

Apparently, the British House of Commons had its grandstand act in the course of approving the loan provisions. There were 2

days of debate, with the Conservative minority heckling the Laborites who are responsible for the terms of the loan. And Commons wasn't deciding on lending money—only on accepting it.

But this is one case where the borrower had much of the trading advantage on his side. The loan is vital to Britain, true enough. Yet it is also important to us that we make it.

For without this credit, Britain would have to embark on a fight for world trade by every device she could invent. Only so could she live. She would have to tighten relations with all parts of her empire and with her neighbor countries in northwest Europe, building up a trade bloc with preferential tariffs and quotas and any other means available.

We would be virtually shut out of that large market. We would have to battle that set-up, with its wealth of raw materials and its manufacturing skills, for trade in South America and every outlying corner of the world.

It would be sheer stupidity to force such a course on Britain. The cost to us in trade would eventually be far greater than the amount of the loan, even if it's never repaid.

More than that, Britain must be strong if there is to be a balanced world, with any prospect for peace. She is our natural ally, and a feeble, impoverished Britain during the years it would take her to recover unaided, would weaken our own position.

This loan isn't an act of charity. It's just good sense.

## Return and Demobilization of Troops

EXTENSION OF REMARKS
OF
### HON. JAMES M. TUNNELL
OF DELAWARE
IN THE SENATE OF THE UNITED STATES
*Wednesday, December 12, 1945*

Mr. TUNNELL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a War Department release of December 17 stating the number of troops en route to the United States from overseas theaters, and also giving the latest demobilization figures.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

SEVEN HUNDRED AND ELEVEN THOUSAND AND SIXTY-SEVEN TROOPS EN ROUTE TO UNITED STATES FROM OVERSEAS THEATERS

On December 11, 711,067 soldiers were en route back to the United States from overseas theaters, the War Department reported today in emphasizing again that serious congestion in passenger traffic out of west-coast ports will cause delay in debarkation of troops arriving there for discharge.

With 306,577 troops en route to the United States from the Middle Pacific and Western Pacific areas, the possibility of further congestion at west-coast ports is heightened.

Latest demobilization figures, released by the War Department today, are—

Returns to civil life:

| | |
|---|---|
| Released during week ending Dec. 14, 1945 | 287,000 |
| Total released Dec. 1 through Dec. 14, 1945 | 597,000 |
| Total released VJ-day (Sept. 2, 1945) through Dec. 14, 1945 | 3,639,000 |
| Total released during the period May 12, 1945, through Dec. 14, 1945 | 4,231,000 |

Since VE-day, 17,444 doctors, 4,070 dentists, and 26,223 nurses have been returned to civil life by the Army.

## Peace Is No Game for Hit-Run Players

EXTENSION OF REMARKS
OF
### HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, December 19, 1945*

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Minneapolis Sunday Tribune of December 16, 1945:

PEACE IS NO GAME FOR HIT-RUN PLAYERS

It required over a year to bring back to the United States the 1,933,156 members of the armed forces we had overseas at the end of World War I. Most of those men had to be transported only about 3,000 miles. In 1919 few other Allied troops required seagoing vessels for redeployment.

At the close of this war 3,000,000 Americans were in Europe and another 2,500,000 were elsewhere overseas. Many of our armed forces are more than 6,000 miles from the continental United States. Being better fed, equipped, and cared for than any other army in the world, they require the services of many ships to supply them pending repatriation. There are large numbers of English, Canadian, Australian, and other troops also remote from their homes and requiring many ships to supply and repatriate them.

In the light of those demands and by comparison with what was done in 1919, the rate of redeployment reported elsewhere on this page is phenomenal.

When fighting ceased in August the Army thought it would have 2,500,000 men in service July 1, 1946. On September 25 it reduced the estimate to 1,950,000. Later it was reduced still more.

Nevertheless, servicemen and their relatives and friends are high-pressuring the Government to get the armed forces home faster.

MOTIVES ARE UNDERSTANDABLE

The desire to get home, now that the fighting is over, is understandable, as is the desire of kin to have their loved ones back. No foreign spot is as attractive as the United States to one privileged to live here. Many of the places in which our troops are stationed are desolate, comfortless, boring.

But even miracle worker Uncle Sam can't stretch a magic carpet round the globe on which millions of men can be transported home overnight. The existing facilities are being stretched to the utmost. It does no good to berate Congress to provide transportation which does not exist. All that can fairly be demanded is that no favoritism be shown in redeployment.

Precipitate and panicky redeployment, on the other hand, may cheat us of our dearly bought victory.

Three hundred thousand young Americans died that the rest of their countrymen could enjoy peace and security. Thousands of others suffered wounds or imprisonment. Millions of their comrades in all the Allied forces underwent terrible ordeals to crush German, Japanese, and Italian militarism and make the world safe for peace-loving peoples.

Their sacrifices have made possible, but by no means assured, the fulfillment of this lofty ideal. Axis militarism has been defeated but it could revive again—undoubtedly will revive again—if the free peoples do not organize the postwar world in such a way that aggression becomes both unattractive and impossible.

Military victory is not an end but a means. The victors must hold the vanquished under control until the war makers are thoroughly discredited in the eyes of their own countrymen, until decent Germans and Japanese have learned how to govern themselves and live amicably with the rest of us.

If the United States fails to participate in this pacification and reconstruction job it will doom the sons, possibly even the younger brothers, of the men who fought this war to fight a third world war. The idea of aggressive war has not yet been banished from many enemy minds. The Second World War has not yet been won.

Reports from dependable American observers with no political or military axes to grind show that redeployment, as now being conducted under unbridled political pressure, has gotten badly out of hand. They show that the United States is rapidly dissipating the great influence it should be exercising for continued peace with justice.

The situation calls for sober second thoughts by servicemen and their relatives. It calls for more discerning and courageous leadership by the President and Congress. The men who now threaten to punish at the polls those who fail to bring them home immediately will join with the rest of mankind in decrying the folly of 1945-46 if, a decade or two hence, they find the world back in the mess from which they fought to retrieve it for four awful years.

While bringing home the men who won the war as fast as they can be relieved without jeopardizing the peace, the Government should be creating a permanent organization—partly military, partly civilian—for carrying out our postwar overseas obligations for as long as may be necessary. Peace is no game for hit-and-run participants. It must be striven for in season and out.

## Refusal of General Vaughan To Use Government Car

EXTENSION OF REMARKS
OF
### HON. CARL A. HATCH
OF NEW MEXICO
IN THE SENATE OF THE UNITED STATES
*Wednesday, December 19, 1945*

Mr. HATCH. Mr. President, I wish to observe that many of us in the Congress have commented upon, from time to time, and have even criticized certain officials in other departments of government for having Government automobiles and Government chauffeurs furnished for their use. Such criticisms have occurred of minor officials and even of employees, and sometimes of major officials. I realize that if I were to say that one official in another branch of government had accepted the use of a Government car, to be driven by a Government chauffeur at Government expense, it would excite no comment and would not be news. But it happened to be called to my attention just recently, by an item in the column entitled "Inside Washington," written by Jim H. Brady, that the military aide to the President of the United States, Brigadier General Vaughan, has actually refused the use of a Government car or a Government driver, and is operating his own car at his own expense. Mr.

President. I think that is a matter of news, and is entitled to be published in the RECORD. Therefore, I ask unanimous consent that an excerpt from the column written by Mr. Brady be printed in the Appendix of the RECORD.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

Brig. Gen. Harry W. Vaughan, military aide to President Truman, doesn't believe in accepting special considerations from the Government. As military aide to the President the general is due a car and driver, but he didn't think it was proper to accept this special service.

The Missouri Democrat walked down the street and bought him a Hudson coupe with his own money. "Now I don't have to worry about waiting for a driver and when I go some place I spend my own money," the general said. "Probably the only trouble is in finding a place to park around the White House."

General Vaughan is a regular fellow. He does an excellent job taking the place of Gen. "Pap" Watson, beloved aide to the late President Roosevelt. The general's wife is a nice person, too. She likes to stay home and care for her children. She is a Cub Scout Mother and has a lot of fun with the troop.

General Vaughan went to the Potsdam Conference, and the Mrs. told him to be sure and bring each scout back a present. He found each boy an Iron Cross, German medal. The troop was tickled pink. So was I, because the general brought me one, too. This was also at the suggestion of Mrs. Vaughan. She's swell.

## Address of Hon. Robert F. Jones, of Ohio

EXTENSION OF REMARKS
OF
## HON. ROBERT F. JONES
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, December 19, 1945*

Mr. JONES. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following address delivered by me before the Ohio Chamber of Commerce at Columbus, Ohio, on Friday, December 14, 1945:

Mr. Chairman, distinguished guests and members of the Ohio Chamber of Commerce, somebody handed me a tough assignment when they suggested I talk on the subject of future costs of Government. If I am a good guesser you will have a good speech! If I am a poor guesser, I am a bum. This, however, does not detract from the importance and vital consideration that must be given to the subject.

The gentleman from Missouri, Mr. CANNON, chairman of my committee, the Committee on Appropriations, said:

"In the seventeenth and eighteenth centuries, every administration that came into power or fell from power in the Old World either rose or was wrecked upon its fiscal policies."

That statement intrigues me. It is a statement of fundamental truth. It is elemental that no nation can indefinitely maintain itself on deficit financing. In the end, disaster overtakes any nation which fails to grasp this simple truth, and so we must look at the subject of future costs of government in the final analysis from the standpoint of the ability of the people to pay for the service they demand of government.

We shall very shortly have a $300,000,000,000 debt, most of which came from the World War II expenditure of $416,628,032,000, roughly, worth of appropriations for the Army, Navy, and Maritime Commission, Executive Office of the President and other agencies. Now the war is over. We have collected some large sums of money from regular taxation, the surtax, and excess-profits tax, so that the $416,000,000,000 of war is not all national debt. With every cent that we could collect, and the highest annual tax bills in the Nation's history, the debt will be $300,000,000,000. And it is with this burden on our backs that we must pause and look at the historical tracks from whence we came over 156 years of our Nation's history. We must look over the road that leads from the beginning of our Government down to date and stretches ahead into the far distant future.

The nature of decisions we make today, to a very large degree will determine the destination and the road we take as a Nation, not only next year but for 100 years to come. The size and strength of America as a fighting force and perhaps a builder of the peaceful world, ties up the destiny of all the peoples of the world. Therefore, unless we can maintain the United States of America on a sound financial basis, there is disaster for the entire world.

The situation is critical and is all the more critical because the people of America have not reached a crisis in their thinking. They are not aware of the tremendous responsibility that accompanies the $300,000,000,000-debt upon the backs of 140,000,000 people.

Now, let us take a look back over the road. The Federal Government was a very inexpensive organization in the early days of the Republic. We all know this and it demands no proof. We never reached a billion dollar appropriation until the fiscal year 1909.

Right here may I pause and tell you how much a billion dollars is. A billion dollars would pay 1,000 men $2,000 a year for 500 years.

Now I repeat, we never reached a billion dollar Federal appropriation until the fiscal year 1909, and we stayed within the one-billion limit until we entered the First World War, and then our expenditures were the largest in the history of the Nation at that time. In the fiscal year 1918 we appropriated nearly $19,000,000,000 and in the fiscal year 1919 we appropriated $27,000,000,000. This initial expense of $46,000,000,000 was the initial cost of World War I.

I was alarmed and shocked when I looked at the record of appropriations of the Federal Government after World War I and learned that for any single year after the First World War appropriations never got down below 350 percent of the last pre-World War I normal peacetime year. The lowest Federal appropriation after World War I was in 1922 when the appropriation was roughly $90,000 less than $4,000,000,000.

In the 1920's the highest postwar appropriation was five and three-fourths times the last full peacetime normal year expenditure.

Now the 1930's mark the beginning of an era when we started on our spending psychology in the Federal Government. Some folks attribute it to a period of unrestrained and uninhibited personal expenditure of the people in the twenties. As a people we bought what we wanted. Too often we bought what we saw whether we were certain we needed it or not. We did not stop to count the cost nor to consider whether we would ever pay out. The result was a spending spree among people which the world had never seen nor enjoyed before. When the crash came in 1929, there was some encouragement from politicians and even statesmen that Uncle Sam bridge the gap and take the place of the individual of the Nation as the great spender who does not count the cost or ask whether there is ever going to be money to pay for it. We are still on a spending psychology and I think a few concrete instances will show us exactly what I mean.

I will quote from the chairman of the great Appropriations Committee who talked to the Members of the House on November 27, 1945. He said:

"Let us take a few concrete instances. For example, let us check the astounding growth of the agricultural appropriation bill. For the fiscal year 1933 the agricultural appropriation bill totaled $175,000,000, to be exact, $175,671,665. That was a large sum.

"Under the chairmanship of Congressman James W. Wadsworth, of New York, the father of our distinguished colleague, JAMES W. WADSWORTH, Jr., the agricultural appropriation bill carried a total of $3,232,995. But coming back to modern history. In 1940, the agricultural appropriation bill was $1,194,498,633. In 7 years the bill had jumped 700 percent.

"Let us check the Interior Department appropriation bill. In 1933 it was $45,533,672.33. At the beginning of the war it had reached $188,325,923. Likewise, the State, Justice, Commerce, and Labor bill for the fiscal year of 1933 was $112,291,970.89. In 1941 the combined bills representing the same departments aggregated $1,130,431,691.

* * * * *

"It might be added, however, that the civil functions bill, reported out by the Subcommittee on War Department Appropriations, but which carries only civil appropriations, increased from $106,578,489 in 1933 to $305,188,514 in 1940."

Let us summarize. In 1933 the entire appropriation for running our Federal Government in that peacetime year was $5,750,000,000. But for the fiscal year 1940, which, by the way, is the last 6 months of the calendar year 1940 and the first 6 months of 1941, the ordinary expenditures of Government amounted to $13,333,000,000. This is a 230-percent increase over 1933 fiscal year, and I quote again the chairman of the Appropriations Committee, Mr. CANNON of Missouri, when he says:

"Now these bill were typical of practically all Government expenditures. In those 7 or 8 run-away years we increased the supply bills, the annual appropriations, by leaps and bounds. There is no parallel in the fiscal annals of any nation. Remember these are not war expenditures. There is nothing here for war or preparation for war. All the figures cited are peacetime expenditures for the annual housekeeping expenses of the Nation."

John Q. Public in the twenties was a dollar-down-and-a-dollar-a-month victim. Uncle Sam took his habit and became a billion-dollar-down-and-a-billion-dollar-a-month good time Sammy. We approached World War II with this kind of an appropriation attitude, without any regard whatsoever for the condition of the Treasury. We are apparently approaching the peace after World War II with the same attitude we had before we felt that any mad dogs at large in the world were a threat or danger to us.

Now, with this background of attitude on the part of the people and the Congress toward the Treasury of the Federal Government, we have the proper background now to make a survey of the future costs of government. I think the best way to get at the cost of government is to take a look at the regular peacetime establishments of the Government, see how much they cost, eliminate the War and Navy Departments and other war items from them, and substitute the best peacetime estimates at this time that can be made in place of these war appropriations.

In the calendar year 1945, we have appropriated in the regular supply bills as of June 30, $66,900,297,000, roughly. Since that time we have appropriated $2,938,401,030.98, bringing the total to $69,838,598,000.

Now, I shall give you a statement of the first peacetime annual cost of government on the assumption that the departments and regular agencies of the Government will not ask for any more money for raises in salary, that there will be no new programs, and that the War and Navy Departments will ask for the peacetime sums the best estimates of which I can get to date. I will call them fixed charges.

The first fixed charge will be interest on the national debt. It is already between $5,000,000,000 and $6,000,000,000 annually. That one item alone is larger than the entire expenditure of the Federal Government for all purposes prior to 1934. This expenditure for the national debt each year will have to be paid before we can start to begin to commence to figure on running the government. This interest charge of $6,000,000,000 is a very conservative figure because, comparatively speaking, all of the bonds are sold on short-term issues and the bonds and certificates of indebtedness or what have you will have to be renewed and refunded at the end of their maturity date. Everyone knows and everyone will admit that Uncle Sam is not going to pay these bonds on the due date. At the present time Uncle Sam is borrowing money at the lowest rate of interest ever paid by any government, 2 percent annually on the Government debt, which is a very small item. But we can take a look back and see what happens on refunding World War I obligations of the Government, and it is reasonable to assume that Uncle Sam probably cannot purchase the use of money for anything near this rate of interest. I may be fooled, but it is very likely that when we refund this enormous $300,000,000,000 public debt it will bring a $12,000,000,000 fixed charge annually. It may be that annual interest on the public debt will never be this high, but if we use the same percentage of rise and interest rate on refunding bonds issued by Uncle Sam for the World War I war debt, we shall have a fixed charge at least of $10,000,000,000 annually.

The second fixed charges that everyone is agreed we shall have is for the War Department establishment. The best estimate that I can get from the War Department as to their hopes is $8,000,000,000 a year for the War Department.

If you talk to the average man on the street he will say that we ought to remain strong as a nation, we ought to have the best Army in the world. We don't want any war. President Truman says we don't want any territorial aggrandizement, but the people of America, if I can judge them correctly, want us to be prepared. There is only one conflict in the argument and that is the manner and means of raising the actual manpower. At the present time everybody connected with the administration—and the administration has the votes in Congress—is insisting that a large War Department appropriation will be requested, and $8,000,000,000 is the figure that keeps rattling around in Washington like Caesar's ghost. This figure for the Army has never been set down in writing in any formal request to Congressmen, but if I can judge the public relations maneuvering, I say the figure of $8,000,000,000 is what they hope for.

The next fixed charge which is for the Navy Department. The annual Navy cost is definitely a part of legislative history. The Congress has already authorized a number of components of ships and auxiliary craft which will require an expenditure of three and one-half billion dollars a year.

Tied to these two items is compulsory military training expenditure of two and one-half billion dollars a year, one and one-seven tenth billion dollars of which is for the Army and the balance for the Navy.

I add another fixed charge and this is one that no Member of Congress or citizen will want to escape. It represents the greatest debt of honor America owes today. I predict that the initial start will be an extra billion dollars in the immediate future. It is three and one-half billion dollars now and I estimate in the immediate future it will run another one and one-half billion dollars. It is our obligation to the veterans. We must pay the veterans' allotments, pensions to his widow and children and orphans, the expense of his education, the hospitalization, his loans to become businessmen or farmers; we must pay for all of these things we have promised and guaranteed the men who bared their breasts for the Nation in its time of need, in the GI bill, in legislation already passed, and in other legislation which will be passed in the future. And, however much we pay, it will be only a part of what we owe them.

Testimony before the committee indicates that the peak of hospitalization of veterans of the war will not be reached until 1975.

We are today paying pensions for every war the United States has fought except the Revolutionary War. We are still paying pensions for the War of 1812, for the Mexican War, the Indian War, and the Civil War, and we will be paying pensions on this war for 100 years to come. From this time on we must set aside at the beginning, before we pay anything else, billions of dollars to redeem our obligations to the veterans. That is a fixed charge that cannot be avoided and one which no one desires to avoid. And its cost will run into the billions.

We have already appropriated $1,350,000,000 for UNRRA and we have authorized an additional $1,350,000,000 this fiscal year. That appropriation, I estimate, will be forthcoming in the spring. I have put this charge of $1,350,000,000 as a fixed charge of government. You may find some argument with it. Everyone today says that UNRRA is a temporary organization to which the United States makes 70 percent of the entire world contribution so that the peoples of the devasted countries may get on their feet, or at least get by the first harvest period. May I point out to you, that the $1,350,000,000 grant, appropriation, gift or loan is not far from the permanent subsidy, WPA, commercial endorsement, or investment which will be given to foreign countries each and every year of the Republic, if America continues its present dream world of international thinking. Corporations that start making outright gifts or cooperative contributions to South American countries, European countries, Asiatic countries, and island continents have developed techniques and contracts which, if they continue at the present rate of growth, we shall easily be making this expenditure of $1,350,000,000 each year. The UNRRA may go out of existence, but a new agency will be created to take its place. At the present time, there are 35 separate agencies making loans, money grants, and contributions to other countries and I predict that this is the minimum of the load Uncle Sam will carry.

Now, for the next fixed charge, I turn to the independent offices hearings before the Appropriations Committee last spring to get some idea of the public works that may be expected so that you will see that I am not talking through my hat when I say that expenditures for public works are estimated to be $5,000,000,000 a year.

Mr. Field, who made the representations to the committee on the witness stand for General Fleming, said:

"I am including everything. We feel that in the postwar period we will have a national income of around $150,000,000,000 if we are going to keep our economy going with relatively full employment. If we are going to have from 50,000,000 to 60,000,000 people working, we are going to have to have a total volume of new construction of at least $15,000,000,000 per year. Our estimates are not based solely on our own feeling about it. The American Society of Civil Engineers has been working on this a great deal, trying to stimulate interest in planning and construction, and it has come up with the same figures—$10,000,000,000 worth of private construction and $5,000,000,000 worth of public construction, or a total of $15,000,000,000 per year.

* * * * *

"We think the construction industry should be prepared to do an average of $15,000,000,000 of all types of construction each year in the postwar period. We think at least $10,000,000,000 of that should be private construction of homes, commercial buildings, improvements and additions to industrial plants, and that type of activity. We think there is a very good chance it can get up to that point—which leaves $5,000,000,000 for public works of all kinds."

Now I am ready to correct my statement for future costs of government for the immediate fiscal year of 1946, as a base for the peacetime fiscal year of 1946. I take the $66,900,000,000 that we appropriated as of June 30 this year, I subtract the Military and Naval Establishments' appropriations passed during the war, amounting to $45,000,000,000, and substitute in their place the Army and Navy $8,000,000,000 and $3,500,000,000, respectively, leaving a base for peacetime operations of $33,302,000,000, roughly. I add the first deficiency and UNRRA deficiency, which we have already passed, amounting to $2,938,698,000; an UNRRA appropriation of $1,350,000,000; $5,000,000,000 for public works; $1,500,000,000 extra for the veterans; conscription, $2,500,000,000; and get $46,590,598,103. This is the base of operations, apparently, for 1946 and future years.

As I told you earlier, after the First World War you know what the percentage was in the increase in cost of Federal appropriations. Human nature of bureaucracy is no different in this postwar period than it was in the 1920's, and I am advised by the members of the Independent Offices Subcommittee on Appropriations, who are holding hearings on requests for the independent establishments of the Government before the entire President's budget is submitted, that each one of these agencies is asking for substantial increases in their appropriations, increases in salaries, personnel, and functions because of the great emergency which exists at the present time.

This $56,000,000,000 peacetime figure for 1946 I contend is a conservative estimate of the future cost of government. Don't get the idea in your head now, that if the same administrative governmental point of view or the people's point of view is continued that you will get any governmental annual cost below this $56,000,000,000 base. I have cut these estimates down to the rock bottom and believe me, an internal bureaucracy of 2,500,000 civil servants in continental United States and 850,000 civil servants in foreign countries wil be spending one-half their time finding ways and means of continuing and extending their own personal importance on the governmental pay roll, and indispensable importance of the agency for whom they work.

There are now 850,500 civil employees working in foreign countries. This is practically the same number of civil servants employed on the entire Federal pay roll of the United States and its outlying possessions on June 30, 1938, to be exact, the entire 1938 civil employee pay roll was 851,926, and if you think anybody having charge of presenting estimates to the Budget to Congress has in mind removing any of them from the pay roll, you are badly mistaken. So $46,500,000,000 is the base of the thinking in the present trend of government.

There is nothing here for the health program proposed by the President. There is nothing here for the huge speed-up or expansion program for reclamation construction which will be proposed by the Reclamation Bureau of the Interior Department. There is no increase for the ambitious program of the War Department civil functions adminis-

tration for the construction of huge multiple-purpose dams for the generation of cheap electricity. There is nothing here yet for the program of $770,000,000 for the construction of an airport on every pasture land adjacent to an unincorporated village. These estimates do not contemplate $880,000,000 construction program of the Post Office Department for every city and hamlet in the land that has not already received a new post office in the 20's and 30's. It does not contemplate the huge expenditures that the Department of Agriculture might anticipate to pay farmers for raising nothing and for contouring their farms. There is nothing here for the increase in international obligations caused by the United Nations Organization and other commitments and obligations in the international field resulting from World War II. And it does not comprehend the cost of proposals of the full employment commission which the administration hopes to establish to make recommendations to the President and to Congress for keeping 60,000,000 people employed forever in the United States. There is another item that is tangible and is as sure to come as the night follows the day but as yet there are no estimates from the Budget Bureau so that I can make the slightest guess, and that is for promotions in the various agencies of the executive branch of the Government. I refer again to the independent offices hearings where it was developed that some men who started at $3,600 in 1933 are drawing $9,600 a year. The only psychology or unwritten law which limits executive department salaries is the congressional salaries of $10,000. Once congressional salaries are raised, there will be a virtual army of employees' salaries in the executive branch to jump from the unwritten limit now of $10,000 to $12,000, $15,000, or $20,000 or whatever Congressmen might vote for themselves in salaries.

I am going to post some of these items and some projects that have approval by the President in his September 1945 message to Congress or are legal authorizations now and indicate to you the size of the bills that have been or are about to be introduced by Congress to make these projects law:

| | *Per year* |
|---|---|
| Federal aid for education | $500,000,000 |
| Vocational education aid | 100,000,000 |
| Free food stamp plan | 500,000,000 |
| Rural electrification (additional) | 420,000,000 |
| Federal aid to hospitals | 110,000,000 |
| Federal health program | 600,000,000 |
| Sewage treatment program | 100,000,000 |
| Federal housing program | 80,000,000 |
| Increased Federal salaries | 500,000,000 |
| LUMP-SUM PLAN | |
| $880,000,000 post office construction | 100,000,000 |
| $770,000,000 airport construction program | 77,000,000 |
| $500,000,000 Commodity Credit Corporation | 500,000,000 |
| $3,000,000,000 Federal aid for highways | 500,000,000 |
| $5,000,000,000 new river valley authorities | 500,000,000 |
| Total | 4,587,000,000 |

I will not charge that these bills will be annually appropriated, but I will make a safe bet on them or increases in established programs to win, place, or show to the extent of $3,000,000,000 annually, if the President, the Congress, and the people continue the present spending attitude.

There is now pending before Congress a bill for $4,500,000,000 for loans to Britain. If this bill passes and we loan money to Britain, it is only reasonable to assume that a loan to Russia will be forthcoming immediately. You know that when Russia sends her delegates here for a loan and we have already gone on record that because of Britain's sacrifices in this war we have made a loan of $4,400,000,000, Russia will say: "Well, what do you think of our sacrifices in the war? Look at the men we saved. Look at the American lives we saved." And Russia will go away with a $4,000,000,000 loan.

Bretton Woods commitment authorized is $5,850,000,000. That is law today. I shall only change the estimated original commitment of $3,300,000,000 for the capital fund of the bank.

Gentlemen, we are at the cross roads in America because bureaucracy is unrestrained. The Appropriations Committee and Members of Congress are not able to restrain the people or themselves from making these huge demands on the $300,000,000,000 burdened Federal Government, as the congressional record of debate on the last Deficiency Appropriation bill shows.

There was one item of particular significance in that bill which illustrates the fact that Congress is like the girl that can't say no. The Committee on Appropriations deferred consideration of $128,000,000 for the projects of the civil functions of the War Department. Twenty-five million dollars was for rivers and harbors; I shall not discuss that item. But the flood-control item was mainly for hydroelectric multiple-purpose dams for the generation of cheap power. The Appropriations Committee was soundly pummeled, sadly defeated, and the entire appropriation for the generation of electricity projects were added to the bill on the floor of the House. I think this $87,000,000 was added with reckless abandon. There is no provision in the flood-control basic law that people who get this cheap electric power at the taxpayer's expense shall ever pay back a dime of principal for the cost of installation.

There is no provision in the flood-control law that they will ever get back a cent of interest, and yet these are capital investments to benefit citizens of the United States who are unwilling to make an investment to recompense the Federal Government for even a part of the cost of the advantages they get.

I have figured out the probable tangible costs with a base of $46,500,000,000. I add the probable additions which are made tangible because the President has mentioned them in his message to Congress in September 1945. I add $14,700,000,000 to my base figure of $46,590,698,103 and come up to a probable cost of government in the near future of $61,290,698,103.

Each month, each week, and almost daily somebody comes forward with a huge program that will cost Uncle Sam another billion dollars.

If I were an aviator trying to describe the weather on future costs of Government I would say, "Ceiling unlimited—visibility zero."

WHAT SHALL WE DO ABOUT IT?

The first thing you can do is send word down the line to the local secretaries of chambers of commerce urging them not to sponsor programs that demand Federal contributions. The argument is advanced by these local chambers of commerce that if the local people will bond the local subdivision for $250,000 the Federal Government will make a contribution of $500,000; and the argument is advanced by the chambers of commerce "if our city doesn't get the $500,000 from the Federal Government, another city of the same size will get the money." Now, if chambers of commerce are going to sponsor this kind of propaganda as representatives of businessmen who are most vitally affected by deficit financing, confiscation of private property by a $300,000,000,000 plus public debt, then truly Uncle Sam is headed for the rocks financially and can never recover.

I have a 1939 Dodge automobile. I would like very much to have a 16-cylinder 1942 model Lincoln. If I buy it, I will have to mortgage my house, and I suppose, once I made the purchase, I would enjoy driving behind 16 cylinders of power and would look very prosperous in this millionaires' limousine and could create quite a good impression until the mortgage came due. Now, from my family's standpoint, my investment of $4,500 ought to be kept in my home so that they and I are never tossed in the street. By this same token, public spending debts must be paid. If I default on the loan, I would lose my home and a receiver or the sheriff would sell it; when a government goes into bankruptcy a dictator takes possession of the government. There are no present advantages, no will-o'-the-wisp prosperity, for any local community that offsets the danger of dictatorship.

I go back now to that group of men who bared their breasts for our country. We owe them the first consideration to pay the debt of honor we owe to them for giving us our security today. I hope that chambers of commerce will not be a party to raiding the Treasury for foolish expenditures at home and unsecured, unsound loans to foreign governments abroad so that the war veterans come to an empty till for the GI benefits, and may God curse us if we put him on the streets selling apples because we have helped empty the till.

I have visualized the foreign loans at $8,400,000,000. With all my heart, I urge that the United States do not make the loan. If there are citizens of the United States that want to make the investment in the socialism of Britain and communism of Russia, I suggest that Congress authorize the sale of British and Russian bonds to those that want to buy them in America.

Secondly, if the majority in Congress now determine that the loan should be made by Uncle Sam, I suggest that a separate bond issue be made. I don't propose that Uncle Sam pay 2 percent regardless to the people that buy these bonds. I propose that under the terms of the loan to Britain and Russia, when the British Government and the Russian Government are not required to pay interest, then the bonds issued for this purpose do not bear interest. Then, if Uncle Sam has made a bad deal, those that wanted him to make the bad deal and have faith in the investment may be the only ones to suffer the lesser return on their investment.

Thirdly, I suggest before Congress transfers the assets of the United States of America the President should present a genuine plan to balance the Budget of the United States within 2 years.

## Democracy on the Diamond

EXTENSION OF REMARKS

OF

### HON. WAT ARNOLD

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, December 19, 1945*

Mr. ARNOLD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article from the St. Louis Post-Dispatch of December 12, 1945, being a reprint from the Saturday Review of Literature, Democracy on the Diamond, by John T. Winterich:

DEMOCRACY ON THE DIAMOND

(Jackie Robinson, a Negro ballplayer signed for a Brooklyn farm, is the first athlete of his race in modern organized baseball, writer says; tolerance in the ball park is seen as significant for America; issue is not color of his skin, but simply: "Can Robinson play ball?")

(By John T. Winterich in the Saturday Review of Literature)

A Negro named Jackie Robinson may well become one of the stouter bulwarks of a tolerant and understanding America along about next April. Robinson has just signed up with the Montreal team of the International League.

Montreal, in baseball parlance, is a Brooklyn farm—if a player makes good in Montreal, the gates of Flatbush are likely to be flung wide for him, and garlands of allanthus leaves showered at his feet.

There is no present indication that such attention, if he ever comes to merit it, will go to Robinson's head. There is every indication that it will not. Robinson knows what he is up against, or put it a little more accurately, what is up against him.

NOT A CRUSADER

Robinson will be the first Negro player in modern organized baseball, according to Al Laney of the New York Herald Tribune sports staff, who interviewed him the other day. Robinson opened his heart to Mr. Laney. Said he:

"I know that I will take a tongue beating. That I can take. At least I think I can take it. And I am due for a terrible riding from the bench jockeys all around the International League circuit if I am good enough really to play with Montreal all summer. I know about the riding white players give one another and I am sure it will be much worse for me."

Robinson makes it clear that he is going into class AA ball as a ballplayer and not as a crusader. Rather, he will crusade by not crusading. He has seen tolerance breed tolerance before.

He played football for U. C. L. A., and has confronted the brawniest that Southern Methodist, Texas Christian, and Texas A. and M. had to offer. No individual among his opponents screamed to the white man's God about "white supremacy" or made any lustier passes at Robinson than the tactics of the game demanded. Robinson ought to know.

"They played hard football," he says, "and really gave me a smacking at times, but I can say with perfect honesty that there never was the slightest thing to indicate that they were giving me the business because I was a Negro."

INVITED BY SOUTHERNERS

Later he played in the All-Star game in Chicago with a team that included half a dozen southern boys. Of this experience he says:

"The first few days in camp there was a slight tension. I noticed it and kept to myself. When the other boys would play poker I would sit around by myself reading a magazine. On about the fourth day these southern boys came to me in a group and asked me to join their game. After that we were friends, everything was entirely natural, and there was no restraint. And I want to say that, in the game, these southern boys gave me the best blocking I ever had."

Laney, exploring all sides of the issue as a good reporter should, asked Robinson "what this proved with regard to his coming baseball career." Robinson said, "It proves, or at least it indicates to me, that once the ice is broken and the idea accepted, the thing is entirely possible."

Of course, the thing is entirely possible. It is absolutely inevitable if America is going to live up to its high protestations of democracy. And there is no better place to begin it than on a baseball diamond.

WHAT TWO-BAGGER WOULD DO

Ten thousand ball-park customers roaring their approbation of a slashing two-bagger from Jackie Robinson's bat will mean more for American democracy than 10,000 other Americans applauding Hazel Scott's piano playing (not in "Constitution" Hall) or Paul Robeson's acting—and Hazel Scott and Robeson would be the first to admit it.

Last winter Robeson made an eloquent plea for the admission of Negro players into big-time baseball. A committee of 10 appointed by Mayor LaGuardia of New York City recently reported that "sheer prejudice and tradition" have heretofore motivated the exclusion of Negroes from organized baseball.

Of those 10,000 ball-park spectators, probably only a small proportion will be familiar with Native Son or Black Boy or If He Hollers Let Him Go. A higher percentage, thanks to a golden platterful of publicity from Boston, will know something about Strange Fruit.

"There is no possible chance that I will flunk it or quit before the end for any other reason than that I am not a good enough ball player. That is the only thing I could be mistaken about. The other things I know." So concludes Jackie Robinson.

Whether Jackie Robinson is or is not a good ballplayer is the only question at issue.

Mr. Speaker, those well-meaning Congressmen who are trying to make a permanent bureau of the Fair Employment Practice Commission, which was established as a war-emergency measure, should take warning from the above article.

The small businessman, and there are many of them, cannot afford a legal staff; so, when the dissatisfied employee or the applicant for a job thinks he has not had due consideration, he can, under FEPC, if it becomes a law, bring suit against the employer and, even though the employer wins the lawsuit, it has cost him more than he can afford, in court costs and attorney fees, to clear his business of the charges.

Such permanent legislation would result in a field day for the lawyer, make added expense for the small businessman, and he would have another bureau in Washington telling him who to hire.

Good performance, good citizenship, and character, as in this Negro's case, will take care of any possible discrimination on account of race, creed, or color.

## Joe Israelite

EXTENSION OF REMARKS

OF

### HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, December 19, 1945*

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein an editorial that appeared in the column of the Chelsea Evening Record, of Chelsea, Mass., on Thursday, December 13, 1945, which is an eulogy on the passing of one of the most active citizens of that city. Attorney Joseph Israelite, a lifelong resident of that city, graduated from Harvard College and Boston University Law School with honor and distinction. He had served the municipality as an alderman and city solicitor. Up until the time of his death, Joe Israelite was loved, honored, and respected by the people of his city and by others, like myself, who had occasion to have business dealings with him. For the past few years he had worked unceasingly and untiringly for the city of Chelsea to protect the interest of his home city in the famous Green tax case. In the passing of Attorney Joseph Israelite, his city has lost a faithful public servant and his family has lost a sincere, honest, and conscientious son and brother. To them we all extend our deepest sympathy with the hope that they may be strong enough to bear the burden of their grief in this hour of sorrow.

JOE ISRAELITE

The untimely death of Joseph Israelite, former alderman, former city solicitor, and special counsel for the city in the Green case, is a definite loss to this community.

No man gave more sincere service to this city in the past generation than did Joe Israelite. It may well be said that he gave his life in the service of Chelsea, for it was his appearance and vigorous protest against the current oil petition which caused his most recent and fatal collapse at the city hall, last week.

Strong in his convictions, aggressive in matters in which he believed he was right, Joe Israelite often was referred to as "the ideal alderman" when he was serving the community in that capacity. He was a fighter for his cause to the end.

He was city solicitor when the Green case came up. He tackled it with characteristic vigor. He studied the complex situations from every angle. He literally lived with the Green case and he won every skirmish in every court. Judges and opponents admired his presentation of this case. He suffered a collapse while working on it, and then another later, but of these only a very few intimate friends knew. He was advised by physicians and friends to "take it easy," but it was not his nature. He continued to throw everything he had into his work.

A clean, upright, honest, outstanding citizen, who fought long and hard for what he believed was for the city's best interests; a devoted son and an efficient public servant, he will long be sorely missed and his place not easily filled.

## Antistrike Legislation

EXTENSION OF REMARKS

OF

### HON. ROGER C. SLAUGHTER

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, December 19, 1945*

Mr. SLAUGHTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letters:

CONGRESS OF INDUSTRIAL ORGANIZATIONS,
*Kansas City, Mo., December 12, 1945.*

ROGER C. SLAUGHTER,
*Member of Congress,*
*House Office Building,*
*Washington, D. C.*

DEAR SIR: I observed in the Kansas City Times this morning that you were one of the leaders in the House battle yesterday to obtain immediate action on a more drastic antistrike bill than the plan recommended by the President, and I am not in the least surprised at your action.

When such matters as the FEPC, 65-cent minimum wage, $25 unemployment compensation, and other bills were recommended by the President of the United States for

the good of the public, you were one of the first to take an opposing position to these measures. It seems that your position is more pronounced every day insofar as legislation affecting labor is concerned. Your actions are certainly branding you as antilabor.

The type of legislation which is being proposed today and which you seem to favor is the same type of legislation which was enacted by the Nazis in Germany during their rise to power, in which they wiped out labor unions in that country. The same was true in Italy during the rise of fascism.

As soon as a group of workers try to better their economic conditions, the cry for antistrike legislation and measures necessary to protect the public are raised by the reactionaries who are present in our Government today. Nothing is done to big business when it decides to strike against the Government—and such a strike is going on today because of the excess-profits tax. Many employers do not care whether they produce anything or not until after the first of the year because if they do not produce they save money because of legislation enacted by yourself and other Congressmen.

Labor willingly sacrificed during the war, but they are not willing to continue to sacrifice anything now that the war is won for the benefit of the millionaires of this country. They are only willing to sacrifice when it benefits the entire country as a whole. Labor is entitled to a decent, living wage and it is about time that we put into effect the four freedoms proclaimed by our late departed President Roosevelt, instead of hanging them on the wall and talking about them, but doing nothing about them.

I tell you, sir, that if this type of legislation is enacted or the type proposed by President Truman in his recent message that the greatest injustice to the workers of this country will be done because you cannot take away the liberty of the people without something happening as a result of that deed. If Congress is interested in doing something for the welfare of the country, it had better enact legislation providing for full and real collective bargaining by industry so that our whole economic structure does not collapse.

I can assure you, sir, that your action is resented by the CIO workers in your area and by all of the liberty-loving people of the great State of Missouri. I do not believe that your actions should be guided by your hysteria and that this is the time when clear thinking and analyzing of all problems will be to the best interest of all the people of our Nation.

I aso note that your opposition was upheld by Representative BELL from this area, and I would appreciate it if you would convey this message to him, so that he, too, can understand what is in the minds of the workers in the State of Missouri.

Very truly yours,

IRWIN L. DESHETLER,
*Regional Director.*

---

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
*Washington, D. C., December 17, 1945.*

Mr. IRWIN L. DESHETLER,
*Regional Director, Congress of Industrial Organizations, Kansas City, Mo.*

MY DEAR MR. DESHETLER: I have just received your letter of December 12 in which you denounce the action of the President and the Congress in attempting to curb the unbridled strike wave which is paralyzing the country.

I WAS particularly interested in your statement that any such action is the same type of legislation enacted by the Nazis in Germany and the Fascists in Italy, and which, as you say, wiped out labor unions in those countries. Perhaps through inadvertence you neglected to mention and comment on Communist Russia where workers have no voice at all.

It is to be assumed that your letter refers to two pieces of legislation which were before the House of Representatives last week. The first is the Hobbs bill, which seeks to prevent robbery and extortion with respect to interstate shipments. It is designed to punish individuals who indulge in these practices, and if you think they are customs that should be defended I am sure your reasons therefor would be of considerable interest to the people of Kansas City.

The primary purpose of the May bill is to provide penalties for a labor union that calls a strike in disregard of a no-strike clause in its contract. As a labor leader, I wonder if you would care to go on record as stating that there is less obligation upon a union to keep its contract than there is upon an employer?

You are mistaken when you call the May bill antilabor. It is antistrike in its concept and it is based upon the fundamental proposition that the public interest is superior to the interest of either labor or management. There is a growing feeling that unless something can be done to bring about industrial peace, there will be six and a half to seven million people unemployed by the middle of the year, which means that millions of returning servicemen and servicewomen will be without jobs. The President and the Congress do not propose to let that condition come about without an attempt on their part to prevent this unnecessary calamity.

Many are also convinced that the rank and file of union members are entitled to some sort of protection against the rash and ill-advised acts of leaders like Mr. Reuther, who has taken his men into a strike at a time when his union is in the worst possible position for a costly strike and the giant General Motors Corp. in the strongest possible position for a long conflict. Mr. Reuther has dragged his followers into a long strike with less than $4,000,000 in the union treasury, with the result that to date General Motors employees have lost $28,000,000 in wages, no strike benefits are available, and many of the strikers are without the necessities of life, not to speak of a little extra spending money that would provide some measure of cheer and happiness at Christmas for their children and their families.

You mention democracy at great length in your letter. Certainly there is no place where democracy should operate more firmly than in a labor union. Members of the union should be free to choose their own leaders with free and open elections and with a certainty that their ballot will be counted, and when strike votes are taken, the same safeguard should be thrown around the individual union member to protect him from outside coercion. There is substantial evidence that a great many union leaders, particularly in the CIO, have not been chosen by the members but rather have been chosen by small cliques, for if this were not the case, the question inevitably arises as to why these leaders are unwilling to rely upon the loyalty of their members rather than insisting upon the enforced and hated check-off system in order to make sure that the dues come in.

Neither management nor labor can succeed in this country without popular support. Organized labor has made great strides in the past 10 years, and it is proper that it should. However, with increased recognition comes increased responsibility and irresponsible leaders must be curbed for the protection of the dues-paying members of the unions as well as for the general public.

Very truly yours,

ROGER C. SLAUGHTER.

## Great Cooperative Leader Writes on the Consumer Approach

EXTENSION OF REMARKS
OF
## HON. JERRY VOORHIS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, December 19, 1945*

Mr. VOORHIS of California. Mr. Speaker, the article which I ask consent to have included herewith is written by Dr. M. M. Coady, a priest of the Catholic Church and member of the faculty of St. Francis Xavier University at Antigonish, Nova Scotia. Along with Dr. James M. Tompkins, Father Coady inspired the development of the great cooperative movement of Nova Scotia and the other Canadian maritime provinces. That movement has raised from poverty the fishermen and miners, and many other people of that area. It has grown to include the bulk of the farmers. The credit unions of the area provide safekeeping for the savings and a source of credit out of their own savings for the people.

Thousands of groups of people in the United States meet in neighborhood homes at regular times to study and discuss their problems and decide upon action to solve them. These groups represent democracy at its best. They have grown out of the cooperative movement, and they have found a large part of their inspiration in similar groups which for a long time have been meeting in the Canadian maritime provinces. Here Protestants and Catholics alike have found an approach to everyday human problems which embodies the fundamental precepts of their faith.

Dr. Coady's article follows:

CONSUMER APPROACH—GREEN LIGHT ON THE HIGHWAY

(By Dr. M. M. Coady)

I think I can best illustrate the necessity of the consumer approach in our cooperative ventures by portraying to you the difficulties that cooperative marketing will run into when it gets under way.

Let us make it very simple. We shall take the farmers, for example. They hear, we will suppose, for the first time about this new technique of cooperation. It is, they are convinced, the green light on the economic highway of life. It beckons them to follow. They decide to form a marketing cooperative. When they begin to bring in their commodities, wheat, meat, or anything else, they are suddenly stopped on the first intersection on the road by the green light; a traffic cop rushes out, blows a golden whistle, holds up a threatening left hand and stops the traffic.

Who is this man with the golden whistle? He is the representative of the first hierarchy of business. He is the merchant, the dealer, the wholesaler, or the representative of the market.

He promptly tells the farmers that they cannot cross this golden line, they must stay back on their farms. These men are everywhere and our would-be cooperators are going to experience great difficulties in the beginning if all the people are not thoroughly indoctrinated with the cooperative philosophy. He can smash the farmers' ranks. He can do this because his economic position gives him influence. He stands high in the political and social life of the community.

He is thus a potential danger to any movement of the people to invade, even in this simple way, the field of business.

The reason for this power is to be found in the fact that he owns economic institutions in the consumer field. He owns stores, wholesales or credit institutions. Were he and his kind out of the way, then the road would be easy. Thus, what so many people here in Canada consider the first step in cooperation is encountering an obstacle that can be solved only by the consumer approach.

We can come to the same conclusion from another angle. The farmers, and all primary products for that matter, should not be satisfied with selling their raw material. You western wheat growers could manufacture your wheat into flour. The green-lighted highway that leads east to the Atlantic Ocean is thronged with people who would love to join with you and own cojointly these milling plants.

But you would look down that long way in vain for a chance to do this as long as your fellow countrymen are not organized on the consumer end. Even if you milled your wheat you would still have to give it to your fellow Canadians through old-line profit business and that would not make it much better for you or for them.

In the Maritime Provinces we have 120 cooperative stores—we do about $8,500,000 retail business a year. We have three wholesales which do $5,000,000 business. Now, suppose that we had, in our part of the country, at least one cooperative store in every community and the wholesales set up in all the region, we could go in with you in joint ownership of flour mills and thus give an easy outlet for this manufactured commodity.

And let us remember this does not apply just to the rural areas of Canada, it applies with greater force to the urban communities. The only way that you can carry on cooperative business with the city dwellers of this country is to have them organized in cooperative consumer societies of all kinds.

City people want the farmers' flour, bacon, and other processed commodities, but you can't get them to them cooperatively unless they have consumer societies. But the population in an urban center should not be looked upon as mere consumers—they, too, are producers. If cooperation is to become universal in this country, I might say if it is to survive in this country, then the city dweller must come into the picture. If we are to sell to him, we must buy from him.

This could be done not by separate organizations of city people against rural people but by cooperative associations in which all are members. We feel proud of the fact that in eastern Canada, on account of our insistence on this universal philosophy from the very beginning of our movement, there is a complete understanding between coal miners, steel workers, industrial workers generally, and the fishermen and farmers.

They are not antagonistic. They sit on the same boards of wholesalers and federations of other consumer cooperative societies. They are moving on all fronts together and are looking forward to the day when they will conjointly own manufacturing plants to supply their needs. This should be the ideal of all cooperators in Canada.

But there is still a greater reason why the primary producers need the industrial workers in the cooperative movement. When through the industrial revolution the domestic system was swept away and manufacturing was concentrated in factories located in industrial centers, the masses of the world's people lost control of their economic lives. Consumer cooperation is the instrument which will give us back this control.

The consumer institutions were not swept away from the local communities. Men will always need stores, wholesales, banks, and service institutions. These must and always will be located where people live.

When the people own, cooperatively, enough of these institutions and when the volume of demand grows they can federate into wholesales and either build or take over the manufacturing plants in the distant industrial centers. Here is where the city man is needed most. We need the volume of his business. We will need him as a worker. But he will be something more than a worker and wage earner in the net set-up. He will be joint owner with the primary producers of the manufacturing plants that cater to the needs of all the people. He can become joint owner of a business whose greatness is only limited by the will of the people.

Here we have the key to the new control and ownership of the productive processes in modern society. This is a clever technique. Nothing can stand up against it. Let the people of North America control their consumer institutions and they own America. That is the road back for the masses of the world's people. That is the road that will lift the people from being mere primary producers who do the world's dirty and hard work to full-fledged citizenship.

We are dead men if we cannot see that our manifest destiny here in Canada is to be a great people; we have the country. We should be as broad as Canada—4,000 miles broad; we should be as virile as the North Wind, realistic as the rocks of Ontario, as serene as the waters of the Great Lakes, secure in our stride as the lordly flow of the St. Lawrence, energetic and active as the infinitely turbulent Atlantic, artistic as the island fringes and green slopes of British Columbia, imperturbable as the everlasting, majestic Rockies. If we don't build here a great civilization we will contradict all human history.

## Connecticut Republican Resolution on Palestine

EXTENSION OF REMARKS
OF
### HON. CLARE BOOTHE LUCE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, December 19, 1945*

Mrs. LUCE. Mr. Speaker, the following is a resolution on Palestine adopted by the Republican State Central Committee at a meeting on Thursday December 13, 1945, in New Haven, Conn.:

Resolution favoring action to enforce and accelerate continued development of a Jewish national home in Palestine

Whereas the ruthless persecution of the Jewish people in Europe, which brought death and suffering to millions and has resulted in continued privations for large numbers of survivors, who have become homeless, demonstrating the urgent need for speedy action; and

Whereas on April 21, 1943, the republican legislature passed a joint resolution favoring "absorption in Palestine of as many Jews as may be required" by the plight of the Jewish people in Europe; and

Whereas on June 30, 1922, the Sixty-seventh Congress of the United States unanimously resolved that the "United States of America favors a national home for the Jewish people"; and

Whereas on October 29, 1945, Representative JOSEPH W. MARTIN, Jr., Republican leader of the House of Representatives, introduced a joint resolution urging that the United States use its influence "to the end that the doors of Palestine shall be opened for free entry of Jews into that country"; Therefore be it

*Resolved by the Republican State Central Committee of Connecticut*, That every effort be made to achieve a speedy solution to this grave problem and that Congress be urged to force immediate action to end dilatory practices of the Federal administration, so as to provide full opportunities for colonization by the homeless Jewish people in Europe; be it further

*Resolved*, That our Government initiate steps looking to an agreement among nations that Palestine be reconstituted as a free and democratic commonwealth in which all men, regardless of race or creed, shall enjoy the equal rights of freemen; be it further

*Resolved*, That copies of this resolution be sent to Senator THOMAS C. HART, Representative JOSEPH E. TALBOT, and Representative CLARE BOOTHE LUCE, Republican Members from Connecticut, of the Congress of the United States, to indicate the wholehearted support of this committee of their efforts to win for the tragic victims of oppression the chance to live under the principles of liberty and opportunity which are an integral part of the American way of life.

## Navy Demobilization

EXTENSION OF REMARKS
OF
### HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, December 19, 1945*

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement from the Navy Department:

NAVY DEPARTMENT,
BUREAU OF NAVAL PERSONNEL,
*Washington, D. C., December 12, 1945.*

*To All Members of Congress:*

Subject: Progress report on Navy demobilization.

During the Christmas holidays you may be asked by constituents for the latest information concerning Navy demobilization and the return of veterans from overseas, and it occurs to me that the following facts may be of use to you.

By December 1, more than 3,500,000 personnel of the various branches of the armed forces had been returned from overseas. Of this number, 2,300,000 had been brought across the Atlantic, 1,204,000 across the Pacific, and 73,000 from India.

After World War I it took more than 10 months to transport 1,900,000 men across the Atlantic. During last month alone, 930,000 men were returned to this country, including many who had to be transported distances exceeding 6,000 miles.

In less than 3 months after Japan's surrender the Navy discharged more men than it did in the 10 months following the 1918 armistice. The Navy discharged a total of 351,497 people during November. On December 9, 17,932 naval personnel were separated, the largest total for a single day.

To return veterans there are now available 920 troop and converted combatant ships with a total simultaneous "lift" of 1,400,000 men. We are, at the moment, using more than 350 large passenger liners and converted freighters in the Atlantic, 170 in the Pacific, and 30 to and from the India theater. We are also utilizing 350 passenger-carrying war vessels, including large and small carriers, attack transports, cruisers, battleships, and hospital vessels.

At present, there remain about 900,000 American military personnel in Europe who are either eligible for discharge or who will be eligible by the time transportation is available for them. Nearly all of these are

in the Army. In the same category in the Pacific, there are about a million Army men and slightly less than 1,200,000 Navy men. About 135,000 Army men remain in India.

By early January space will have been made available to return from Europe all personnel except those necessary for clean-up forces and garrison duty. It is expected that sufficient transport accommodations will be available to take all the men out of India by April 1, and all out of the Pacific by early summer. This, of course, excludes occupation forces and service troops.

As for the Navy's problems, we have three major obligations. We must maintain enough ships at full fighting efficiency to meet the Nation's commitments on the high seas and overseas. We must lay up ships, decommission bases, and preserve or dispose of surplus material so that installations and stocks of supplies will not be simply abandoned or destroyed. Lastly, we have a large share of the job of returning to the United States Army and Navy personnel now outside the continental limits.

We have reduced, insofar as possible, the complements of ships. We have discharged, under the point system, or have assigned to other duties, thousands of persons whose services were no longer needed in their particular specialties. But, so long as ships remain in operation they have to be maintained. Machinist's mates and watertenders, among others, are no less busy. With thousands of passengers aboard, the work of cooks, bakers, steward's mates, and supply personnel is more difficult than under normal circumstances.

The number of points normally required for the discharge, under the demobilization program, of enlisted men has dropped from 44 on September 1 to 38 on December 1, and by January 1 the score will be down to 36. The score for officers, which on September 1 was 49, is now 44 and by January 1 will be 43. By the first of the year we expect that approximately one-third of the 3,000,000 naval personnel to be demobilized will be back in civil life; by the end of January, one-half; by April, two-thirds; and by September 1 demobilization is scheduled to be completed.

At the present time we are not assigning to foreign duty any enlisted man who is within 6 months of discharge, nor are we assigning enlisted men who are within 45 days of discharge to vessels making transport trips. Enlisted personnel, who are 38 years of age or over and who have a state of dependency which existed on August 15, 1945, may now be discharged, upon their request, regardless of their point scores, rates, or classifications.

Likewise, any enlisted man with three or more children is considered to have a prima facie case of hardship, and is discharged regardless of points upon his own application. Furthermore, on January 1 enlisted personnel hitherto ineligible for demobilization under the point formula because of the need for their services will become eligible for discharge on the basis of point scores.

In order that as many naval personnel as possible may spend Christmas at home with their families, those Navy men and women ashore and on ships within the continental limits of the United States who will be eligible for discharge on or before December 31 will be separated immediately, wherever they can be spared, so that they may reach home by the holidays.

I have said before, and I repeat, that the Navy is determined to get the men home just as fast as our requirements and transportation will permit. To that end we pledge our best efforts, and the same ingenuity and spirit which were applied to the problems of the war.

Respectfully,

LOUIS E. DENFELD,
*Vice Admiral, USN,*
*Chief of Naval Personnel.*

## Communism in Public Schools of New York

EXTENSION OF REMARKS
OF
**HON. JOHN E. RANKIN**
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, December 19, 1945*

Mr. RANKIN. Mr. Speaker, under permission to extend my remarks, I insert the following letter in the RECORD which was received by the Committee on Un-American Activities on December 18, 1945, from a New York City school teacher:

I am sure that in the large issues confronting you, you have had no opportunity to examine the very serious problem confronting New York City's teachers.

We are forced to take in-service courses approved by the board of education. Of late these have been given by an ever-increasing number of private organizations of very questionable sponsorship. Such a one is a course given by the Institute of Pacific Relations at 1 East Fifty-fourth Street, New York City, where Communist propaganda is the subject of every single discussion on Pacific problems. The merits of the Communist Party, its way of improving life for the masses, and its acceptance as the only way of saving the peoples of the world becomes the center of every Tuesday's meeting.

How are American teachers to protect themselves? Who is providing the loophole for the entrance of these courses into the required work of the New York teachers? You are the only hope we have of bringing this into the open. Individually we can only bring recriminations and loss of license on ourselves if we protest. We want your help.

## Coffee-Cup Tempest

EXTENSION OF REMARKS
OF
**HON. CHESTER E. MERROW**
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, December 19, 1945*

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the RECORD I include therein an editorial from the Boston Herald of December 18, 1945:

COFFEE-CUP TEMPEST

Sugar is short, cream is short, and, unless Washington comes across with a new subsidy or a lifting of controls, coffee is going to be short next spring. We do have the cup still.

For 2 years the OPA has kept coffee prices below the cost of production. This stabilized a cost-of-living item, but it flooded the country with low-grade coffee. When the squeeze began to get so great that even this quality threatened to dry up, the Government came across on November 19 with a 3-cent subsidy on 6,000,000 bags through March 31, representing a $24,000,000 adjustment to the producers.

The result has been a moderate improvement in the coffee now arriving. One large Boston dealer states that the quality is now better than we have had for 2 years, though the choice varieties from Colombia, Mexico, Guatemala, and Venezuela are still going elsewhere than to the United States. It would take a 5-cent subsidy to get them here.

What is to be done after the subsidy expires on March 31? The administration is committed to a policy of abandoning these price evasions on food. But it cannot let go without raising or removing the ceilings, and this it is reluctant to do at a time when labor is protesting at the cost of living.

Now, a second-grade cup of coffee is too much to pay for the appeasement of labor. Americans do not drink the stuff for calories or vitamins, and this includes the rank and file of the United Automobile Workers, too. Nor would the removal of controls result in skyrocketing prices, not with 14 growing countries competing for our market. There is something to be said, too, for the soothing effect on American nerves of a smoother cup of coffee. Certainly there is a lot to be said for the alleviation of Latin-American jitters by an ending of these harassing restrictions.

## Back to Solvency

EXTENSION OF REMARKS
OF
**HON. GERALD W. LANDIS**
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, December 19, 1945*

Mr. LANDIS. Mr. Speaker, America now demands leadership which will bring us back to solvency. Our people are opposed to deficit spending. We need a thorough house cleaning in the departments and agencies of the Government. We must reduce materially the number of Federal employees and weed out those New Dealers who favor perpetual deficit spending.

We must not bankrupt America in order to finance the world. America must not play the role of Santa Claus to foreign nations. The American people should not be required to keep their "nose to the grindstone," to aid foreign nations, when we have a reconversion job to do in the United States.

To risk the taxpayers' money to promote lending and investment to foreign countries may not be a wise investment, particularly if the volume is too large. There is a certain inherent risk which is not present in domestic investment. There is no legal way in which debts can be collected from a foreign country, particularly from that country's government. If payments are suspended, the investor is helpless.

Our own experience in foreign investment has not been very promising. History shows that it will not make for peace. After the last World War we were criticized severely because we made an attempt to recover our war debts. Most of the countries did not even pay the interest on these loans. Then why should we make this large loan to Great Britain? We do not want to bankrupt Great Britain by making such a loan. During a recent debate in Parliament Winston Churchill and the Conservatives opposed the loan on the grounds that it might bankrupt their country.

We want to support the United Nations Organization for international peace. We will aid the starving nations abroad with our surplus food. We have agreed to the Bretton Woods proposal for international financing. However,

any additional foreign loans must be protected with contracts for air bases and strategic and critical materials.

The proponents of the British loan contend that money will come back to America in wider markets, if the plan works. They will use this money to purchase materials and goods in the United States.

However, if this money were distributed to our citizens in wages, farm prices, and old-age pensions both the money and the goods would remain in the United States. It is high time that we do something for Americans first before we try to finance the world.

The New Deal administration now proposes to loan Great Britain a total of $4,400,000,000. The money will be repayable over a 50-year period at 2 percent interest, but repayments will not start until 1951. Under the proposed loan Britain would not pay interest for the first 5 years. Where are we going to get the money? Of course, it will come from the American taxpayers. The idea of loaning Great Britain money at 2 percent and charging our veterans and farmers 3 to 4 percent is ridiculous. Great Britain already owes us $6,400,000,000 from the last World War.

British assets were listed by the United States Bureau of Mines, unmined gold reserves, $24,500,000,000; unmined diamond reserves, $8,800,000,000, and foreign investments of $14,000,000,000.

Mr. Speaker, I was not elected to give America away. I do not believe in making these loans to foreign countries to make socialism work in England and communism work in Russia.

Exorbitant salaries and allowances paid to certain kings and rulers is another reason why American taxpayers might be opposed to foreign loans.

Great Britain: Provision is made for the support of the royal household by the settlement of the civil list soon after the commencement of each reign. The civil list of the present king, established in 1937, after the usual surrender of hereditary revenues, was fixed at 410,000 pounds—$1,656,400—of which 110,000 pounds—$444,400—is appropriated to the privy purse of the king, 134,000 pounds—$541,360—for salaries for the royal household and retired allowances, 152,800 pounds—$617,312—for household expenses and 13,200 pounds—$53,328—for alms and bounty. The civil list also provides for an annuity of 70,000 pounds—$282,800—to Queen Mary. The provisions for other members of the royal family are as follows: The Princess Elizabeth, 6,000 pounds—$24,240; the Duke of Gloucester, 35,000 pounds—$141,400; the Princess Royal, 6,000 pounds—$24,240. No provision is made for the Duke of Windsor.

Belgium: The king has a civil list of 12,000,000 francs—$405,120—and the Queen-Mother of 2,000,000 francs—$67,520.

Egypt: According to law 50 of 1938, the king's civil list is fixed at $413,800, and the royal family's allowance at $413,800.

Italy: The civil list has been settled—1919—at 11,250,000 lire—$570,409; by a law of 1925 an allowance of 3,000,000 lire—$152,109—was settled on the Prince of Piedmont, heir apparent, Duke of Aosta, and the Duke of Genoa receive an allowance of 1,000,000 lire—$50,703—each.

Japan: The civil list is fixed at 4,500,000 yen—$1,054,755.

Sweden: The royal family of Sweden have a civil list of 1,896,900 kroner—$452,012. The sovereign, besides, has an annuity of 300,000 kroner—$71,487—voted to King Carl XIV Johan and his successors on the throne of Sweden.

Switzerland: The president of the federal council has an annual salary of 1,720 pounds—$6,949.

Bulgaria: The civil list is fixed—1938—at 4,791,705 leva—$58,032—besides 27,289,900 leva—$330,508—for the maintenance of palaces, and so forth.

Denmark: The king has a civil list of 1,000,000 kroner—$193,080. Annuities to other members of the royal house amount to 151,200 kroner—$29,194.

Greece: The king's civil list is fixed at 24,000,000 drachmai—$161,160—and of the Diadoch at 4,000,000 drachmai—$26,860.

Netherlands: The sovereign has a civil list of 1,200,000 guilders—$637,536. There is also a large revenue from domains, and in addition an allowance of 100,000 guilders—$53,128—for the maintenance of the royal palaces. The family of Orange is, besides, in the possession of a private fortune, acquired in greater part by King Willem I in the prosecution of vast enterprises tending to raise the commerce of the Netherlands.

Norway: The king has a civil list of 700,000 kroner—$158,963, the crown prince 150,000 kroner—$34,064.

Yugoslavia: The king's civil list amounts to 24,000,000 dinars—$537,528, plus 24,886,328 dinars—$557,379, as difference for payment in foreign exchange.

France: The head of the French Government receives 15,000 francs per month or 180,000 francs per year—equals about $36,000 plus additional allowances for expenses—prewar figures.

It was impossible to get the figures for Russia and China ruler from the State Department or the Congressional Library. They may be secret.

I am opposed to the $4,400,000,000 loan to Great Britain or any other similar loan to foreign countries unless these loans have proper safeguards to protect the American taxpayers. However, I would not object to a specific bond issue where the purchaser of these bonds assumed the risk. This would remove these transactions from the Treasury's general fund operations.

This $4,400,000,000 could be spent advantageously in America in aiding the GI bill of rights, securing decent pensions for the elders of America, care for our Nation's citizens who are undernourished, ill-clad and ill-housed, and carry on an educational campaign to reduce juvenile delinquency to a minimum.

If Great Britain gets this loan then Russia is expected to request a loan of $6,000,000,000, France and China will want to borrow five hundred to six hundred million and other nations will ask for loans.

Mr. Speaker, it is time to call a halt on these foreign hand-outs. Let us beware of the kind of a leader who is "a steady patriot of the world alone, the friend of every country but his own." The Republican Party would be wise to select the following slogans: "Back to Solvency" and "There Will Always Be an America Unless the New Deal Gives It Away."

---

## The Greatest Menace in America Today Is Organized Propaganda. The OPA Is the Greatest Offender

EXTENSION OF REMARKS
OF

### HON. THOMAS A. JENKINS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, December 19, 1945*

Mr. JENKINS. Mr. Speaker, the greatest menace in America today is organized propaganda. This menace has been growing rapidly for years, especially for the past 15 years. Private individuals, corporate interests, labor organizations, and political factions have indulged in it. Even the Government itself has engaged in it.

Should the Government engage in propaganda? No. Absolutely no! It is the duty of the Government to keep the people informed by reporting facts to them. Reporting anything but facts would be a distinct disservice. Likewise, it is the duty of Government to prevent organized propaganda by any of its agencies when it has the effect of misrepresenting or distorting facts.

Is the Government carrying out its responsibility in this respect? Mr. Speaker, let me answer that by asking this question: Is there any Member of this House who has not on many occasions had serious doubts as to the factual accuracy of statements issued by many Government agencies?

One of the greatest offenders in this regard has been the Office of Price Administration. The OPA could yet do some good within the scope of its authority. Its organized propaganda is becoming so revolting to the American people and to Members of Congress, however, that I predict they will soon decide they would rather do without the good it might do than to risk the harm it will be sure to do through the propaganda efforts of a small group in that agency to perpetuate their power and bring about permanent Federal control of prices in this country.

OPA has indulged in organized propaganda of the most shameless kind. It has gone o far as to have millions of its misleading publicity statements mailed out with monthly allotment checks to dependents of men in the armed services. It has organized pressure groups of one kind and another to descend en masse on congressional hearings and stridently demand perpetuation of OPA.

Within the last few weeks it has organized community propaganda campaigns throughout the country in the form of a special week devoted to praise of OPA. These special observances were first to be called Anti-inflation Week. But

after the ground work was well laid, the signals were changed and word went out from Washington that they were to be called Price Control for Prosperity Week. Under that name, this OPA propaganda is now going on in small communities in every part of this country.

Newspapers in those communities are being pressured by OPA representatives to print long prepared statements extolling the virtues of OPA and of permanent price control. City officials have been induced under the plea of patriotism to give special public recognition to OPA activities.

I would like for the Members to think for a moment on the name they have chosen, Mr. Speaker—Price Control for Prosperity. All of us want prosperity. We expect to have it. And now Mr. Bowles is starting to sell us on the idea that we must have price control if we are to have prosperity. By implication, we must have price control as long as we have prosperity.

Between now and next June 30 the American people are going to witness one of the greatest Government propaganda campaigns of all times, based upon this theme of Price Control for Prosperity. The purpose of that campaign will be to perpetuate OPA. Under the guise of controlling inflation the OPA seeks to make price control permanent. From this it would be an easy step to state socialism.

The strategy by which permanent price control is to be achieved is to find one reason after another why price controls cannot be lifted at the moment—always accompanied by the pious hope that it can be removed in the near future. Like the end of the rainbow, however, that happy day will be constantly retreating. We will move from one "emergency" to another as we have done for the past 13 years—each "emergency" requiring the continuation of Federal control over the private lives and activities of American citizens.

Last summer, when the war with Japan ended, we were assured by Mr. Bowles that our economy would be "decontrolled" as speedily as possible. Dates were set for the removal of price controls and we were told that nearly all controls would be lifted soon after the first of the year. Most of these dates have come and gone and the controls have not been lifted. The "emergency" is still with us and Mr. Bowles now says that we do not dare remove the controls after the first of the year, as he had promised, and that they must be continued past next June 30.

The campaign to accomplish that purpose has already started and it is partly to point out the utter ruthlessness and cynicism of that propaganda drive that I take the floor today.

Mr. Bowles has used as his shining example of the horrors of price control removal the case of the price of citrus fruits, on which price controls were removed by OPA on November 19. This example has been used by Mr. Bowles before a Senate committee, in speeches throughout the country, and on Monday of last week in a press conference here in Washington which Mr. Bowles called for the purpose of giving further publicity to his citrus fruit exhibit. OPA representatives have been instructed to make it the keynote of their arguments and press releases in promoting Nation-wide observance of "Price Control for Prosperity" week.

Here is an example of the kind of statement Mr. Bowles makes on this subject. Speaking before the National Association of Manufacturers in New York on December 6, Mr. Bowles said:

> What, for instance, would happen to food prices (if price controls were removed)? • • • Your wife will tell you that some grades of oranges, lemons, and grapefruit moved up 50 to 100 percent in the first few days following the action of OPA in removing the price restrictions. If this occurred on food products which seemed to be in adequate supply, what would happen to meat, vegetables, milk, cereals, and all the other dozens of food products which are in more scarce supply?

Analysis of that statement will demonstrate that it is made with the usual Bowles' technique—a collection of half-truths and inferences made for the deliberate purpose of misleading the listener. But I am not so much concerned now with the fact that the statement is intentionally misleading as I am with the fact that Mr. Bowles is using continuously as his chief argument for the necessity of retaining price control a hand-tailored example—citrus fruit—which was carefully planned and put into effect for the express purpose of giving OPA just this kind of a propaganda medium.

I am convinced that in removing the ceiling price on citrus fruits, the OPA did so with the deliberate purpose of creating a sudden increase in prices which they would be able to use as exhibit No. 1 in their campaign to perpetuate OPA controls, and for the immediate exploiting of which they had made careful preparations.

Here is the story of the citrus-fruit propaganda theme:

Producers of fresh fruits and vegetables have long contended that there is no need for ceiling prices on fresh fruit or vegetables which are in adequate supply. In fact, they point out, ceiling prices on such products tend to peg retail prices at the ceiling and retard consumer purchasing, even though there may actually be an oversupply of that particular fruit or vegetable. This contention has proved to be correct. As most of you know, there have been no ceiling prices on potatoes for the past several months and potatoes are no higher today than they were when ceilings were lifted and are, in fact, lower than they were a year ago when price ceilings were in effect.

There have been similar results from removing ceilings on other fruits and vegetables in adequate supply. When there is plenty of a commodity, competition is a more effective ceiling on prices than OPA can ever maintain. OPA chooses to ignore these experiences, however, and talks only of citrus fruits.

For a long time the growers of citrus fruits had an agreement with OPA that when the price of their product reached a certain low level, indicating an essential balance between supply and demand, ceiling prices would be removed in order to stimulate consumption. That price level, at which ceilings were to be removed, was reached late last July. But OPA—in spite of its agreement to do so—would not remove ceiling prices. Although the Department of Agriculture reported that we would have one of the largest citrus fruit crops in our history, OPA continued throughout the summer and early fall in its refusal to remove ceiling prices. Then, on November 19, just 3 days before Thanksgiving, OPA suddenly removed the ceiling prices on citrus fruits. Mr. Bowles and his economic manipulators had calculated their time carefully.

November 19 was the Monday before Thanksgiving, when fresh fruits are in heavy demand for the holiday table. November 19 is also near the end of one of the big orange seasons of the year and just before another large orange season starts. It is in the period when there is always a relatively short supply of oranges because the Valencia season is nearing its end and the navel orange season is not yet in full swing. This situation was so well recognized by the citrus fruit trade that, when informed of the action, many of them begged OPA to leave the ceilings on for another two or three weeks, until navel oranges were moving to market in quantity. November 19, it might also be noted, was just before community observances of Price Control for Prosperity Week in which OPA planned to use the citrus fruit example.

The result of removing citrus fruit ceilings at this particular time was exactly what any intelligent person would have predicted from the conditions I have just described. It was the result which OPA strategists knew would occur when they planned this action for November 19. Supplies for the Thanksgiving season were already shipped. There was no possibility of moving additional supplies from producing areas to consuming areas in the 3 days between November 19 and November 22. The demand for choice fruit is higher those 3 days than it is at any other time of the year except just before Christmas and New Year's. Shoppers, eager to get choice fruit for their holiday meals, and retailers, eager to provide this fruit if they could, naturally bid up the price of choice citrus fruits. Top grades shot up well above previous ceilings. It is significant, however, that the poorer grades of fruit not only did not double in price, as OPA has intimated, but actually "went sour," as the produce dealers say, so that the average increase in citrus fruit prices throughout the country—even under the conditions OPA had planned—was only a few cents a crate.

This fact was ignored by OPA as it put its publicity machine in motion. OPA press offices throughout the country were ready on the day ceilings were lifted to issue their scarehead stories ignoring the small average increase in price and citing only the jump in the price of choice holiday fruit, to draw the obvious moral that this is what happens when any ceiling price is removed.

Mr. Speaker, the fact that OPA publicity offices throughout the country came out with similar statements at the

same time, all tending to show the results of removing ceiling prices, was not accidental. It was carefully planned here in Washington by the OPA. Almost identical releases appeared simultaneously in papers from the Atlantic to the Pacific.

I have not had time to go through all the newspapers of the country for November 19 and 20, but here are some typical examples of the manner in which OPA publicity offices went to work to capitalize on the situation which OPA price manipulators had created.

In San Francisco, the Associated Press quoted the district OPA director on November 20 as urging restoration of ceiling prices on citrus fruits "because the price of oranges has jumped approximately 70 percent practically overnight." The San Francisco Chronicle quoted the regional OPA administrator as saying he would make an immediate investigation to determine whether ceilings should be replaced. He apparently had heard his master's voice.

In Detroit, OPA press agents again rushed to the Associated Press with the news that "removal of Government controls sent the price of citrus fruits skyrocketing today in Detroit markets." He forgot to mention that the average price did not advance.

In Chicago, OPA press agents rushed into print with the news that some oranges had jumped from $5.50 to $9.95 on the Chicago market. These, of course, were the choice fruits in high demand for Thanksgiving. They did not give the average price of oranges. This story, too, was widely used by other newspapers and the Pittsburgh Post-Gazette, after using this story editorially added: "In Pittsburgh there seems to have been little appreciable change." It is not recorded that any OPA agent in Pittsburgh pointed out that failure of prices to skyrocket there vindicated the soundness of removing price controls.

In Minneapolis, the Star Journal, like all the other newspapers, quoted the OPA district director. He made the absurd prediction that grapefruit, oranges, and lemons would disappear from restaurant and cafe menus. He, too, had heard his master's voice.

Thus it went throughout the country. Within 1 day after the removal of price controls on citrus fruits OPA press agents in district and regional offices everywhere laid down their barrage of publicity, distorting facts to prove their argument that removal of ceiling prices on any commodity is a mistake.

The most truthful story appeared in the Denver Post. The prices quoted there, as elsewhere, were the most alarming which could be found and not representative of the market as a whole, but an OPA food specialist in the district office spilled the beans. Ceilings were removed, he told the Post, because of "a surplus supply due to an exceptionally large crop and as a test of the effect of the removal of price ceilings on wholesale and consumer markets." That, of course, was the real reason for the removal of citrus price ceilings on November 19—so that it could be held out to the country "as a test of the removal of price ceilings on wholesale and consumer markets." The OPA spokesman in every community had to have this story in order to make his propaganda sound convincing, but the Denver man slipped in passing it on to the general public.

After the original flurry in prices which OPA manufactured, the price of citrus fruits settled back within a few days so that many grades and varieties are now selling well below previous ceiling prices. Mr. Bowles well knows this fact and yet he continues to use this one misleading example, which OPA prepared so carefully, as an argument for such an important decision as that on indefinite continuation of all ceiling prices.

On Monday of last week Mr. Bowles called a press conference in which he again used the deliberately misleading example of citrus-fruit prices. Here is the way he was quoted by the Associated Press reporter:

> In saying OPA will have to move more slowly in the future in eliminating price controls, Mr. Bowles said that what happened on citrus fruits illustrated this. Price ceilings on fresh citrus were removed last month and prices immediately shot up, doubling in some cases, Mr. Bowles said.

When asked to substantiate this figure of increased prices Mr. Bowles called on an OPA economist who was sitting at his elbow and this economist reported that oranges were then selling from one-half cent to 1 cent a pound above ceiling prices on the wholesale market. This would be 35 to 80 cents a box above previous ceiling prices. This was either a deliberate misrepresentation or an evidence of ignorance. The ceiling prices of Valencia oranges in New York was $5.38 a box. On the day on which Mr. Bowles held his press conference—Monday, December 10—Valencia oranges sold in New York at an average of $4.29 a box—exactly $1.09 a box below the previous ceiling prices.

The ceiling price of navel oranges was also $5.38 a box and even this choice fruit, which was not yet moving in adequate supply to meet demands, sold in New York December 10 for $5.57 a box, only 19 cents above the previous ceiling, and a normal reflection of the market situation at this time of year. Florida brucebox oranges with a ceiling of $4.55, sold in New York that day for $4.31—24 cents below ceiling. Florida Indian River oranges, with a ceiling of $4.99, sold for $4.71 a box on December 10—28 cents lower than the previous ceiling.

Thus, Mr. Speaker, in laying the groundwork for his propaganda campaign to perpetuate OPA, Mr. Bowles has not only deliberately manipulated the controls of citrus fruits so that prices would go up, he has consistently misrepresented and misinterpreted the results of that action and continues to do so in the face of overwhelming evidence that even the very figures he uses are erroneous.

This kind of propaganda is now appearing in the small newspapers of the country. Local OPA representatives, obviously on direct orders from Washington, are using the excuse of "price control for prosperity" week to persuade editors of smaller papers to print their arguments for OPA perpetuation, in which the manipulated citrus fruit price plays a prominent part.

I press this on the attention of the House as a sample of what we may expect in the next several months as this great propaganda campaign swings into high gear.

---

## Precampaign Platform

EXTENSION OF REMARKS

OF

### HON. JOHN C. KUNKEL

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, December 19, 1945*

Mr. KUNKEL. Mr. Speaker, several weeks ago the Republicans in Congress set forth in a forward-looking document its aims and objectives. This was not in any sense intended to be a party platform. Obviously, a platform could be framed only by delegates to a national convention.

It was desired the people should know the political creed which would guide Republicans in Congress in the determination of the specific problems as they arose. Those aims were later endorsed unanimously by the Republican National Committee and steps taken for the purpose of a closer coordination with Members of Congress as new problems arose.

The Republican aims and objectives will undoubtedly serve to bring about greater unity of action on the part of all Republicans. The Harrisburg Telegraph, in an editorial printed on Monday, December 10, really shows a complete comprehension of the purposes and the wisdom of the Republican action. Under permission to extend my remarks, I include the editorial:

PRECAMPAIGN PLATFORM

Voters will not have an opportunity to exercise their franchise in State-wide elections before the first Tuesday after the first Monday, 1946. All States will elect Members to the National House of Representatives, one-third will elect United States Senators, while others will elect governors and members of State legislatures.

Evidently with an eye on those elections, and proceeding on the paraphrased theory that "in time of calm prepare for storm" is a good policy, Republican Members of Congress have drafted and submitted "aims and purposes" to the national committee. They have whipped up ideas gleaned from correspondence, talks with constituents, and sifted from "bull" sessions which are a daily routine in the Capitol cloakrooms. In reducing their thoughts to type they have started the jelling process of a 1946 platform.

The handiwork of the legislators was endorsed unanimously in Chicago Saturday by the national committee as a basis for party policy. That the middle and far west committeemen should have criticized some of the paragraphs is a healthy sign, and Chairman Brownell quite properly announced he would appoint a committee of seven to receive, clarify, amplify, and broaden existing principles and receive new suggestions.

It is apparent that the authors did not intend to write a rigid platform. Their chief aim was to spark an interest in the party and what the party should support and advocate in legislation. They framed an outline that should start Republicans on a round of examination and polling of sentiment of voters.

It is hoped that these original or preliminary principles of a Republican platform will be widely distributed. State and county committees would do well to provide copies to members and to citizens of all political alinements and request frank, honest comment. Discussion and debate of current and anticipated political issues will excite a healthy interest in the party's desire to increase congressional representation and gain control of more State administrations and legislatures.

Let the missionary work get under way.

## Demobilization of the Armed Forces

EXTENSION OF REMARKS

OF

### HON. KARL M. LeCOMPTE

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

*Monday, December 17, 1945*

Mr. LECOMPTE. Mr. Speaker, in the terrible war that ended only a few months ago America assembled the greatest fighting force the world has ever known. Land forces, naval forces, and air forces combined to bring victory over the Axis Nations. The victory was won on every battlefield and in every department. Our forces were led by brilliant commanders, but we must not overlook the character and performance of the men who make up the rank and the file. They sacrificed everything. They suffered, bled, and died over land and sea, in the air, and under the water and never asked for any favors until the victory was ours.

Now the same men and women are asking for release from service in order to return to civilian life and take up where they left off when they took up arms.

Parents want their boys back. The older men are carrying and have carried the load on the farms and in the factories until they are breaking down. Wives and children are begging to have their husbands and fathers back. Many men have little children at home. The responsibility of the Government now is to get every boy home as quickly as possible. Transportation and shipping must not be allowed to slow down the demobilization program.

Several months ago I introduced a simple bill providing for the prompt discharge of remaining sons in a family where one son has lost his life in the armed services. Grief-stricken mothers and fathers have lost one boy—they want the other returned to the family circle. Can we not have action on a simple bill of this kind?

While the War and Navy Departments both report that demobilization is going forward with full speed yet there appear to be innumerable inequalities. The point system does not always appear to be exactly fair. Moreover there are thousands of cases in which men are held as essential when they have a sufficient number of points. How about this situation? Washington is overflowing with high-ranking officers yet men in the ranks such as mail clerks, storekeepers, yoemen, and so forth, are held as essential regardless of points.

Maj. C. L. Lambert, an outstanding lawyer and citizen of Sigourney, Iowa, who served with honor and distinction in World War I and again for a long period in this war and during the intervening years as a National Guard officer, brought to my attention a letter from a soldier stationed in Japan. He describes conditions for the American servicemen as being worse since the war was over than when the fighting was on. Situations such as he describes should be investigated and I am taking the liberty to include in my remarks excerpts both from Major Lambert's letter and from the one received from the soldier, whose name is withheld for obvious reasons:

Hon. KARL M. LECOMPTE,
*New House Office Building,*
*Washington, D. C.*

DEAR KARL: I am sure you will be very much interested in knowing how some of our fighting men are being treated that are still in the service and you might have an opportunity to take it up with the right place in the War Department where it will do some good.

I am inclosing herewith a letter from a soldier who has been in the service for over 2 years and who has a Purple Heart with an Oak Leaf Cluster indicating he was twice wounded in battle. The mere fact that he has gone from a recruit to a staff sergeant in the Infantry in 2 years will indicate that he is a high-class young man. He is not quite 21 years of age.

His mother and father are very much exercised over the letter. He is a member of the Twenty-seventh Division, now in Japan. He received his wounds on Okinawa.

I am satisfied that perhaps this is an isolated case and that many of the soldiers are being much better treated. However, I am not so sure that there are not many other instances fully as bad or worse.

I believe if this letter of this soldier is properly placed in the War Department it will bring forth an immediate investigation and probably result in the elimination of conditions complained of.

It would seem to me that a soldier twice wounded and not fully recovered should be commended rather than censored for complaining about such treatment, both for himself and his fellow soldiers.

With kindest personal regards, I remain,
Yours very truly,

C. J. LAMBERT.

---

FUKUSHIMA, JAPAN,
*October 14, 1945.*

DEAR FOLKS: Just thought I'd drop a few lines to let you know that I am all right. We are still in the same place here. We are really catching it now. They work the men night and day here and they are forcing them to wade mud and water up to their knees to do common work that Japs can do. It is worse now than when there is a war. The USO commando "brass hats" we have now are really making it miserable for the men. If it was combat it would be different. Then they are good to the men because they are afraid of the men. The "brass hats" we have now never saw a battle and are just out of the States and think they won the war. They take all the souvenirs such as rifles, sabers, pistols, and so forth, and leave us who fought the war without anything. All the men who have been in battle with this outfit have been wounded once or twice and can't get anything and get all the dirty work. Seems like there is no more democracy in this country. If things get much worse I think I'll turn in my stripes and go to the guard house. Especially if I don't go home soon. I am completely fed up with the way it is run now.

The division goes to the States in December but one needs 60 points to go with it. I have but 54. It's pretty darn poor friends and neighbors one has and Congressmen when they can't get combat men home. I have been wounded twice over here and it has ruined my physical condition and left me with two bad legs and they can't even get us home.

I read in a paper from the States that stated 70 pointers would be out by October 1 and 60 pointers by November 1. At present, they still have men in the company with 54 points. Looks like they are pulling the wool over your eyes back there. All of us over here are completely fed up with the situation. Seems like they forgot us or just don't care.

ROBERT.

The boys are not getting home as fast as they should. Men with long service are being held in Germany, Japan, China and in the islands and at stations everywhere, men who have richly earned a discharge. Men are held too long in the Aleutians. Often the food is poor and inadequate. Some men have been "advised" that they better not write to their Congressmen and doubtless many boys do not write us, out of fear of consequences. In the following case a wife sent to me a letter from her husband in which he told her of the destruction of Government property on one of the Pacific islands. I quote from this letter but withhold the writer's name:

Sergeant ——— has been telling of seeing natives at work (while driving with his friend), digging huge pits about 20 feet by 30 feet by 15 feet. His friend said, "Just wait till we drive a bit farther and you'll see what they're for." And sure enough. There we saw how rifles, clothing, equipment of all sorts were being buried just to get rid of it. It really hurts to think that that may be the fate of my carbine that I've babied all these months and of my clothes all freshly laundered and mended. Especially when our allies just across the China Sea will probably go underclothed this winter. Think of all the wonderful things that could be made of all that cloth.

The morale of the Army and Navy is at a low ebb. One high-ranking officer told me recently in a frank conversation that there are more men a. w. o. l. now than at any time in the Army's history; the number now goes into the thousands and men are a. w. o. l. in every theater of operation.

Another matter that is causing much dissatisfaction is the food handed out to boys in some islands of the Pacific. Let me quote one paragraph from a letter written by a young friend whose statement speaks for itself:

Well I just came back from dinner. The food around here is a damn shame. After every meal I'm still hungry and I'm not the only one. They don't feed us anything. We had stew for dinner but it just consisted of water and gravy and two or three pieces of meat in it for each man. That is all. No potatoes, nothing filling. Bread, no butter. They've been giving us one piece of bread per meal. If they can't feed us they haven't any right to keep us here. I've had plenty of bad food in the Army, but I've never been starved before. You can't get seconds on any of it—except water. I don't care about the quality, I'd like some quantity for a change. One of the boys in my room told a colonel the other day that we'd starve if it wasn't for the bread. The meals got better then for a couple of days, but now they are just like they were before. What a life—may all brass hats responsible burn in hell. I'm hungry, how are you?

The slowness in discharging men, the delays in getting them home, the failure to grant discharges where men are needed at home—all combine to militate against any program for universal military training. If the leaders in Congress and in the Army and Navy really want a universal training law it might be advisable to speed up demobilization and see to it that all men with 2 years' service and men with battle wounds are given the privilege of being discharged by March 1, 1946.

---

### Hon. James A. Farley

EXTENSION OF REMARKS
OF
## HON. SOL BLOOM
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Monday, December 17, 1945*

Mr. BLOOM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by the Honorable James A. Farley at the fifty-second annual fall luncheon meeting, Bronx Board of Trade, October 18, 1945:

It was with particular pleasure that I accepted the invitation of the Bronx Board of Trade to speak at this meeting. I do not know of any association which has shown a greater interest in getting the facts as to its postwar problems with greater intelligence than has been demonstrated by Mr. Adolph J. Chesley, your president; Mr. W. E. Matthews, executive secretary, and members of the Bronx Board of Trade. There seems to be in your membership and among your officials an awareness of the significance of attaining and maintaining high levels of production and employment tarough bold plans made by the Bronx businessmen.

Our memories are short, indeed, if we do not remember that 5 years ago America enjoyed its best peacetime year. With 46,000,000 people gainfully employed we produced roughly $100,000,000,000 in goods and services. That was after 7 years of experimentation by a government that was feeling its way and by businessmen who were not at all times in possession of the solution to many of our problems. It was truly the "age of experiment."

It was in this situation that we were confronted with war. War broke out and raised our economy to new high levels.

We have had four enemies from the beginning of this war: Germany, Italy, and Japan; and the fourth one, unemployment. That enemy has still to be licked. The only way to defeat that enemy lies in expansion, and when we speak reconversion, I would like to emphasize that we must reconvert and expand, because it will do us little good to reconvert to 1940 standards. If we were to open up tomorrow morning where we left off in mid-year 1940, we would have millions of unemployed, a cut-back of almost 60 percent, and an excess of $100,000,000,000 worth of left-over war goods scattered over six continents.

We are in possession of the key to the greatest era America has ever seen, based on a backlog of demands which must be fulfilled to provide us with the same types of equipment at the level of living that we were enjoying in 1940.

Let us examine what they are. In 1940, Americans drove 28,000,000 automobiles. By the end of last year, we were down to 23,000,000 cars. With the completion of reconversion, and if Americans act as they always have, we shall then want to drive in America 33,000,000 automobiles, so that the industry is short 10,000,000 cars right now.

We should have to build 554,000 new homes every year to take care of expansion in families. There has been no building since 1941, so that we are short 2,000,000 dwelling units of one kind or another. That will require a 4-year construction operation.

Since Pearl Harbor we have had more than 7,000,000 marriages. Imagine the gigantic production necessary to give those couples the many things that they will need to set up housekeeping.

What about the electrical-appliance industry? We are short 70,000,000 electrical appliances. Many are putting ice in electric refrigerators, because they cannot get parts and equipment.

What about the railroads in America? What about new hotels, new buses, new transportation, telephone companies, your utilities? All require replacements. That will require primary sources of labor right across the board.

Truly, we have never had an era of opportunity like this one. In America, with the highest living standard in the world, over 80 percent of our farm homes do not have central bath rooms and heating plants. Think of the possibilities in electrifying farm homes and supplying electrical tools and equipment.

However, most of the planning for a sustained high level of employment and high national income, will terminate abruptly after our accumulated wants are filled, unless we learn to sell more goods to more people than ever has been thought possible. There are no previous sales records to which we can return. A glance at our war-production record shows that there could never again be any doubt of the ability of American industry to produce anything in any desired quantities. However, there is still doubt about the ability of our distribution channels to carry away mass production into the hands of the consumer.

If industry is going to produce 41.6 percent more goods than were produced in 1940, our distribution must certainly increase the volume of sales in order to meet this great increase in production. What are the reasons to believe that we have a great potential market for this increased production? Let us look at the record. Have people saved during the war? Yes; they have saved more money since Pearl Harbor than they saved in the previous 170 years of the existence of the American Republic.

During the war, people have paid off their debts, their mortgages, and cleaned up their time payments on refrigerators, automobiles, and other installment purchases. Therefore, I am inclined to feel that these people feel more secure and confident, and will want to make the purchases that they have been thinking of during the war. Adding up all savings of unincorporated businesses and so forth, our total savings are more than $100,000,000,000.

Recent surveys of a true cross section representing the mass market of America, show that most people plan new purchases. Eighty-five percent intend to replace major articles that have worn out. This includes automobiles, refrigerators, home furnishings and new homes. These are planned purchases by people who have money.

At this point, if I may, I would like to present the results of a research project by the marketing committee of the Committee for Economic Development, called American Industry Looks Ahead, and a supplement, Postwar Views of American Manufacturers. This research project endavored to answer the following question: Will business be good in America when our industrial machine has been reconverted for peacetime pursuits? To us in this country, there is today no question more challenging than that, and I suppose there is no question to which more Americans everywhere are more anxiously seeking an answer.

And at the same time that we ask whether business will be good after reconversion, there are other questions that spring to our minds.

How many people will have jobs in the United States? How good will business be—and how large will employment be in the manufacturing industries? How will things be in your industry—and in mine? If we are to have a high peacetime level of production, sales, and employment, when will that materialize?

This report is the first forecast yet produced in any such detail giving the estimates of industry leaders and trades associations as to early peacetime market prospects. It covers no fewer than 290 classifications of processed and finished goods. I repeat, it is a forecast made by American businessmen themselves—1,564 manufacturers and trade associations.

Now, what do the leading manufacturers and trade associations foresee as the volume of goods which they will be able to make and sell in the first full year after reconversion—a year which might begin in September 1946? It is this: 41.6 percent more than in 1939. In some minds the increase is as high as 75 percent. Let me emphasize this figure—41.6 percent more goods and services produced in America in 1947 than in 1939. That is what manufacturers themselves are counting on, given an economic climate which will encourage risk taking. We have learned to produce abundantly for war. We have it in our power—and our manufacturers know it—to produce abundantly for peace.

To accomplish a task of this size we must recognize a new concept of the importance of selling. And this new concept must be based on a scientific analysis of our markets. We must rely less on hunches and intuition in the field of marketing and depend more on testing and measurement.

Walter D. Fuller, chairman of the CED Development Division, under whose auspices the CED marketing committee undertook its marketing survey, explains its scope as follows:

"The marketing committee's job was not to do the forecasting but to put together and interpret the result. The market appraisal is thus a composite view of postwar markets for manufactured goods by American manufacturers themselves. The opinions as to the significance of this view, so far as the level of postwar employment is concerned, are those of the marketing committee.

"The importance of the study is obvious. As a forecast of markets, it should be directly useful to the manufacturing industry, to the wholesale and retail trade, and to other business interests. Beyond this, it has much value as an interim check on the level of the manufacturing industry's postwar anticipating and planning.

"Its broader implications have significance for industry itself, for Government, and for all who are concerned with the economic future of our country."

But, this is only part of the picture. The other part is that it is of no use to produce this immense volume of goods—and, in fact, they will not be produced—unless they can be sold.

Those of you who are specialists in distribution, it is you and the selling staffs under you to whom industry turns in these first postwar years. Forty-two percent more production means the need for 42 percent more sales.

Is this too lofty an ambition? Can Americans effectively absorb 42 percent more of the goods of life than they ever did before the war? Permit me to repeat myself; CED believes they can and want to, and will, if they have the purchasing power. Sumner Slichter of Harvard, chairman of the CED

advisory board, has made an impressive estimate of the huge volume of "catching-up demand" for consumer goods which would sustain the national market for years, and of the unprecedented volume of liquid individual savings that will be available to support the demand.

But the "catching-up demand" can be only the beginning of the story of America's future prosperity. Sales must be maintained after deferred wartime needs are satisfied, so that the later period will be a sustained high level of employment.

The challenge to Bronx business lies in preparing first, to produce this increased volume of production and then, and more important, to sell these goods.

New kinds of goods, the results of startling inventions, will be produced. Improvements have been made in familiar goods. These will stir up demand.

More customers for the stores will result from population increases. Already, at the end of February 1944, it was estimated that population had reached nearly 138,000,000.

The yearly income of the people of the Bronx—the per capita income, all translated into the buying power of the dollar as it was in 1926—increased four times between 1850 and 1937. Because this tremendous expansion has taken place there is good reason to believe it can take place again.

How did the people of this Nation climb up the ladder to higher standards of living? The answer is, by continually using more goods, thus creating more factory production and more employment. The retailers, wholesalers, salesmen, and advertisers of America persuaded them to own and use these goods.

More than any other people in the world, Americans demand more and better goods. They seek improvements, and they expect manufacturers to satisfy them. They feel themselves to be free individuals, not held down by caste or creed, and they expect to get ahead.

One major reason for expecting people to buy is that we have people who know how to sell. Our system of getting goods to the people, of distributing, or marketing them, has no equal in the world. Every family is within reach of a store, every store is reached by wholesalers, every wholesaler is reached by manufacturers. These families speak one language, want similar goods, have high standards of living, and are not divided by tariff barriers such as are found in Europe.

Nowhere else in the world does there exist such a gigantic market. It has made possible our methods of organized distribution, which in turn have made possible our methods of mass production. Every retailer in America shares these benefits.

As I said a moment ago, a recent survey of a true cross section representing the mass market of America shows that most people plan new purchases. No survey is needed to tell any retailer that if the public was asked, "Do you want to dress better and eat better after the war?" they would answer "Yes."

Bronx retailers and wholesalers also intend to replace worn-out equipment. Manufacturing establishments need to make substantial purchases of equipment and machinery.

While employment can be expected to remain high, and the total wage income of the country large, the truly anxious question is whether the people as a whole will wait to see how things turn out before buying. If the whole Nation hesitates, a depression with serious unemployment can result.

Retailers of the Bronx and all those who sell goods can help overcome this hesitation by well-planned sales and advertising programs, ready to launch at the proper time.

It is hard to believe that if the present restrictions are relaxed and more goods make their appearance, the people will not spend at least some part of their great savings. If they should spend too freely while goods are still scarce, the results would be dangerous, sending prices up and causing inflation. Moderate spending is to be hoped for, rather than a scramble for scarce merchandise.

Great changes may be looked for, following the two greatest wars and the greatest depression in history. No retailer can expect conditions to stand still. The growth of the department store followed the depression of the early 1900's, and the growth of the chain store followed World War I and the depression of the early 1920's.

New kinds of retailing are now being planned in some quarters, and new methods of distribution from manufacturer to retailer. Retailers who are alive to changes and who lay their own plans will be better able to meet changes as they come.

Without committing themselves completely to an optimistic forecast, retailers may well decide to take all the steps necessary for estimating their future volume of business, and for laying out the programs they would need to follow in order to handle that volume when it develops.

Retailers and wholesalers will always be needed to get goods to the people. They are as necessary as factories. Here is the reason:

America's famous mass production is made possible by a production line on which each worker performs one specialized job instead of several jobs. The division of labor turns out more goods.

Likewise, on the consumption line, as we may name it, stretching from the factory to the family, each specialized worker, whether retailer, wholesaler, agent or broker, salesman or advertising man, performs a separate job. This division of labor is as efficient as necessary and deserves as much credit as that of the production line.

In fact, the Nation's consumption line has moved faster than the production line. It is always calling for more goods. That is one of the ways we have climbed to new levels of national wealth.

The goods that will be made in factories must also be sold. That is to a great degree the responsibility of retailers. Even production goods, steel, machinery, chemicals in the end produce goods for ultimate consumers. All manufacture ends in the retail sale.

In one of our best peacetime years—1939—more than 17,000 Bronx businessmen were engaged in retail trade. They provided employment for more than 26,300 individual employees who indirectly contributed to the maintenance of almost 100,000 people. These employees were paid over $32,000,000 in wages, while their employers maintained an investment of $31,000,000 in stocks of goods on hand.

By turning over their combined stocks more than 10 times, our retailers contributed almost $349,000,000 to the Nation's total volume of retail sales.

The war has exacted its toll of proprietors of retail establishments and clerks for the armed services and for war work. Many opportunities will therefore exist in the coming months for reestablishment of retail business by former proprietors as well as for new enterprisers who I hope will come from the ranks of boys who were once clerks.

Our citizens have borne without complaint the shortages of civilian goods and the special services to which they were accustomed in the prewar years. However, it is quite clear, that with the war's end, business will remain only with progressive retailers who plan to return quickly to prompt, courteous, customer treatment, with accommodations, goods, and services greatly enlarged over what was considered to be excellent retail service prewar.

A retailer who thinks he can slip easily into the postwar period by merely letting more customers come in his door and ordering more goods as he needs them, may be due for a rude awakening. Changes will not come as suddenly as an earthquake, but come they will.

New kinds of stores are now being planned and when they are set up they will be vigorous 1947 models. The pull from new buying power in the public, and the push from wholesalers and manufacturers, will demand aggressive selling.

Reconversion, in retailing, begins with the retailer. It affects men rather than machines, though the changes in their ideas may change their stores, too.

In the field of construction there are thousands of job opportunities for the city's carpenters, painters, plasterers, masons, bricklayers, electricians, plumbers, and similar occupations. The construction of new commercial, industrial, and residential structures will revive local construction activity and bring it back in step with the recurring 18-year building cycle; a major upturn in construction is overdue. The revamping and adequate servicing of our loft and office buildings alone will provide jobs for many.

In the residential field at least 200,000 family dwelling units will be required to provide housing for the natural population increase up to the present time.

This urgent market may total $1,000,000,000. In addition, there is the need for replacement of 470,000 old-law tenements representing another $2,000,000,000 in the not too distant future. The trend in commercial construction is well illustrated by the recently announced $15,000,000 trade center, planned for the four-block St. John's Park terminal site in downtown Manhattan.

I know that the Bronx retailers, wholesalers, service trades people and construction people here in the Bronx in cooperation with CED and the Bronx Board of Trade have done a splendid job of planning for the sale of this increased volume of production, and it is only through an understanding of his responsibility to sell this increased volume, on the part of every wholesaler, retailer and service trade person, that we are going to be able to maintain a high level of production and employment right here in the Bronx.

Things don't happen; they are planned and brought about. I am convinced that if your organization and other organizations of a like character in the Bronx work together in the cooperative way you have in the past, our reconversion goal will be obtained.

---

## Britain Poisons Minds of People of India Against the United States

EXTENSION OF REMARKS

OF

## HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, December 19, 1945*

Mr. CELLER. Mr. Speaker, I herewith submit an interesting letter from a returned official of an important branch of the service. It is self-explanatory. It underscores the attempt of Britain to hurt us in India.

DECEMBER 16, 1945.

Congressman E. CELLER,
*New York State.*

DEAR SIR: In response to your request I am preparing this account of my observations in India during 1945. I hope that you will find material here that will aid you in furthering the just and legitimate interests of the United States of America and of continuing world peace.

It came as something of a surprise to me, upon arriving in the India-Burma theater, to learn that American officers and officials are unofficially but clearly discouraged from attempting close contacts with Indians. An attempt is made to segregate the American in India and to prevent him from getting to

know India or Indians well. I was informally instructed by my superiors to stay away from Indian politics and political figures. I was not to show any interest in things Indian and I discovered that it was considered bad form to show such interest.

Furthermore, we were informed that we were in India by the kindness of the British and that we should at all times be careful to keep them happy. Unfortunately most of the British there were more or less frank to show their dislike and distrust of America and Americans. I traveled a great deal and largely with British officers. This gave me plenty of opportunity to discover their sentiments.

It came as a distinct shock to discover that the main sources of news about America for India, such as Reuters Agency, were careful to slant their news about America in such ways as to tend to breed ill will and misunderstanding about our country. Leading British papers in India usually took an unhelpful attitude toward the U. S. A. in editorials, etc.

During the year I was there I felt a distinct deterioration of our position and prestige taking place. I feel certain that our status in India and the Far East has materially declined during the war. Perhaps this is an understatement.

Frequently the Reuters dispatches, prominently featured in leading papers there, carried stories about our race riots and ill-treatment of Negroes. Shortly after the Phillips letter had been published in America, and apparently to counteract its good effect in India, several such stories of race problems in America appeared in such papers as the British-owned Statesman. It had the desired ill effect.

An example of other types of anti-American news in India was the anonymous letter published by the Statesman late in 1944 purporting to be from an Anglo-Indian girl who had been "seduced" and abandoned with a child by an unnamed American officer. The girl threatened suicide. Several months later a member of the Central Legislative Assembly asked the government if the letter had ever been proved to be authentic and the government admitted that it appeared that the story was not true. Nothing was ever done publicly, however, to deny the letter. In a country such as India a letter of that type was destined to cause considerable criticism of Americans.

A more recent and most far-reaching example of news stories slanted for anti-American sentiments occurred shortly after the recent monetary-loan talks began between Britain and the United States. One morning most of the English-language newspapers of India carried headlines stating that America demanded that Britain reduce or cancel her debt to India in return for a loan. The Indians were naturally greatly put out by this seemingly unreasonable demand and were instantly greatly irritated with America. We had only the stories there to go by (the account was carried to India by Reuters) and we also couldn't understand why our Government had made such a demand. Upon returning to the States I asked why our Government had demanded that the Indian debt be canceled and discovered that the stories which had appeared in India were quite distorted and that actually our loan negotiations had contained requests concerning the dissolution of the dollar pool which would have met with high approval in Indian circles; unfortunately the story wasn't carried that way. It is hard to understand why our foreign service in India made no statement to clarify the distorted version of the facts which appeared in India and which did us so much harm there.

In the realm of business, too, attempts were made to cause Indians to look with disfavor on opportunities for doing business with America. India represents a tremendous market which could be of great value to America and, also, India would benefit by importing plants, machinery, and consumers' goods from us. Britain can't fill that market for some time to come but won't let us enter it if possible. India was promised about $40,000,000 worth of dollar credit from the dollar pool for the period 1944–46; but, getting such credits to buy with proves very difficult. So far only $5,000,000 of credit has been released out of the $40,000,000 promised and actually India needs and wants much more than $40,000,000 in credits. Red tape and delay are used extensively to avoid granting such credit. It is common knowledge that bribery is actually the only practical method of getting credits.

The Government of India has announced plans to send students to America for studies—always carefully avoided in the past—but it is not generally known that most of those students are to be trusted Government employees who will not pick up ideas of freedom over here. Bona fide students who have their own funds and want to come here to study are regularly turned down. A visa is usually granted them but the Reserve bank refuses or delays forever in granting them dollars for their rupees. Many students I knew had been trying for a year or more to get to come to America to study. Many were frankly told it would be much better for them to go to England.

Indian booksellers were everywhere most anxious to get books about America from here but all experienced utmost difficulty if not complete impossibility in getting permission to buy books from America. As a result, we could not buy books about our own country which we wanted to read and which Indians also wanted to read.

Besides all of these matters, there was the inescapable fact that the people of India and of southeast Asia expected American leadership in their progress toward greater freedom and opportunity and looked too long in vain for such leadership. They are everywhere disillusioned with us and are counting us as tacit supporters of the reestablishment of empire. It was widely pointed out in India, often by British agencies, that the words "freedom" and "justice" do not appear in the United Nations Charter and that we supported Britain against Russia in the matter of the Russian demand for a clearcut statement about colonies. It is hard to believe that America has gone so far down the road from the ideals of its founders. The colonial world expected a great deal from us and the way the news gets out there it seems as though we have not only done nothing constructive but have actually alined ourselves with the reestablishment of colonial domination. During the war our agents carried statements about the "four freedoms" into the Jap-held countries of southeast Asia, now those people are trying to realize those freedoms and are met with American equipment used by British troops against them.

Wendell Willkie warned some time ago that we were losing our fund of good will out there. I think we have lost it and that it has been in good part due to slanted propaganda against us and to the failure of our foreign service, many of whom seem more concerned with Britain's estate than with our own, to speak up to counteract such slanted items.

After all, foreign peoples do not look upon us as we look upon ourselves. We think we are good and have good motives. We take that for granted. Apparently we think our opinion of ourselves is shared by other people; but unfortunately it is not. A conscious effort is needed to assure the world of our real motives and interests. Propaganda against us only makes it more imperative that we know our minds and that we let other people know what we stand for.

I trust this gives you some idea of what has happened to our status in the eastern part of the world during this war. I know I am not the only American who was there who feels as I do about these matters.

## Resolution on Atomic Energy Control

EXTENSION OF REMARKS
OF
### HON. WILLIAM A. ROWAN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

*Wednesday, December 19, 1945*

Mr. ROWAN. Mr. Speaker, under leave to extend my remarks I include a resolution on atomic-energy control, supported by more than 200 members of the National Academy of Sciences, which was submitted to me by Robert S. Mulligan, professor of physics, University of Chicago:

RESOLUTION ON ATOMIC-ENERGY CONTROL

I

The Johnson-May bill for the regulation of atomic energy, now before Congress, does not protect the vital interests of the United States. This bill should be withdrawn.

Amendments have not corrected the essential defects of the bill. They retain the objectionable features of the original bill. The bill, if enacted, would—

1. Weaken the national defense.
2. Jeopardize the democratic institutions of the American people.
3. Frustrate fundamental research necessary to the maintenance of American leadership in the development of atomic energy.
4. Set up an authority within the United States responsible to no one—not even to the President or the Congress.
5. Take atomic energy away from the American people, where the President says it belongs, with the danger that it may become the exclusive property of the military.
6. Make it more difficult, perhaps impossible, to stop the present drift toward an atomic armaments race.
7. Block the normal negotiation of international agreements in the field of atomic energy, and interfere with attempts to set up vitally necessary international controls.

The bill, as now amended, creates a commission with autonomous powers not only in the area of atomic military research but in scientific, medical, and industrial fields. The new amendments do not require the Commission to license independent research or to make materials available to independent laboratories under proper safeguards. Nor are standards set up under the bill for atomic research privileges. The Commisison would have power to grant exclusive rights in atomic energy development to certain private companies, or to withhold these rights from other companies at its own discretion.

II

In our judgment, any legislation in this field should, as a minimum, provide the following:

First. The Commission and its administrator should be responsible to the President and to Congress. They should be removable by the President in the same manner as Cabinet officers.

Second. Any secrecy regulations should be applicable only to the disclosure of the design features and laboratory tests pertaining to the plant and to details of the atomic bomb itself; that is, only to such matters as are normally kept secret when the manufacture of munitions or weapons of war is involved. We note that the President of the United States has distinguished between the scientific knowledge and the design features, tests, plants, and details of the bomb itself. Other regulations should be limited to removing hazards to safety.

Third. Prior to promulgation, all secrecy regulations should be reviewed by a special Cabinet committee to make sure that the public interest in full disclosure is protected whenever possible.

Fourth. To protect individual research, the Commission should be required to provide sufficient materials, under proper safeguards, to make independent research possible. It should be made perfectly clear that the Commission has no power to control research.

Fifth. The Commission should be required, after an appropriate interval, to recommend to the Congress a program setting forth the standards which should apply to the Government regulation of the industrial use of atomic energy. Until such a program has been recommended and enacted by the Congress, the Commission should not have any power to permit the use of atomic power for industrial purposes. Such a program should deal specifically with such problems as patents, exclusive rights, and those steps to be taken to encourage private enterprise to assist in this development. Research and experiments looking toward the industrial use of atomic power should be permitted prior to the submission of the industrial program.

Sixth. We believe that the free exchange of scientific information with the United Nations as proposed by the President is of the utmost importance, and is not entirely separate from the development of a domestic program. Atomic power has been made possible only by the work of scientists all over the world. Many of the most eminent of these scientists are not in the United States and are citizens of foreign countries. Legislation must be framed by the Congress so as to take advantage of such international agreements as may be achieved, and to permit the free exchange of scientific information, not only within our own country, but with foreign scientists.

III

President Truman has said: "Never in history has society been confronted with a power so full of potential danger and at the same time so full of promise." Surely, any legislation on a subject so momentous deserves the gravest consideration by Congress. We welcome the creation of the special committee of the United States Senate to deal exhaustively with these matters. Equal consideration must be given by the House of Representatives. To forestall the dangers and realize the promises of atomic energy, Congress owes the American people the best legislation which its combined wisdom can draft.

Respectfully submitted by the undersigned members of the National Academy of Sciences:

Charles Greeley Abbot, director, Smithsonian Institution, Washington, D. C.; Comfort Avery Adams, Edward G. Budd Manufacturing Co., Philadelphia, Pa.; Thomas Addis, professor of medicine, Stanford University; Robert Grant Aitken, emeritus director, Lick Observatory; Abraham Adrian Albert, professor of mathematics, University of Chicago; James Waddell Alexander, Institute of Advanced Study, Princeton University; Charles Elmer Allen, professor of botany, University of Wisconsin; John August Anderson, Mount Wilson Solar Observatory, Pasadena, Calif.; James Rowland Angell, president emeritus, Yale University; Charles Armstrong, medical director, United States Public Health Service, Washington, D. C.; Harold Delos Babcock, Mount Wilson Observatory, Pasadena, Calif.; Irving Widmer Bailey, biological laboratories, Harvard University; Wilder Dwight Bancroft, emeritus professor of physical chemistry, Cornell University; Philip Bard, professor, school of medicine, Johns Hopkins University; Gregory Paul Baxter, professor of chemistry, Harvard University; George Wells Beadle, professor of biology, Stanford University; Charles P. Berkey, emeritus professor of geology, Columbia University; Henry Bryant Bigelow, museum of comparative zoology, Harvard University; Raymond Thayer Birge, chairman, department of physics, University of California; Eliot Blackwelder, head of department of geology, Stanford University; Alfred Blalock, surgeon in chief, Johns Hopkins Hospital, Baltimore, Md.; Hans Frederik Blichfeldt, research laboratory, General Electric Co., Schenectady, N. Y.; Gilbert Ames Bliss, emeritus professor of mathematics, University of Chicago; Marston Taylor Bogert, emeritus professor of chemistry, Columbia University; Edwin G. Boring, professor of psychology, Harvard University; Norman L. Bowen, professor of geology, University of Chicago; Gregory Breit, ballistic research laboratory, Aberdeen Proving Ground, Md.; Percy Williams Bridgman, professor of mathematics and natural philosophy, Harvard University.

Arthur Francis Buddington, professor of geology, Princeton University; Douglas Houghton Campbell, professor of botany, Stanford University; Anton Julius Carlson, emeritus professor of physiology, University of Chicago; William Bosworth Castle, professor of medicine, Harvard Medical School; William Ernest Castle, research consultant, University of California; Rollin Thomas Chamberlin, professor of geology, University of Chicago; Charles Manning Child, emeritus professor of zoology, Stanford University; Hans Thacher Clarke, professor of chemistry, College of Physicians and Surgeons, New York City; Ralph Erskine Cleland, professor of botany and bacteriology, Indiana University; Arthur Byron Coble, professor of mathematics, University of Illinois; William W. Coblentz, physicist, National Bureau of Standards, Washington, D. C.; Carl Ferdinand Cori, professor of pharmacology, and biochemistry, Washington University, School of Medicine; John N. Couch, professor of botany, University of North Carolina; Henry Crew, professor of physics, Northwestern University; Reginald A. Daly, emeritus professor of geology, Harvard University; Bergen Davis, emeritus professor of physics, Columbia University; Clinton J. Davisson, Bell Telephone Laboratories, New York, N. Y., Nobel prize 1937, physics; Arthur L. Day, director (retired), geophysical laboratory, Carnegie Institution, Bethesda, Md.; A. J. Dempster, professor of physics, University of Chicago; John Dewey, emeritus professor of philosophy, Columbia University; L. E. Dickson, emeritus professor of mathematics, University of Chicago; Th. Dobzhansky, professor of zoology, Columbia University; E. A. Doisy, director of department of physiology and biochemistry, St. Louis University School of Medicine; Hugh L. Dryden, Chief, Mechanics and Sound Division, Bureau of Standards, Washington, D. C.; Carl O. Dunbar, director, Peabody Museum, Yale University; L. C. Dunn, executive officer, department of zoology, Columbia University.

C. A. Elvehjem, professor of biochemistry, University of Wisconsin; R. A. Emerson, professor of plant breeding, Cornell University; Joseph Erlanger, professor of physiology, Washington University School of Medicine; Henry Eyring, professor of physical chemistry, Princeton University; Wallace O. Fenn, professor, School of Medicine and Dentistry, University of Rochester; M. L. Fernald, Fisher professor of natural history, Harvard University; John A. Fleming, director, department of terrestrial magnetism, Carnegie Institution of Washington, D. C.; Paul D. Foote, director of research, Gulf Research & Development Co.; J. Franck, professor of chemistry, University of Chicago, Nobel prize, 1925, physics; R. C. Fuson, professor of chemistry, University of Illinois; Henry Gilman, professor of chemistry, Iowa State College; William K. Gregory, American Museum of Natural History, New York City, N. Y.; William D. Harkins, professor of chemistry, University of Chicago; R. A. Harper, emeritus professor of botany, Columbia University; Ross G. Harrison, emeritus professor of biology, Yale University; E. B. Hart, professor of agricultural chemistry, University of Wisconsin; Carl G. Hartman, professor of zoology and physiology, University of Illinois; Selig Hecht, professor of biophysics, Columbia University; Michael Heidelberger, College of Physicians and Surgeons, New York, N. Y.; Ludvig Hektoen, Chicago Tumor Institute, Chicago, Ill.; C. Judson Herrick, emeritus professor of comparative neurology, University of Chicago; Joel H. Hildebrand, chairman, department of chemistry, dean, College of Letters and Science, University of California; William Hovgaard, emeritus professor of naval construction, Massachusetts Institute of Technology; Edwin P. Hubble, ballistic research laboratory, Aberdeen Proving Ground; Claude S. Hudson, Director of Division of Chemistry, National Institute of Public Health, United States Public Health Service; George A. Hulett, emeritus professor of physical chemistry, Princeton University.

Albert W. Hull, assistant director, research laboratory, General Electric Co., Schenectady, N. Y.; Clark L. Hull, Institute of Human Relations, Yale University; Walter S. Hunter, professor of psychology and director of laboratory, Brown University; Vladimir Ipatieff, professor of chemistry, Northwestern University; Herbert E. Ives, physicist, Bell Telephone Laboratories, New York, N. Y.; M. H. Jacobs, school of medicine, University of Pennsylvania; D. F. Jones, department of genetics, Connecticut Agricultural Experimental Station; Edward Kasner, Adrian professor of mathematics, Columbia University; Edwin C. Kemble, professor of physics, Harvard University; A. V. Kidder, chairman, division historical research, Carnegie Institution, Cambridge, Mass.; John G. Kirkwood, professor of physical chemistry, Cornell University; Adolph Knopf, director of graduate studies, department of geology, Yale University; Charles A. Kraus, professor of chemistry, director of chemical research, Brown University; L. O. Kunkel, Rockefeller Institute for Medical Research, Princeton, N. J.; Irving Langmuir, associate director research laboratory, General Electric Co., Schenectady, N. Y.; K. S. Lashley, director, Yerkes Laboratories of Primate Biology, Orange Park, Fla.; W. M. Latimer, dean, college of chemistry, University of California; Armin O. Leuschner, emeritus professor of astronomy, University of California; Warren H. Lewis, Wistar Institute of Anatomy and Biology, Philadelphia, Pa.; S. C. Lind, dean, institute of technology, University of Minnesota; Ralph Linton, professor of anthropolgy, Columbia University; C. C. Little, director, Jackson Memorial Laboratory, Bar Harbor, Maine; Leo Loeb, emeritus professor of pathology, Washington University; Warfield T. Longcope, physician in chief, Johns Hopkins Hospital; Chester R. Longwell, chairman, department of geology, Yale University; Theodore Lyman, director, Jefferson Physical Laboratory, Harvard University; J. B. Macelwane, director, institute of geophysics, St. Louis University.

Duncan A. MacInnes, Rockefeller Institute for Medical Research, New York, N. Y.; Wm. deB. MacNider, Kenan research professor of pharmacology, University of North Carolina; Barbara McClintock, department of genetics, Carnegie Institution, Cold Spring Harbor, Long Island, N. Y.; E. V. McCollum, head of department, School of Hygiene and Public Health, Baltimore, Md.; L. A. Maynard, director, School of Nutrition, Cornell University; E. D. Merrill, director, Arnold Arboretum, Jamaica Plain, Mass.; Ernest Merritt, emeritus professor of physics, Cornell University; K. F. Meyer, Hooper Foundation, University of California medical center; Leonor Michaelis, emeritus member, Rockefeller Institute for Medical Research, New York, N. Y.; George R. Minot, director, Thorndike Memorial Laboratory, Boston City Hospital; S. A. Mitchell, director, McCormick Observatory, University of Virginia; Carl R. Moore, chairman, department of zoology, University of Chicago; Joseph H. Moore, Lick Observatory, Mount

Hamilton, Calif.; Marston Morse, Institute for Advanced Study, Princeton, N. J.; F. R. Moulton, secretary, American Association for Advancement of Science, Washington, D. C.; R. S. Mulliken, professor of physics, University of Chicago; John H. Northrop, Rockefeller Institute for Medical Research, Princeton, N. J.; F. G. Novy, emeritus dean, Medical School, University of Michigan; Theophilus S. Painter, research professor of zoology, University of Texas; Charles Palache, emeritus professor of mineralogy, Harvard University; J. T. Patterson, director of zoological research, University of Texas; John R. Paul, professor of preventive medicine, Yale University; Linus Pauling, head of division of chemistry, California Institute of Technology; G. W. Pierce, emeritus professor of physics, Harvard University; W. B. Pillsbury, emeritus professor of psychology, University of Michigan; Alfred N. Richards, professor of pharmacology, University of Pennsylvania; J. F. Ritt, professor of mathematics, Columbia University.

O. H. Robertson, head of department of medicine, University of Chicago; W. H. Rodebush, professor of chemistry, University of Illinois; Alfred S. Romer, Museum of Comparative Zoology, Harvard University; William C. Rose, acting head of department of chemistry, University of Illinois; Frank E. Ross, Mount Wilson Observatory, Pasadena, Calif.; William W. Rubey, principal geologist, United States Geological Survey, Washington, D. C.; Florence R. Sabin, emeritus member, Rockefeller Institute, Denver, Colo.; Frederick A. Saunders, emeritus professor of physics, Harvard University; Karl Sax, professor of botany, Harvard University; Adolph H. Schultz, associate professor physical anthropology, Johns Hopkins Medical School; W. B. Scott, emeritus professor of paleontology, Princeton University; Carl E. Seashore, dean pro tempore, department of psychology, State University of Iowa; Philip A. Shaffer, dean of medical school, Washington, University; Harlow Shapley, director of observatory, Harvard University; John C. Slater, head of department of physics, Massachusetts Institute of Technology; Joseph Slepian, associate director of research laboratories, Westinghouse Electric Corp., East Pittsburgh, Pa.; Louis B. Slichter, professor of geophysics, California Institute of Technology; V. M. Slipher, director, Lowell Observatory, Flagstaff, Ariz.; Lyndon F. Small, head chemist, National Institute of Health, United States Public Health Service, Bethesda, Md.; Lee Irvin Smith, chief of division of organic chemistry, University of Minnesota; Philip E. Smith, professor, college of physicians and surgeons, Columbia University; William C. Stadie, professor of medicine, University of Pennsylvania; L. J. Stadler, professor of botany, University of Missouri; W. M. Stanley, member, Rockefeller Institute for Medical Research, Princeton, N. J.; Joel Stebbins, Washburn Observatory, Madison, Wis.; Otto Stern, research professor, physics department, Carnegie Institute of Technology; G. W. Stewart, professor and head, department of physics, State University of Iowa.

Calvin P. Stone, professor of psychology, Stanford University; Marshall H. Stone, professor of mathematics, Harvard University; George M. Stratton, emeritus professor of psychology, University of California; George L. Streeter, Johns Hopkins Medical School, Baltimore, Md.; Otto Struve, Yerkes Observatory, University of Chicago; H. U. Sverdrup, professor, Scripps Institute of Oceanography, La Jolla, Calif.; John R. Swanton, ethnologist, Smithsonian Institution, Washington, D. C.; William H. Taliaferro, dean, division of biological science, University of Chicago; C. V. Taylor, dean, school of biological science, Standford University; Charles Thom, United States Department of Agriculture (retired), Port Jefferson, N. Y.; T. Y. Thomas, professor of mathematics, Indiana University; Edward L. Thorndike, emeritus professor of psychology, Teachers College, Columbia University; Edward C. Tolman, professor of psychology, University of California; A. M. Tozzer, curator, Peabody Museum, Harvard University; Robert J. Trumpler, professor of astronomy, University of California; Harold C. Urey, professor of chemistry, University of Chicago, Nobel prize for chemistry; H. S. Vandiver, professor of mathematics, University of Texas; C. B. Van Niel, professor of microbiology, Hopkins Marine Station, Stanford University; Donald D. Van Slyke, member, Rockefeller Institute for Medical Research, New York, N. Y.; J. H. Van Vleck, professor of physics, Harvard University; T. Wayland Vaughan, emeritus professor and emeritus director, Scripps Institution, Washington, D. C.; Oswald Veblen, professor, school of mathematics, Institute for Advanced Study, Princeton, N. J.; H. B. Vickery, biochemist in charge of laboratories, Connecticut Agricultural Experimental Station, New Haven, Conn.; Selman A. Waksman, professor of soil microbiology, New Jersey State Agricultural Experimental Station, New Brunswick, N. J.; J. C. Walker, professor of plant pathology, University of Wisconsin; Hermann Weyl, professor, school of mathematics, Institute for Advanced Study.

John B. Whitehead, emeritus professor of applied electricity, Johns Hopkins University; Willis R. Whitney, honorary vice president, General Electric Co., Schenectady, N. Y.; E. P. Wigner, Jones professor of mathematical physics, Princeton University; R. R. Williams, chemical division, Bell Telephone Laboratories, New York, N. Y.; B. H. Willier, chairman, department of biology, Johns Hopkins University; George B. Wislocki, Stillman professor of comparative anatomy, Harvard Medical School; Clark Wissler, emeritus curator, American Museum of Natural History, New York, N. Y.; S. B. Wohlbach, School of Medicine, Harvard University; R. W. Wood, research professor of experimental physics, Johns Hopkins University; L. L. Woodruff, director, Osborn Zoological Laboratory, Yale University; Robert S. Woodworth, emeritus professor of psychology, Columbia University; Sewall Wright Burton distinguished service professor of zoology, University of Chicago; W. H. Wright, Lick Observatory, Mount Hamilton, Calif.; Robert M. Yerkes, professor of psychobiology, Yale University School of Medicine; V. K. Zworykin, associate director, R. C. A. Research Laboratories, Princeton, N. J.

## Seven Steps by Congressman To Help Make UNO Succeed—It Depends Upon You and Me To Be Builders of World Peace; Do Not Stir Up Misunderstanding, Ill-Will, Suspicion, With Other Members of UNO

EXTENSION OF REMARKS

OF

### HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, December 18, 1945*

Mr. DOYLE. Mr. Speaker, when I yesterday voted to put life blood into the United Nations Organization, I voted to give life to the hopes, aspirations, prayers of the great mass of the American people. Yes; we all hope and we must all work and pray that this time there shall be an enduring world peace. The first chance we now have to set up international peace and security, machinery to enable international accord and collaboration for this enduring world plan is through this very United Nations Organization which we yesterday voted to implement by authorizing the appointment of the United States representatives thereto.

And since so much able and clear explanation has already been made by committee members of just what this bill will do, I wish to take a few minutes to make some observations which I believe are pertinent in this debate. Then I may, on the assumption that every Member of this House wants enduring world peace more than anything else for the world. I want just this very enduring world peace, that none of my neighbors shall lose their sons in another world war as I did mine in this one, and that this world shall live as a world neighborhood instead of a world at each other's economic and social throats.

I make seven suggestions as to our own attitude and conduct in this House with reference to this UNO to wit:

First. Let us mentally make it a must. That is, because we know that another world war, with the atomic power used therein, will result in the destruction of the civilization of man. We know we must have success with the UNO. It is either success through UNO or world chaos. Therefore the UNO must succeed.

Second. Because the choice is either a successful UNO or chaos, because of the atomic power which scientists tell us will now be available to all nations, we must not only conclude mentally that UNO must succeed, but we must all do our dead level best to make it successful. "Lip" service and voting authorization and money is not enough for us to do, or render.

Third. Talk not of its possibility of failure, but rather speak only that it must succeed. Speak at all times of it in terms of something must succeed and about which there can be no room for failures.

Fourth. Do not talk on this floor in terms of ill will, prejudices, hatred, suspicion of the other members of the Organization of which we have become a component part. Whenever we speak of any of them, let us first make sure that what we are impelled to say is not mere gossip or false exaggerated report or hearsay. Let us speak of the other members as we would be ourselves spoken of. Let us not stir up ill will, suspicion, and misunderstanding toward our motives by reason of ill-chosen words or hasty conclusions or unfounded conclusions.

Fifth. Let us consider that we here in Congress are an integral part of this new world instrument for world security. Therefore we must consider ourselves as in a particularly high place to be builders of peace, by reason of only saying the things and doing the acts which are designed to definitely build for an enduring world peace.

Sixth. Be possessed of a mind that the UNO can succeed in a war-torn world. Stop our doubting. Stop our doubting. Stop repeating to one another doubts as to its becoming a success. Stop spreading fear. Be positive for its success instead of negative and doubtful.

Seventh. Keep the UNO in a nonpolitical position in our minds and hearts. By that I mean to say that the peace of the world is more important to me than is the calling of a person by his party affiliation. Counting the cost of the recent war in terms of money and human lives and destinies; adding thereto the waste, heartaches, fears, hates, the chaos both past and future which will result in the world as sure as gospel from this war, it behooves us here and now to dedicate our every material and spiritual resource to the high purpose and the necessity of doing our dead level best as a Congress to make the United Nations Organization a success.

To me this need of enduring world peace is ever present. It is a dominating factor in my attitude toward many things. Upon it depends decisions of destiny by this Congress in your lifetime and mine. There must be no sense of scoffing at the possibility of achieving world peace. Rather, gentlemen, there must be no act, no deed, no word by us—or any of us—which is designed to or which will postpone that day.

It depends upon you and upon me—today, tomorrow—each day to be builders of an enduring world peace—mentally, morally, spiritually, and by what we say and by what we do.

## Resolution on Poland

REMARKS

OF

### HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

*Thursday, December 20, 1945*

Mr. PHILBIN. Mr. Speaker, it is most appropriate on the eve of the birthday of the Prince of Peace that Congress should give its attention to pending great questions affecting world peace.

I am therefore introducing today a resolution in behalf of the Polish people, expressing sympathy with their aspirations for a completely free status and pledging the assistance of this Congress to their aims for a democratic government of their own choice. It seems particularly fitting, at this time when our Secretary of State is engaged in conferences with leading ministers of the United Nations, that this Congress should express the hope that he will be able to bring into the agenda of these conferences the problems of Poland, Lithuania, and other Baltic and Balkan Nations.

It may also be appropriate at this time to hope that at these conferences our Secretary of State may move successfully to fix an early date for the negotiation of permanent treaties of peace and thus end the dangerous policy of international drifting which appears to be generating feelings of distrust and suspicion that may well sow the seeds of future war.

Our able and distinguished Secretary of State is about to confer with the foreign ministers of our principal allies in Moscow. This is the appropriate occasion, therefore, to consider pending great questions which involve on almost a world-wide scale the freedom of millions of worthy democratic-minded peoples. Above all, this is also the time to move for and arrange the early negotiation of final treaties of peace which will determine just, durable, and effective settlements and thus put an end to patchwork, piecemeal diplomacy and the policy of drifting and equivocation on vital international issues before this drifting leads us to the threshold of another great war. I have already urged our Department of State to bring up these questions for discussion at Moscow and earnestly hope that they may be considered.

In connection with the discussion of freedom and self-determination, it is most appropriate for me once again to bring to the attention of the Congress the unfortunate continuing plight of the gallant Polish people, the Lithuanian Nation, and other Baltic and Balkan States which are now suffering from, or threatened with oppression and unwarranted denial of freedom.

It would seem very clear that there is in some places here and abroad, the belief, desire, and hope that previous settlements of the Polish question and other related Baltic and Balkan questions heretofore arrived at by unilateral action or in informal conferences between some of the leaders of the United Nations would, after original protest, be ultimately accepted and approved by the people of the United States. The theory underlying this view is that, if long enough continued, our Nation will forget or overlook these gross and indefensible violations of the Atlantic Charter and our own cherished principles of freedom and justice. And I am not confining my remarks to the areas mentioned above because they are pertinent to informal arrangements heretofore made which affect many other nations and areas. They are equally pertinent to the brutal encroachments of imperialism wherever it reappears in ugly form throughout the world as to the brutalities and violations of totalitarianism.

Be that as it may, so far as I am concerned as a member of Congress, I am not prepared and will not be prepared at any time to forget or overlook these injustices. I endorse as a step in the right direction the principle stated not long ago in substance by our State Department that this government would not accord diplomatic recognition to autonomy over any nation that was based on force, conquest or aggression.

Some of the Allied Nations, including our own, have protested the political systems prevailing in central Europe. The Secretary of State has sharply criticized the situation in formerly hostile Bulgaria in particular, because he regards it as permitting a puppet dictatorial government in that country contrary to the interests and wishes of the people. In logic, the same protest is even more applicable to our faithful ally, Poland, where a puppet government, a ruthless dictatorship based on force, is established by our acquiesence and compliance which, if we can believe reports, is proceeding to throttle freedom and perpetrate outrage after outrage against the God-fearing, liberty-loving, peace-seeking Polish people. This is certainly a great inconsistency and glaring paradox of our current international policy.

If anyone is under the impression and is proceeding on the theory that this situation is going to "blow over," that the delivery of gallant Poland, heroic Lithuania and other brave Baltic and Balkan Nations into the special sphere of Russian influence is going to "blow over" and be forgotten by the American people or by the American Congress merely through inertia and the lapse of time, he is making a great mistake.

The irregular and ill-advised action on Poland by our Government and our allies has provoked the deepest resentment and bitterness among millions of decent, liberty-loving American citizens and this resentment and bitterness is not confined to those of Polish blood but is burning in the heart of every American citizen who loves liberty and believes in and stands for the principles of self-determination and the Atlantic Charter for which precious American blood has been so lavishly spilled all over the world.

What could be more destructive of our professed war aims than for this great, free, and powerful Nation to join with the other nations in turning over the Polish people to an undemocratic and ruthless regime against their will, and without their consent and without action by the United States Senate whose approval of foreign treaties is required by the Constitution. Could we believe for one moment that the United States Senate would ever sanction this outrage?

I am conscious that some Allied statesmen have talked about the political mistakes of the Polish, have advocated the so-called Curzon line as the solution to Poland's territorial problems and have made accusations against the good faith and fair dealing of the Polish people that are most unwarranted. No one should know better than some of these statesmen themselves that the Polish people not only do not accept the Curzon line, but have no voice whatever in present policy or acts of the present puppet masters of Poland.

Those who participate in, recognize, and condone this outrageous violation of the God-given right of the Polish people to maintain and conduct a free government of their own choice must bear due guilt for the evil consequences of their acts and weak excuses and patent subterfuges will never delude the fair-minded, democratic-minded peoples of the earth, here or elsewhere.

It is even more outrageous and indefensible to accuse the Polish people of the terrible inhuman crimes that have been and are being committed in eastern Europe, especially the slaughter and exile of the religious, when it is a known fact that all means of self-defense as well as self-expression have long since been taken away from the impoverished and defenseless Polish people by the oppressive puppet regime in Poland.

These poor people cannot speak and protest let alone procure or use the arms with which to defend their lives, families and possessions. It has become fashionable in some supposedly enlightened and liberal circles to make scapegoats of the Polish people in order to district attention from those responsible for their horrible plight.

But there is not a Member of this House, and there is not a freedom-loving American citizen in the Nation, who does not recognize that this situation now obtaining in Poland, to which I regret to say our Government apparently has consented, is an affront to all conceptions of honesty and justice. It is a repudiation of the basic principles of freedom and self-determination. It is a cruel betrayal of one of our most loyal allies in the war. It is a calloused unpardonable abandonment of the so-called "four freedoms" which were alleged, as we were so often and so positively assured when our boys were being sent off to slaughter and death in all corners of the earth, to be the aims for which they were fighting, bleeding, and dying—our hope for a brave new world of peace and plenty.

It is pertinent now, and it will be pertinent until this question is finally settled under principles of international justice, amity, and decency, to ask whether or not it is the intention of our State Department and Government to consent to the perpetuation of this violation of the fundamental rights of the Polish people. To abandon them and leave them helpless before the powerful ruthless tyrants who are now holding them by the throat and stifling their last free breath is an unconscionable offense against the law of nations and the law of God which the decent opinion of this great free American nation will never condone or sanction.

No, Mr. Speaker, this episode of betrayal of gallant Poland will not blow over. It will not be forgotten. It lives in the minds and hearts of all our countrymen who love freedom and it will live in our minds and hearts until Poland is restored to its honored and rightful place among two free nations of the earth.

Some officials of this Government may glibly argue that compromise is a necessary part of world statesmanship but that is a principle that never has been and never will be accepted by the American people. The principle of compromise with terrorism, compromise with injustice is not an American principle; it is offensive to the very spirit of free America. Like every other nation in this world which has fought and struggled and sacrificed for self-government throughout the ages as gallantly and bravely as Poland has done, Poland is entitled to her freedom, Poland is entitled to reestablish and maintain her own government, Poland is entitled to her own territories and her own possessions, and Poland is entitled to her birthright as a free nation. Nothing less than that will ever satisfy the spirit of fearless devotion to liberty that animates the Polish people, and nothing less than full political, social, economic, and ideological protection for Poland as an independent and sovereign nation can or will be recognized by the American people.

Mr. Speaker, as an American, I object to small peoples and small nations being kicked around by the strong and the powerful because I do not like injustice or bruite force, and, moreover, because I understood that this war was to end that sort of thing for all time. I am out of patience with those who pursue the principle of compromise through appeasement and supine submission to the will of radicalism and imperialism. The time has come for our Nation to declare a strong, forceful foreign policy. We seek no selfish gains; we pursue no greedy aims; we ask not for territories or possessions of other people; we demand only that the principles on which our own Nation is based and for which we entered the war and for which so many of our loyal sons have offered up their lives shall be respected throughout the world; we demand this in the name of those who died that human liberty and American liberty might live.

It is time to let other nations understand—and I care not how strong or powerful they are—that we do not intend to sit idly by and watch cynical forces of totalitarianism or imperialism just as evil in their purposes and as ruthless in their methods as Hitler ever was employ brutal force and unwelcome infiltration to sweep across Europe—sweep across the Orient—threatening to destroy or throttle every spark of freedom and justice wherever the withering hand of tyranny is laid.

Mr. Speaker, in our own self-interest as well as for justice it is time for us to act and I urge that our State Department declare a strong affirmative position in this matter and serve notice on every nation to which it may be applicable that we will no longer tolerate oppression and betrayal of the Polish people or any other people desiring freedom, that we will regard continued domination of such peoples against their will and in violation of international morality to be acts of bad faith toward the principles and aims of the United States of America and the United Nations Organization.

Sincere and whole-hearted international cooperation may well bring peace through justice but further appeasement of nations who through aggression and conquest insist upon making a mockery of our war aims and the accepted principles of human decency can only lead to another world war. Let us correct this threatening situation before we bring ruin upon the whole world, before we drift or are drawn into the vortex of another war that will decimate not only ourselves, but all of civilization. Now is the time for a show-down.

## Billion Dollar Loans for Whom?

REMARKS

OF

### HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

*Thursday, December 20, 1945*

Mr. MUNDT. Mr. Speaker, while Members are home during their 2-week Christmas recess, they will hear many questions about the proposed loan of over $4,000,000,000 to Great Britain, with its net interest rate of substantially less than 2 percent.

Some of these questions will challenge the wisdom of loaning money to foreign nations at interest rates so low that our taxpayers must pay higher taxes to supply the differential between the interest rate our Government must pay to borrow the money it loans abroad and the interest rate it proposes to charge the lucky foreign borrowers. Others will inquire about the logic and justice of charging American veterans an interest rate over twice as high as that charged to veterans of foreign countries who are members of the constituency of nations fortunate enough to be given bargain interest rates.

However, Mr. Speaker, it would seem that none could question the wisdom and businesslike methods of Congress if we were to insist to President Truman that before pressing for approval of his proposed loan to Great Britain action be deferred until at least March 31 with the understanding that by that time the President submit to Congress a breakdown and summary of all the foreign loans it is proposed that this Government make to foreign countries during 1946.

Russia wants six billion or more; the Arab countries want several hundred millions at least; Norway, Yugoslovia, Italy, Poland, and other foreign nations, it is understood, are planning to approach us with fervent pleas and persuasive appeals for substantial loans. America will make few lasting friends by loaning its substance lavishly throughout the world but we can make some lasting and embittered enemies if we grant consideration to some and deny it to others. Even President Truman must realize that there is a limit somewhere to what this country can do in the matter of loaning billions which it does not have. The logical approach therefore is to list all the requests for foreign loans before acting on any so that Congress can scale them down, grant them all, or refuse their approval as the facts and figures then available might best indicate.

## Lack of Transportation for Our Servicemen

REMARKS

OF

### HON. L. MENDEL RIVERS

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

*Thursday, December 20, 1945*

Mr. RIVERS. Mr. Speaker, we all read in the press yesterday of the great numbers of returning servicemen on the east and west coasts, stranded for the lack of transportation. We note on every train, bus, and plane countless thousands of civilians running all over the country on pleasure jaunts and taking up space and utilizing equipment that could well be used to carry home the men who have given us the first peaceful Christmas we have had in 4 years. We see stranded aboard ship, on our very shores, our flesh and blood, unable to see those whose faces have carried them through the filth and hell of the world's most savage conflict. How their hearts must burn. How their spirits must sink on such a

reception. What will be their feelings because we have not even noted their great and immeasurable sacrifices and contributions to the comfort and safety the American people have enjoyed at their expense? Have we ever thought where we would have been had they faltered or hesitated? Have we forgotten how they fought for us in the dim days, with inadequate arms, planes, and tanks? Have we failed to recall their death march on Bataan and on Guam?

There was no bottleneck in transportation, or a lack of priority, when we were rushing these same man to the far-flung battle fronts to protect this Nation. Why should there now be any bottleneck or lack of priority for their transportation home, when they have so gloriously finished the greatest job ever assigned to the men of this country?

On yesterday, I requested the Director of the Office of Defense Transportation to cancel all civilian travel—plane, train, and bus—not connected with the reconversion effort, in order to get these boys home for Christmas. I hope that every Member of the House will do the same. Get in touch with the Director of the Office of Defense Transportation today. Think of the gratitude that will live in the hearts of our returning servicemen for such a yuletide thought. And think of the appreciation of their loved ones if you help to make their return for Christmas possible. These veterans are entitled, as a matter of right, to have every possible effort made to get them home without delay.

Mr. Speaker, these warriors, these heroes, homesick and tired, have lived to see and to feel what was written in Holy Script: "A prophet is not without honor, save in his own country."

## Loans to Foreign Governments

EXTENSION OF REMARKS

OF

### HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

*Thursday, December 20, 1945*

Mr. REED of New York. Mr. Speaker before we take from the pockets of the taxpayers of the United States the almost innumerable millions of dollars and turn them over to foreign governments, it might be well to review the amounts now owed to us by foreign countries. These defaulted debts make a sorry picture when it is recalled these billions will have to be redeemed by our people by the hardest kind of work and privation. I am inserting at this point the reputed debts of World War I owed to the United States, as of July 1, 1944:

*World War I debt owed the United States, as of July 1, 1944*

(Source: U. S. Treasury Department)

| Country | Total indebtedness | Principal unpaid [1] | Interest postponed and payable under moratorium agreements | Interest accrued and unpaid under funding and moratorium agreements |
|---|---|---|---|---|
| Funded debts: | | | | |
| Belgium | $495,263,077.60 | $400,680,000.00 | $3,750,000.00 | $90,833,077.60 |
| Czechoslovakia | 170,484,850.31 | 165,241,108.90 | | 5,243,741.41 |
| Estonia | 23,919,170.81 | 16,466,012.87 | 492,360.20 | 6,960,797.74 |
| Finland | 8,704,800.15 | 7,941,403.92 | [4] 763,396.23 | |
| France | 4,529,589,934.38 | [2] 3,863,650,000.00 | 38,636,500.00 | |
| Germany (Austrian indebtedness) [2] | 26,024,539.59 | 25,980,480.66 | | 627,303,434.38 |
| Great Britain | 6,263,764,782.58 | 4,368,000,000.00 | 131,520,000.00 | 44,058.93 |
| Greece | 36,437,695.10 | 31,516,000.00 | 449,080.00 | 1,764,244,782.58 |
| Hungary | 2,674,567.89 | 1,908,560.00 | 57,072.75 | 4,472,615.10 |
| Italy | [2] 2,047,231,659.34 | 2,004,900,000.00 | 2,506,125.00 | 708,935.14 |
| Latvia | 9,875,762.05 | 6,879,464.20 | 205,989.96 | 39,825,534.34 |
| Lithuania | 8,848,573.28 | 6,197,682.00 | 185,930.46 | 2,790,307.89 |
| Poland | 299,332,204.20 | [2] 206,057,000.60 | 6,161,835.00 | 2,464,960.82 |
| Rumania | 73,111,160.13 | 63,860,560.43 | | 87,113,369.20 |
| Yugoslavia [3] | 63,088,593.78 | 61,625,000.00 | | 9,250,599.70 |
| | | | | 1,463,593.78 |
| Total | 14,058,351,371.19 | 11,230,903,272.98 | 184,728,289.60 | 2,642,719,808.61 |
| Unfunded debts: | | | | |
| Armenia | 26,793,083.46 | 11,959,917.49 | | 14,833,165.97 |
| Russia | 438,449,173.08 | 192,601,297.37 | | 245,847,875.71 |
| Total | 465,242,256.54 | 204,561,214.86 | | 260,681,041.68 |
| Grand total | 14,523,593,627.73 | 11,435,464,487.84 | 184,728,289.60 | 2,903,400,850.29 |

[1] Includes principal postponed under moratorium agreement and principal amounts not paid according to contract terms.

[2] The German Government has been notified that the Government of the United States will look to the German Government for the discharge of the indebtedness of the Government of Austria to the Government of the United States.

[3] This Government has not accepted the provisions of the moratorium.

[4] Also includes interest postponed and payable under agreement of May 1, 1941, and the joint resolution approved June 12, 1941 (Public Law No. 110, 77th Cong.).

I think most Americans will agree with the statements of Upton Close whose views are expressed in an article entitled "Close Ups." Under leave to extend, I am inserting the article:

CLOSE UPS

(By Upton Close)

Perhaps it is the mystical dreaminess of the Christmas season, but I am politically nostalgic this week. In the dying embers, which are always usual in a picture like this, I see the United States Senate of other years, a great and noble body led by a band of wondrous prosecutors—instead of a group of sniveling defense attorneys.

Through the curling smoke wisps of my imaginary fireplace comes the stern and gaunt face of Jim Reed of Missouri. I can hear the bellowing periods of this great American echoing through the Senate chamber as he condemns with snarling contempt a British loan of $4,400,000,000. I think he would speak like this:

"These miserable minions of Karl Marx, the Maynard Keynes, the Harold Laskis, and the rest of them, come crawling to us here begging us to hand out to them $4,000,000,000 with which to spread a Sovietized imperialism throughout half the world. They want it without interest, without promissory notes, without proper formality. Gentlemen, they want it without a thought of repayment just as they wanted and got lend-lease.

"And they got the four billion four hundred millions from a weak and milksop administration during the very same fortnight that their government in London prohibited our own Pan-American Airways from landing more than twice a week in England. I heard no objection to the landing of American transport planes in England during 4 years of war—planes bearing American troops to save the British Isles from German invasion."

As the embers in my imaginary grate become dimmer, up from the gloom arises the countenance of Hiram Johnson. As if from the tomb I can hear the great rolling voice pouring out the opinions of a real American on the nebulous question of world government.

"By what right do these emissaries come from foreign shores, infiltrate our State Department, our press, our universities, our schools, and even our churches with the thought that the people of the great United States must now surrender a part or all of their sovereignty to some dreamy world organization?

"We have been drawn into their wars and have lost and suffered through all of them. When the fighting is over and our blood has soaked hundreds of foreign battlefields they have told us to get out and not to meddle in their international political affairs."

Yes, what we need in our Senate and House today are more Walshs and Johnsons and Reeds who will drive with whiplashes of scorn and ridicule the dangerous and subversive termites from our governmental institutions—and less defending attorneys of the Barkley type who seek to shield their clients from responsibility for their acts before the great court of public opinion.

## Universal Military Training

EXTENSION OF REMARKS

OF

### HON. JOHN J. SPARKMAN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

*Thursday, December 20, 1945*

Mr. SPARKMAN. Mr. Speaker, Bishop Charles Wesley Flint, of the Methodist Church for the Washington area, has recently given a letter explaining his views on military training. Believing that all will find it of interest I am including it as follows:

THE METHODIST CHURCH,
WASHINGTON AREA,
*Washington, D. C., December 11, 1945.*

*To the Members of the Military Affairs Committees of the House of Representatives and of the Senate:*

You have recently received a communication from the Council of Bishops of the Methodist Church opposing the pending bills for universal military training.

Of the 24 or 25 bishops present when this was voted, I was the only one who did not vote for the resolution. I could not subscribe to several of the statements included, though in harmony with my colleagues on the intent and objective.

1. We, bishops, are unanimous in the conviction that the only sure basis for peace and security are international understanding and agreement, cooperation, and good will.

Also that this objective should be constantly motivating and controling—nothing should be done which militates against it and everything possible done to promote it.

As, by the UNO and other agencies, we press on toward this ideal, there must be interim arrangements. On the nature of these, good men will differ in judgment.

2. We, bishops, are unanimous in protesting against a full year, segregated from normal life and education, for exclusive military training under military regime.

(In my humble judgment, however valuable the training, a year of basic military training for youth in the most active, ambitious and acquisitive year of life, without a preponderant measure of educational or vocational content, would be intolerable boredom and react against the very purpose.)

Speaking only for myself, I am surprised that the various polls indicate such a majority of citizens generally, of servicemen and students favoring military training when the only bills pending call for a full year. (In my judgment, the opinion of our Methodist laymen would not differ materially from the general poll.)

Some measure of universal military training is certainly regarded with favor by American people generally.

May I, speaking only for myself, urge the following considerations:

1. The provision for universal military training should be regarded as temporary, to be reduced as rapidly as, and eliminated as soon as, progress in international relations permits.

2. Meanwhile the period for such training should be only the minimum essential for basic training. Surely a whole year is not needed for such purpose.

3. Some program be devised by which, for senior high school and college youth, such training be integrated with the regular educational program.

4. In the case of youth who do not have opportunity in high school or college, the period of special military training include either a large educational element, vocational or foundational, or supervised training in industry.

5. Courses with educational content to be formulated by, or jointly with, educational authorities.

6. The educational curriculum to include a course of instruction in international relations, including study of the causes of war and means of promoting peace.

7. Ample provision to be made for the social, moral, and spiritual welfare of the trainees; the moral and cultural qualifications of officer-instructors to be of a high order.

Yours respectfully,

CHARLES W. FLINT,
*Bishop, Washington Area, the Methodist Church.*

Mr. Speaker, there have been various polls on military training. One of the most interesting was made by the Motive magazine published by the student department of the board of education of the Methodist Church. This poll and the statement covering it are as follows:

THE AMERICAN CAMPUS THINKS ABOUT PEACETIME COMPULSORY MILITARY TRAINING

The following is the report on the first of a series of student opinion polls conducted on campuses over the Nation by the Motive student editorial board. Because of the overwhelming importance of peacetime conscription, there was no quandary over the subject for this first Motive poll. During the first week of October, students stuck blanks, bearing the four questions printed below, in the faces of other students. The answers given to these four questions give us a revealing cross section of the opinions held by students on peacetime conscription. The poll has for the most part been taken on coed, liberal arts, average-sized campuses. A few of the polls were taken in women's colleges and men's colleges. Several were made in theological seminaries. Some of the polls were taken on the campuses of colleges with church affiliations; others were taken at State and privately endowed universities and colleges. A cross section of all four college classes is represented; in coeducation institutions, opinion blanks were distributed to men and women in accordance with their percentage number in the school. An effort was made to include students from a variety of backgrounds and environments; city and rural students as well as those economically wealthy and of moderate means are included. It would be most interesting to present a comparison of campuses by name; it would also be interesting to give the views of a few of the nationally known participants. But it has been agreed that such information will not be divulged. It is vital that we know and evaluate what students of this country think of peacetime compulsory military training, so read on.

1. Do you favor 1 year of peacetime compulsory military training for all physically able men?

| | |
|---|---|
| Percentage of total number answering "Yes" | 66 |
| Percentage of total number answering "No" | 34 |
| Percentage in church-affiliated schools answering "Yes" | 59 |
| Percentage in church-affiliated schools answering "No" | 41 |
| Percentage in non-church-affiliated schools answering "Yes" | 71 |
| Percentage in non-church-affiliated schools answering "No" | 29 |
| Percentage of all women voting answering "Yes" | 69 |
| Percentage of all women voting answering "No" | 31 |
| Percentage of all men voting answering "Yes" | 59 |
| Percentage of all men voting answering "No" | 41 |

2. If you favor this training, when should it be given? At what age? Or upon graduation from high school?

| | |
|---|---|
| Percentage of those favoring training at age of 17 | 5 |
| Percentage of those favoring training at age of 18 | 10 |
| Percentage of those favoring training at age of 19 | 1 |
| Percentage of those favoring training at age of 20 | 1 |
| Percentage of those favoring training at age of 21 | 3 |
| Percentage favoring age of 17 or end of high school | 34 |
| Percentage favoring age of 18 or end of high school | 41 |
| Percentage favoring training upon completion of college | 5 |

3. If a law for compulsory military training is favored, do you favor allowing men who are conscientiously opposed to this service to spend 1 year in alternate service of some sort?

| | |
|---|---|
| Percentage of total number answering "Yes" | 74 |
| Percentage of total number answering "No" | 26 |
| Those in church-affiliated schools answering "Yes" | 74 |
| Those in church-affiliated schools answering "No" | 26 |
| Those in non-church-affiliated schools answering "Yes" | 75 |
| Those in non-church-affiliated schools answering "No" | 25 |

4. Do you favor a year of equivalent training for women?

| | |
|---|---|
| Percentage of total number answering "Yes" | 13 |
| Percentage of total number answering "No" | 87 |
| Percentage of all women answering "Yes" | 15 |
| Percentage of all women answering "No" | 85 |
| Percentage of all men answering "Yes" | 10 |
| Percentage of all men answering "No" | 90 |

## Veterans' Rights Under the Amended GI Bill

EXTENSION OF REMARKS
OF
**HON. THOMAS D'ALESANDRO, JR.**
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, December 19, 1945*

Mr. D'ALESANDRO. Mr. Speaker, the enactment of the conference report on H. R. 3947 will provide a sound, modest, constructive plan for dealing with the entire veterans' problem. It will substitute order and system for the chaos and confusion now existing as a dozen different Government agencies are quarreling over the control of certain functions for veterans. It will centralize responsibility, reduce red tape, eliminate overlapping services, and, most of all, assure the veterans of a decent break.

This measure, H. R. 3749, contains some very important changes in the so-called GI bill of rights, the Servicemen's Readjustment Act of 1944, including changes in Public Law 16, Seventy-eighth Congress, pertaining to the rehabilitation of persons disabled in service since September 16, 1940.

Briefly, the important changes are:

ADMINISTRATIVE PROVISIONS

The act makes permanent the authority of the Administrator to procure necessary space for administrative, clinical, medical, and out-patient treatment purposes, by lease, purchase, or construction of buildings, or by condemnation or declaration of taking. Under existing law this authority is limited to the present war and 6 months thereafter.

ARTIFICIAL LIMBS, OTHER APPLIANCES, AND RELATED SERVICES

Provision is made to insure ample authority governing the procurement of prosthetic appliances and services in connection therewith to disabled veterans, including travel expenses.

SPACE FOR SERVICE ORGANIZATIONS

The Administrator is authorized, at his discretion and under such regulations as he may prescribe, to furnish, if available, necessary space and suitable office facilities for the use of paid, full-time representatives of veterans' organizations specified in section 200, Public Law 844, Seventy-fourth Congress, June 29, 1936, and such other national organizations recognized by the Administrator thereunder, in the presentation of claims

under laws administered by the Veterans' Administration.

DISABILITY RETIREMENT

The present provision permits review of findings and decisions of retiring boards of the War or Navy Departments. The new act clarifies the intent by including findings and decisions of boards of medical survey and disposition boards.

EDUCATION AND TRAINING

Extension of time: The act extends the time from 2 to 4 years after either the date of his discharge or the termination of the war, whichever is the later, to initiate a course; and extends the time within which education or training may be afforded from 7 to 9 years after the termination of the war.

Requirement of showing of interruption of education by service removed: The new act eliminates the requirement in the law that veterans show that education was interrupted by service, and because of such change, it strikes out the 25-year age limitation on presumption of interruption of education.

Reference to refresher or retraining course removed: There are stricken from the present law the references to a refresher or retraining course, and in effect the new act provides that the veteran will be afforded approved education or training for a period of 1 year plus the time he was in the active service, not to exceed a total of 4 years.

Short intensive courses: There are authorized short intensive courses under contracts with approved institutions, with pro rata acceleration, or foreshortening, of period of eligibility, but the cost of any such course may not exceed $500.

Correspondence courses: Provision is made for instruction by correspondence courses, without subsistence allowances, subject to contracts as to rates, charging one-fourth of the elapsed time used in following such courses against the veteran's period of eligibility. The total amount payable for a correspondence course or courses is limited to $500.

Adjustment of fees to public institutions: The Administrator is authorized to make an adjustment of fees in the case of public institutions, if he finds upon application by the institution that customary charges are insufficient to permit the furnishing of education or training to eligible veterans or inadequate compensation therefor, on an over-all plan and based on showing of need of assistance to meet the educational demands under the Federal program. The estimated cost may be fixed—by regulation if desirable—instead of the actual cost—only by agreement—and the veteran may elect to foreshorten his period of eligibility by having all customary charges in excess of $500 paid. Since section 1505 is repealed there is thereby removed the chief obstacle to the proper operation of these provisions.

Subsistence allowances increased: The monthly subsistence allowances are increased from $50 to $65 in the cases of veterans without dependents, and from $75 to $90 in the cases of veterans with dependents.

Combination of courses: Provision is made for approved combination of courses under part VIII—education and training—and part VII—vocational rehabilitation—of Veterans Regulation No. 1 (a), as amended, except that the total period of combined courses must not exceed the maximum period or limitations under the part affording the greater period of eligibility.

Return of books, supplies, or equipment: There is authorized the release of returned books, supplies, or equipment, to educational or training institutions for credit, or the disposition thereof otherwise, without regard to limitations on disposition of surplus property generally.

VOCATIONAL REHABILITATION, PUBLIC LAW 16, SEVENTY-EIGHTH CONGRESS

Extension of time: The Administrator is permitted to approve courses under Public Law 16, relating to vocational rehabilitation of service disabled, beyond the 4-year period fixed in existing law and there is also extended from 6 to 9 years after the end of the war the time within which training may be furnished, to conform to the amendments made in part VIII.

Monthly rates under Public Law 16 increased: The new act provides that the disabled veteran, while pursuing training and for 2 months after his employability is determined, will be paid the amount of subsistence allowance specified in paragraph 6 of part VIII, Veterans Regulation No. 1 (a), as amended—the education and training provisions, title II, supra. It establishes a minimum rate of $105 for a veteran without dependents, $115 with a dependent, and $10 per month additional for a child, $7 for each additional child and $15 for a dependent parent. Under existing law, while a veteran may receive additional pension while pursuing a course of training, the amount payable cannot exceed the rates for total temporary disability—such rate for a veteran without dependents being $92.50 per month. The effect of the amendment is to permit the disabled veteran to receive subsistence allowances at the sums payable under part VIII relating to education and training plus whatever pension he is entitled to under existing law, but with a prescribed minimum, to protect the disabled veterans with low rate of pension.

GUARANTY OF LOANS FOR HOMES, FARMS, AND BUSINESS PURPOSES

This title of the Servicemen's Readjustment Act is revised materially, the most important changes being as follows:

First. Any loan made by any of the prescribed lending agencies to an eligible veteran within 10 years after the end of the war in compliance with the terms and conditions of the title is automatically guaranteed in an amount not in excess of 50 percent of the loan. In place of the present predetermination of the Veterans' Administration that a proposed loan may be guaranteed it provides that a loan is automatically guaranteed by virtue of the lender and the veteran having consummated a loan in full compliance with the specific provisions of the title, one of which is that the purchase price or cost does not exceed the reasonable value as determined by proper appraisal made by an appraiser designated by the Administrator of Veterans' Affairs. The terms of the loan may be as agreed upon by the lender and the veteran subject to the provisions of the law and regulations adopted pursuant to law. The Veterans' Administration upon determining that a loan has been automatically guaranteed is authorized to issue a certificate of guaranty. Loans to be made by lenders other than those supervised by State or Federal agencies must be approved in advance by the Veterans' Administration in order to be guaranteed.

Second. The aggregate amount of the guaranty in the case of a non-real-estate loan may not exceed $2,000 and in the case of a real-estate loan, $4,000, or in a proportionate amount in combination loans or in two loans of either type.

Third. The interest may not exceed 4 percent.

Fourth. The Administrator is authorized to pay an amount equivalent to 4 percent on the amount originally guaranteed rather than payment of interest for the first year.

Fifth. The maturity on amortized loans on real estate may not exceed 25 years, or in case of farm realty 40 years, and the maturity on non-real-estate loans shall not exceed 10 years.

Sixth. Makes clear that the veteran may purchase a lot out of the proceeds of a loan designed to finance the construction of a home on that lot.

Seventh. Omits the word "normal" from the phrase "reasonable normal value" in connection with appraisals.

Eighth. Broadens the act so that loans can be made for every ordinary farming purpose.

Ninth. Broadens the business-loan provisions to permit any normal business enterprise to be financed initially.

Tenth. Broadens the refinancing of existing indebtedness to cover all types of loans, with restrictions.

Eleventh. Extends and declares the powers of the Administrator to perform functions under the loan provisions, principally with respect to suits payment of claims, compromises, property administration, and the like.

Twelfth. Adds a plan permitting the Administrator to insure any loan made by supervised lending agencies which otherwise might be made under title III, as amended. Such insurance will be issued in lieu of a guaranty, to be issued direct to the lending institutions under procedure giving them not to exceed a 15-percent coverage and to be issued only to supervised lending institutions or financial institutions purchasing such loans from the original lending institution. The Administrator is authorized to prescribe, by regulation, terms and conditions and to establish the interest rate not to exceed 3 percent discount or a flat equivalent rate.

Thirteenth. The guaranteed loans may be made by any ordinary lending agency which is subject to examination and supervision by an agency of the United States or of any State or Territory, including the District of Columbia.

Restrictions of Federal laws are removed as to certain institutions subject to Federal supervision with respect to the following—as to any loan at least 20 percent of which is guaranteed under the title, and, of course, limited to such governmental loans: (a) Ratio of amount of loan to the value of the property; (b) maturity of loan; (c) requirement for mortgage or other security; (d) dignity of lien; and (e) percentage of assets which may be invested in real-estate loans.

Fourteenth. Lenders not of one of the specified classes may make guaranteed loans only in the event the loan is approved in advance by the Administrator of Veterans' Affairs.

Fifteenth. The provisions pertaining to secondary loans, section 505, are modified to conform to new procedure, and the provision that the rate of interest on the second loan shall not exceed that on the principal loan by more than 1 percent is omitted.

Sixteenth. Provision is made to protect contractural rights under loan guaranties issued under the original act, and to authorize the approval of applications filed at any time within 90 days after the effective date of the new act, in order to permit the continued processing of loan applications pending the issuance of necessary instructions and regulations under the amendatory legislation.

MISCELLANEOUS PROVISIONS

Section 1505, relating to deductions from any future adjusted compensation repealed: Section 1505 of the law relating to charges and deductions of benefits under the Servicemen's Readjustment Act against benefits under any adjusted compensation law is repealed.

Citizens of United States who performed active military or naval service with Allied governments: The new act extends to persons who served in the active military or naval service of Allied governments and who were citizens of the United States at the time of entrance into such service, the benefits of the Servicemen's Readjustment Act as well as the vocational rehabilitation provisions of Public Law 16, Seventy-eighth Congress, to the same extent as in the case of persons who served in our own armed forces. It is provided, however, that these benefits will be extended only to persons who are residents of the United States at the time of filing claim and who are not receiving similar benefits from the government of the Allied nation concerned.

Persons on terminal leave or hospitalized pending final discharge: There are extended the benefits of education and training and guaranty of loans, and vocational rehabilitation under Public Law 16, Seventy-eighth Congress, to persons while on terminal leave or while hospitalized pending final discharge, with provision that no subsistence allowance would be paid in such cases under title II of the act or Public Law 16. This section is made effective as of June 22, 1944, the date of enactment of the Servicemen's Readjustment Act.

The acceptance of this conference report will prevent a repetition of the tragic mistakes under which World War I veterans suffered and will guarantee just treatment to our veterans, who were taken away from their schools, colleges, and jobs. Their home life has been broken up.

We must face this tremendous problem. It will be a problem of returning all these men and women back to normal channels of civilian life. This is a most important problem, because it affects 10 percent of our entire populations. It is the most vigorous 10 percent of the Nation—the young men and women upon whom the future welfare of this country will depend.

Every effort must be made that nothing will interfere with the physical and economic development of this segment of our people. It is a problem that must be solved with understanding and sympathy, because it is first of all, a human problem.

They are coming back at a time when our country's national economy is under a terrific strain. Millions of men and women returning from the war front and camps will need jobs, money, training, hospitalization, housing, and other assistance, and they will expect stability and security, so that they can start rebuilding their private lives.

We must give them all that. It is the least we can do for them, because they have given us continued freedom and liberty.

---

## The Use of Knowledge in Society

EXTENSION OF REMARKS

OF

## HON. FRED L. CRAWFORD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

*Friday, November 23, 1945*

Mr. CRAWFORD. Charity, Mr. Speaker, belongs in unorganized, individual, human relations, such as the paternal care of the family; it is not a proper function of government. The Government's business is that of arranging for full and free, and yet peaceable, competition; and unless it fills that bill wisely and well we will not have, first, full—or nearly full—employment; nor, second, will we have production with ample goods in the consumer's hand.

It is particularly untrue, therefore, that any attempt on the part of government to foster or furnish employment directly, to compensate for that which private business fails to supply, can be reassuring to business or give that confidence to private enterprise which will promote employment of either capital or labor. If there are any investments which the Government should make, these must be considered, in timing as well as other factors, on their own merits, for they not only must not but they cannot be made to constitute a satisfactory and in the long run a make-work program.

It is particularly inept to attempt to assemble a statistical chart of the needs of both government and business as if they were a single field of operation in which a single, so-called national budget could be projected out of the past and into the future with an assurance that can be dignified as anything more than guesswork. Business itself is essentially a thing of many budgets, each of them with its own uncertainties; and nothing government can do will remove the speculative element and afford security to each, or to all, of these competitors so that they can proceed with a so-called confidence born of the absence of risk. Government interference cannot assuage, it can on the contrary only aggravate, these risks into a deadly burden on business, especially the little businesses that have plenty to do without having to fit themselves into Government regulations and that have to take up most of the slack in unemployment.

Among the really careful and objective thinkers on this subject who have attained the status of the "best sellers" with the reading public is Prof. F. A. Hayek, author of The Road to Serfdom. Recognition of his talent has been renewed in the current number of the American Economic Review, published by the American Economic Association, in an article entitled "The Use of Knowledge in Society." Here Dr. Hayek asks, and answers, the question, "What is the problem we wish to solve when we try to construct a rational economic order?" That there can be no rational statistical basis for procedure such as is set forth in the so-called full employment bill is made too clear for further dispute. The pertinent part—greater part—of this essay is therefore offered for the RECORD as a conclusive negative in the debate on this legislation:

I

What is the problem we wish to solve when we try to construct a rational economic order?

On certain familiar assumptions the answer is simple enough. If we possess all the relevant information, if we can start out from a given system of preferences, and if we command complete knowledge of available means, the problem which remains is purely one of logic. That is, the answer to the question of what is the best use of the available means is implicit in our assumptions. The conditions which the solution of this optimum problem must satisfy have been fully worked out and can be stated best in mathematical form; put at their briefest, they are that the marginal rates of substitution between any two commodities or factors must be the same in all their different uses.

This, however, is emphatically not the economic problem which society faces. And the economic calculus which we have developed to solve this logical problem, though an important step toward the solution of the economic problem of society, does not yet provide an answer to it. The reason for this is that the data from which the economic calculus starts are never for the whole society given to a single mind which could work out the implications, and can never be so given.

The peculiar character of the problem of a rational economic order is determined precisely by the fact that the knowledge of the circumstances of which we must make use never exists in concentrated or integrated form, but solely as the dispersed bits of incomplete and frequently contradictory knowledge which all the separate individuals possess. The economic problem of society is thus not merely a problem of how to allocate given resources—if given is taken to mean given to a single mind which deliberately solves the problem set by these data. It is rather a problem of how to secure the best

use of resources known to any of the members of society, for ends whose relative importance only these individuals know. Or, to put it briefly, it is a problem of the utilization of knowledge not given to anyone in its totality.

This character of the fundamental problem has, I am afraid, been rather obscured than illuminated by many of the recent refinements of economic theory, particularly by many of the uses made of mathematics. Though the problem with which I want primarily to deal in this paper is the problem of a rational economic organization, I shall in its course be led again and again to point to its close connections with certain methodological questions. Many of the points I wish to make are indeed conclusions toward which diverse paths of reasoning have unexpectedly converged. But as I now see these problems, this is no accident. It seems to me that many of the current disputes with regard to both economic theory and economic policy have their common origin in a misconception about the nature of the economic problem of society. This misconception in turn is due to an erroneous transfer to social phenomena of the habits of thought we have developed in dealing with the phenomena of nature.

II

In ordinary language we describe by the word "planning" the complex of interrelated decisions about the allocation of our available resources. All economic activity is in this sense planning; and in any society in which many people collaborate, this planning, whoever does it, will in some measure have to be based on knowledge which, in the first instance, is not given to the planner but to somebody else, which somehow will have to be conveyed to the planner. The various ways in which the knowledge on which people base their plans is communicated to them is the crucial problem for any theory explaining the economic process. And the problem of what is the best way of utilizing knowledge initially dispersed among all the people is at least one of the main problems of economic policy—or of designing an efficient economic system.

The answer to this question is closely connected with that other question which arises here, that of who is to do the planning. It is about this question that all the dispute about "economic planning" centers. This is not a dispute about whether planning is to be done or not. It is a dispute as to whether planning is to be done centrally, by one authority for the whole economic system, or is to be divided among many individuals. Planning in the specific sense in which the term is used in contemporary controversy necessarily means central planning—direction of the whole economic system according to one unified plan. Competition, on the other hand, means decentralized planning by many separate persons. The halfway house between the two, about which many people talk but which few like when they see it, is the delegation of planning to organized industries, or, in other words, monopoly.

Which of these systems is likely to be more efficient depends mainly on the question under which of them we can expect that fuller use will be made of the existing knowledge. And this, in turn, depends on whether we are more likely to succeed in putting at the disposal of a single central authority all the knowledge which ought to be used but which is initially dispersed among many different individuals, or in conveying to the individuals such additional knowledge as they need in order to enable them to fit their plans in with those of others.

III

It will at once be evident that on this point the position will be different with respect to different kinds of knowledge; and the answer to our question will therefore largely turn on the relative importance of the different kinds of knowledge; those more likely to be at the disposal of particular individuals and those which we should with greater confidence expect to find in the possession of an authority made up of suitably chosen experts. If it is today so widely assumed that the latter will be in a better position, this is because one kind of knowledge, namely, scientific knowledge, occupies now so prominent a place in public imagination that we tend to forget that it is not the only kind that is relevant. It may be admitted that, so far as scientific knowledge is concerned, a body of suitably chosen experts may be in the best position to command all the best knowledge available—though this is of course merely shifting the difficulty to the problem of selecting the experts. What I wish to point out is that, even assuming that this problem can be readily solved, it is only a small part of the wider problem.

Today it is almost heresy to suggest that scientific knowledge is not the sum of all knowledge. But a little reflection will show that there is beyond question a body of very important but unorganized knowledge which cannot possibly be called scientific in the sense of knowledge of general rules: The knowledge of the particular circumstances of time and place. It is with respect to this that practically every individual has some advantage over all others in that he possesses unique information of which beneficial use might be made, but of which use can be made only if the decisions depending on it are left to him or are made with his active cooperation. We need to remember only how much we have to learn in any occupation after we have completed our theoretical training, how big a part of our working life we spend learning particular jobs, and how valuable an asset in all walks of life is knowledge of people, of local conditions, and special circumstances. To know of and put to use a machine not fully employed, or somebody's skill which could be better utilized, or to be aware of a surplus stock which can be drawn upon during an interruption of supplies, is socially quite as useful as the knowledge of better alternative techniques. And the shipper who earns his living from using otherwise empty or half-filled journeys of tramp steamers, or the estate agent whose whole knowledge is almost exclusively one of temporary opportunities, or the arbitrageur who gains from local differences of commodity prices, are all performing eminently useful functions based on special knowledge of circumstances of the fleeting moment not known to others.

IV

If it is fashionable today to minimize the importance of the knowledge of the particular circumstances of time and place, this is closely connected with the smaller importance which is now attached to change as such. Indeed, there are few points on which the assumptions made (usually only implicity) by the "planners" differ from those of their opponents as much as with regard to the significance and frequency of changes which will make substantial alterations of production plans necessary. Of course, if detailed economic plans could be laid down for fairly long periods in advance and then closely adhered to, so that no further economic decisions of importance would be required, the task of drawing up a comprehensive plan governing all economic activity would appear much less formidable.

In a competitive industry at any rate—and such an industry alone can serve as a test—the task of keeping cost from rising requires constant struggle, absorbing a great part of the energy of the manager. How easy it is for an inefficient manager to dissipate the differentials on which profitability rests, and that it is possible, with the same technical facilities, to produce with a great variety of costs, are among the commonplaces of business experience which do not seem to be equally familiar in the study of the economist. The very strength of the desire, constantly voiced by producers and engineers, to be able to proceed untrammeled by considerations of money costs, is eloquent testimony to the extent to which these factors enter into their daily work.

On reason why economists are increasingly apt to forget about the constant small changes which make up the whole economic picture is probably their growing preoccupation with statistical aggregates, which show a very much greater stability than the movements of the detail. The comparative stability of the aggregates cannot, however, be accounted for—as the statisticians seem occasionally to be inclinde to do—by the "law of large numbers" or the mutual compensation of random changes. The number of elements with which we have to deal is not large enough for such accidental forces to produce stability. The continuous flow of goods and services is maintained by constant deliberate adjustments, by new dispositions made every day in the light of circumstances not known the day before, by *B* stepping in at once when *A* fails to deliver. Even the large and highly mechanized plant keeps going largely because of an environment upon which it can draw for all sorts of unexpected needs; tiles for its roof, stationery for its forms, and all the thousand and one kinds of equipment in which it cannot be self-contained and which the plans for the operation of the plant require to be readily available in the market.

V

If we can agree that the economic problem of society is mainly one of rapid adaptation to changes in the particular circumstances of time and place, it would seem to follow that the ultimate decisions must be left to the people who are familiar with these circumstances, who know directly of the relevant changes and of the resources immediately available to meet them. We cannot expect that this problem will be solved by first communicating all this knowledge to a central board which, after integrating all knowledge, issues its orders. We must solve it by some form of decentralization. But this answers only part of our problem. We need decentralization because only thus can we insure that the knowledge of the particular circumstances of time and place will be promptly used. But the "man on the spot" cannot decide solely on the basis of his limited but intimate knowledge of the facts of his immediate surroundings. There still remains the problem of communicating to him such further information as he needs to fit his decisions into the whole pattern of changes of the larger economic system.

How much knowledge does he need to do so successfully? Which of the events which happen beyond the horizon of his immediate knowledge are of relevance to his immediate decision, and how much of them need he know?

There is hardly anything that happens anywhere in the world that might not have an effect on the decision he ought to make. But he need not know of these events as such, nor of all their effects. It does not matter for him why at the particular moment more screws of one size than of another are wanted, why paper bags are more readily available than canvas bags, or why skilled labor, or particular machine tools, have for the moment become more difficult to acquire. All that is significant for him is how much more or less difficult to procure they have become compared with other things with which he is also concerned, or how much more or less urgently wanted are the alternative things he produces or uses. It is always a question of the relative importance of the

particular things with which he is concerned, and the causes which alter their relative importance are of no interest to him beyond the effect on those concrete things of his own environment.

It is in this connection that what I have called the economic calculus proper helps us, at least by analogy, to see how this problem can be solved, and in fact is being solved, by the price system. Even the single controlling mind, in possession of all the data for some small, self-contained economic system, would not—every time some small adjustment in the allocation of resources had to be made—go explicitly through all the relations between ends and means which might possibly be affected. It is, indeed, the great contribution of the pure logic of choice that it has demonstrated conclusively that even such a single mind could solve this kind of problem only by constructing and constantly using rates of equivalence (or values, or marginal rates of substitution), i. e., by attaching to each kind of scarce resource a numerical index which cannot be derived from any property possessed by that particular thing, but which reflects, or in which is condensed, its significance in view of the whole means-end structure. In any small change he will have to consider only these quantitative indices (or values) in which all the relevant information is concentrated; and by adjusting the quantities one by one, he can appropriately rearrange his dispositions without having to solve the whole puzzle ab initio, or without needing at any stage to survey it at once in all its ramifications.

Fundamentally, in a system where the knowledge of the relevant facts is dispersed among many people, prices can act to coordinate the separate actions of different people in the same way as subjective values help the individual to coordinate the parts of his plan. It is worth contemplating for a moment a very simple and commonplace instance of the action of the price system to see what precisely it accomplishes. Assume that somewhere in the world a new opportunity for the use of some raw material, say tin, has arisen, or that one of the sources of supply of tin has been eliminated. It does not matter for our purpose—and it is very significant that it does not matter—which of these two causes has made the tin more scarce. All that the users of tin need to know is that some of the tin they used to consume is now more profitably employed elsewhere, and that in consequence they must economize tin. There is no need for the great majority of them even to know where the more urgent need has arisen, or in favor of what other needs they ought to husband the supply. * * *

VI

We must look at the price system as such a mechanism for communicating information if we want to understand its real function—a function which, of course, it fulfills less perfectly as prices grow more rigid. (Even when quoted prices have become quite rigid, however, the forces which would operate through changes in price still operate to a considerable extent through changes in the other terms of the contract.) The most significant fact about this system is the economy of knowledge with which it operates, or how little the individual participants need to know in order to be able to take the right action. In abbreviated form, by a kind of symbol, only the most essential information is passed on, and passed on only to those concerned. It is more than a metaphor to describe the price system as a kind of machinery for registering change, or a system of telecommunications which enables individual producers to watch merely the movement of a few pointers, as an engineer might watch the hands of a few dials, in order to adjust their activities to changes of which they may never know more than is reflected in the price movement.

Of course, these adjustments are probably never "perfect" in the sense in which the economist conceives of them in his equilibrium analysis. But I fear that our theoretical habits of approaching the problem with the assumption of more or less perfect knowledge on the part of almost everyone has made us somewhat blind to the true function of the price mechanism and led us to apply rather misleading standards in judging its efficiency. The marvel is that in a case like that of a scarcity of one raw material, without an order being issued, without more than perhaps a handful of people knowing the cause, tens of thousands of people whose identity could not be ascertained by months of investigation, are made to use the material or its products more sparingly; i. e., they move in the right direction. This is enough of a marvel even if, in a constantly changing world, not all will hit it off so perfectly that their profit rates will always be maintained at the same constant or "normal" level.

I have deliberately used the word "marvel" to shock the reader out of the complacency with which we often take the working of this mechanism for granted. I am convinced that if it were the result of deliberate human design, and if the people, guided by the price changes, understood that their decisions have significance far beyond their immediate aim, this mechanism would have been acclaimed as one of the greatest triumphs of the human mind. Its misfortune is the double one that it is not the product of human design and that the people guided by it usually do not know why they are made to do what they do. But those who clamor for "conscious direction"—and who cannot believe that anything which has evolved without design (and even without our understanding it) should solve problems which we should not be able to solve consciously—should remember this: The problem is precisely how to extend the span of our utilization of resources beyond the span of the control of any one mind; and, therefore, how to dispense with the need of conscious control and how to provide inducements which will make the individuals do the desirable things without anyone having to tell them what to do.

The price system is just one of those formations which man has learned to use (though he is still very far from having learned to make the best use of it) after he had stumbled upon it without understanding it. Through it not only a division of labor but also a coordinated utilization of resources based on an equally divided knowledge has become possible. The people who like to deride any suggestion that this may be so usually distort the argument by insinuating that it asserts that by some miracle just that sort of system has spontaneously grown up which is best suited to modern civilization. It is the other way round: Man has been able to develop that division of labor on which our civilization is based because he happened to stumble upon a method which made it possible. Had he not done so he might still have developed some other, altogether different, type of civilization, something like the state of the termite ants, or some other altogether unimaginable type. All that we can say is that nobody has yet succeeded in designing an alternative system in which certain features of the existing one can be preserved which are dear even to those who most violently assail it—such as particularly the extent to which the individual can choose his pursuits and consequently freely use his own knowledge and skill.

## The Al Smith Drive

EXTENSION OF REMARKS
OF
### HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

*Thursday, December 20, 1945*

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Boston Herald:

THE AL SMITH DRIVE

As there is a much larger quota for Massachusetts than for New York State in the drive for funds to build an Al Smith Memorial Hospital in New York City, the managers of the enterprise must have assumed that he is better appreciated here than in his home territory, and that residents of Massachusetts will therefore respond more liberally to the appeal. That is probably correct. This State did better by him politically than New York. It whooped things up for him spontaneously and more unroariously than other sections. Persons of the Charles E. Hughes and Elihu Root type shared the attitude toward him of the man who earned his living with his muscles.

Did New Yorkers see so much of al that familiarity bred disregard and he became a prophet not honored adequately in his own country and among his own people? Are the enthusiasm and affection for him in Massachusetts and Boston due in part to the fact that the memorable nominating speech in the Democratic national convention of 1932 came from a Bay Stater, Joseph B. Ely?

The personnel of the committee which Mr. Ely heads intimates the extent of affection for Al. The group includes outstanding Protestants and Jews as well as Catholics, business, professional, and military men, among them Brig. Gen. Henry Parkman, Jr., the prominent and the inconspicuous. The chances are that the $150,000 desired from Massachusetts will be raised and that some of the largest contributions will come from persons who didn't vote for him and who spoke against him angrily at the time. They, and the more modest givers, will chip in because they saw in Mr. Smith those qualities which transcend political considerations and bind all decent men together irrespective of party, race, creed, and color.

## Potato Support Prices for 1946

EXTENSION OF REMARKS
OF
### HON. REID F. MURRAY
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

*Thursday, December 20, 1945*

Mr. MURRAY of Wisconsin. Mr. Speaker, the following announcement is of interest to the potato growers of America and also to the Members of Congress who voted for the Steagall amendment to the Price Control Act:

The United States Department of Agriculture today announced the support program that would be in effect for the 1946 crop of Irish potatoes, together with the schedule of base prices. The operations outlined and base prices are designed to permit growers a return of not less than 90 percent of parity.

Although the program for next year's potato crop is similar in general to the price support program in effect for the past few years, it differs in two major details.

Under the program announced today for the 1946 crop, there is to be no advance announcement of support prices for grades below U. S. No. 1 at fixed amounts or at fixed percenages of the applicable prices for U. S. No. 1 grade. Instead, the Department will support prices of lower grades, exclusive of culls, at such times, in such areas, by such means, and at such prices as will be necessary to carry out the USDA's price support obligations. In this connection it is pointed out that the Department may prescribe conditions governing disposition of grades lower than U. S. No. 1 which would need to be met before U. S. No. 1 grade potatoes would be eligible for support.

The second difference is that the announced support prices are base prices, effective at a stage of distribution described as "in bulk, loaded on truck at farmer's gate." Formerly support prices were at the f. o. b. level. The actual price to be received by any grower participating in the price support operation, therefore, will be the applicable base price, adjusted for the value of the marketing services actually performed as prescribed by the USDA. Specific allowances for marketing services will be announced before the support operations are undertaken.

Prices of early and intermediate crop potatoes will be supported by direct purchases, and if necessary, by diversion to other than normal trade channels, including exports, industrial, and food outlets. Late crop potato prices will be supported by loans, supplemented where necessary and practicable by diversion to export, industrial, and feed outlets.

Provisions of specific purchase and diversion programs will be announced when operations begin. In the case of the loan program, however, a full announcement will be made as soon as all details have been worked out.

*Schedule of basic support prices on 1946-crop Irish potatoes*

PART I: EARLY AND INTERMEDIATE POTATOES

[In dollars per hundredweight, U. S. No. 1 quality, bulk loaded at grower's gate]

| State and area | From beginning of season through— | | | | |
|---|---|---|---|---|---|
| | Apr. 30 (1) | May 31 (2) | June 30 (3) | July 31 (4) | Aug. 31 (5) |
| Early: | | | | | |
| Alabama | ----- | ----- | $1.70 | ----- | ----- |
| Arizona | ----- | ----- | ----- | ----- | $1.65 |
| Arkansas | ----- | ----- | ----- | ----- | 1.60 |
| California, southern [1] | $1.30 | $1.35 | 1.35 | $1.25 | ----- |
| Florida: | | | | | |
| Southern [2] | 2.60 | ----- | ----- | ----- | ----- |
| Northern [3] | ----- | 2.20 | 1.70 | ----- | ----- |
| Other | ----- | ----- | 1.70 | ----- | ----- |

| Wisconsin | ----- | ----- | 1.25 | 1.30 | 1.40 | 1.50 |
| Wyoming | ----- | ----- | 1.25 | 1.30 | 1.40 | 1.50 |
| Other States [14] | ----- | ----- | 1.50 | 1.55 | 1.65 | 1.75 |

[1] Counties of Monterey, San Benito, Madera, Fresno, Inyo, and all counties south thereof.

[2] Counties of Charlotte, Glades, Martin, and all counties south thereof.

[3] All counties lying north of the counties of Charlotte, Glades, and Martin, and south and east of the Suwannee River.

[4] Counties of Zapata, Jim Hogg, Brooks Kenedy, and all counties south thereof.

[5] The counties of Hardeman, Foard, Knox, Haskell, Jones, and Taylor, and all counties east thereof; the counties of Callahan Eastland, Erath, Hood, Johnson, and Ellis, and all counties north thereof; and all counties east of the Trinity River except the counties of Walker, Liberty, and Chambers, which are considered as lying wholly west of the Trinity River.

[6] All counties north of a line formed by connecting the southern boundaries of the counties of Yoakum and Stonewall; and the counties of Childress, Cottle, King, and Stonewall, and all counties west thereof.

[7] Counties of Solano, Sacramento, San Joaquin, Stanislaus, Merced, Santa Clara, Alameda, and Contra Costa.

[8] All counties in Colorado not included in the San Luis Valley and the western slope.

[9] Counties of Saguache, Huerfano, Las Animas, Costilla, Alamosa, Rio Grande, Conejos, Mineral, and Archuleta.

[10] Counties of Routt, Eagle, Pitkin, Gunnison, Hinsdale, La Plata, and all counties west thereof in the State of Colorado.

[11] Idaho County and all counties north thereof in the State of Idaho.

[12] Counties of Wilkin, Otter Tail, Wadena, Cass, Crow Wing, Aitkin, and Carlton, and all counties north thereof.

[13] Counties of Malheur, Baker, Union, and Wallowa.

[14] All States and areas not provided for in this schedule.

I do not care to discuss this problem until a later date. You will note that Utah, for example, is to be provided a $1.05 per hundredweight, or 63 cents per bushel floor or support price for 1946. Northern Minnesota and North Dakota a 66-cent per bushel support, Wisconsin a 75-cent per bushel support price as of September 1946.

Can you give any reason why the support price for early potatoes in California in May of 1946 should be 81 cents per bushel and $1.35 per bushel in Texas, and $1.32 per bushel in Florida?

There are many situations that must be considered in connection with this announcement, and after the recess I am expecting to present them to Congress and show exactly what is taking place in the minds of the price jugglers of this administration.

## Federal Contribution to States for Old-Age Assistance

EXTENSION OF REMARKS

OF

## HON. J. WILLIAM FULBRIGHT

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

*Thursday, December 20 (legislative day of Wednesday, December 19), 1945*

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to include in the Appendix of the RECORD a letter received by me from the Chairman of the Social Security Board, relating to a bill I recently introduced—S. 1653—to provide for computation of amounts of grants to States for old-age assistance on the basis of the financial resources of the several States, together with an introductory statement prepared by me on the subject.

There being no objection, the letter and statement were ordered to be printed in the RECORD, as follows:

On December 4, I introduced S. 1653, a bill to require that Federal contributions to States for old-age assistance shall be in accordance with the ability of the separate States to pay their proportionate part, based on the per capita income in each State in proportion to the per capita income of the continental United States.

Under present laws, with the Federal Government contributing an amount equal to that appropriated or authorized by the State in which a claimant happens to live without regard to the cost of living or what the pensioner needs for a minimum standard of living, persons residing in the poorer States are denied the essentials of life. For the entire Nation, the average monthly payment to needy old people is nearly $30 per month, but in 9 of the 12 lowest income States the average, in spite of substantial increases in recent years which has cost the local taxpayers a far greater percentage of their income than in the wealthier States, the average is less than $20; and in five of those nine States it is less than $15.

Cost-of-living studies do not show large or clearly defined differences among the States and regions in the costs of identical essential needs in food, clothing, and housing. Yet, when the need is as great and the fiscal ability is low, local officials have no recourse but to reduce the payment of old-age assistance below the actual minimum cost of living. Because the welfare of each section of the country is of concern to all sections, it is believed that in meeting the actual welfare needs of our aged needy, no matter where they happen to live, the general public welfare of all the people will be improved. In the 12 States with the lowest average income, with 21 percent of the population of the country, only 14 percent of the total Federal amount is granted for public assistance.

This bill is designed to bring about reasonably adequate assistance to needy folk in every State, no matter where they live and regardless of the financial resources of the area. This principle has been endorsed by the Council of State Governments, the American Public Welfare Association, and other interested and informed groups. The Social Security Board has recommended to Congress that the Federal Government provide special aid for public assistance to States with low economic capacity on an objective basis. The principle of granting more State aid to poorer localities has already been well established in education; certainly essential needs are more necessary for our aged poor, and the obligation falls on each of us individually, no matter where we live, and upon all of us as a Nation.

LETTER FROM MR. ALTMEYER

FEDERAL SECURITY AGENCY,
SOCIAL SECURITY BOARD,
*Washington, D. C., December 18, 1945.*

Hon. J. W. FULBRIGHT,
*United States Senate,*
*Washington, D. C.*

DEAR SENATOR FULBRIGHT: Thank you for sending me a copy of the bill on old-age assistance, S. 1653, which you introduced in the Senate. Your bill is in essential agreement with recommendations made by the Social Security Board for amendment of the Federal matching provisions of the Social Security Act, not only for old-age assistance but also for aid to dependent children and aid to the blind.

The Ninth Annual Report of the Social Security Board for the fiscal year 1943–44 included the following statement regarding the basis of Federal grants to States. We believe this statement may be useful to you in presenting the need for amending matching provisions:

"Under the Social Security Act, the Federal Government matches, dollar for dollar up to a given amount a month, the assistance payment made to a needy old or blind person or a dependent child under a State plan approved by the Social Security Board. Within the limits on Federal matching, the amount of the Federal grant to the State for any of these assistance programs, therefore, is fixed by the amount provided by the State, or the State and its localities. States differ greatly in income and therefore in potential capacity to finance adequate assistance programs. In 1943 per capita income ranged from $1,452 in the high State to $484 in the State where average income was least. Average income increased in 1943 in all but one State, where it already was high, but the range and ranking remained about the same as in 1943. States with a high level of income can make relatively large appropriations for public assistance and thus qualify for relatively large Federal grants, though the extent of need among their people may be less than it is in States which can afford only small amounts and get only small Federal grants.

"Studies of the Board have led to the conclusion that differences in the economic and fiscal capacity of States are the greatest single clause of the even wider variations in levels of assistance. Among States administering public assistance under the Social Security Act, average payments for each of the three special types of assistance in June 1944 were about four times as much in the highest State as in the State where the average was lowest. In general assistance, financed wholly from State and local funds, differences were even greater, and the average in the highest State was more than six times that in the lowest.

"The average assistance payment in each State is made up, of course, of differing individual amounts, since the payment to a recipient supplements what resources he himself may have. Individual assistance payments under these four programs range from a few dollars a month to—in a very few States—more than $100 for an occasional recipient in exceptional circumstances. A low average for a State might be due to the fact that the recipients on the rolls needed only small amounts to supplement what they themselves had. Actually, however, the low averages occur almost without exception in States where per capita income and fiscal resources are low. The low averages result, in general, from the meagerness of payments to persons who have little or nothing but their payment. In such States, moreover, some needy persons eligible under the State law may get no aid whatever because funds are lacking.

"The Social Security Board reaffirms a recommendation made in earlier reports that special Federal aid for public assistance be provided on an objective basis to States with low economic and fiscal capacity. Such provision is essential if standards of assistance are to be equitable and more nearly adequate in all States. Just as the Board believes that the Federal share should vary with economic capacity of the States, it believes that Federal and State funds should be distributed to localities in relation to their needs and, where the localities participate in financing, also in relation to their financial ability."

We are enclosing copies of two tables showing the variation among the States in expenditures for old-age assistance under present matching provisions. Table 1 shows total expenditures per inhabitant from Federal, State, and local funds in the fiscal year 1944–45. Table 2 shows the percent which each State received of total Federal funds expended for old-age assistance compared with the percent of total United States aged population in the State.

I hope this information will prove useful to you and that you will let me know if we can be of further assistance to you.

Sincerely yours,
A. J. ALTMEYER, *Chairman.*

## McVay Court Martial

REMARKS
OF
**HON. HENRY D. LARCADE, JR.**
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
*Thursday, December 20, 1945*

Mr. LARCADE. Mr. Speaker, the Navy court marshal of Capt. Charles B. McVay 3d, held here in Washington, in my opinion, leaves a blot on the Navy that will never be erased. Reports indicate that the court found the accused "not guilty" of all charges save and except one—not zigzagging his ship, and the most reprehensible fact of the trial was that this officer, the scion of an illustrious Navy family, was convicted of that charge upon the testimony of an enemy officer, Commander Iko Hashimoto, a despicable Japanese commander of the submarine which sent his ship to the bottom.

Mr. Speaker, I am advised that never before in the annals of our country has a court martial called an enemy to testify against a brother officer, and in view of the brilliant record of Captain McVay, it is difficult to understand the action of the men who constituted this naval court martial.

Mr. Speaker, I have followed this case from the beginning of the court martial, and it seems to me that instead of Captain McVay being brought to trial that, those responsible for the loss of the 860 men of a complement of 1,160 for not sending rescue craft until 5 days after the disaster, should have been the ones to summon for court martial.

Mr. Speaker, I hope that the Secretary of the Navy or the President will reverse the findings of this scandalous and undeserved action of the court-martial court in this instance; however, even this action will never remove the stain from the court martial and Navy in summoning a prejudiced enemy officer to testify against a brother officer with a record such as that of Captain McVay.

## Port of Galveston Leads the Country in Export of Cotton

EXTENSION OF REMARKS
OF
**HON. JOSEPH J. MANSFIELD**
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
*Thursday, December 20, 1945*

Mr. MANSFIELD of Texas. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following news clipping from the Galveston Daily News, December 11, 1945, in regard to the shipment of cotton through the port of Galveston. For many years before the late depression Galveston was one of the leading ports in the export of cotton, generally in first position. During the war, of course, such shipments were limited to war and lend-lease purposes. From this clipping it will be seen that Galveston has again gone to the front with cotton receipts greater than in any other port in the United States. The report is as follows:

PORT NOW HOLDS FIRST PLACE IN COTTON RECEIPTS

The port of Galveston is bidding again for its former distinction as the world's greatest cotton port. Figures released yesterday showed that the local port is leading its two chief competitors, Houston and New Orleans, by a comfortable margin in cotton receipts.

Gross receipts for the 1945–46 season to date were 609,099 bales yesterday, the Galveston Cotton Exchange and Board of Trade said. In comparison, Houston's total is 496,995 bales and that of New Orleans 483,005 bales.

Foreign exports from Galveston total 162,372 bales, and 260,936 bales have been shipped out by rail. Export figures of the ports of New Orleans and Houston were not available yesterday.

While at this time last year Galveston was leading all ports in the Nation in gross cotton receipts, a marked increase is notable this year. Last year at this time the total of gross receipts was 478,954 bales. At the same time, Houston's gross receipts were 344,197 bales, and New Orleans' 362,175 bales.

Foreign exports have shown a tremendous gain since the end of the war. Last year's exports at this time totaled 47,516 bales, as compared with this year's 162,372 bales. Rail movement of cotton was higher last year than this, with a total of 266,308 bales going out by rail as compared with 260,936 bales this year.

## Statement of Philip H. Hill Before Senate Committee on Banking and Currency Regarding Senate Bill 1592

EXTENSION OF REMARKS

OF

**HON. ROBERT A. TAFT**

OF OHIO

IN THE SENATE OF THE UNITED STATES

*Thursday, December 20 (legislative day of Wednesday, December 19), 1945*

Mr. TAFT. I ask unanimous consent to have printed in the Appendix of the RECORD a statement by Philip H. Hill in behalf of the National Institute of Municipal Law Officers before the Senate Committee on Banking and Currency in regard to Senate bill 1592.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Mr. Chairman and members of the committee, my name is Philip H. Hill. For 7 years prior to my entering the Navy in October of 1942, I was city solicitor for the city of Charleston, W. Va. For several years during this period, I also served as chairman of the committee on housing of the National Institute of Municipal Law Officers, on whose behalf I am privileged to present this statement on the general housing bill which this committee now has under consideration.

For the information of the members of the committee, I may say that the National Institute of Municipal Law Officers was formed some 10 years ago to serve as a central clearing house for information and assistance required by city attorneys in the performance of their official duties. It is now serving 416 member municipalities, with a total population of more than 60,000,000 of our citizens located in 48 States and Hawaii. More than 2,000 municipal law officers of these member municipalities are represented through the institute.

At the outset, let me say also that the interest of municipal law officers in housing legislation is not remote—as some may be disposed to believe. On the contrary, it is very direct and very active, for it is at the municipal level that housing cuts across the whole pattern of the administration of the modern community. City attorneys and municipal law departments increasingly are being called upon to participate and assist in working out various phases of the housing problems of their own communities. This has been generally reflected in the wide variety of problems dealt with in the reports of our committee on housing and committee on eradiction of blighted areas.

A resolution endorsing the provisions of S. 1592 and recommending its enactment by the Congress was adopted this week by the National Institute of Municipal Law Officers assembled in annual conference. I would appreciate it if a copy of this resolution, along with an excerpt from the report of our housing committee on S. 1592, might be inserted in the record at the end of my remarks.

Because the problems resulting from the continuing spread of slums and blighted areas have been of such long standing and serious concern to all municipal officers, perhaps a disproportionate part of my comments are directed to that title of the bill which deals with aid to localities for the assembly and clearance of slums and blighted areas and their preparation for redevelopment. However, this should not be construed as indicating in any way that we feel that the other titles of the bill are less workable or less essential. It is our firm and sincere belief that each of the several titles of the bill are required to meet specific needs. Because of this fact and because of the essential relationship of its several titles, we are convinced that S. 1592 represents the most sensible and honest effort which has been put forth to provide a realistic solution to our housing problem. And today, nonetheless as in the past, our housing problem, while it is intensified by the pressures of war-born shortages and our military demobilization, is essentially a long-term problem. Clearly it cannot be met either through short-sighted expediency which demands no action now, or by temporary, emergency, or piecemeal legislation.

While the housing problem is common to all communities and is therefore national in scope, effective and appropriate remedies necessarily are tied to the local market. Basically, therefore, the housing problem is essentially a community problem and the degree of success achieved by any national program which seeks to deal with such a problem must depend in a large measure upon the degree of responsibility accorded to and assumed by the local communities. We believe that the bill properly places in the local communities the clear responsibility, and initiative, for determining their own housing needs, and for working out their own programs to meet these needs, with supplemental assistance from the Federal Government where necessary. Likewise, we feel that this basic concept is properly supplemented by the provisions of title II of the bill which provide for aid to the local communities, on a matching basis, for the preparation of analyses of their local housing markets and needs. We believe that these provisions are essential to help the communities in meeting most effectively those responsibilities which, under the bill, are theirs.

We are also strongly in favor of those provisions of title II of the bill which would authorize funds to be made available to the National Housing Agency to carry out a program of technical housing research. Through such a program, we believe it is possible to make continuing progress in the reduction of the construction cost of homes. More important, perhaps, from the standpoint of the municipal law officer, such a program seems to offer a feasible means of securing the factual bases upon which outmoded building codes may be revitalized to permit and encourage the use of new and improved building techniques and materials. Clearly this would benefit all those who have a stake in house production—the consumer, the builder, the banker, the laborer, and the local community.

The provisions of titles III and IV of the bill seek to perfect and expand the various aids to private housing enterprise currently extended through the Federal Home Loan Bank Administration and the Federal Housing Administration. These provisions seem sound and should do much toward enabling these units to assist in meeting, more effectively than they can under the present statutes, the housing needs of our returning veterans and of families of more moderate income. Throughout titles III and IV there is an appropriate concentration on the encouragement and protection of home ownership. At the same time there is a clear recognition that, by reason of preference or need, many families will continue to require rental housing. The rental housing provisions of titles III and IV, along with the provisions of title V which seek to attract into moderately priced rental housing large aggregates of investment capital now actively seeking new outlets, should provide a reasonable balance of sales and rental housing.

We are strongly in favor of the provisions of title IV which seek to secure the production of a substantial volume of moderately priced homes available for purchase under advantageous terms which, at the same time, offer additional protection to the home owner against the loss of his home and his life savings. The sponsors of this bill are to be commended for working out a combination of firm commitments to builders, up to 85 percent of the appraised value of a moderately priced home, with provision for its purchase by the home owner under a 95-percent, 32-year, 4 percent mortgage. It would be our hope that such a plan would be sufficiently attractive to cause builders who otherwise would in all likelihood be much more interested in producing housing in the 7-, 8-, 9-, and 10-thousand-dollar price class, to produce a substantial volume of good homes in the moderate-price class where the need is clearly the greatest.

As I have indicated before, the problems resulting from the continuing spread of slums and blighted areas have been of long standing and serious concern to all municipal officers. It is our sincere conviction that no substantial volume of new housing construction may now be undertaken without reference to this problem which is common to all urban areas.

A pronounced trend of tax delinquency exists in these areas, and investments therein have become highly speculative risks. The migration of population, investment capital, and taxpaying capacity continues at an accelerated rate as blight progresses. The cost of public services which the local government must continue to supply to these areas, nevertheless, continues at a constant figure. At the same time additional municipal expenditures are required to provide and maintain essential public services to the newly developed outlying sections and to make them more accessible to the central business areas, and, as has been very appropriately stated, "Taxes go up, rents go up, and the residents continue to go away."

The march of population, investment capital, and taxpaying capacity from the central areas to the suburban areas will continue unless effective action is taken to make these blighted central areas available for appropriate redevelopment at prices which are consistent with the reuse of the land. This has now become increasingly apparent to a wide variety of individuals and groups, responding to an equally wide variety of motives and interests. The implications of this trend to municipalities which already are hard pressed to find new sources of revenue to meet new and progressive municipal needs—particularly in view of the continuing trend on the part of the Federal Government to preempt the sources of new local tax revenues—is plain. Accordingly, there is an increasing demand not only from farsighted realtors and public officials, but also from a diversity of groups never before particularly interested in housing, that positive, constructive action be taken now to remedy the basic conditions which nourish and encourage the spread of urban blight.

We recognize that the program of aid to localities for the assembly and clearance of these blighted areas and their preparation for redevelopment is considered to be an experimental program. We recognize that it is a new program, but we believe that it may well prove to be as important as any single feature in the general housing bill.

The committee well knows that this problem has been of sufficient concern to cause some 20 States to enact legislation which seeks to make it feasible, by a combination of private enterprise and local public endeavor, to assemble the land in these blighted areas and make it available for suitable redevelopment at a price consistent with the most appropriate reuse of the land. Some of these laws have been on the books since 1941. But apart from the project being developed by the Metropolitan Life Insurance Co., under the New York law, none of them have been productive of the clearance and redevelopment of blighted areas. We are convinced

that, under these State laws alone and without supplemental assistance from the Federal Government, real progress in the clearance of these blighted areas and their redevelopment for appropriate uses will not be achieved. In part, this is due to the fact that the necessary write-down of the land values in these areas cannot be accomplished through State and local action alone because they do not themselves possess the financial resources to undertake that job. Moreover, the complications resulting from constitutional limitations upon the incurring of debt or upon the levying of taxes to support new municipal undertakings would make it impossible to get any such type of program under way in any substantial number of States

We believe that the provisions of title VI offer the first real hope of substantial accomplishment in this extremely important field. Because the potential accomplishments which may be realized from this title could do so much to revitalize the sound development of our municipalities and the stabilization of their revenues, we wish to emphasize the importance which we attach to it. Given this type of assistance for the assembly and clearance of land in slum and blighted areas, additional incentives would be created for all types of housing development. New opportunities would be opened for large-scale direct investment under the yield insurance provisions of the bill. The types of housing most likely to be produced with yield insurance seem particularly appropriate for the relatively intensive use for which many central areas are most suited. Mutual ownership and rental housing seeking land suitable for large-scale development should find particular advantages in making use of the areas which this plan would make available. Housing for upper-income families under present FHA operations should be safeguarded by the protection of the type of neighborhood development possible under this plan. Incentives for the retention of existing, and the attraction of new, commercial developments may be provided. Public housing should have an important role to play in rehousing low-income families displaced by clearance and redevelopment operations involving reuse of the land for commercial use or housing for middle or upper-income groups.

In the past the National Institute of Municipal Law Officers has consistently favored the program of aid to localities for low-rent housing for families in the lowest income group. We recognize, of course, that there are some groups who today, as in the past, contend that all forms of public-housing activity must be stopped and they are extremely vocal in their contention. We do not believe that this type of opposition is based upon any realistic or honest approach to the problem. It would certainly seem that today there is a clear recognition, on the part of all reasonable and informed groups, of the importance and necessity for the continuation of the public low-rent housing and slum-clearance program to serve those families whose incomes are so low that, even with the improvements and additional aids to private enterprise provided in the bill now before you, they cannot be served by private enterprise.

At the Federal level, a special congressional subcommittee which studied the problem for more than a year and a half have stated its conviction that remedial measures must be provided which will permit the more rapid removal of substandard housing and the rehousing of low-income families than can reasonably be expected to take place through private initiative and finance alone. Likewise, the system established under the United States Housing Act for meeting these needs has, by the test of actual experience, proven to be the most effective and economical means of doing this essential part of the housing job. Title VII, as we see it, provides the necessary basis for the continuation of the low-rent-housing program under the United States Housing Act. Also, it perfects that system so that the cost of the program may be materially reduced through complete private financing of the loans at lowered interest rates. This would permit a reduction in the annual contributions from 60 to 45 years, and offers substantial possibilities of further economies.

At the State and municipal level the need for such a program has received complete recognition. Forty States, along with the District of Columbia, Hawaii, Alaska, and Puerto Rico, have enacted legislation to permit the creation of local public bodies with adequate powers to participate in that program. More than 400 cities and more than 350 counties have established local housing agencies. This seems to be an overwhelming confirmation of the need for this program.

The National Institute of Municipal Law Officers strongly endorses those provisions of the bill which place the major urban housing functions of the Federal Government in a single agency. Like all other Federal housing legislation, this bill has as its central objective the provision of good housing for our people. It seeks to stimulate the provision of that housing through varied fiscal devices and systems of aid. Thus it seems to be a matter of plain, common sense that these interrelated programs and activities must be centered upon that objective through a unity of activity and purpose, and a clear delineation of responsibility for housing policy, which can only be achieved at the Federal level through the establishment of a single housing agency. This is borne out by our experience with the scattered housing agencies and programs in earlier years, and our experience with the National Housing Agency under the most trying wartime conditions.

We should also like to indicate that we note with approval and consider appropriate the various special provisions of the bill relating to veterans and their families and to the families of men still in the armed services.

We believe that this bill offers a realistic approach to the housing problem and affords the best possibilities of attaining a sustained and high annual volume of new home construction. It does not attempt to segment or deal separately with various phases of the problem, without regard to their obvious interrelation. We endorse the bill because it seeks to provide the means for a program to stimulate the production of good housing at reasonable cost for those who did not have it before; to provide an effective means for arresting urban blight and aiding sound community growth; to protect sound property values and to establish new outlets for investment funds, building materials, and labor.

## Veterans and Labor—The Victory Team

EXTENSION OF REMARKS
OF
### HON. LOUIS C. RABAUT
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
*Thursday, December 20, 1945*

Mr. RABAUT. Mr. Speaker, the closest ties forged at the anvil in the heat of war were established by the joint efforts of the laboring men and women, and the service men and women of our beloved America.

The husbands, sons, brothers, sisters, and other relatives of the makers of the implements of war and the preparers of food, serviced and manned our weapons of destruction in their joint devotion for victory.

Theirs was a mutual sacrifice, even to the accidents in factory and the bloodshed of the battlefield. The distinction of the uniform is fading to civilian attire, and the reconversion, so to speak, is reestablishing that mutual interest that should exist for a prosperous America, emerging as the fruit of victory. Such a victory demands, and rightfully so, work for all at a fair wage level, comfortable living standards, and a productive economy for family needs.

Let no worker or returning serviceman permit anyone to sever this unified, wholesome position, for in unity there is strength. The deepest interests of the country are involved in that unity purchased at a tremendous price in the sacrifices of the war. Here is a comradeship born in the sweat and blood of devotion to the ideals that in the serious days of conflict captivated the imagination of the world. In the tranquil hours of peace, it should be cherished and preserved.

## Parity in Health and Education for Farm People

EXTENSION OF REMARKS
OF
### HON. LISTER HILL
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
*Thursday, December 20 (legislative day of Wednesday, December 19), 1945*

Mr. HILL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address on the subject Parity in Health and Education for Farm People, which I delivered to the Associated Women of the American Farm Bureau Federation, at Chicago, on December 17 last.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The farm women, the women whom you represent here today, constitute 2 out of 10 of all American women. Three out of every ten children in America are being reared in farm homes. But the farm income is only one dollar out of every ten of the Nation's income.

Two out of every ten women, then, are farm women.

Three out of every ten children are being raised in farm homes.

Yet only $1 out of every ten goes to provide for these farm homes.

We are determined not to be satisfied with the progress that has been made toward a parity of income for farmers. We still have a long way to go.

I come to Chicago to talk with you and the representatives of the American Farm Bureau organization about three fundamental things: The soil, the health of the Nation, the Nation's children.

All three of these things are related directly to achieving what amounts to a parity of opportunity for farm people. The scientists tell that we are taking plant food out of our soil at twice the rate we are putting it back in the form of fertilizer and soil-building crops. This means that we are facing soil bankruptcy.

When your family sits down to the table for a meal, it's not the amount of vegetables,

milk, and meat which alone determines the food value of the meal. It's the phosphorus, nitrogen, and other minerals that determine whether meals build strong, healthy bodies. And in turn, the amount of these elements is determined by the plant food that was available in the soil from which the vegetables, meat, and milk came.

The people of Deaf Smith County, Tex., have practically no tooth decay, and few dental bills. That's because the soil of that section is rich in minerals. Science today associates many disabilities and diseases, such as goiter, night blindness, anemia, thyroid troubles, tonsillitis, dental caries, and heart disease with deficiencies of minerals in our soil.

What is true of people is true of livestock. Missouri didn't just happen to be a mule-raising section. They're able to raise big, tough mules in Missouri because of the soil there. In certain areas of Tennessee a high phosphorus soil produces crops and grazing which fatten and grow livestock faster than other sections of the State.

The key to the American Farm Bureau soil plan is the national fertilizer policy bill, which Senator BANKHEAD and I are sponsoring in the Senate, and Representative FLANNAGAN in the House. Tomorrow I have the good fortune to have an opportunity to discuss in detail with the American Farm Bureau the progress of this measure. I have taken the liberty to mention it here because it is related to your own interest in increased income for farm people, in a healthier diet for the Nation, and in the preservation of our basic national resource, the soil.

No matter how we approach the necessity of providing medical care, we find that it relates directly to income. It is income that builds hospitals, pays doctors' bills, and provides public health services.

Four out of every ten counties in the United States do not have a recognized hospital. Practically all these counties are rural counties.

You need no statistics to remind you that throughout the rural areas of America the number of doctors is far below that necessary to provide needed service to farm people. The war years have made it even worse. Year by year the number of doctors in our rural areas has been dropping.
